"That's where the rub lies. That's the hard part of it," admitted Sanders. "A fellow strong enough to make it back to water would have himself; but I don't see how he could turn a hand to save the rest of us."

"Then what's to be done?" demanded one of the handcart's crew, in tones that trembled with dread.

Nobody answered at first. But finally Sanders spoke: "I see but one way for us. We'd better leave everything right here, wagon, cart, wheelbarrow and all; and we'd better turn every animal footloose. They're likely to wander about till they die, but that can't be helped. We'll at least give 'em a chance. As for us men, we'd better rest a few hours if we can without chewing our tongues, and then start back. Let's try to keep in the road, everybody. It will mean death to get out of it. But we'd better not try to keep together. I mean, let the ones that can travel fastest not wait for the others. The strong can't help the weak by staying with 'em. But they can help 'em by hurrying on and coming back to meet 'em with water."

"But how'll they fetch back water? What'll they carry it in?" demanded Esau.

Nobody answered at first. But presently a handcarter said:

"There comes the hard part. We've got a water kag, but—"

"But a water kag's a powerful onhandy thing to pack," suggested one of the wagoners.

"Speshly sixty-five miles, and on foot," spoke up Esau.

"Guess we'd better have one, though, and take turns at carrying it. That's our—our only chance," Sanders told them. "And we'd better stuff something into our pockets to eat; whatever we've got that won't have to be cooked. We're not hungry now. Or at least we don't feel hungry. But we will feel it the minute we drink—as hungry as wolves."

After that followed a silence. Somebody suggested that they ought to rest and

Pike's Peak or Bust

(Continued from the preceding page.)

take the animals out and let them rest. But all were so much excited over their desperate situation that they finally decided to travel a few miles toward water first. At once the men with the wagon began to unyoke their work cattle.

"You're goin' to turn old Brindle loose, I reckon, air you?" said Esau to his partner

"I don't think so. I'll strip off her pack and her saddle; but I'll keep the rope on her horns and drive her as I go. At least I'll drive her as long as she can travel and as long as I can travel. You'll leave your wheelbarrow just where it is, I suppose?"

"As good a place as any. Don't know whether I'll ever git back to it or not. Don't see how I can unless it rains. If I never come back——"

"Boys," Sanders here called out, "I've just thought of something. "There's some travel on this road all the time. We may meet wagons. If we do, we'll turn 'em back. And, of course, they'll give us a ride."

"Wouldn't it be a glorious thing if we could meet somebody?" exclaimed a handcarter.

"And let's hope whoever we meet will have a kag of water with 'em," spoke up somebody else.

And another man added: "Make it a bar'l while you're wishin'. I could dreen a kag or two myself."

"Wishin' ain't water," one of the drivers was saying, when Orlando, who was stripping the pack from Brindle, paused to call out:

"Men, I've thought of something. Seeing my mining tools—my pick and shovel—suggested it. Ten of us here, and plenty of tools to dig with. Why couldn't we pick out a place and dig to water?"

"Well now, I'm wondering if we could!" exclaimed Sanders. "Why didn't we think about that sooner?"

"Yes, that's worth thinking about," called out Holloway, now busy unyoking the wheel oxen.

"But diggin' for water is powerful uncertain business," another of the wagon drivers suggested.

"No uncertainer than trampin' a hundred and thirty miles without water," somebody else spoke up.

However, Orlando's suggestion appealed to all of them. Suspending their preparations to travel, the 10 men quickly grouped themselves together again.

"But where would we dig?" somebody wanted to know.

"Lowest place we could find would be the best place, I'd say."

"Now who knows but what we could dig in the river bed and strike water?" exclaimed Esau.

And Sanders added: "Nearly all these dried-up western streams have water under their sand beds if you dig deep enough, I've heard tell."

"That river bed back yander didn't look to me like it had ever seen water."

"But it had—of course it had! Scads of it!" exclaimed somebody. "Looks are deceptive. Everybody knows that."

"But it's a long, long ways back to the river bed. We've traveled nobody knows how many miles since we parted company with the river," another reminded them.

"But if the map Mr. Sanders showed us is right, the river can't be more than a few miles south of here." Orlando made that remark.

"If we strike off acrosst this desert without any road we'll soon find ourselves utterly lost. Then our bones will be dead shore to bleach out here," one of Sanders' party said. "Stick to the trail, I insist. Yes, stick to the trail."

But at this point Holloway spoke up: "This road can't be far from the river channel. Just a few miles back we passed close enough to see it, I recollect—to see the sun shining on the white sand. It looked so fearfully dry we never once thought of digging there for water, any of us. Guess that was an oversight of ours."

"How far back was it that the road passed in sight of the river channel?" demanded Sanders.

"About—about five miles," answered Holloway. And his two partners agreed with him that the distance was only five or six miles.

Sanders considered. "Then my judgment is that we'd all better make for that place and take everything with us. Even if we have to dig 25 or 30 feet, we can do it. And we can do that quicker and easier than we can hoof it 60 or 70 miles."

"That we can, Abe," agreed a handcarter. "Ten of us here. We can take turns at diggin'—what we couldn't do at trampin'. A few can dig or shovel out while the others rest."

"You're got the right pig by the ear now, boys, I'm thinkin'," one of Holloway's partners said. "Diggin' in the river bed is away yander our best show for water. I'm sorry we didn't think of that ourselves. Though it wouldn't ha' been as easy for three as it will be for 10."

Now Sanders added: "And the sooner we get to the river bed and get to digging the sooner we're likely to strike water."

Quickly the unyoked oxen were yoked again, and Brindle's saddle and pack were soon in place. At once the wagon was driven out of the road and turned. While that was being done, Esau began pushing his wheelbarrow west once more, and Orlando started his cow in the same direction. Close behind the cow and the wheelbarrow followed the cart, with three men pulling and two pushing. And bringing up the rear came the wagon. Two of the wagon party were walking and driving, but the third was riding inside.

(To be continued.)

Why Thin Fruit?

(Continued from page eleven.)

apples. This will certainly pay in the reduction of the second brood.

There are fewer windfalls and the pickers drop fewer fruits from thinned trees than from unthinned trees. This is due largely to the fact that when one apple in a cluster loosens and falls, or when one apple in a cluster is picked, it allows the others to settle together or shift position on the spur. This causes the entire cluster to drop off. The pickers lose time in trying to gather in whole clusters at once to prevent the remaining fruits from dropping.

Thinning prevents the breaking of many branches and limbs and makes propping unnecessary. Broken limbs are a serious loss because they mean the loss of revenue from the produce of these limbs for several years to come. When a limb breaks much of its fruit falls as a result and fruit below is also knocked off.

In the case of pears, at least, thinning hastens the date at which they may be picked. Pears are not allowed to ripen on the tree and are usually picked as soon as they reach the desired size of two and one-half to three inches in diameter. Well thinned trees can often be picked from one to two weeks earlier than trees which were not thinned. This gives the grower the advantage of higher prices on an earlier market.

There is as much, or more, labor saved in picking, grading and packing fruit from thinned trees as is used in thinning. Men like to handle large fruit and can pick, grade or pack more boxes in a day.

While the greatest value of thinning is in the effect on the present year's crop, it also increases the value of the orchard. Obviously, other things being equal, an orchard without broken limbs and bearing annually as a result of thinning is worth more than one which has not been so thinned. Thinning pays big dividends. When based on the cost of thinning it returns from 500 to 1000 per cent. Bankers should learn to know the value of thinning. Then they would not refuse to lend growers the money with which to hire it done on the grounds that it is not a necessary operation or does not pay.

Raising Seed Crop

Will Jennings of LaConner, Skagit county, is raising five acres of mangels and sugar beets for a seed crop and estimates the yield will be between one and a half and two tons to the acre.

The roots were planted on land which had been in wheat and vetch for two years in succession and last year's crop was not all taken from the ground, due to a large part of the crop lodging. The extreme dry weather is telling on this, as well as other crops on the place, and the yield would have been much better if there had been more rain.

Mr. Jennings also has a crop of cabbage which he is raising for seed, in spite of the fact that much of the crop was greatly damaged last winter by floods and severe weather.

No Bargain.

"Dear John," the wife wrote from a fashionable resort, "I enclose the hotel bill."

"Dear Mary," he responded, "I enclose check to cover the bill, but please do not buy any more hotels at this figure—they are cheating you."—Life.

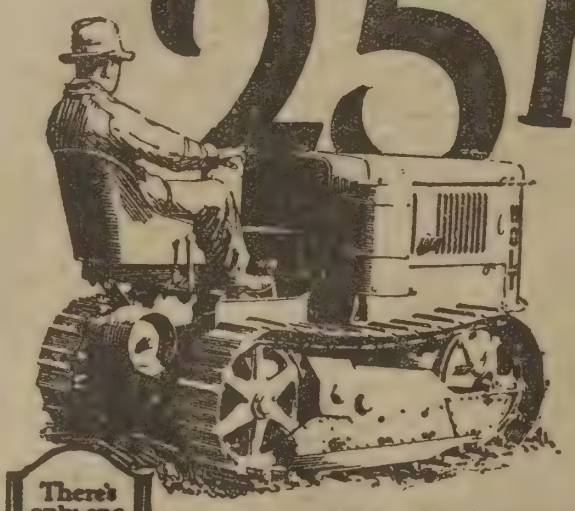
How Strong a Plow Do You Want?

A plow well suited to average conditions in the Middle West and East wouldn't have the required strength in the difficult plowing conditions of this section. Here, the rugged strength of all-steel construction is essential. To meet the requirement of extra strength, the **John Deere Steel Gang** was built.

It's all-steel — extra strong in every part without unnecessary weight. No castings to break. No pipes to bend. Extremely simple and compact — frameless — no unnecessary parts to get out of order. Beams guaranteed not to bend or break.

It's handy — even width of furrows on hillsides or around curves is controlled by means of a handy landing lever. Powerful springs make it easy to raise bottoms. Square corners can be turned without the raising of bottoms from the ground.

Bottoms to suit your soil—genuine John Deere steel or chilled. Quick detachable shares — loosen one nut to remove share; tighten the same nut and share is on tight. Great clearance between bottoms, between front moldboard and furrow wheel, and between share point and beam prevents clogging in trashy conditions.



Furnished in either two- or three-bottom size, 12-, 14- or 16-inch bottoms.

See the John Deere Steel Gang at your John Deere dealer's store. Write today for free booklet. Address the John Deere Plow Company at Portland, Ore.; Spokane or Seattle, Wash., or Boise, Idaho. Ask for Free Booklet JS-747

JOHN DEERE

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

25 h.p

There's only one Caterpillar Holt builds it

Here is the new high point of achievement in small tractors —"Caterpillar" T35 Tractor—big in power, enduring in service and versatile in performance. Weighing only 4000 pounds and measuring only 48 inches in width, it carries a 25 h. p. motor and delivers 15 h. p. at the drawbar. This has been accomplished by advanced design and improved qualities of steel and methods of heat-treatment. "Caterpillar" T35 Tractor establishes a new standard for dependability and long life.

Get full information and ask where you can see the T35 on display or in operation. Or ask about larger size "Caterpillar" Tractors—the 5-Ton, Western 10-Ton or big-power 75.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I wonder how many mothers will agree with me that all babies are born good and obedient and if they are never allowed to disobey while they are still babies, say up to 6 or 8 years, that they stand an excellent show to become obedient and respectful sons and daughters.

We made it a rule in our home with our first child never to ask or tell him to do a task unless we intended to "see it through," and before the babies are a year old they must obey, even if the baking is delayed or a meal late. One day I spent nearly two hours with one of my children, 2 years old, before she would hand me the pencil I had asked for, instead of throwing it at me or on the floor. It was time well spent, for in the end I had conquered her stubbornness. There is a vast difference between stubbornness and persistence, one being a bad habit and the other a good one.

Some mothers think a child 1 year old is too young to discipline, but I think one should start with them at a day old, as they learn immediately whether mother will take them up whenever they cry.

I have found that by careful training and demanding obedience and good manners and consideration for others up to the time they are in the seventh or eighth year that children so trained do not need many severe punishments after that age. Good behavior has by that time become a habit with them.

As they grow older they should be given interesting things to do, work about the home and a real interest in the things pertaining to it and little by little certain responsibilities. In this way they can be kept close to father and mother.

It is hard sometimes to punish small children, but one need not be harsh and should never lose control of one's temper while punishing a child; if one must, put off the punishment for a while, never punish in anger. Never leave the impression that you are taking out some of your bad feeling on the child, but be sure you make him feel that it is love for him and a desire for his good that prompts the punishment.

Appeal to the pride of the older children, it will seldom be in vain. I often say to one of mine, "Would you let a thing like temper get the best of you? Show yourself stronger than your temper."

I have proved that studying for the children pays and have done a good deal of it and have tried to sift the practical from the superfluous. I would like to impress all young mothers with the fact that the study of child raising pays big.

My children are all so healthy, full of life and vigor, well trained, helpful and are hustlers at school. If mothers would only devote more time to the children while they are young and controlable there would be fewer regrets when the children are grown to young men and women.

Be chums with your children, enjoy their pleasures and try to understand their troubles, laugh and play with them even when you are too tired to "laugh straight."

I am a farm woman and not in the best of health. I do all my own work except when there is extra help in the fields during haying and harvest. I also do the family sewing and yet I have always found time to attend a pet bird's funeral, help rescue a hurt chicken or play a game with my youngsters. Often as I work I talk seriously with them about their conduct or their work at school or explain something that is troubling their young minds. I am sure no mother was ever loved more by her children. They bring everything to me, pleasures and sorrows alike. What more can a mother ask? Only that this beautiful confidence may continue till they are strong enough to decide serious questions for themselves. And even past that time I would have them feel always that they can "bring their troubles to mother" confident that they will find sympathy, help, understanding and encouragement.

MRS. B. M. C.

Dear Mrs. Barland: I read the Family Circle and like it. I am the mother of nine children from four to 19 years. In a recent paper Mrs. Breedlove asks how to get rid of the little bugs that collect on hams and bacon. I put powdered borax over the meat and they go away.

MRS. E. M. BABB.

Dear Mrs. Barland: I want to tell the sister how to smoke hams and bacon without a smokehouse.

I use a large box and take off the bottom to use for a lid. Turn the box upside down and put poles across near the top and hang the meat on them. Lay on the ground 3 or 4 lengths of stove pipe and place one end in a corner of the box. One can use an old tin oil can instead of the pipe by cutting a hole in both ends. Build a fire in one end of the can or pipe and apple wood is a good wood to use for smoking. It will smoke better if a small hole is left in the top of the box and a piece of pipe fixed so the smoke can pass through.

MRS. C. E. M.

Just Folks

Books either inspire or deaden.

Durable foundations are underground.

Anybody can disagree; only the wise agree.

To say yes may be the farthest from meaning yes.

Life's melodies come forth out of troubled waters.

You can hold onto a rough stick better than to a smooth one.

Americans are educated by jolts more than by rules and regulations.

Doing a little every day amounts to more than doing a lot now and then.

Psychology is a word that is handed about on every tongue these days. The psychology of the moment has become a Shibboleth. In my school days psychology was one of the hidden words of the inner circle of learning.

It is possibly better that psychology should come out of its cloisteral seclusion, shake itself in the open air, let the sunlight frighten out the moths from its hidden clothing and become a work-a-day factor in the daily life of the people.

And yet I am wondering if psychology has not gone to the other extreme of commonness and joined the ranks of the low-down white trash. Has not psychology, in a measure, become a trick performer? Has it not almost entered the ranks of the occult?

One would almost come to believe that the expenditure of a few dollars, the learning of a few devices, the opening of a few side doors into the "subconscious mind" would put any son or daughter of Adam into the selected ranks of successful business or professional life.

Psychological tricks may play a considerable part in current business and professional life, but they are tricks just the same, and every trick has its day.

There is gradually dawning on the minds of men that the so-called laws of the mind are of less vital importance than the so-called laws of the heart. Good will yet remains the greatest social factor in the world. Good will finds ways and means of reaching and moving other people when all the arts of the mind fail. The head should check up on the heart, but the heart does the business. Beware of too much checking up lest there is no business to do.

E A S

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A few days ago I read a very remarkable book about the heart. There were two or three statements which are worth repeating. They relate to murmurs and their importance to the victim of heart trouble.

Dr. Copeland.

There are endless numbers of persons living in daily fear of early death. They have been told that heart murmurs are present that unusual exertion may bring fatal results, and consequently the joy of life is gone.

In this book the author speaks of meeting an old man who said:

"Today is a very important anniversary in my life. It is just 50 years ago that I was rejected for life insurance on account of heart disease."

He speaks of a patient of his own in these words:

"I think the loudest aortic systolic murmur I ever heard was in an old lady, who, with the exception of rheumatism, had remarkably good health and who lived till she was 93."

One of the oldest men I ever knew personally retired from business when he was 35 and nursed a bad heart till he died of natural causes at the century mark.

I do not mean to intimate that heart disease should not be given serious attention. It must be considered, but it is decidedly unscientific to consider it apart from the general condition of the victim.

The author I have quoted says of these patients:

"One must never discourage these cases. A leaky ship will often make a long and successful voyage, and a heart with a leaky valve will often carry its owner to old age, and will help him to do much excellent work. If you tell such a man that he has incurable heart disease (he may happily be blessed with a saving skepticism) you will have done your utmost to insure the accuracy of your prediction, though your diagnosis may have been grievously wrong. There is no important organ of the body so susceptible to nervous and mental influence as the heart; hope will buoy it up to make renewed and often successful efforts; despair will kill it."

The great authorities warn against hopeless prognostications. One of them says:

"Let it always be remembered that frequently sound and healthy hearts show a murmur, and that it is necessary, therefore, to seek for other evidences on which to base a prediction."

The same writer says in effect: "Let no single symptom of heart trouble be the ground for forming an unfavorable opinion. The presence of a murmur has so oppressed the profession and the public that a vast amount of positive alarm is continually being done by taking too seriously the significance of this sign."

I am delighted with this writer because he is so optimistic and yet so sane. He says so truly:

"The business of a prophet is at all times dangerous and an unsatisfactory one, whether in medicine or in any other sphere; but, recognizing our fallibility, it is surely wiser and safer to err, like Balaam of old, on the side of blessing rather than of cursing, of optimism rather than of pessimism."

Let the victim of heart trouble have courage and renewed hope.

Largest and Best
for Over 50 Years

The Watkins administration building at Winona, Minn., U. S. A. The finest private office building in the world.

For years, Watkins Flavors and Extracts have been favorites in the household. Few products of any kind enjoy such a fine reputation. 11 flavors.

Watkins Spices are known everywhere for their full fine flavors. A row of Watkins Spices on the pantry shelf is your best assurance of good cooking results.

You can always depend on good results with Watkins Baking Powder. Its purity is guaranteed.

High Points in News of the Week

Henry B. Spencer, former vice president of the Southern railway and general purchasing agent for the war-time railroad administration, Friday was appointed federal coal administrator for the duration of the present strike emergency by President Harding.

Mr. Spencer becomes administrative member of the distribution committee, which will control distribution of available coal supplies on a priority basis to essential industries and utilities.

With the announcement of creation of the coal administrator, confidence was expressed at the White House that production of coal, regardless of rail and mine strikes, eventually would be increased to the point where it would be adequate for the country's needs. President Harding felt so assured on this point, it was said, that he contemplated no further movement in the coal strike situation.

* * *

Official announcement was verbally made at the White House Friday that President Harding was prepared to submit formal proposals for settlement of the railroad strike to meetings of the railway executives and of the general strike committees of the shop craft unions.

The president, it was stated officially, believes that some of the difficulties in the way of an adustment of the trouble which has injured the nation's transportation system are "clearing away" as the result of the conference which he concluded shortly before the announcement was made.

President Harding began his conferences Thursday with T. DeWitt Cuyler, president of the American Association of Railway Executives. After Mr. Cuyler had left the White House Mr. Jewell, the shopmen's chief, and the presidents of the various shopcraft unions, arrived from Chicago and went at once into conference with Mr. Harding. They remained in session for a short while and then left the White House, but returned in the afternoon and spent more than three hours with the president. Mr. Cuyler also returned to the White House later in the evening.

The union heads who conferred were B. M. Jewell, head of the railway employees' division of the American Federation of Labor; W. H. Johnson, president international machinists; J. A. Franklin, boilermakers' union; M. F. Ryan, carmens' union; James Burns, metal workers' union; Edward Evans, electrical union, and Timothy Healy, stationary engineers' and oilers' union.

It is understood that the president wants the men to go back to work and the railroads to take them back with the understanding that rehearings will be given on matters already in dispute before the United States railroad labor board and with the further agreement that the seniority rights problem will be left for future determination.

All principal points in dispute are left to the United States railroad board to adjudicate. This is the essence of the compromise settlement drafted by President Harding and informally approved by the spokesmen of the contending parties.

At this writing, Monday, it is announced from Washington that peace terms already have been agreed to in the country-wide railway strike and formal ratification has been assured through President Harding's efforts, it was asserted tonight by a man in close official touch with the situation.

All that now remains before the strike which has cost the workers upward of $40,000,000 in wages passes into history, it was asserted, was the formal indorsement of the terms of settlement by the railway executives meeting in New York and the strike leaders who will convene in Chicago at the same hour.

* * *

Damage estimated at $1,000,000 resulted from rain, hail and wind storms that swept Nebraska and South Dakota and western Iowa Friday night and early Saturday.

There was no loss of life reported but heavy losses resulted from the destruction of farm property crops and railroad equipment.

* * *

Vice President Coolidge left Washington Saturday night from Boston, starting a trip that will occupy two or threee weeks and take him to the Pacific coast. The vice president plans to leave August 4 for San Francisco, where he will address the American Bar association convention August 10. The present itinerary of Mr. Coolidge calls for visits to Portland, Ore., and Seattle, but no speeches are planned. He will return east through Canada without making any stops.

* * *

Acting Secretary Roosevelt Saturday ordered Major General Lejeune, commandant of the marine crops, to send one officer and three or four enlisted marines into the Teapot dome naval oil reserve, Wyoming, at a place about 40 miles from Casper, to eject oil squatters who have begun drilling for oil.

* * *

Argentine wool clip, which begins in September, is expected to be the smallest in the 20th century, according to a survey issued by the commerce department. Sheep grazing in Argentina, the department found, has dropped from 74,380,000 in 1895 to 44,855,000 in 1918 and to between 25,000,000 and 35,000,000 at the present time.

* * *

The first appropriation out of $80,000 given to the new American fund for public service by Charles Garland, young Massachusetts heir, who is giving away his inherited fortune, will go to "the relief of starving miners in the western Pennsylvania coal fields." The appropriation, amounting to $2000, was authorized by the board of directors at their first meeting. Garland was present.

* * *

Whether the administration tariff bill will be enacted before the November election has again become the subject of private discussion at the capitol. There is a more or less general belief in the senate that the measure can not be brought to a final vote in that body before September 15, and there are those who believe the ironing out of difficulties between the senate and the house in conference will be so slow and tedious a process that it can not be completed before congress goes home for the fall campaign.

* * *

With the flood waters of Saturday receding, reports come of devastation to thousands of acres of Nebraska farm land, swept clear of all crops, thousands of head of live stock dead and property loss conservatively estimated at $1,000,000. Small streams, flooded by the cloudburst of Friday night, spread over Pierce, Wayne, Stanton and Cedar counties, inundating towns with from several inches to several feet of water and forcing citizens to flee to higher ground.

Holstein Prizes

Dr. David Livingston, superintendent of the Western State hospital at Fort Steilacoom, writes a letter to Governor Hart containing the following interesting information:

"You will no doubt be pleased to learn that the Western State hospital has been awarded the sum of $34.50 by the Holstein-Friesian Association of America, covering prize money won during the last fiscal year.

"The certificate accompanying the check says in part, 'It is becoming increasingly difficult from year to year to gain place among the prize winners, and you are to be congratulated on winning a portion of the prize money awarded.'"

READY TO LEND MONEY.

The Wool Growers' Service corporation, formed some time ago by the Washington Wool Growers' association, was ready to begin lending money to sheep men on July 1. Up to that time applications for loans totaling about $150,000 had been made.

WRITING ADVERTISERS PAYS

The majority of our advertisers will send you, upon application, attractive catalogs, booklets and folders containing ideas and information of value to you. Why not act upon such offers in the issue which you are now reading? When you write please say, "I saw your ad in THE WASHINGTON FARMER."

Bits of Fun for Everyone

Wasn't Possible.

Shortly after Detroit's motor ordinance went into effect a motor cop hailed a lady driving a limousine on the boulevard and ordered her to report at 9 o'clock.

"The very idea, why?" exclaimed the lady.

"Im sorry, ma'am," insisted the bluecoat, "you were going 40 miles an hour."

"Impossible," exclaimed the lady indignantly; "why, I haven't been out an hour yet."

Or a Miracle Man.

She: "What would you call a man who hid behind a woman's skirts?"

He: "A magician."

Ikey Knew How.

A Hebrew small storekeeper, much to the astonishment of his neighbors, suddenly decorated his shop window with a gorgeous new blind. It was the sensation of the day, and few of his brethren failed to make some remark to him about it.

"Nice blind you've got there, Isaac," said one.

"Yes, Aaron."

"How much did it cost you, Isaac?"

"It didn't cost me anything, Aaron. My customers paid for it."

"What! Your customers paid for it?"

"Yes, Aaron. I put a leedle box on my counter, 'For the blind,' and they paid for it."

Sour Grapes.

'Tis better to have loved and lost than to win and be forever bossed.

Awful Predicament.

Roberts: "What's the matter? Finances bothering you?"

Richards: "Yes, I owe Rogers $5, and today I've got it, and he knows I've got it, and he knows I know he knows I've got it."—The American Legion Weekly.

Got Along Famously.

Tim: "How are you getting along at home while your wife's away?"

Jim: "Fine. I've reached the height of efficiency. I can put on my socks now from either end."

Limited.

"I knew a chap," said an artist, telling of some of his youthful experiences in the Latin quarter, "who painted the landscapes, and when opportunity offered he would make a little money to keep him going by decorating the walls of houses with rural scenes, highly colored in glaring tints, as if nature had turned color blind. There were always cows and always they were represented as standing up to their knees in water.

"'Why do you always put your cows in water?' some one asked.

"'Well,' confessed the artist, 'you see, I have never learned to paint hoofs.'"—Harper's Magazine.

Not Up on the News.

A traveling man one night found himself obliged to remain in a small town on account of a washout on the railroad, caused by the heavy rain, which was still coming down in torrents. The traveling man turned to the waitress with: "This certainly looks like the flood."

"The what?"

"The flood. You've read about the flood, and the ark landing on Mount Ararat, surely?"

"Say, mister," she returned, "I ain't seen a paper for three days!"—The Furrow.

Has proved a big success

It is light and pretty, has low heels, foot-form sole, fits high or low arch foot, used for street, house or dancing.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4051. Misses' Dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 5 1-8 yards of 32-inch material. For trimming as illustrated 1 3-8 yards is required. Price, 10 cents.

3640-4046. A Good "Sports" Costume. Blouse 3640 cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require 3 1-8 yards of 36-inch material for a medium size. Skirt 4046 is cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. A 29-inch size will require 4 3-4 yards of 40-inch material. With plaits extended lower edge of skirt measures 3 5-9 yards. Two separate patterns, 10 cents for each pattern.

4058. Girl's Dress. Cut in four sizes: 8, 10, 12 and 14 years. A 12-year size requires 5 1-4 yards of 32-inch material. Price, 10 cents.

3670. Lady's Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 5 1-2 yards of 40-inch material. The width of the skirt at the foot is about 2 yards. Price, 10 cents.

3432. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 3 1-2 yards of 36-inch material. Price, 10 cents.

4061. Girl's Dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 3 5-8 yards of 32-inch material. To trim as illustrated requires 3-4 yard of contrasting material. Price, 10 cents.

3861. Girl's Dress. Cut in four sizes, 2, 4, 6 and 8 years. A 4-year size requires 2 1-4 yards of 36-inch material. Price, 10 cents.

4066. Lady's House Dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 3-8 yards of 32-inch material. The width of the skirt at the foot is 2 1-8 yards. Price, 10 cents.

3869. Lady's Apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 3 7-8 yards of 36-inch material. Price, 10 cents.

4044. Set of Smart Sleeves. Cut in three sizes: Small, medium and large. To make one pair of sleeves like No. 1, will require 5-8 yard of 32-inch material. No. 2 requires 1 1-4 yards. No. 3 requires 1 3-8 yards. Price, 10 cents.

4047. Lady's Skirt. Cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. A 29-inch size requires 3 yards of 40-inch material. If contrasting material is used for trimming 3-4 yard 12 inches wide will be required. Price, 10 cents.

3620. Girl's Dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size will require 3 5-8 yards of 27-inch material. Price, 10 cents.

You Can Win a Walking Doll

Nothing will make any girl happier than one of our UNBREAKABLE WALKING DOLLS. The walking feature intensifies the attractiveness of the doll 100 per cent. Moreover, it is light in weight, has a soft body, and is well made from top to toe. It stands 13 inches high.

There are no springs or sharp edges in our walking dolls—the mechanism is all concealed in the body. OUR UNBREAKABLE WALKING DOLLS sleep, sit, stand, and when led by the hand they REALLY WALK WITH YOU.

A walking doll with sleeping eyes and real hair will be awarded to YOU in return for your services in securing nine 3-year subscription orders to your State Farm Magazine at the regular rate of 50 cents each, or $4.50 for the nine subscriptions. A little time spent securing subscription orders and one of these wonderful walking dolls will be your very own for keeps. Get busy now before some one else starts to harvest the orders in your neighborhood.

TheWashington Farmer
Review Building,
Spokane, Wash.

We were glad to get a little note from Ellen Nelson, a cousin who lives in Walla Walla county, Washington. Ellen waited a long time before she wrote to us this time. She says she went on a cattle tour and had a fine time.

A letter comes to us from Marie Thomas of Benton county, Washington. Marie has five brothers and two sisters and she is 9 years old. Her pets are a cat and two colts. Her friend, Josephine Herbert, is visiting at her home for a while this summer. Marie's birthday is April 17.

"We had a cloudburst here Monday, June 5, and the garden truck was nearly washed out," writes Grace Ross, a southeastern Washington cousin. "We live in a valley at the foot of some hills and the water ran off the hills." In two more months Grace will be a Corner graduate.

Birthday Greetings

THURSDAY, August 3—Marguerite A. Campbell, 10 years old; Lina E. Gardner, 11.

FRIDAY, August 4—Dorothy Coonrad, 11 years old; Lucille Crider, 11; Martha Ylonen, 7.

SATURDAY, August 5—Matilda French, 11 years old; Ellen Newton, 10.

MONDAY, August 7—Leeta Ball, 11 years old; Leona Ball, 11; Luther Burbank, 11; Walter Setters, 11; Irene Bernice Beardslee, 8.

TUESDAY, August 8—Lila Elliott, 11 years old; Matilda L. Guler, 11; Alice Knapp, 11; Anna Mantey, 10.

WEDNESDAY, August 9—Jimmy Betz, 10 years old.

LETTERS RECEIVED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Freeda Klippert, Mayme Kynse, Mildred Warehime, Lillian Peterson, Olive Laughlin, Frances King, Marion Hamilton, Thelma Raull, Ellen Lathrop, May Wuotila, Averill Paull, Pansy Green, Irene Ralph, Carl Julius, Lois McAlney.

Iva Lee Easterling, Martha Kokko, Lillie Puffert, Bernice Bahrs, Lyynie Kokko, Louis Geseler, Myrtle Nelson, Anne Palola, Dorothy Timm, Mildred Sherrod, Carol Meyer, Johnny Timm, Matilda French.

Genevieve Gooby, Loise Vorla, Edna Amend, Marjorie Fike, Pauline Forsman, Ruth Otterstedt, Irene Ione Torpa, George Davis, Mary Aharn, Melba Johnson, Elga Wint, Florence Uhlrich, Grace Gockley, Helen Richardson, Isabel Ford, Winnifred Goodard, Astrid Larsen, Howard Swalling, Alice Bromley, Della Bromley, Alice Vance, Linnea Gord, Florence Fry, Ruth Hay, Melvina Hume, James Miller, May Dickenson, Alma Schneider, Elizabeth Cook, Harriet Cook, Carol Spencer, Edna Schlien, Edna Johnson, John Ball, Leona Ball, Evelyn Cleman, Geneva Quicksall, Mary Sparks, Mae Moore, Ruby Ferrell, Ruth Gray, Berneal Kleinnecht, Mildred Page, Eunice Libbey, Helen Carlson, Henry Janssen, Annie Lloyd, Alene Hensley, Marie Amoruso, Mabel Olsen, Katie Harvey, Myrtle Matre, Marvin Lum, Mildred Cunningham, Eila Cunningham, Julia Gradisknik, Martha Hedlund.

BEDTIME STORIES

By THORNTON W. BURGESS.

THE NEATNESS OF BOBBY COON.

Bobby Coon yawned and stretched lazily. Then he climbed out of the doorway in the hollow tree which was his home. The Black Shadows had already crept far out from the Purple Hills, and looking up through the tops he saw a star winking at him. Bobby Coon winked back and then slowly climbed out of the hollow tree.

He had slept all day, for Bobby Coon often had rather sleep through the bright day and prowl around all night. The fact is, Bobby Coon is very apt to get into mischief. Somehow he can't seem to help it. If there is any mischief to get into Bobby Coon is pretty sure to be found right in the middle of it. So, because it is safer to go to forbidden places at night than in the bright light of the sun Bobby Coon prefers to sleep during the day.

When he had come down from the hollow tree Bobby Coon carefully brushed his handsome coat, waitcoat and trousers, and combed out his beautiful ringed tail. Then he washed his face and hands, for whatever faults Bobby may have, he is always neat. Yes, sir, there is no one in the Green Forest who is neater than Bobby Coon.

Bobby Coon looked quite the dandy as he started down the Lone Little Path to the Green Meadows and across to the Smiling Pool. There he found Little Joe Otter and Billy Mink just returned from a fishing trip. They were just preparing for a feast as Bobby came along.

"Hello Bobby Coon!" cried Little Joe Otter. "Come and have some fish with us."

Billy Mink didn't look at all pleased at Little Joe Otter's invitation, for Billy is inclined to be selfish, and what he can not eat himself he hides away. But he said nothing, merely reaching out for the largest fish for himself.

"Thank you," said Bobby Coon, "I believe I will."

Now Billy Mink and Little Joe Otter are not at all fussy about their food. It didn't trouble them a bit because there was dirt on the fish from dragging them up the bank, and the bits of dead grass and bark sticking to the fish they did not notice at all. But Bobby Coon did. Bobby is fussy, very fussy about his food. He took the fish given him and walked down the bank to the Smiling Pool.

Billy Mink and Little Joe Otter stopped eating to watch him. When he had found a comfortable place on the edge of the Smiling Pool Bobby Coon began to eat, but before he put it in his mouth each piece of fish was carefully washed.

"My aren't we nice?" jeered Billy Mink.

"Did you think that fish was poisoned?" demanded Little Joe Otter, scowling down at Bobby.

"What's good enough for us isn't good enough for him," broke in Billy Mink.

Bobby Coon looked up and grinned. "Nothing of the sort," said he. "I wash all my food. It doesn't matter where I get it, or what it is, if there is any water near I wash it. Honest, fellows, you don't know how much better it tastes!"

"Too much work," grunted Little Joe Otter with his mouth full.

Bobby just smiled and kept right on washing his food, and when he had finished he washed his hands and face.

(Copyrighted byThornton W. Burgess.)

Before he put it in his mouth each piece of fish was carefully washed.

You Get Your State News Quick

As a Result of Modern Publishing Facilities Used By Your State Farm Paper

THERE are many things which occur in your state which you naturally want to hear about as soon after they happen as possible.

That is one of the points at which your state farm weekly renders superior service.

The Washington Farmer's news gathering organization covers the whole state, so that a complete, accurate report of every event of interest to Washington farmers is sent to this paper without delay, in many instances being transmitted by telegraph.

After that the wonderful facilities and appliances of the modern publishing establishment are brought into play. By means of linotypes the news is set up in a fraction of the time it takes by older methods. The stereotype, a cast of solid metal from which the paper is printed, is next prepared to make the matter suitable for speedy printing. The reading and advertising matter being all assembled and ready, a flood of electric power is released and the great, modern rotary press prints, folds, counts, and staples 30,000 twenty-four-page copies of this magazine in a single hour. Addressing and mailing devices and finally the familiar automobile perform other features of the exacting work of speeding the news to you while that news is still fresh, interesting and worth while.

You don't have to wait a month, or even a fortnight, as this paper reaches you every week.

You might think that such SPEED in publishing would cost you more, just as the fast trains between many big cities are extra fare trains. However, such is not the case. Your state farm paper is one of the big bargains of the publishing world. Please help us keep it so by lending us a hand in our subscription work. Send in your own renewal at least 60 days in advance of the expiration date on the wrapper, and include the orders of your friends and neighbors with your own.

High Record Holsteins

As a sort of benediction upon the annual convention of the Holstein-Friesian Association of America at Kansas City early in June, it was announced that the 50th cow of the breed had completed a record above 1000 pounds of butterfat in a year, and before the breed journal could get to press with the announcement, two more American cows had turned the trick, including William Todd & Sons' of the Yakima valley, Cascade Jessie. This makes a total of 55 at the last writing, as compared with only 12 cows of all other breeds which have achieved this high mark.

The list has been increasing with amazing rapidity within recent years. The first record above 1000 pounds was made in 1911, and except for two years, every year since that time has seen one or more completed. In 1921-22, 13 were chalked up, more than in any other two years, and in the first few months of the current year five have been added. The Holstein-Friesian World credits Idaho with breeding one 1000-pounder (Segis Pietertje Prospect) and Washington with developing two (Segis Pietertje Prospect and Queen De Kol Bonheur Pontiac), but this list must now be revised to include Cascade Jessie, and to give Washington one 1000-pound cow bred there and three developed. G. V. Leighton of Boise, Idaho, who bred "Prospect," is the only northwest man listed among the breeders of the big producers, and Carnation Stock farms alone of northwest breeders has developed two. William Todd & Sons should be credited, however, with breeding one and developing one.

NATIONAL AYRSHIRE MEETING.

At the annual meeting of the American Ayrshire Breeders' association at Devon, Pa., June 14-15, Paul O. Reyman of West Virginia, was reelected president for a second term. Four vice presidents were elected and the places of the nine directors whose terms had expired were filled, mostly by reelection. Secretary C. L. Burlingame was not only reelected, but a resolution of commendation was passed for the manner in which his office had been conducted. A new constitution was adopted, which gives the association more freedom of action. A registry fee of $50 was placed against imported cattle, which will be refunded for meritorious work in the show ring, paddock or pail.

Forty-two animals were sold at the national consignment sale for an average of $513. Just two of these were bulls, and each brought over $1000, so the average of the females was $485, with top price of $1500.

LEWIS GUERNSEY CATTLE CLUB.

Organization of a Lewis County Guernsey Cattle club at Chehalis, with Frank J. Saliger of Chehalis as president, gives organized representation within the county to all three of the leading dairy breeds, and is expected to develop a strong demand for fawn-and-whites. Large herds of Guernseys in that district there are none, that of H. R. & Carl Taylor of Chehalis being the largest. But the recent sale of 50 head from Wisconsin started several foundation herds, and interest in the breed is keen.

The breeders met at luncheon at the St. Helens, and later were addressed by County Agent R. G. Fowler and Secretary George Walker of the Southwest Washington fair. Other officers of the club are P. H. Thomsen, Centralia, vice president; H. R. Taylor, Chehalis, secretary-treasurer; and J. G. Haight, Chehalis, and J. Pettit, Centralia, members of the executive committee.

NEW BETTER-SIRES EMBLEM READY.

A new emblem of improved design for recognition of good work in improving live stock is ready for distribution by the bureau of animal industry of the United States department of agriculture. The certificate, which measures 8 1-2x10 1-2 inches, resembles a steel engraving and is suitable for framing. A person holding an old emblem and desiring to exchange it for a new one may do so by returning the old one to the bureau of animal industry. About 7800 of the old emblems have been issued to breeders and others working with the department in improving the utility value of farm animals, reducing the number of runts, and in other ways benefiting the live stock of the country.

BUYS GUERNSEY BULL.

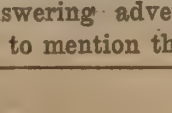
Late in April B. M. Luck of Woodland, Wash., purchased from Calkins & Riggs of Daybreak farm, Brush prairie, Wash., the Guernsey bull, Carview Repeater Boy. His dam is on official test, with prospect of a 700-pound record. Mr. Luck has a fine herd of heavy producing grade Guernseys.

WILL ENTERTAIN CITY FOLKS.

Waikiki Jersey farm, on the Little Spokane river, north of Spokane, is inviting the general public, both the citizens of Spokane and the farmers of the territory tributary, to its first annual picnic, August 13. Waikiki is well known for its excellent Jerseys, from which it supplies a large number of retail customers in the city of Spokane with milk and cream. "We want our customers and their friends to come out to the farm and see our herd and the conditions under which their milk is produced and handled," says William Auld, manager of Waikiki. Mr. Auld estimates the crowd at this first picnic at 2000, and announces that the farm will supply the ice cream and milk, the visitors bringing their own basket lunches.

HAS FOUR PUREBREDS.

J. B. Vance, a Guernsey breeder of the Ahtanum valley, a few miles from Yakima, has four head of registered animals in his herd of 10 milk cows, and he expects to produce a high class herd in due course of time. The grade animals will only be kept until their place can be filled by the purebred heifers.



One of his best cows, Ruben's Pride a cow with her third calf, is a Canterbury-bred animal and has milked as high as 40 pounds of milk a day. Another cow, Elsie's Princess, of Yakima, is a 3-year-old and has produced 36 pounds of milk in 24 hours.

Mr. Vance has 40 acres, most of which is in cultivation, there being only five acres of permanent pasture. He believes in feeding grain in the summer as well as in the winter, and his cows show up well as a result.

V. M. CHASE, Yakima, Wash.—I left the farm about 15 years ago and of all the farm papers and magazines I have read I have found none that will keep the northwest farmer or city man in touch with the farming or stock raising industry as well as The Washington Farmer.

Ruby Dell Guernsey Farm
Our herd has been in the winning wherever shown.
Senior herd sire, Francis May King (A. R.) he by Langwater Hambro (A. R.)
Junior herd sire, Rex of Willow Brook, he by Langwater Sunderland (A. R.)
Our herd matrons are cows with A. R. records from such noted sires as Langwater Hambro, Langwater Emigrant and first 5 daughters of Francis May King, to freshen with average records of 480.14 butterfat, at average age of two years and ten months; most of them double letter class.
Some splendid bull calves for sale of above breeding.
H. E. ANGEL, Mabton, Wash.

TEN MONTHS' OLD
GUERNSEY HEIFER
Sixteen tested dams average over 600 lbs. fat. $250. FOSHAY FARMS.
O. & M. L. VOGET, Hubbard, Ore.

Orchard Hill Farm Guernseys
"Home of high class Guernseys."
DR. PARK WEED WILLIS, Owner.
REDMOND, Wash.

Brown Swiss Stock Farm
Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.
THEO BRUGGER, Route 3, Gresham, Ore.

Holstein Bull Bargains
Three, 8 to 10 mo. old. One out of Jantlina Colantha Johanna, grand champion cow Oregon state fair, with 22-lb. record as junior 2-year-old. Both equally as well bred. One by a Pontiac sire. Write for full particulars and bargain prices.
W. MARTIN, Forest Grove, Ore.

Holstein Bulls sired by son of world record cow. from dams sired by brother to Segis Pietertje Prospect. Prices low.
H. R. BOOMER, Payette, Idaho.

Young Red Polled Bulls
By the champion sire of the northwest circuit, closely related to the world champion Red Polled cow.
F. H. PORTER, Halsey, Idaho.

Northwood Herd Milking Shorthorns
Improve your herd with a Shorthorn bull of the milking strain. Getting milk as well as beef. We have some choice bull calves for sale at farmer's prices from high record cows.
NORTHWOOD FARMS, Redmond, Wash.

OREGLOW JERSEYS
Register of Merit cows for sale, group priced low for quick removal, choice stock for foundation herd.
IRON MINE FARM, Oswego, Ore.
W. M. LADD, OWNER.
D. BROOKS HOGAN, MGR.

Young Jersey Bull Golden Glow's Chief breeding. Dam on official test and will make about 500 lbs. butter fat. Priced for quick sale.
M. G. GODWIN, Scotts Mills, Ore.

Fourth Gold Medal Jersey Bull
now in use in my herd. No other herd ever had so many. Young stock for sale.
ED CARY, Carlton, Ore.

Jersey Bulls at Bargain Prices
Send today for our special sale list of registered Jersey bulls from R. of M. dams. Easy terms, liberal credit.
WARREN GRAY, Box T, Jefferson, Ore.

Jerseys 797 lbs. of fat, the highest record 3-year-old tested in 1920 is dam of a high class young bull we have to offer.
J. J. VAN KLEEK & SONS, Box T.
BEAVERTON, ORE.

ST. MAWES JERSEY BULL.
Three nearest dams of sire averge 841 lbs. fat. Dam on test, milking over 40 lbs. a day. Priced right.

Certified Seed

Industry Grows in Skagit County

A total of 62 acres of potatoes, 38 of which are to be certified for seed, is a good example of the hold the certified seed industry has in Skagit county. O. W. Eckman and By West of Mount Vernon are the owners of this particular acreage. While the main crop is for potatoes that will be sold as certified seed, there will be 14 acres of commercial potatoes which will include those sorted from the seed fields which are not true to seed type. Such will be sold in the fall for the early market, while the seed will be stored and graded during the winter and sold as ordered for immediate or spring delivery.

"We are trying to confine ourselves to three varieties," said Mr. Eckman. "The Burbanks and the Pride of Multnomah are the two that are in best demand for seed, while there is a difference of opinion as to the third. There are a number of growers who like the Netted Gem, but we also have a large acreage of the Earliest of All. There are also some that prefer the round white type, but the long white tubers have been found to bring the best returns and we advocate these for general farm use in any part of the country.

"We have in all about 20 varieties that we are raising on the farm each year, but these are partly for experimental purposes and partly to have a large collection for show purposes. There is very little sale for such varieties as the blue salad potato except for seed, but we like to have them in the show to add to the number of varieties. There are many other novelties that are grown for the same purpose.

"As for the seed for the commercial crops, there is little difference in the treatment or manner of planting from that of the certified crops. They are both graded carefully and treated before cutting. The patches are kept free from weeds and the odd varieties are rogued out of the patch as the crop is growing. It is with this point, however, that more attention is needed with the certified fields, since there must be no foreign varieties, diseased plants or other undesirable points. This inspection is all done, of course, by the state seed inspector, who looks the patch over while it is growing and again when the tubers have been dug."

Mr. Eckman told how the greater part of their potato land was rented each year in order to get land that had been in pasture for a number of years. "It would involve too much land and necessitate the keeping of a large number of cows if we were to farm on our own land entirely," he remarked, "and besides it would take too much time away from the potatoes."

There are about three types of soil used by the growers, sandy loam, peat and a combination of peat and sandy loam. In all cases the land is plowed in the fall if possible and the disk is used on the sod before the plowing begins, in order to keep the sod from turning under in large mats. It is much easier to cut the sod up and get the ground in a pulverized state if this is done. It is also easier to hold the moisture if the land is prepared in this manner, according to Mr. Eckman.

"As for digging, we find that it is economy to use the best machine digger that can be purchased," asserted Mr. Eckman. A good digger should go down just deep enough to get under the tubers, but not too deep. It is very seldom that a machine will injure more than 10 per cent of the potatoes, while in hand digging there are usually 25 per cent that are bruised or cut even with the best of help. A clean cut, such as are some times found when a machine is used, will not cause the tuber to rot as soon as will a puncture made by a digging fork. We find that it pays to get a machine into the patch and get them dug and the crop into the storage cellar before it is too late."

Potato Rows, North, South

R. D. Bates of Sedro-Woolley has a two and a half acre patch of potatoes that is making a very good showing. There are four varieties, the Pride of Multnomah, the Netted Gem, the Beauty of Hebron and the Rural New York. The Multnomahs will be saved for seed as well as some of the Netted Gems.

The entire patch is being sprayed with Bordeaux mixture, since Mr. Bates and a neighbor have purchased a spray machine in partnership. Two of the rows have been left to act as a check plot, while two more are being sprayed with powdered spray in order to see if there is any marked difference in the two treatments.

The rows were planted north and south to allow more sunlight to all parts of the plant than if they had been planted in rows running east and west. The patch was planted about May 1.

NEW FORM OF GRAPE CONTRACT.

Markets report the new form of contract in California grape futures. Shippers put up $200 per car which is matched with $200 on the part of the buyers. The $400 is placed in the bank in escrow.

For the Woman on the Farm

Chevrolet Four Passenger Coupé

$850 *f. o. b. Flint, Mich.*

Every farm should have two cars.

The farm car—usually an open touring model, is used for carrying milk cans, merchandise, etc., and is seldom in condition for going to church, shopping trips to town, or for making calls in the neighborhood.

Moreover, the farm family with only one car is at a great disadvantage. As a rule the family have disposed of their driving horse, so when the farmer is using the one car, the women and the children of the family must stay at home.

The New Superior Chevrolet 4-passenger Coupé is ideally suited to overcome these conditions. It is a splendid, all-year, woman's car for the small farm family. It has fixed seats for three and a folding fourth seat.

For a larger family, the New Superior Model Chevrolet 5-passenger Sedan is recommended.

Both of these cars have Fisher bodies, beautiful in line, finish, upholstery and interior appointments. The mechanical equipment is the same that has given the New Superior Chevrolet line such an excellent reputation and first place in the sale of standard fully equipped cars.

This Chevrolet Coupé can be easily operated by any woman and has a remarkably low cost of operation and upkeep.

Chevrolet Invites Comparison Because Comparisons Sell Chevrolet

Consider What Chevrolet Equipment Means:

Standard Rear Axle Construction. The new Superior Chevrolet has the strong, quiet, Spiral Bevel Gear Axle that "stands the gaff" without breaking.

Standard Transmission—three speeds forward and one reverse.

Standard Braking System—foot service brake, hand emergency brake.

Standard Electrical System: Starter, storage battery, Remy ignition, electric lights front and rear on battery circuit.

Standard Cooling System—pump circulation, large, honey-comb radiator and fan. This means a cool, efficient engine, saving gasoline and oil and ensuring driving comfort.

Standard Instrument Board, containing speedometer, ammeter, oil pressure gauge, lighting and starting switch and choke pull.

Standard Type of Carburetor, with exhaust heater—one reason why you get most miles per gallon of gasoline with a Chevrolet.

Powerful Valve-In-Head Motor. The same type as used in successful cars selling at much higher prices.

Demountable Rims—extra rim on rear. No trouble to change tires on a Chevrolet.

Many Other Advantages which will be noticed on inspection, comparison and demonstration.

Two Weeks' Tour of Education Covers Territory From Oregon to Canada

By RALPH ERSKINE

There is no record of any state in the Union ever holding a live stock tour that has extended across the entire state and made a two weeks' continuous trip in the cause of better live stock. The western Washington live stock men's demonstration tour, which was completed at Sumas August 4, was from Vancouver, Wash., at the southern part of Clarke county, to the Canadian border, including 79 of the leading herds in western Washington.

The statewide tour was instigated by Director S. B. Nelson of the extension service at the request of a number of farmers of western Washington. Such a tour, he said, could be put on in a way that would reach a large number of people, bring more breeders in touch with other live stock men and emphasize the value of the purebred sire, even when used on the average farm herd. The plans were carried out with the assistance of Don Magruder and C. M. Hubbard, both of the extension service, as well as the county agents in the various counties.

"Those who made the entire trip were more than repaid for their time and effort," said Dr. Nelson, "and they saw many good herds which they did not know were in existence. Many of the smaller herds were found making excellent records and many are lowering the cost of production by the use of better live stock or the practice of better feeding.

"Another point that can not be overestimated is the personal contacts on the tour. One breeder, for instance, upon seeing a herd of his chosen breed, remarked that he didn't know there was such a herd in that part of the country. He had lived in the district for over 10 years and had never found the time to see what his neighbor was doing."

The spirit in which the tour was supported in all counties was encouraging and at many towns banquets were given by the commercial clubs or farm bureau or other organizations. Here the local breeders had an opportunity to tell some of their own experiences and to hear talks by the specialists of the state college as well as prominent live stock men of the state.

The first stop was the farm of M. B. Cunningham, near Vancouver, Wash. There are only a few of the 40 head that are purebred, but Mr. Cunningham has been nsing a registered Holstein bull for the last 8 1-2 years. A daughter of the former herd sire is out of a cow that is seven-eighths Jersey, but she shows the color of the sire.

Chester White hogs constitute the live stock at Shoreacres farm, which is not far from the Cunningham place. Three brood sows and a boar are all of the herd at the present time, since the spring pigs have been sold. One of the sows shows exceptional quality. The boar is a well-proportioned animal, sired by an Ed. Shoel boar.

Must Make Good.

At Stickney Brothers a herd of purebred and high grade Jerseys was displayed, the herd having been bred up for the last 15 years. "We see to it that each new cow makes good or we don't keep her," said Mr. Stickney. "We have our own testing outfit and we run the samples about four times each year."

Seven of the Guernsey heifers in the grade herd of D. F. Marrow were from their one bull and have been found to produce a greater quantity of milk than their dams. Mr. Marrow has been breeding up his herd for the last 10 years with a registered bull.

At the "Daybreak farm" a real treat awaited every one. The splendid herd of registered Guernseys were in the pasture and Mrs. Riggs told how several foundation herds had been started from individuals sold from the "Daybreak farm." Some very typy animals were shown in this herd and practically all have made good records on official test. Importer Ivey's Masterpiece, one of the herd bulls, has stamped his characteristic top line on all of his offspring. Two other bulls are kept on the farm, one of which is of Langwater strain.

The H. A. Simmons herd of La Center contained some of the foundation cows of the M. S. Cunningham herd, the first herd on the tour. There are a bunch of splendid cows in this herd and the bull is owned in partnership with one of the neighbors.

A Shorthorn herd was a variation from the dairy herds and even the dairymen on tour showed much interest in the N. C. Hall animals on pasture at Ridgefield. Of the entire 80 head there are 25 that are registered milking Shorthorns. Some of these heifers are from the Clay family, which is considered among the best in the breed. The herd sire, Villager Sam, a son of Imported Villager, is of the milking strain. Some of his heifers from grade Holstein cows show a predominence of the characteristics of their sire rather than their dam. Some of the best milkers in the herd will give as high as six gallons of milk which will test around 6 per cent, according to Mr. Hall.

The Second Day Out.

On the second day the B. M. Luck herd of high grade Guernseys was seen at the first stop at Woodland. For the last 15 years this herd has been built up by the use of purebred sires, the first two of which were Jerseys. Since that time there have been three different Guernsey bulls and the best producers kept from the herd, until now there are some of the classiest Guernseys that one could ask for from a grade herd. The present herd bull, Carview Reporter Boy, is from the Langwater and May Rose breeding, and tipped the scales at 2150 pounds early this spring.

Thirty head of the 50 Holsteins at the John Bogart herd, also near Woodland, are registered animals. Eleven are from the H. C. Davis herd at Yakima, while three were purchased from the Mills herd at Chehalis.

The C. A. Bradt Guernsey herd at Kalama included 13 purebred cows which traced back to May Rose breeding. The old herd bull is Western General Pershing, but the new herd sire comes from a cow that made fifth in her class on official test. He has 15 crosses to May Rose. The animal is owned in partnership by Mr. Bradt and P. E. Todd.

At Kelso the herd of grade Jerseys owned by T. D. Gungan were in their stanchions. There are 57 mature cows, all of which show exceptional uniformity in their udder development. The herd sire, Bluster's Chief, is a grandson of Chief Engineer and his dam made a record of 665 pounds of fat as a 2-year-old and 700 pounds as a 3-year-old. He has 20 heifers in the herd. **Mr. Gungan has been breeding up with registered sires for 15 years.**

There were 18 head of cows and calves on the C. S. Houpt farm, near Castle Rock, all grade Jerseys except one registered cow and the two herd bulls. The young bull, St. Mawes Lad, is from the Hewitt farm in Oregon. An older bull, sired by Rinda Lad of S. B., showed splendid type and form. Although the cows are high grades they are the first cross with a registered bull. One of the heifers has a production record of 44 pounds of fat, while her dam as a mature cow produced only 34 pounds. Similar comparisons were pointed out with others in the herd.

A Herd From One Sire.

The striking feature of the G. H. Huntington herd of grade Holsteins, near Castle Rock, was the fact that 24 cows in the herd are from the old herd sire. The present herd bull is a 2-year-old that comes from the Bessie stock and promises to make a good increase in the production of the entire herd.

The last herd of the second day was that of J. H. Quick, also of Castle Rock, where there were 11 head of the 25 that were purebred Jerseys. This herd was started with Shorthorns 20 years ago, but was built up with good sires. Four years ago Mr. Quick bought two registered heifers and a bull of the St. Mawes strain and has bred up his present purebred cows from them. A new herd sire has been secured, is a grandson of Sophia 19th and is from the St. Mawes breeding on the dam's side.

On the third day the tour began with the Carl Laakso herd of grade Jerseys at Winlock, Lewis county. Here there were 40 head of cows which were being cared for by the two boys, Archie and Ano. It was interesting to note that the former herd sire was slaughtered before his real value was ascertained by the production of the daughters.

Poultry Farm Included.

A flock of White Leghorns on the John Annonem farm at Winlock was next inspected. There were a total of 2800 birds in all the houses and an average of 60 per cent was given as the production throughout the year. Mr. Annonem is also keeping a pen of breeders and will raise his own chicks.

From Winlock the cars went to the Al Neuerts farm, in the St. Urban district, where Mr. Neuerts kept the two association bulls. There are 21 dairymen in the community who own an interest in Cothilde Chimacum Springs Farm King Korndyke, the senior herd sire. He is a 4-year-old and has plenty of quality. An assessment of $25 is levied against each member and a fee of $10 is charged for nonmembers for service. There were eight cows and five heifers shown at this farm from some of the near-by herds in the association.

There were over 100 people at the picnic lunch in Alexander park at Chehalis at noon. The Lewis County Pure Breeders' association had charge of the program and O. O. Phelps called on Governor Louis F. Hart and Dr. S. B. Nelson for brief talks. Others also spoke.

Another glimpse at beef animals came at the J. A. Scollard home, a short distance from town. Two of the Aberdeen Angus herd bulls were brought out, Erickaman, a 2-year-od, and Blackmead 2d, a yearling. Both of these bulls, as well as the cows, were blocky and compact, a decided contrast to the dairy animals which had been the center of interest at most of the other farms. Mr. Scollard has 92 animals in the herd. He will have a show herd on the circuit this fall.

The herd bull at the A. T. Flagg herd of Jerseys near Chehalis comes from St. Mawes breeding and has 11 proven sons, seven of which are in Lewis county. He also has eight purebred daughters with average of 450 pounds each. Mr. Flagg is doing some constructive breeding and has a splendid herd of purebreds.

Grade and purebred Guernseys were found at the H. R. and Carl Taylor farm. This herd is being improved by the use of Chicona Berium, a son of Langwater Traveler, the well-known Guernsey bull with three nearest dams that averaged 718 pounds of fat.

The last herd of the day was that of Anton Adolphsen, also near Chehalis. Here there were 19 head of registered Jerseys of the St. Mawes and Hood farm strains. The sire is the same as that used in the Flagg herd.

In Thurston County.

On entering Thurston county, a visit was made at the A. E. Lundeen herd of purebred and grade Jerseys. The result of using a good sire was there self-evident. One 3-year-old purebred produced 444 pounds of fat in eight months, a decided improvement over her dam. Mr. Lundeen has a typical herd and is doing some construction work by the use of the cow testing association.

There were 13 head of purebred Holsteins on the Ed Cross farm, and a young bull calf who has 12 leading 1000-pound sires listed on his pedigree. "The best way to put butterfat into a herd is to use the best sire obtainable," said Mr. Cross. John Hegloff, owner of the next farm, is doing all he can to raise the standard of his herd by the use of Sir Tacoma Pontiac Violet, a grandson of King of the Pontiacs.

At the M. W. Brewer herd one cow produced 60 pounds of milk daily, while her granddam produced only 24 pounds. Dave Ellison's farm, in Mason county, was visited during the next morning.

The Grays Harbor Herds.

Going next into Grays Harbor county, the caravan stopped at Ed. Cavett's Holstein farm the home of Sir Bessie Fobes Tritomia. This bull has two world record daughters. There were 13 purebreds on the W. E. Macomber farm. Here the herd sire, Captain Butterboy Pontiac, is rapidly improving the production of the herd. A herd of Guernseys of the Langwater breeding were seen at the J. E. Olson farm.

Sixteen Milking Shorthorns of the General Clay breeding constitute the only herd of its kind in the county. The owner, Frank Glenn, has been building up this herd for six years. Robert Polson of Montesano showed the crowd his fine herd of Poland China hogs. Robert is a member of the county pig club, and his hogs are a good example of the work the club is doing.

The Aberdeen Chamber of Commerce gave a banquet for 65 people and called on some of the local breeders as well as the extension men for short talks.

Better Than in Holland.

"I find the American-bred Holstin cows produce more butterfat than did the cows in Holland when I was there," remarked Jake Kooy, at whose place the tour stopped early Friday morning. Mr. Kooy's bred sire is Bessie Fobes Tritomia, that comes from good foundation stock. Fifty of the daughters from the R. Arlands herd of Montesano are still in the county and producing good records. A few of these cows were found at the John Pierce farm, the next stop.

Three Jersey herds completed the program for the morning, those of J. H. Taylor, Montesano; E. L. Brewer and J. R. Martin of Satsop. "Such herds as these are a credit to any community," said Mr. Magruder, extension specialist. The foundation stock of the Taylor herd were Golden Massey Pope 3d, Gertie's Lily and Maiden's Duke Girletta. The Brewer and Martin herds are well known to all Jersey breeders of western Washington, as they include some fine show animals and excellent producers.

(Continued on page sixteen.)

Will Market Nebraska Wheat

By an arrangement just made the wheat in the pool of the Nebraska Wheat Growers' association will be sold through the new sales establishment ust organidzed at Minneapolis by the Northwest Wheat Growers' Associated.

This is the first year of operation for the Nebraska association and while at does not become a full member of the Northwest Wheat Growers' Associated, the state officers express much satisfaction over the sales connection recently made by the selling agency.

The Minneapolis sales agency of the Northwest Frowers will apply immediately for membership in the Minneapolis chamber of commerce. The wheat growers plan to make use of the chamber market but will not deal in futures, according to George C. Jewett, manager of the organization. Under normal conditions the grower members in the five states of Oregon, Washington, Idaho, Montana and North Dakota will produce 40,000,000 bushels of wheat. Approximately one-half of this amount will flow through the sales agency at Minneapolis and the other half will go to the Pacific coast, according to a statement made by Mr. Jewett.

Fred Jeklin, former manager of the Seattle office of the Washington Wheat Growers' association and recently of the London office of the Northwest Wheat Growers' association, has been made manager of the Minneapolis office.

Application for $9,000,000 to $11,000,000 are before the war finance board for moving the 1922 wheat crop of Washington, Idaho, Montana and North Dakota, according to a statement from Managing Director Eugene Meyer of the finance corporation.

This application is in addition to any local arrangements with the banks in the states benefited, such as those of Spokane, Portland and Seattle, which make loans to growers' associations.

The war finance board is asked to provide the Washington Wheat Growers' association with $2,000,000; the Idaho Wheat Growers' association, $1,000,000; the Montana Wheat Growers' association, $3,000,000, and the North Dakota Wheat Growers' association, $3,000,000 to $5,000,000.

This is the first move in a large way to finance the movement of the 1922 crop through the cooperative marketing agency. Funds are helpful at this period, when wheat is being hauled to the warehouses.

Defective Spark Arrester

One of the most frequent causes in fires in standing grain and grain that has been threshed by stationary outfits is the spark from the threshing engine. Investigation shows that in most all cases of fires from this cause a defective spark arrester is found or one that the wire mesh was not fine enough to break or hold the large clinkers. Be sure to make a careful examination of your engine stacks.

THE WASHINGTON FARMER

VOL. XLVII. NO. 6.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.
SEATTLE, WASH., Office, 617 Central Bldg.
To either of which communications can be sent, but to avoid delay address office nearest you.

C. A. Cour, Fullerton building ..... St. Louis
R. R. Ring, Palace building ..... Minneapolis

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Scientific Tariff Grows in Favor

The Associated Press reports that as the fight over tariff rates goes forward in the senate, sentiment in support of a scientific tariff continues to increase. Senator Frelinghuysen of New Jersey, an intimate friend of President Harding, has introduced a bill of that character. Senator Poindexter has declared his support of the principle, and now the Associated Press reports that Senator Keyes of New Hampshire and Senator Willis of Ohio, both republicans, announced their support of this reform in statements issued recently to the American Nonpartisan Scientific Tariff league.

This reform is needed, and once the public has attained it, will not be readily relinquished. It proposes to create a nonpartisan tariff commission that will be entrusted with administrative details of tariff rate making, substantially as the interstate commerce commission is empowered to make freight rates. In freight rate making, congress lays down the broad general policy of government regulation and the commission works out the details. It would be the same way with a scientific tariff law.

The benefits of the proposed reform would be two-fold. It would relieve congress of the almost impossible task of framing new tariff schedules, and it would impart flexibility to the tariff and timely adjustment of rates to changing conditions in world industry and markets.

It is true, as Senator Poindexter has pointed out, that the tariff question can not be permanently taken out of politics. The American people, through their congress, in the future as in the past, must decide whether they want a protective tariff or free trade, a tariff for revenue only, or a tariff on the principle of reciprocity; but when congress has declared a public policy and the president has approved its action, there should be in continuous session a body of experts, nonpartisan in composition, to apply the adopted policy and principle on a scientific basis.

Shortcuts to Economy

Frank Shipman, poultryman, uses discarded fish nets instead of wire netting and sphagnum moss for litter—by which you might know, if you were familiar with the locality, that he lives at Chinook, Wash., down on "the Peninsula," where such things are handy and cheap.

It's the ability to take advantage of just such short-cuts to economy and efficiency that often spells financial success for the poultryman, according to W. D. Buchanan, poultry extension specialist at the state college, who ought to know because he has tried it and succeeded. Shipman is caring for about 100 hens and is marketing about 2000 eggs each month—he sold 2200 the month before the Pacific county poultry excursionists called at the ranch, late in May.

Assistant Secretary Pugsley's Visit to the Pacific Coast

It was the privilege of the editor of The Washington Farmer to accompany C. W. Pugsley, assistant secretary of agriculture, on an automobile trip from Spokane to Pullman and return.

Mr. Pugsley is making a nation-wide tour in which he is interviewing the presidents and the extension department deans of agricultural colleges, as well as county agents, throughout the different states.

Mr. Pugsley gives one the impression of being a thoroughly western man of breadth and courage—two qualities which serve him in good stead in his work as assistant secretary of agriculture, especially during the present period of reorganization undertaken by Secretary Henry C. Wallace. The assistant secretary has had wide experience in agricultural thought and practice.

Born on an Iowa farm, he graduated from the University of Nebraska in 1906, and spent two more years on the home farm. He became an assistant professor of animal husbandry in the Nebraska university, then one of the heads of the department of agronomy and farm management, which was followed by professor of farm management.

He then returned to the University of Nebraska, where he became assistant professor of animal husbandry, professor of agronomy and farm management and director of agricultural extension, as well as state leader in demonstration, and boys' and girls' work. He was U. S. delegate to the International Institute of Agriculture at Rome in 1913, Nebraska member of the American commission for investigation of agricultural credit in marketing systems in Europe, a director of the National Farm association, chairman of the standing committee of extension work of the American Association of Agricultural Colleges and Experiment Stations, and later editor of the Nebraska Farmer.

This is Mr. Pugsley's first visit to the Pacific coast and he expressed warm appreciation of the progress made in agriculture in the new northwest.

The secretary, Henry C. Wallace, having a lifelong experience in farm paper business, with Assistant Secretary Pugsley going to the department of agriculture from the editor's chair of the Nebraska Farmer, and following Secretary Edwin T. Meredith with a remarkable success as an agricultural publisher, we have substantial ground to expect that the important knowledge along various farm lines stored in the U. S. department of agriculture will get out to the people in good, readable style. In fact, a nose for what the farm people want to read already is in evidence in the matter sent out by the press office of the department.

LOOKING INTO OTHER FARM FIELDS

A slump of 37,735,000 bushels in the total wheat yield of Belgium, Spain, Greece, Hungary and Poland was predicted to the department of agriculture by radiogram from the International Institute of Agriculture at Rome. The total yield for 1922 is estimated at 264,148,000 bushels, compared with 301,883,000 bushels last season.

* * *

A new element appears to have entered the milk field in Wisconsin. Condenseries are reported as being in the market again, and with prices which may attract milk now going to cheese factories. Furthermore, several brick cheese factories have closed on account of the milk supply having been taken away for shipping purposes.

* * *

What is stated to be a record shipment in dairy produce for Montreal left one day during last week when a single vessel carried away a cargo consisting of 55,354 packages of butter, of which 46,394 packages were shipped by Montreal exporters and 8960 packages by western houses. The total weight of the cargo was approximately 3,600,000 pounds and the value is estimated at about $1,150,000. A representative of the Saskatchewan Cooperative Creameries has just returned from Europe after having made arrangements to export the bulk of the company's butter from Regina to Great Britain direct and it is expected that between 25 and 30 carloads will leave Regina for the British isles this year. Four cars are already on their way to the Atlantic coast.

State Farm News

The fifth annual meeting of the Northwest Association of Horticulturists, Entomologists and Plant Pathologists closed at Yakima with the election of the following officers for the coming year: A. L. Lovett, entomologist, Oregon Agricultural college, president; D. F. Fisher, United States plant pathologist at Wenatchee, vice president, and C. C. Vincent, horticultural department, University of Idaho, secretary-treasurer. About 100 agricultural scientists from Washington, Idaho, Oregon, Montana and British Columbia attended the session. The next annual meeting is scheduled to be held in southern Idaho, the city to be selected later.

* * *

Farmers of the Tieton district in the Yakima valley are organizing a farm loan association, of which W. F. Hoyer is named chairman.

* * *

An enthusiastic meeting of farmers was held in Skamania county, Washington, at the home of Frank John, Stevenson, recently. The meeting was representative of berry growers and poultrymen. The necessity for organizing an association to boost the county berry growers, and to make plans for marketing their product, was discussed. A committee was appointed to formulate resolutions to complete an organization along the lines discussed and a date set for future meetings. The committee consisted of C. D. Walker, W. H. Grey and I. D. Brown, Mr. Grey to act as secretary pro tem.

* * *

Kittitas county poultrymen have organized and signed up 18,000 hens in the Washington Cooperative Egg and Poultry association, according to A. S. Brown, district manager of the association, whose headquarters are in Yakima.

* * *

The first solid carload of the 1922 apple crop was shipped from the Wenatchee Products company. It was billed to Minot, N. D., and consisted of Yellow Transparents, Duchess and Astrachans. It is unusual to begin shipments this early in the season in carload lots, although many summer apples are shipped in less than car lots at this time of year. The crop of early apples is said to be unusually large, as every tree seems to be loaded to capacity.

* * *

J. Harkema, a rancher, residing four miles west of Prosser, has shipped a ton of choice watermelons, part of them going to Seattle and part to Spokane.

* * *

Poultry and live stock and products of the soil will be shown in profusion at the Skagit fair this year and industrial exhibits promise to be more attractive than usual. Premium books are being distributed and show a greater variety of classifications and more attractive awards than in former years.

* * *

The storage capacity of the plant of the Washington Growers' Packing corporation at Vancouver will be doubled this year at a cost of about $8000.

* * *

Rebuilding the barns and the show pens at the Walla Walla fairgrounds, recently destroyed by fire, will be started immediately, it was announced by officers of the association. The fire will not be permitted to affect the fair next fall. The loss is estimated at about $15,000. Of this $10,000 will cover the stables, $2500 the two trotting horses burned and $2500 the hay, harness, racing equipment, etc.

* * *

The acreage of Spokane county seed potatoes will be nearly doubled this year, according to County Agent Virgil Patton. The big demand for Spokane county seed potatoes comes from the Yakima section.

* * *

Frank C. Nielson has succeeded P. S. Darlington as horticultural inspector at Wenatchee. Mr. Nielson has spent 20 years in the Wenatchee valley engaged in various employments connected with the growing of apples. He planted all of the Clark orchards west of the town, and had much to do with the Monitor orchards. Mr. Nielson for a number of years successfully operated his own orchards and in 1918 went to work for Mr. Darlington as deputy and continued in that capacity until his promotion.

* * *

F. C. Forrest, cashier of the First National bank of Pullman is the new chairman of the agricultural committee of the Washington Bankers' association.

* * *

C. Nyberg of Pacific, Wash., has a cow 3 1-2 years old that has had four calves inside of a year—two July 14, 1921, and two July 8, 1922. The cow was milked right along.

* * *

Grandview this year will try shipping out precooled cantaloupes, which is something new. Three-fourths of the cantaloupe tonnage, which will be from 200 to 300 cars, will be precooled and held under refrigeration for 36 to 48 hours at 33 degrees after harvest before shipment is made. The cantaloupes will then go out under ice.

* * *

The shipping of cherries is practically concluded in the Yakima valley. The total output is about 100 cars. Practically all the cherries grown are on trees along the roads and along property lines. Solid cherry orchards are very rare in the valley.

* * *

Ten and 15 tons of silage is a good production from one acre of ground even in the case of oats and peas, but Lee Lewis of Woodland tells one that seems to be the record.

"I could hardly believe it myself," said Mr. Lewis, "but I actually cut enough from one acre and a half of dike land to fill the silo, which is 10x30 feet. The crop was wheat and vetch and was seeded in October. It stood higher than my head and had to be forked back by hand before the next swath could be cut.

* * *

"We have had good results with vetch and oats for a hay crop and find that it is good for the soil as well as for the cows," remarked K. Jenny of the Sifton district, near Vancouver, Wash. "In most cases the hay crops are seeded in the fall in order to have the hay mature before the dry weather comes on. Spring wheat usually gives a smaller yield to the acre than the winter crops.

"Corn makes a fine silage crop, but we can not always depend on it. One year we tried oats alone and it would have done well except for the ensilage at the side which was affected by the newness of the silo. We feel, however, that oats and vetch or wheat and vetch make the best silage crops.

FARM BUSINESS AND MARKETS OUTLOOK

The trend of business and industrial affairs hinges on the outcome of present labor difficulties.

Recent observations indicate a larger range crop of beef than has been generally expected.

Railroads are only accepting hog shipments to eastern markets at the shipper's risk, so that eastern buying has been small, resulting in the sharpest drop in months.

Passage of the 33 cent per pound clean duty on wool in the senate has given the wool market a firmer tone.

The long expected export buying of wheat has started with sales at Chicago, New York and via the Gulf, totaling approximately 16,000,000 bushels.

Estimates upon the final yield now range around 825,000,000 bushels as there has been some improvement in spring wheat in the last month.

Primary receipts of corn last week were approximately 5,500,000 bushels compared with a ten-year average for that week of 3,800,000.

Egg prices dropped to the lowest level in six years last week.

The Business Outlook

The rail and coal strikes thus far have put 1,000,000 or more men out of work, caused a coal shortage which is curtailing operations of some of the big coal using industries and an advance in price to all consumers, increased the time of freight in transit—particularly important in the case of perishables, resulted in embargoes on certain lines and made a serious car shortage in the fall a practical certainty.

The government has taken a hand in both strikes through offering aid to mine operators who wish to reopen and through the declaration of a national emergency in transportation and issuance of priority orders on the part of interstate commerce commission. The latter, fortunately, place the important farm products in the preferred list. Government officials are active also in efforts to get the disputing parties to confer together, and some sort of settlement under which the strikers will go back to work may be reached at any time.

The trend of business and industrial affairs hinges on the outcome of those labor difficulties. Indications are numerous that if a satisfactory settlement is reached soon further expansion will take place, although there may be some changes in those industries taking the lead. The auto industry, which has been booming, reports a seasonal slump in orders and a dozen companies have announced price cuts within the last month. Building operations are falling off and the iron and steel mills are not so rushed as they were. As the pace slackens in these industries which have been taking the lead, others which have been lagging are expected to increase activity.

Financial conditions are highly favorable for a period of prosperity, as time money in the east is down to 3 3-4 per cent, the best commercial paper is quoted at 4 per cent and bankers' acceptances have been quoted as low as 3 per cent. Nor is the crop moving season expected to tighten the money market materially. The Federal Reserve ratio is at the highest since May, 1917, and Great Britain is adding to our gold supply through shipments sent to pay interest on her debt to our government.

All issues of Liberty bonds have been sold at the highest prices known and students of the bond market expect them to advance still further before fully discounting the era of low interest rates believed to be before us.

While the strike situation is a heavy drag on the domestic affairs, its effects are not necessarily lasting. The foreign muddle is not so easily or quickly remedied. Inflation in Germany continues and marks have reached a new low of 11 7-8 cents per hundred or about one two-hundredths of their par value. Drastic measures will be necessary to prevent a collapse in that country which would drag Austria and Bulgaria along. Italy also is weak financially and the budget of the French government is far from balancing.

Western Range Cattle Start

An advance guard of several hundred head of western range cattle, mostly in feeder flesh, arrived at Chicago in the last 10 days, so that the run appears to be starting according to the usual schedule. Recent observations also indicate a larger range crop of beef than has been generally expected.

Few choice or prime steers are left in the corn belt and prices on such have held firmly with an $11 top due at Chicago as soon as the right kind arrives. Yearlings are at a discount of 25 cents. With grassers and short-feds coming from all sections and eastern dressed beef markets receding, values on common, medium and good steers have continued to sag. Some of the intermediate sorts are as much as $1 lower than a month ago and it is probable that the decline has not ended. Most of the grass steers are bringing $8 to $8.75 at Chicago with a few going to killers as low as $6.50. Steers fed a generous corn ration on grass are cashing mostly at $9 to $9.75.

Feeder buyers are holding back expecting lower prices later on and more certain transportation conditions. With grass steers available, the selection is much better than a month go. Stocker and feeder cost this fall promises to average $1 or more higher than last year. Cattle prices in western Canada are extremely low, so that the duty of 30 per cent has failed to stop shipments. Chicago received several carloads on the feeder order last week and more are expected.

Unusual Conditions in Hog Trade

Receipts of hogs at 11 markets last week were 525,000 head, the largest for this season in at least 18 years, which is as far back as the records are available. The ten-year average for the corresponding week is 431,000 head.

Railroads are only accepting shipments to eastern markets at shipper's risk, so that eastern buying has been small. The result was the sharpest drop in months, put part of the loss has been recovered in the last few days, as the wide spread between eastern markets and Chicago stimulated the shipping demand and receipts have decreased.

Consumptive demand for fresh pork has declined, probably due to strike conditions, but the season during which both domestic and foreign distribution of cured hog meats and lard is at its best is near at hand and the foreign outlet has widened steadily for two weeks.

If hog receipts continue to run as large as they have been prices will not advance, but there is still time for the late summer bare spot and a smart upturn in values.

Trend in Lambs, Uncertain

Lamb prices dropped to the lowest level in a month last week, but recovered partly later in spite of a lower dressed lamb market. Eastern shipping orders were curtailed by the rail strike, while receipts were slightly above the average for the corresponding week. Since range lambs are playing a dominant role receipts are not dependable under present transportation conditions and the trend of prices is uncertain. Feeder lamb prices declined, but the movement countryward is too large and the price level too high for a healthy situation.

Receipts of horses at public stockyards in June were only 16,000 head, compared with a seven-year average for that month of 58,000 head. July is not doing much better. A few head of choice drafters sold near $300 at Chicago, but the bulk of the 1350 to 1500 pound chunks changed hands at $115 to $165.

Senate Vote Helps Wool Market

Passage of the 33 cent per pound clean duty on wool in the senate has given the wool market a firmer tone. Only small quantities are changing hands at present, as mills are fairly well supplied and are waiting the outcome of sales of cloth and of tariff legislation. Buying from the American Woolen company has been leisurely, but the output of nine of its mills has been sold. Woolens are in better demand than worsteds.

Stocks of wool in bond have increased heavily in the last six months and are much larger than the quantity imported in that time, as wool is being held to enter after the permanent tariff bill has been passed. A shortage of merino wools exists abroad and the committee which has had the disposal of the wartime accumulations of Australia and New Zealand in charge has reduced its holdings of crossbreds by 40 per cent. Since world consumption seems to be outrunning production, a shortage of the lower grades of wool is expected to develop eventually.

Buy 16,000,000 Bushels Wheat

The long expected export buying of wheat started last week with sales at Chicago, New York and via the Gulf totaling approximately 16,000,000 bushels. Fear of a rail tieup probably was a stimulating factor. Part of the buying was to fill old sales for early August shipment so that the amount of new business is unknown.

The rail strike has not affected the movement seriously, as primary receipts for the last week in July were 16,032,000 bushels, which is 40 per cent above the ten-year average for the corresponding week. The first week in August marks the high point in receipts as a rule. Car shortage reports are becoming more and more numerous and are apt to be a factor later.

Estimates upon the final yield now range around 825,000,000 bushels, as there has been some improvement in spring wheat in the last month. The Canadian crop is estimated unofficially at around 345,000,000 bushels, compared with 301,000,000 bushels last year. Canada's record crop in 1915 was 393,543,000 bushels. Based on present crop prospects and home consumption of about 825,000,000 bushels in the last twelve months, the United States and Canada together should be able to export approximately 500,000,000 bushels this year. This would provide about 2,000,000 bushels daily for the next eight months which is equal to the estimated daily import requirements of the wheat deficiency countries and possibly more than they can pay for. After that time southern hemisphere wheat will become available.

European crop yields are running below those of last year and an increase of 100,000,000 bushels in their import requirements over last year. At the same time conditions continue favorable not only in the United States and Canada, but in the other exporting countries of Argentina, Australia and India. Broomhall estimates surpluses in exporting countries in the next 12 months at 680,000,000 bushels and "effective demand" from importers at 656,000,000 to 672,000,000 bushels. Surpluses and import needs appear to be closely matched, but buyers are not aggressive and, for the time being, the trend of prices is apt to be in their favor.

Corn, Oats and Rye

Corn prices have been maintained, but not advanced, by huge sales for export in the last two weeks. Domestic consumers also have been buying freely. The prospect of another 3,000,000,000-bushel crop as shown by unofficial estimates was noticeable in the December delivery at Chicago which has declined about 10 cents a bushel from the high point of the season. Primary receipts last week were approximately 5,500,000 bushels, compared with a ten-year average for that week of 3,800,000 bushels. The visible supply at terminals is close to the largest on record for this season, but is decreasing rather rapidly.

Oats prices are low enough to have discounted most of the bearish conditions which include the large visible supply, the slow demand and the start of the new crop to market. Early threshing returns indicate a larger yield than expected earlier in the season, but unofficial estimates still point to a crop below the average in size. Canada has a big crop, but light crops in Europe may increase the export outlet this year.

Rye Surplus Is Big

Besides the large rye crop in the United States, Canada has a record crop and the prospective export surplus from North America promises to be the largest ever known. Prices remain at more than the average discount below wheat with further declines not unlikely. Germany is unable to buy freely, with marks near the zero point in value.

$11 for New Clover Seed

No official forecast of the clover seed crop has been made as yet, but the condition of clover is reported at about 10 per cent better on the ten-year average and the acreage is fairly large. The price of cash prime red clover at Toledo holds close to $13 a bushel, while $11 is offered for seed from the new crop to be delivered in October.

The range of cash grain prices for the week ending August 2 was as follows:

CHICAGO—Wheat—No. 2 red, $1.05@1.09 1-4; No. 3, $1.04 1-4@1.07 1-4; No. 2 hard, $1.06 1-2@1.11; No. 3, $1.05 1-2@1.09; No. 4, $1.06@1.08 1-2.

Corn—No. 2 mixed, 62 1-2@63 1-2c; No. 3, 62 1-4@63 1-4c; No. 4, 61 1-4@62 3-4c; No. 2 yellow, 63 1-4@64c; No. 3, 62 1-2@63 3-4c; No. 2 white, 62 1-4@64c; No. 3, 62@63c; No. 4, 61 1-4@62 1-4c.

Oats—No. 2 white, 34@39 1-2c; No. 3, 32 1-4@36 3-4c; No. 4, 32@35 1-4c.

Rye—74@76 7-8c.

Barley—55@62c.

Weak Spot in Feed Markets

After a fortnight of firmness the feed market has weakened and lost most of the recent gains. Demand for mill feeds is less urgent and flour mills are operating more extensively. Cottonseed meal has slumped sharply under heavy offerings of new crop meal at a big discount. Hominy feed is at the highest level of the year.

Prices per ton (100 pound bags) in carlots:

CHICAGO—Bran, $17; standard middlings, $20.50; flour middlings, $26; cottonseed meal, 36 per cent, $43; 43 per cent, $47; hominy feed, $26; gluten feed, $29.85; old process oil meal, $46.30; tankage, $55.

Hay Supply Increasing

Nearly all the old hay crop has been sold leaving an unusually light carryover. Receipts of new hay at markets near the producing sections are increasing and prices are slightly easier although the rail strike has stimulated buying. The market may sag a little lower.

Prices per ton in carlots: Chicago—No. 1 timothy, $18@20; No. 2, $15@17; No. 1 clover mixed, $14@16; upland prairie, $14@18; midland prairie, $12@16; rye straw, $12@13; oat and wheat straw, $8.50@10.50.

Butter, Eggs and Cheese

Egg prices dropped to the lowest level in six years last week. Weather favors maintenance of heavy production both here and in Canada. Receipts are dropping off rather steadily, but remain above the average for this season and storage holdings are still increasing. The increase in storage holdings at the four leading markets alone during July has been enough to make a total of 10,000,000 cases for the entire country on August 1, or 28 per cent higher than ever before known. The present price level for fresh eggs appears to have discounted these conditions, however, and an upward, rather than a downward, trend in fresh eggs is to be expected.

Lower prices for butter attracted extensive buying by storage operators last week and caused a sharp upturn in the market, but the tone remains unsettled. Receipts have decreased steadily for six weeks, but the total is above the average at this season and there is a large surplus if operators desire to store it. Domestic consumption of butter shows a big increase over last year

Styles of American Cheese

The styles or shape in which American cheddar cheese is made are known commercially as Cheddars, Flats, Daisies, Young Americas, Longhorns and Square Prints. They differ not only in shape, but in size and weight and in the number packed in a box when sold. The standards for each style are as follows:

"Cheddars" are 14 1-2 inches in diameter and 12 inches high, weigh 65 to 66 pounds and are packed one in a box.

"Flats" are 14 1-2 inches in diameter and 5 1-2 inches high, and weigh 30 to 33 pounds. They may be packed one in a box, known as "singles," or two in a box, called "twins."

"Daisies" are 13 1-2 inches in diameter and 4 inches high and weigh 20 to 22 pounds. They may be packed one, two or three in a box known as "singles," "doubles" or "triples."

"Young Americas" are 7 inches in diameter and 7 inches high and weigh about 11 pounds, and are packed four in a box.

"Longhorns" are 6 inches in diameter and 12 inches high, weigh about 12 1-2 pounds each and are packed four in a box.

"Squares," as the name implies, are not round, but are 7 inches by 14 inches by 3 inches and weigh approximately 10 pounds each. They are generally packed two in a box.

Home Economists Meet

Delegates From 33 States and Canada Present

"All boys eat. In fact, most of them like to eat. So we used that as a starting point for our first unit, foods," said Mary Ruth Fisher in her talk on "Home Economics for Boys."

The 15th annual convention of the American Home Economics association held its sessions at the Oregon Agricultural college, Corvallis, last week.

Delegates from 33 states and Canada made up one of the largest national conventions of the times, including some 500 members. Students and alumni throughout the northwest were in attendance, staying at halls and sorority houses in order that they might get in closer touch with leaders of home economics.

The accomplishments of the association were told by Miss Mary Sweeny, president, in her address of welcome to the delegates.

Twenty-four states have affiliated with the national organization and more have expressed their intentions of doing so, according to the president. She stressed the need for getting in closer touch with the housewife and a better understanding of the homes.

"The greatest value of the home management course is that it raises standards, and helps the student to find herself and round her own development," declared A. Grace Johnson, professor of household administration at Oregon Agricultural college. "When the student completes the home management course, she should be expert in budgeting her time, her finances, and her energy."

The fundamental diet of the human race, breast milk, was emphasized by Dr. C. Ulysses Moore of Portland, specialist on children, in his appearance before the foods and nutritional section of the national home economics conclave.

He compared infantile death rates on different foods, showed the effects of breast feeding upon mother and child and outlined the method of securing breast milk and teaching the technic so that every child can be breast fed for nine months. Chemical and nonchemical constituents of an adequate diet were outlined and babyhood named as the age at which diet is the foundation for longevity, health and usefulness. Dr. Moore is considered an authority on children and diseases of children.

National councillors in attendance at the meeting are:

Mary E. Sweeney, president of the association, Michigan agricultural college; Lenna F. Cooper, Battle Creek sanitarium, Battle Creek, Mich.; Jenny H. Snow, supervisor household arts, Chicago; Grace Denny, University of Washington; Maude Murchie, state supervisor, teacher training courses in home economics, Sacramento; Alice F. Blood, Simmons college, Boston; Anna Richardson, federal board for vocational education, Washington; Ava B. Milam, dean of the school of home economics, Oregon agricultural college; Isabel Beiver, University of Illinois; C. F. Langworthy, United States department of agriculture, Washington, D. C.; Jessie White, acre, Utah agricultural college; Effie I. Raitt, University of Washington; Kate Bear, University of Arizona; Ruth Bickey, California; Miss Frances Swain, Chicago normal college, Chicago; Frances Kelly, Minnesota; Agnes Kewley, Utah agricultural college; Mrs. Myrtle G. Cole, North Dakota agricultural college; Gladys Brannegan, council to west central region.

Asotin's Harvest

Wheat Crop Better Than Expected

Harvest in Asotin county is proving an agreeable surprise, for wheat is yielding better than was expected when harvest began. Yields ranging from 16 to 36 bushels per acre are being reported and the general average is considerably above what was estimated before threshing began. On Anatone flats and in Cloverland the grain is turning out better than was expected

Ray Tuttle got 23 bushels per acre from one field and 18 bushels per acre from another and the quality is good. C. W. Steen got better than 25 bushels per acre from both Turkey Red and Hybrid, and the former tested 61 and the latter 60 pounds per bushel. T. W. Davis of Cloverland had a yield of 25 bushels. Frank Johnson of Cloverland had an average of 30 bushels for his crop, and one yield of 35 bushels in Cloverland was reported, but the name of the farmer who raised it was not obtained. J. W. Hollenback had a little better than 20 bushels per acre from his Turkey Red. H. D. Benedict got 21 bushels per acre and H. L. McMillan's crop averaged between 18 and 20 bushels. L. Morrow's farm in the Cloverland district had an average of 20 bushels for both Kanred and Turkey Red. D. Bolick had an average of 22 bushels. Frank Cliff had an average of 25 bushels per acre for his entire crop.

SEED POTATO DEMONSTRATIONS.

County Agent H. J. Plumb of Stevens county and Professor M. D. Armstrong, assistant horticultural specialist of Washinigton State college, are holding a series of meetings for demonstration of seed potato growing. Those yet to be held are:

August 10, Petts farm, 9 a. m.; community picnic. August 11, Olaf Rose farm, Marble valley, 9 a. m.; A. E. Skidmore farm, Orin, 2 p. m. August 12, J. M. Sholund farm, Narcisse, 9 a. m. August 14, M. G. Reber farm, Bossburg, 9 a. m.; C. H. Dotts farm, Flat creek, 2 p. m. August 15, John H. Kruse farm, Kelly Hill, 9 a. m. August 16, Rube Lont farm, Arzina, 8 a. m.; G. Jamison farm, Rice, 10:30 a. m.; W. A. Park farm, Daisy, 2:30 p. m.

SCHEDULE BEE DEMONSTRATIONS.

B. A. Slocum, bee specialist of the Washington State college extension service, will be in Yakima county August 12 to 14 to demonstrate methods of handling bees and cooperate with the beekeepers' association for better production. Arrangements are being made for holding four demonstrations at Parker, Toppenish, Wapato and Sunnyside respectively. The first two will probably be held on August 12 and the latter two on August 14.

The Thirty-Ten Bill

Will Be On the Ballot in November

Official announcement has been made by the secretary of state that the initiative petition for the 30-10 school tax bill has been found to contain 44,667 valid signatures, about 5000 more than necessary to insure the validity of the ballot in November. The measure provides that $30 shall be raised by state taxation for each school child in the state, $10 by county taxation for each child, and not to exceed a 17-mill levy voted in the local district. The measure is being sponsored by the state parent-teachers' association, representatives of which circulated the petitions. It is being strongly opposed by tax-reduction organizations.

At its meeting in Seattle recently the State Federation of Taxpayers' league voted unanimously against the measure and drew up the following 10 points in opposition to the measure:

1. That it is misnamed, being called an equalization measure, whereas it does not equalize the defects in the present school taxation system.
2. That it is unnecessary, inasmuch as no educational emergency exists at this time, and the school system of the state is one of the best, most costly and most efficient in the United States.
3. That it would not succeed in its professed purposes of giving relief to needy school communities, as only approximately 500 of the state's school districts need financial assistance, while 2100 do not.
4. That it would result in extravagance, and would be an extravagant measure.
5. That it would increase taxation by $3,750,000, while professing to reduce the taxes of local districts by a probable reduction in levies of such districts.
6. That it is based on a deception, professing equality for school children and justice for taxpayers, but giving neither.
7. That it would change the method of distribution of school tax funds from the pupil-attendance basis to a dual basis, depending on teacher and pupils.
8. That it would arrest the consolidation of country school districts.
9. That its effect would be to increase the funds available for teachers' salaries in rural districts, inasmuch as 65 per cent of the $3,750,000 additional funds raised would be utilized for teachers' salaries.
10. That passage of the measure would make continuance of the poll tax inevitable, to raise the additional $3,750,000.

These points were drafted by a committee consisting of Dr. S. B. L. Penrose, president of Whitman college and representative of the Walla Walla Taxpayers' league; E. D. Cowen of Tacoma, Pierce County Tax association; Jay Thomas, Seattle, of the Lower Cost of Government league; L. M. Livengood, secretary of the Taxpayers' Economy League of Spokane; Reuben W. Jones, secretary of the Seattle school board, and J. T. S. Lyle, Tacoma, president of the State Federation of Taxpayers' Leagues.

BIG LIVE STOCK SHOW PROMISED.

Southwest Washington fair officials report that there will be fully 350 head of stock on display in the live stock department this year when the fair opens at Chehalis-Centralia. One hundred four horses have been entered in the harness races and arrangements have been made for holding a horse show. Another new feature will be auto polo, substituting for the automobile races.

Everywhere, the Hupmobile makes the same name for itself—a name for saving, earning service.

Give it gas and oil and water. It asks little if any more from one year's end to the other.

Give it even ordinary care, and it goes on and on, always ready and willing to work.

Quick trips to town and back with supplies, around the farm with tools and whatnot, to church and the neighbor's on Sunday.

And along with it all, the certainty of continuous low costs, and hardly a speaking acquaintance with the repair shop.

Why should a farmer accept less in his motor car, when he can get so much, at such low cost, from the Hupmobile?

Women Like the Hupmobile Because of its Beauty and Driving Ease

Gravity System
Of Supplying Farm With Water

By L. J. SMITH, Head Department of Agricultural Engineering, Washington State College.

I am putting in a gravity water system. My well is 270 feet from where I must put my cistern. I want to run two pipes, one an inch pipe to carry water to the cistern, the other a three-quarter inch pipe to carry it back. My power for pumping is a windmill and my idea of using two pipes was to get away from pumping against the pressure of the water in the cistern. However, some who should know tell me it is only the height I raise the water that counts and if I run my upward pipe in at the bottom and curve up to top to empty there, I gain nothing. Would like to know also how to filter this water. I will use a check valve at the pump connection to keep water from coming back. The cistern is eight feet in diameter and nine feet deep.
Potlatch, Idaho. C. V. B.

There is no reason why you should go to the expense of putting in two pipes from your pump to your gravity tank. I would install a one-inch pipe between the pump and the tank which should be sufficient in size for the requirements of the average farm. It would take as much power for you to pump into the tank by means of one pipe and draw the water off by means of another as it would to use the single pipe, which latter, of course, is cheaper.

I would plan on running the pipe into the bottom of the cistern and to slope the bottom so that you can entirely drain out the cistern through the pipe. By this arrangement, if you keep the top of the tank tightly closed you can empty out the cistern four or five times a year and it likely would not be necessary for you to get into the cistern for years.

When you come to the point where you start digging deep to get the pipe under the bottom of the cistern, the easiest method for the last few rods would be to use an auger and bore a hole for the pipe. This would be considerably cheaper than digging so deep a ditch. Be sure that the pipe slopes continuously toward the pump in order that all the sediment may be removed upon draining.

I note your inquiry in regard to filtering the water. Unless you have reason to doubt the purity of your water supply, there is no necessity for installing a filter. It is not possible to filter water and remove bacteria except by a filter which requires at least 25 or 30 pounds pressure to force the water through the same. Such a filter would require removal about once a week for cleaning purposes and sterilizing, so you see that the filteration of water for bacteria is quite a complicated process and I would not attempt it except where absolutely necessary.

If you still think you should purify your water, kindly write me again and I will give you more complete details.

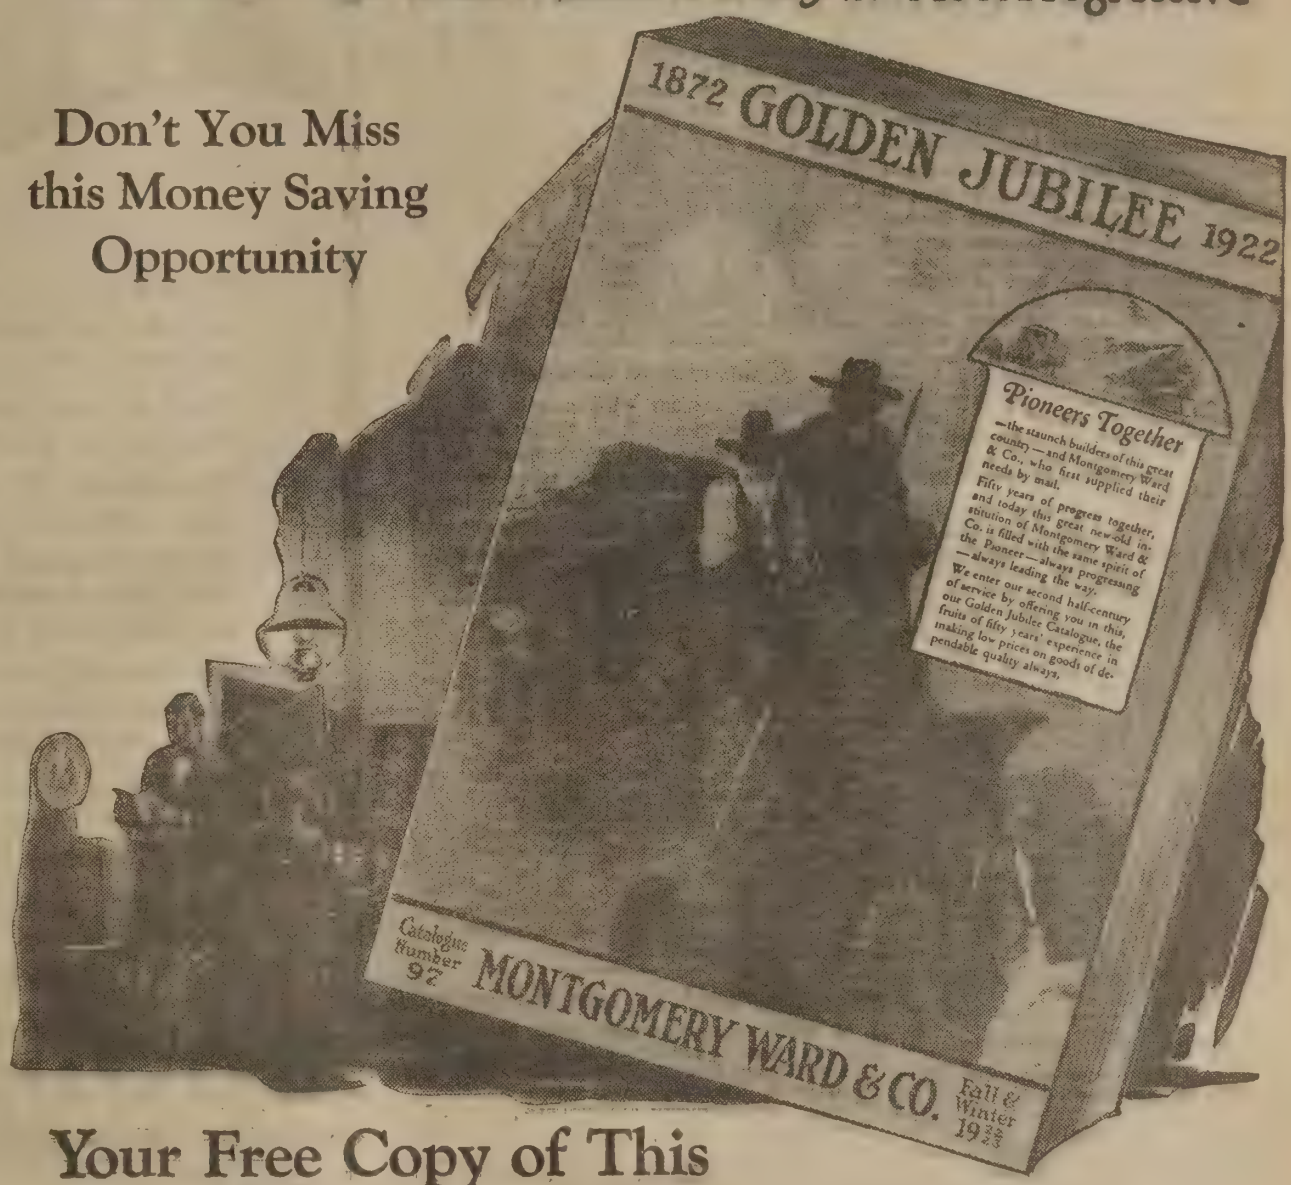
Hydraulic Rams
Farmer Has Good Luck With Two

Otto Tramm of Enumclaw, King county, Washington, has had exceptionally good luck with two hydraulic rams on his place two miles from town. They have been running for the last nine years, and the first repair work was done on them this winter.

In order to get a supply of drinking water it was necessary to go up the creek about 1000 feet, and erect a flume which carried the water to a small supply tank near the barnyard. This gave a five-foot fall, while the ram lifts the water 40 feet to the tank near the Tramm farm house. Since the supply was plenty large for the household they are supplying two of the neighbors with drinking water.

At the time the ram was installed Mr. Tramm went to a neighbor telling him of his plans to furnish a water supply for his home. The neighbor agreed to furnish half of the material for the flume and do half of the work of putting it up if he could have the privilege of using this supply to run a ram of his own, which would carry the water to his house near by. The plan was carried out and has worked very successfully. In spite of the fact that the rams themselves are not protected by fence or enclosure of any kind there has been but little trouble with the farm animals interfering with the rams or the supply.

Mr. Tramm felt that he could have secured a greater pressure by placing the main tank at a higher level, but if he had done so the ram would not throw as much water. With the 40-foot tank he has been able to supply all needs about the house and has not felt justified in making any change.



WAR FINANCE CORPORATION LOANS.

The War Finance Corporation announces a total of $748,706 of loans to country banks in Washington and Idaho. Of this amount over $86,000 has been repaid. The largest amount advanced to a single organization in the two states is that granted to the Okanogan County Live Stock association. Twelve loans were made, amounting to $156,915.

Don't You Miss this Money Saving Opportunity

Your Free Copy of This
Golden Jubilee Catalogue
Is Now Ready for You

Fifty years' experience in making low prices, in selecting worthy, serviceable goods, and offering them at a saving, has gone into the making of this big complete Golden Jubilee Catalogue.

Your FREE copy is waiting here for you. To write for it today is to learn the lowest price you need to pay for everything you need for the Home, the Farm and the Family.

There is a Cash Saving of at Least $50 for You

Getting the right price today is a matter of choosing the right place at which to buy. To know the lowest price, to get the actual market price on everything you buy, will mean a saving of at least $50 on your needs and your family's needs this season.

Montgomery Ward & Co. quote the lowest prices possible on new, fresh merchandise of serviceable quality. We do not sell cheap unreliable merchandise. We do sell good goods at the lowest cash prices of the year. To buy from Montgomery Ward & Co. is complete assurance of Satisfaction and Certain Saving.

Everything for the Home, the Farm and the Family

For the Woman. Are you interested in the newest styles? Ward's own fashion experts have selected the latest styles in everything for you and for your children—coats, suits, dresses, hats and shoes, and all are offered to you at a big saving.

For the Man. Do you want full value for your dollar? All your personal needs, everything from clothing to a good cigar, is offered you at prices that bring you the greatest return for your money.

For the Home. Everything that goes to make the home modern and pleasant, rugs, wall paper, furniture and home furnishings are shown in this catalogue at prices that save many dollars.

For the Farm. Everything the farmer needs—tools, roofing, fencing, paint, hardware, of guaranteed dependable quality—at amazingly low prices.

Every item in this catalogue is guaranteed exactly as pictured and described. Your money back if you are not entirely satisfied with everything you order.

MONTGOMERY WARD & CO.

Chicago Kansas City St. Paul Fort Worth Portland, Ore.

Your Orders Shipped Within 48 Hours

We announce a new perfected service for you.

After a year's work, and study, originating and testing new systems, and employing experts, we have perfected a new system that makes certain a very quick and satisfactory service to you.

Practically every order that comes to Montgomery Ward & Co. this season will actually be shipped and on its way to you in less than 48 hours.

Lower prices, better merchandise, and now a new service. True it is indeed that "Montgomery Ward & Co., the Oldest Mail Order House, is Today the Most Progressive."

LIVESTOCK AND DAIRY

The Farmer's Cow

By W. L. DAVIS,

In addition to the two well established types, the dairyman's cow and the beef raiser's cow, prominent practical farmers and agricultural educators have felt for a long time that there was a place and urgent demand for a general farmer's cow, a broad-backed, deep-bodied, mellow-fleshed cow, that would yield a reasonable amount of fairly rich milk, produce a calf which would grow into a good beef at 2 years old and herself possess the ability to fatten into a desirable butcher's animal when her period of usefulness as a milker had passed. Recently Alvin H. Sanders, editor of the Breeders' Gazette, has taken a very definite stand in favor of "the farmer's cow." When a man of Mr. Sanders' mature judgment and wide experience in the live stock world champions such a cause it is a practical guarantee that a real need exists.

Mr. Sanders does not take the radical view of some dual-purpose advocates, that there is no place for the specialized beef and dairy types. For the farms that are equipped to handle the specialized dairy cow or beef cow these highly developed types have a very real place which they will continue to hold. "But," says Mr. Sanders, "betwixt and between these two extremes lie a million farms that specialize neither in the one nor the other, and the failure of American cattle breeders to recognize broadly this actual condition explains why upon these million farms there are only nondescripts or scrubs of the worst sort to be found today. That is the whole truth, and the sooner this fact is recognized by all who have to do with molding public thought and sentiment upon such subjects the better for the future of American agriculture."

Mr. Sanders believes that the cow equipment needed on this general farm is not the highly specialized dairy cow or the highly specialized beef cow, but the right type of dual-purpose cow.

Pasture and Protection

Hog raisers may accomplish two desirable results by plowing up the barn lots at least once a year, says the United States department of agriculture. In the first place, hogs need good succulent pasture as much of the time as possible, and in the second place they need protection against internal parasites, such as roundworms, the eggs of which remain in the soil. Turning over the soil in the lots helps to get rid of the pests and the crop of forage makes it a profitable operation. In addition to providing cheap protein feed, pasture crops aid as a laxative and require the hogs to take a certain amount of exercise which is necessary to breeding animals and growing pigs.

Rye is probably the best crop to use for fall, winter and spring pasture for hogs. Throughout the corn belt it may be sown from August 20 to about October 1, depending on the latitude. In warmer climates the crop may be put in at various times up to as late as December. By putting in successive plantings from two to four weeks apart it is possible to have fresh pasture all the time. Seeding for pasture should be much heavier than for a grain crop, from three to four bushels per acre on a good soil. Pasturing can probably begin six weeks after seeding, and may continue, if the rye is not covered with snow, until the following April.

California to Compete

A California team will compete at the Pacific International Live Stock show in the stock judging contest for high school students, trained under the provisions of the Smith-Hughes vocational educational act. This information comes from R. A. Condee, chairman of the California high school judging committee and secretary of the Southern California Holstein Breeders' association. Mr. Condee wrote that his committee had unanimously decided that the high school judging team of California will attend the Pacific International. Five hundred dollars is offered by this show in prizes for high school teams trained under this act. There are a number of high schools in each of the northwestern states operating under the act and it is expected that competition will be very keen. The judging at the Pacific International will be under conditions similar to those governing the boys' and girls' clubs and the college students' judging contests. It is understood that the railways contemplate offering free transportation for each team and instructor attending the exposition.

Concrete Tank for Liquid Manure

A 2000-gallon concrete tank has been built and arranged to catch all the liquid manure from the dairy barn on the E. W. VanTassel Ayrshire farm at Wenatchee, Wash. The concrete gutters are extended through the barn lot and join at a point near the pit.

A pitcher pump is used to pump the liquid into a 200-gallon tank, which is hauled on a truck to the orchard and the manure sprinkled on the soil. Mr. VanTassel estimates that this form of manure is worth about $7 a load, based on the fact that all solid manure from the dairy herd is sold readily for $3 a ton at the farm. There is a waiting list of orchardists who want the manure and much more could be sold if it could be supplied.

For his own orchard Mr. VanTassel used an alfalfa cover crop, which is disked under every spring for a mulch. With this plan there is little use for the solid manure when the liquid can be supplied in large enough quantities to fertilize the crop.

Secret of Good Grain Silage

There are probably more failures with grain than with any other crop attempted for use as silage, but there is no really good reason why even grain can not be successfully "canned." The principal difficulty seems to be in getting it packed. It must be cut very fine, and to accomplish this the cutter knives should be changed and sharpened twice a day. Take full advantage of the packing effect of the fall and do not disturb the grain afterwards.

DAIRYING IMPROVES.

Dairymen in the 45 cow testing associations in the nine western states now own 9484 cows that have made more than 40 pounds of butterfat in a month. Not many years ago a 40-pound cow was a rarity. There is much room for improvement, however, in the general run of herds in all parts of the country, says the United States department of agriculture.

HOG TYING STEERS RECORD.

A new world's record for roping and hog tying steers was established during the second day of Cheyenne's frontier day exhibitions by Ben Johnson, Oklahoma horseman. Johnson accomplished the feat in 20 4-5 seconds, one-fifth of a second faster than the former record made by Fred Lowry in 1912, also of Oklahoma.

WILL EXHIBIT RED POLLED.

F. H. Porter, the well-known breeder of Red Polled cattle of Halsey, Ore., will exhibit a full herd of his favorite breed at the Oregon state fair and the Pacific International Stock show.

THE HIGHEST QUALITY AND THE LOWEST PRICES IN OUR HISTORY

Repeatedly we are told by veteran Goodyear users that our tires today give more than twice the mileage they did twelve years ago.
What is even more surprising, *these superior Goodyear Tires of today cost less than half as much!*
Take our 30 x 3½-inch Cross-Rib fabric clincher as an example.
In 1910 you paid for this size tire $33.90; today, for a vastly improved tire of the same size, you pay but $10.95!
All other tires in the Goodyear line show similarly important reductions, the average decrease in price since 1910 being more than 60 per cent.
Goodyear Tires this season are at their highest point of excellence—larger, heavier and more durable than ever before.
Goodyear prices are now at the lowest point in Goodyear history.

They Do Away With the Plow and Get Better Crops

By C. E. HILL, Superintendent Waterville Branch Experiment Station.

Henry Gall was one of 30 farmers who attended a demonstration of the double-rod weeder on the Waterville branch experiment station in May, 1921.

Farmers were given the opportunity at that time to look over the crop and fallow which were the result of the Waterville station's innovation in handling fallow ground without plowing. Mr. Gall grasped the idea of securing the firm, shallow, cloddy surface necessary for fall seeding at a minimum of cost, went home and put a good double cut-away disk to work on the balance of his summer fallow. It was a little late for ideal work in maintaining maximum early moisture, but Mr. Gall followed the disk with one operation of the light draft spring tooth harrow and one weeding with the double-rod weeder, at suitable intervals during the season. This latter work kept down weed growth and assisted in firming the ground.

With an absence of rainfall in the fall of 1921 and no precipitation whatever during the present crop season, Mr. Gall will harvest 25 bushels of Turkey red wheat from the unplowed fallow. This balance of the half section, early plowed and well worked, will yield approximately five bushels less.

No less striking results can be found on the farms of E. P. Hinderer of Supplee and Louie Brandt of Withrow, where the new practice is found in successful operation on large summer fallow and crop fields. Mr. Brandt's summer fallow can be seeded with absolute assurance of a stand when the proper season arrives, while his Turkey wheat grown on land similarly handled will compare favorably with Mr. Gall's. In this instance again the crop on the unplowed fields will outyield the earliest plowing on the same farm.

Mr. Hinderer is using a right lap to good advantage for the early work and his success in growing maximum crops at minimum cost under the new system has been outstanding. He harvested 23 bushels of Turkey per acre from a quarter in the fall of 1921, a rainless season—handled as fallow during 1920 without plowing. This was exactly the same yield of Turkey obtained on the same quarter, in 1915, a wonderful crop season, following early-plowed and well-tended fallow. This quarter is light, subject to blow, and the yield obtained is probably around the limit of production. Mr. Hinderer figures costs and concludes that he can handle 25 per cent more acreage on the winter wheat system under the new plan with a saving of at least $1 per acre. Mr. Gall maintains that a one-man, eight-horse outfit can do the necessary seasonable work on 500 acres of summer fallow ground.

Here is a method for this section which will control blow, conserve moisture, maintain the surface conditions which are so important for seeding in the fall, make possible the farming of good-sized acreages profitably and cut the cost of production. It does not call for additional expenditure in new machinery. A good double disk or right lap for the early work which is the foundation for success in any dry land fallow system, the light draft harrow and the double-rod weeder turn the trick. In heavy stubble or trash half the teeth can be removed from the harrow.

The extent of application of this change in farm practice will have to be worked out, but the Waterville branch experiment station has demonstrated its practicability on the lighter soils and larger acreages of this section for fall seeding. With the active assistance of the extension service it will mean greater assurances of winter wheat stands and added profits to the dry land wheat farmers of this plateau.

Yakima Dairymen

Have 400 Members in Association

The unusual success of the dairy associations in the counties of western Washington has been an incentive for the dairymen of the Yakima valley to form a similar organization which will help them to market their dairy products. The new association will be known as the Yakima Dairymen's association and is ready to begin operations with 400 members and 3000 producing cows.

The purpose of the association is to supply a good quality of milk and cream to the distributors who will bottle and sell it for the city milk trade. The newly created milk commission will regulate the price of milk and cream to be paid by the consumer as well as stipulating what the producer shall receive. The creameries, who, by the way, handle bottled milk for the city trade, will be assured of a more uniform supply of sweet and sour cream as well as milk.

Both the distributors and the producers are required to sign a three-year contract, which is drawn up before a notary to assure both parties that they may depend on the transaction for the stipulated time at prices that are fair to all concerned. It is estimated that the association will handle 75 per cent of the milk and cream used in the city of Yakima.

In selecting the milk commission of five members that would have charge of setting the price, one was chosen from the woman's clubs, one from the commercial club, another appointed jointly by the distributors holding contracts with the association, and one member from the association. The county agent was appointed as an exofficio member, making five members in all, the first two being selected to represent the public. The commission can be called for session by either party holding contract and it will be asked to collect any information to be had regarding the cost of production of milk or the distribution to the consumers. From information of this kind they will set a price that is considered fair to both the consumer and the producer and allow the dealer a reasonable spread for the handling.

The association has a utility plant at Yakima, where it can handle any surplus milk that may be had. It is equipped with a large receiving vat, a cheese vat, pasteurizer, separator, churn, boiler and cooling tanks. A testing room will also be installed. This plant is the property of the association and can be used in case there is a larger supply of milk than can be used by the general consumption. In case there is an oversupply of cream it will be churned and the butter shipped to the United Dairy association.

A receiving station is being established at Sunnyside, where cream will be gathered from as far as Prosser and Toppenish.

Officers of the association are: George V. Harris, Yakima, president; W. H. Shaver, Cowichee, vice president, and R. W. McKenna, secretary and manager. The directors are: Alec Todd, M. W. Poyner and F. A. Duncan of Yakima, the latter appointed by the state director of agriculture, as required by law; E. V. Taylor, Selah, and S. D. Cornell, Grandview.

FLOURING MILL BURNS.

The mill of the Portland Flour Mills company at Prescott, together with seven warehouses and one dwelling belonging to the same concern, was destroyed by fire late in July with an estimated loss of about $1,000,000.

SHIP CREAM TO TACOMA.

By shipping their cream to the Pierce County Dairymen's association, which maintains a pasteurizing station in Tacoma and has a market for more of the product than it has been getting, dairymen of the Big Bottom country in eastern Lewis county expect to save considerable over what it would cost to truck their output to Chehalis, and at the same time to realize the benefits of cooperative marketing through the United Dairymen. Ever since the Lewis-Pacific association started operating its plant a year ago, eastern Lewis county farmers have sought affiliation with it, but road conditions have proved an effective bar to truck shipment. Under the new arrangement the cream will be hauled by truck only from Randle to Morton, and will go from there to Tacoma by rail. Twenty-two dairymen signed the Pierce county contract before shipments started.

Let DELCO-LIGHT Do Your Chores

Think how much time and work you could save every day if you only had Delco-Light on your farm.

Electric power would do the chores. It would pump the water and send it under pressure to every place you need it—to the kitchen sink, the bath room, the watering troughs, the hose to water your garden and to protect your property against fire.

This same power from Delco-Light would sweep the floors, run the sewing machine, wash the clothes, heat the iron, milk the cows, separate the cream and churn the butter.

And Delco-Light will give you better, cleaner, cooler, safer light for less money than you now spend for coal-oil to use in your lamps and lanterns.

No matter how big your farm is, or how little, Delco-Light will pay for itself and enable you to make more money.

Call the Delco-Light dealer in your territory. Ask him to give you an estimate at the new low prices and find out now the easy terms on which you can buy Delco-Light.

If you will mail the coupon we will send you catalog, prices and complete details.

Delco-Light

—is self-starting
—has a simple, efficient oiling system
—has a 4-cycle, valve-in-head, air-cooled motor
—is free from troublesome oil cups, oil pump, water reservoir, carburetor, rheostat and belts
—has good bearings
—runs on either gasoline or kerosene
—has long-lived, thick-plate batteries, with both wood and rubber separators
—is economical
—is durable
—has 160,000 satisfied owners
—has an organization back of it to see that you get prompt, efficient service

POULTRY AND RABBITS

Poultry and Garden

When we first stopped at the farm of W. L. Willis of Mount Vernon we took it to be a poultry farm. Later, after we had seen his splendid fields of seed crops we wondered if this were not the main source of income. Finally when we asked him as to his principle industry he avoided our question for the simple reason that he does not emphasize either industry to the detriment of the other.

"We find it necessary to carry on some kind of intensified farming, since we are keeping such a large flock of chickens," he told us. "We could not raise oat or hay crops to any advantage, since the large quantity of manure would only cause the crops to lodge. Such plantings as garden crops will all respond readily to heavy applications of hen manure, and we are taking advantage of it. We find that the two work hand in hand with each other, each using a byproduct of the other to some extent."

The poultry plant consists of two large houses, with a total capacity of 7000 birds, but at present there are only about 5000 hens kept. The houses are all of the two-story type, which afford the birds the whole lower floor for dusting. This arrangement is considered necessary because there are some years when floods would endanger the birds if housed on the ground floor entirely.

"We need from 3000 to 4000 new birds each year to keep up the flock and this year we did some incubation," said Mr. Willis. "We have a breeding pen with some of our very best hens and cockerels and they are given free range about the farm. In this flock are the birds which were in the egg-laying contest at Puyallup last year. One of the birds was given third place in the contest, but judging from the size of her eggs she ranked second. We also have a high-class cockerel, for which we paid $100 and we have been offered the same price for the contest hen. There are only 15 hens in the breeding flock, but they are all trapnested and the eggs are hatched separately and the chicks toe punched as soon as hatched.

"There is a large quantity of manure each day from the poultry plant and we plan to have some place to distribute both summer and winter. This necessarily calls for some kind of intensive farming method that will make the best use of the ground. We have raised both garden and seed crops and find that a combination of both is best for our conditions."

Mr. Willis has five acres of rutabagas, from which he expects to harvest a ton of seed to the acre. The dry season has kept the growth down and prevented a duplicate of last year's yield, which was 2300 pounds to the acre. The seed was planted last September and the roots dug and stored in a cellar over winter and in the spring they are set out in the field and the seed is harvested the latter part of July. The stalks are cut with a corn knife and tied into bundles and shocked.

Table and sugar beets are planted in much the same way except that the seed is planted in May. One acre of beets from seed will plant five acres the following spring for the seed crop. The roots are pitted over the winter after the tops have been removed and they are set in the field as soon as the ground will permit, which is usually February or March. They are set in rows four feet apart, two feet in the rows.

Mr. Willis has two and a half acres of spinach, which he is letting go to seed. This is a one-year crop and is seeded the earliest possible time in the spring, the plants producing seed the same year. The rows are seeded somewhat closer than the root crops and hand-cultivation is practiced. When the plants have matured seed they are pulled and shocked on a frame, which is withdrawn, leaving the shock standing. Such a patch should produce a ton of seed to the acre, but the lack of rain will hold the crop back to about 1500 pounds this year.

Aside from the seed crops Mr. Willis is raising a quarter of an acre of asparagus, which will be set into the field next spring. The plants are now 2 years old and if planted early in the spring they may be cut for market, according to Mr. Willis. The heavy cutting, however, will not be made until the following spring, when the plants will be 4 years old. All of these plants were raised from seed which is found to be a very convenient and economical manner of getting an asparagus patch started.

A large patch of rhubarb is producing its second crop of stalks and is expected to produce a large crop next year. The whole field is fertilized heavily with hen manure and it is giving the plants a splendid start. Thorough cultivation is practiced after each application in order to work the manure into the soil. Mr. Willis is known to be the first man to ship a carload of rhubarb to the outside market from Mount Vernon.

Rabbits for Fur

While the raising of rabbits has proved to be a successful undertaking from the standpoint of breeding stock and meat, Mr. and Mrs. Orr of Tacoma, owners of "Orr's rabbitry," have found that the furs can also be utilized and made to produce a big part of the income.

With this purpose in mind they have been raising only the breeds that have the right kind of skins for making into furs. The solid colors are being bred, which are mainly the white, black and blue Flemish Giants. A few Steel Flemish are still kept, but it was these that produced the blue strains when crossed with the blacks. They are now being bred and are producing the solid blue color without further crossing.

Not only do the rabbits in the Orr rabbitry have the proper color, but they are all good sized rabbits. All young rabbits are kept with the doe until they are from 3 to 4 months old, when they are segregated and either butchered or kept for breeders. At the age of 7 months they have attained an average weight of 12 or 13 pounds. Such a good sized rabbit will have a skin that will measure 18x24 inches.

Rabbits from this rabbitry have for many years made names for themselves at the shows.

"The fur making part of the business is by far the most profitable phase that can be developed," said Mrs. Orr, "provided one can make up the furs himself and sell the finished product. It looks like a hard task to some people, but I do not find it any more difficult than some kinds of dressmaking. In fact, I maintain that any one who can make dresses for herself can make furs. It is mostly all hand work, anyway, and requires care. The machine can be used in the making of the linings which are used for the pattern on which to sew the tanned fur.

"We have made a variety of articles and find that they sell readily. For a lady's cape, which was made from white furs with a black border, it took 38 skins in all. The small black dots are sewed in from the under side to imitate erminett. One of the fur companies placed a valuation of $175 on it, saying that an article of similar quality could not be bought for less.

"As for the tanning, it pays better to send the dried skins to some company who makes a specialty of this work and have it all done at one time. The cost is small and it is finished in fine condition for working into anything that is needed. The skin from some rabbits makes stronger leather than one would imagine and we made some into a pair of moccasins that wear almost as good as some other kinds of fur."

Mrs. Orr utilizes all waste pieces of white fur into three-inch strips, which is taped and lined. This can be marketed at a neat price, especially when it has the black dots in it. Some of this which was made up last fall sold for $3.50 a yard.

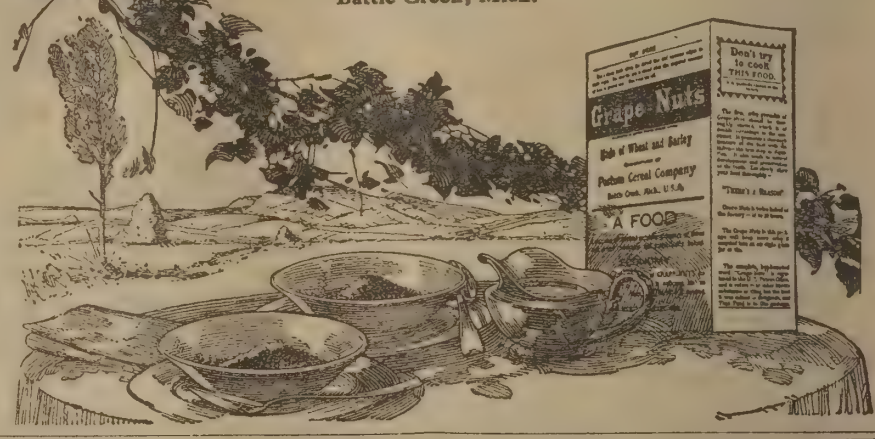
As yet no furs have been clipped with the view of imitating seal. They are best with the fur in the natural stage, according to Mrs. Orr. This makes good collars and cuffs for ladies' coats and it will wear almost as well as some of the heavier furs.

In preparing the skins for keeping they are merely dried after being stretched on two sticks which are mounted on a short piece of spring wire to hold them apart and does not stretch them too much. It is best to dry in the shade and not attempt to apply any tanning preparation unless the work is to be done at home. The tanneries ask that none of the fat or surplus meat be removed, since this can better be done by machinery and at less danger to the skin.

Let's disarm the thermometer

MEATS and starches for the body are like fuel for the furnace.

Why not adopt for breakfast or lunch, Grape-Nuts with cream or milk and a little fresh fruit—and turn off the internal heat? Here's complete nourishment, with cool comfort.



Grape-Nuts contains all the nourishment of whole wheat flour and malted barley, including the vital mineral elements and bran "roughage," and it is partially pre-digested in the long baking process by which it is made.

There's a wonderful charm for the appetite in the crisp, sweet goodness of this ready-to-eat food, and fitness and lightness afterward, which meet summer's heat with a smile.

Your grocer will supply you with Grape-Nuts!

ORCHARD AND GARDEN

A World Record

Made by Queen Bee and Progeny

By GEORGE W. YORK.

When "world records" are referred to, one usually thinks of cows that have given an unusual quantity of milk or cream. But the "world record" that I want to speak of was made by a queen-bee and her progeny.

A beekeeper in Michigan had shipped to him by an Alabama bee and queen breeder 32 two-pound packages of bees, with a queen for each package, on April 15, 1921. One of the queens and packages of bees produced for him during the 1921 season 577 finished sections (or small bores) of comb honey, which he sold for $168. The beekeeper (Mr. Hamilton) says this particular queen kept 20 broodframes filled with brood during the honey storing season.

The foregoing record undoubtedly is a banner record of the kind, for the highest record I have ever seen reported, and that in a period of nearly 40 years, was 566 finished sections of comb honey by one colony of bees in a season, and that was reported many years ago by a New York state beekeeper.

What makes the latest report of 577 finished sections of comb honey unprecedented is the fact of its being produced by a two-pound package of bees and its queen.

Perhaps it is well to say here that this wonderful record was made by supplying the colony of bees with sections having combs at least two-thirds drawn or built out in advance, so that would be of great assistance to the bees.

Of course a queen that would keep 20 broodcombs filled with brood during the breeding season is a remarkably prolific queen, and no doubt deserves to be valued at $200, as she is being valued today. For the queen-breeder in Alabama who sold her with the two-pound package of bees in the first place has bought her back again, and is rearing queens for sale from her at $1 each, and some at $1.75 each. As it is possible to rear 2000 queens from one queen-bee during a single season, it is not at all surprising that this wonderful queen should be valued at $200, although that amount might seem to be rather high to a person not familiar with beekeeping and honey production.

Strawberry Plants

By DON B. WHELAN.

What is the matter with the strawberry plants when they turn yellow and die? This is a question that growers in different parts are asking this year. It seems to be a mysterious complaint, inasmuch as the cause of it can not be easily located. Some have laid the trouble to too much water, others to lack of it, while still others blame the use of too much fertilizer. The majority frankly confess their ignorance.

The real cause is a small bug with a sucking mouth that works near the surface of the ground. It punctures the stems and extracts the plant juices, causing first a yellowing and then a dried-up condition of the plant. This bug is known as the false chinch bug, and goes under the scientific name of "nysius ericae." It is a slender grayish-brown bug about one-eighth of an inch in length. During the winter it hibernates as an adult in rubbish and under leaves around the base of its food plants. As a rule they are found on many cultivated plants and weeds, but during a real dry season they confine their attacks more to the cultivated plants. They will feed on such weeds as pepper grass, shepherd's purse, Russian thistle and sagebrush.

Control of this pest can be accomplished by cleaning the rubbish from the field late in the fall to destroy their hibernating places. At the present time a spray composed of Bordeaux misture, to which nicotine sulphate has been added, is the best means of control known.

Red Spider

By C. C. VINCENT.

Owing to the dry spring and summer the red spider is extremely prevalent in many of our fruit sections. This mite is not only working on fruit trees, but is also found on many of our small fruits. The mites are doing considerable damage in that they feed upon the leaves, causing them to turn yellow, dry up and fall off. This condition not only reduces the crop for this year, but also weakens the vitality of the tree to such an extent that the crop is seriously affected the following year. Ralph Smith, recently entomologist of the Idaho State university, gives the following excellent advice concerning this pest:

"This is the commonest and the most destructive of the spider mites in Idaho. It commonly has been called the "red spider," but the predominating color usually is not red. The common name, two-spotted mite, is based upon the presence of two dark spots, usually readily distinguishable on the back of the full-grown mite. Aside from attacking all kinds of orchard and garden fruits, it is an important pest of many garden, truck and field crops. It is also a common pest of nearly all kinds of cultivated flowers, shrubs and shade trees. "The first indication of injury is the appearance of minute whitish flecks and fine webs on the leaves of the affected plants. With continued infestation the leaves usually turn grayish or yellow and lower surfaces become covered with numerous fine webs, under which the mites live. The webs collect particles of dust from the air and excrement from the mites, which gives the plants a dusty appearance. Eventually the foliage of infested plants becomes brittle and drops off.

"Mature mites pass the winter on vegetation and in trash surrounding the plants which they infest during the summer. They become active on the first warm days in early spring. Migration onto the fruit trees begins soon after the blossom buds commence to open, but it continues over a long period. Probably the greater number of mites go from surrounding vegetation to the fruit trees during May and the early part of June. Multiplication on the trees during the spring is very slow and studies show that serious infestations are not likely to develop before the first of July. During the later part of August and in September the mites commonly collect in depressions on the fruit of prunes and plums. Later they migrate to the bases of the trees, where they frequently make conspicuous web tents, from which they gradually disperse to near-by vegetation.

Control Measures.

"The destruction of fallen leaves and other vegetation, and subsequent cultivation of the soil in berry patches are effective measures for destroying the overwintering mites. Experiments in treating the surface soil about currant bushes with kerosene emulsion, miscible oils and lime-sulphur gave no better results than was obtained by spading the surface soil. In clean cultivated orchards surface cultivation in late fall and early spring as well as light cultivation during the summer months, apparently has retarded the development of infestations.

"When trees become seriously infested during the summer the liberal use of irrigation water tends to reduce the injury. Direct control in orchards consists in spraying as soon as infestations become apparent, using commercial lime-sulphur, 1 to 50. The lime-sulphur may be advantageously combined with one of the codling moth cover sprays. Atomic sulphur, soluble sulphur and wettable sulphur also have given good control. The sulphur sprays have given good results on small fruits. For small fruits which are soon to be picked the most satisfactory control has been to forcefully spray the plants with soapy water.

Calcium caseinate spreader adds very materially to the effectiveness of the sulphur sprays."

You Are Choosing To-Day

Between Spending a Little for Paint Now and Spending Heavily for Repairs Later

YOU can't escape the choice. Either your buildings and equipment are well protected by paint or they are rotting and will require repairing or rebuilding within a few years.

Check the costs. Find out how much *more* it will cost to repair or rebuild your property than it will to protect it with paint. Rotting buildings and rusting equipment are a waste and an extravagance.

When you paint use the best paint. It costs less in the long run. It spreads more easily—saves labor cost. It covers more surface per gallon than "cheap" paint.

But most important, the best paint serves you many years longer than "cheap" paint.

We have been making the best paints for 73 years. They are scientific in formula and preparation. They meet the weather conditions in the West.

They contain the finest materials—PIONEER WHITE LEAD, pure linseed oil, pure zinc, and pure colors—combined scientifically in exact proportions with long-time skill.

House Paint: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured —32 colors.

Barn and Roof Paint: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality —6 colors.

Floor Paint: Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

Implement Paints: Fuller's Pacific Wagon Paint, adapted for repainting agricultural implements, farm wagons, farm machinery, wind mills. A glossy, durable finish—7 colors.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

Advice on Painting FREE

If you want to do your own work and get the best results, ask our Specification Department for *free advice.*

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

For Pleasure, Not Money

Enjoy Flowers More When They're Not Commercialized

"We never sell any of our flowers. We don't raise them for that purpose and there is more pleasure in raising flowers when they are not commercialized." The remark came from E. Remy of Yakima upon being asked how he sold most of his flowers. "They have always been a source of pleasure with us and we enjoy having some flowers to give to our friends when there is an occasion that demands them.

"There are about 70 varieties of roses alone," said Mary Remy, the daughter, who has much of the responsibility of the garden and does a large part of the lighter work. "This is a good climate for roses, although there are seasons such as we had last winter that will cause some of the more tender varieties to winterkill. They will always come up again from the roots and with a little protection they would come through the winter uninjured.

"We have always made a specialty of roses and we find that the John Hopper is the best one to winter in this climate. We try to have as many kinds of flowers as possible in order to have them blooming at all times. The bulbs will bloom early in the spring and some of the annuals will bear late blooms. If one is going to raise bulbs of any kind they should not forget to mulch them well and to take them up every summer and plant again in the fall, Gladiola seem to be better adapted to this climate, although the tulips will do well here if taken care of."

Miss Remy has a collection of ferns from the neighboring wilds along the river and in the mountains. These she transferred by means of tin cars or in some cases by digging up as much of the dirt as possible from around the roots and wrapping in a newspaper. If not allowed to dry out they can be transferred a long distance in this manner and some rare specimens have been made to grow in the Remy yard.

Such flowers as the snapdragons and asters as well as other annuals are very good for cut flowers and they come at different seasons. The snapdragons can be grown to a good size and with long stems if the proper varieties are chosen and if the soil is well fertilized.

The soil in this neighborhood is a gravelly loam and responds well to barnyard manure or nitrate. Both are used in the flower gardens and something of the kind is necessary for best results. After each irrigation the rows are cultivated in order to save the moisture, and to keep down the weeds.

An interesting feature about the Remy home is a telephone pole that has been entirely covered with the growth of a trumpet vine which is over 10 years old. The fence in front of the house and next to the road is covered with crimson ramblers, which make an early bloom and create a beautiful effect.

The home flower garden and orchard on the Remy farm near Yakima. A large variety of perrenials and annuals are grown and a very beautiful effect is had at all times of the growing season.

Experimenting With Clover Crop

Leon H. Miller of the Rock Island district near Wenatchee has a 10-acre orchard on which he is trying out the continuous cover crop method of raising alfalfa.

This plan differs from that used in many other orchards in that the alfalfa is never plowed or disked under, but allowed to die down each fall. No attempt is made to incorporate the plants with the soil, but it is left to decay naturally and thus hold the moisture close to the surface.

By so doing the small roots of the trees are induced to feed close to the surface of the soil and they are not injured by cultivation. The best of the plant food is thus utilized as the vegetation decays and is deposited on or near the surface. Irrigation is also made easier and the vegetation works much similar to a blotter and draws the water from the ditches, thus saturating the whole surface.

Mr. Miller has two-thirds of the orchard planted to Winesaps and there are a few Delicious and Jonathans. A few trees of Yellow Transparents are growing near the house.

"I tried out an experiment with early and late thinning," said Mr. Miller, "and I am more than ever convinced that we should thin early if we are to get the maximum returns. I took two Yellow Transparent trees and thinned one in May and the other about the same time in June. The apples on the tree thinned in May are at least 50 per cent larger than in the case where they were thinned in June. I wish I had thinned the whole orchard a few weeks earlier."

Leaf Roller Control Work

Leaf roller control work in the Spokane district has not brought out anything strikingly new this year, according to H. E. Newman of Spokane, in charge of the work there. Results are very largely dependent upon the thoroughness of the work done and upon the weather. Dry weather is favorable to good control and if the grower is lucky enough to have such weather and does his spraying well he may get good results. Weather is a big factor, as rain is very adverse to effective work. The dormant spray with miscible oil is for the present season's crop, while the arsenate spray later will have the effect of reducing the infestation for the season following. Mr. Newman was formerly deputy horticultural inspector.

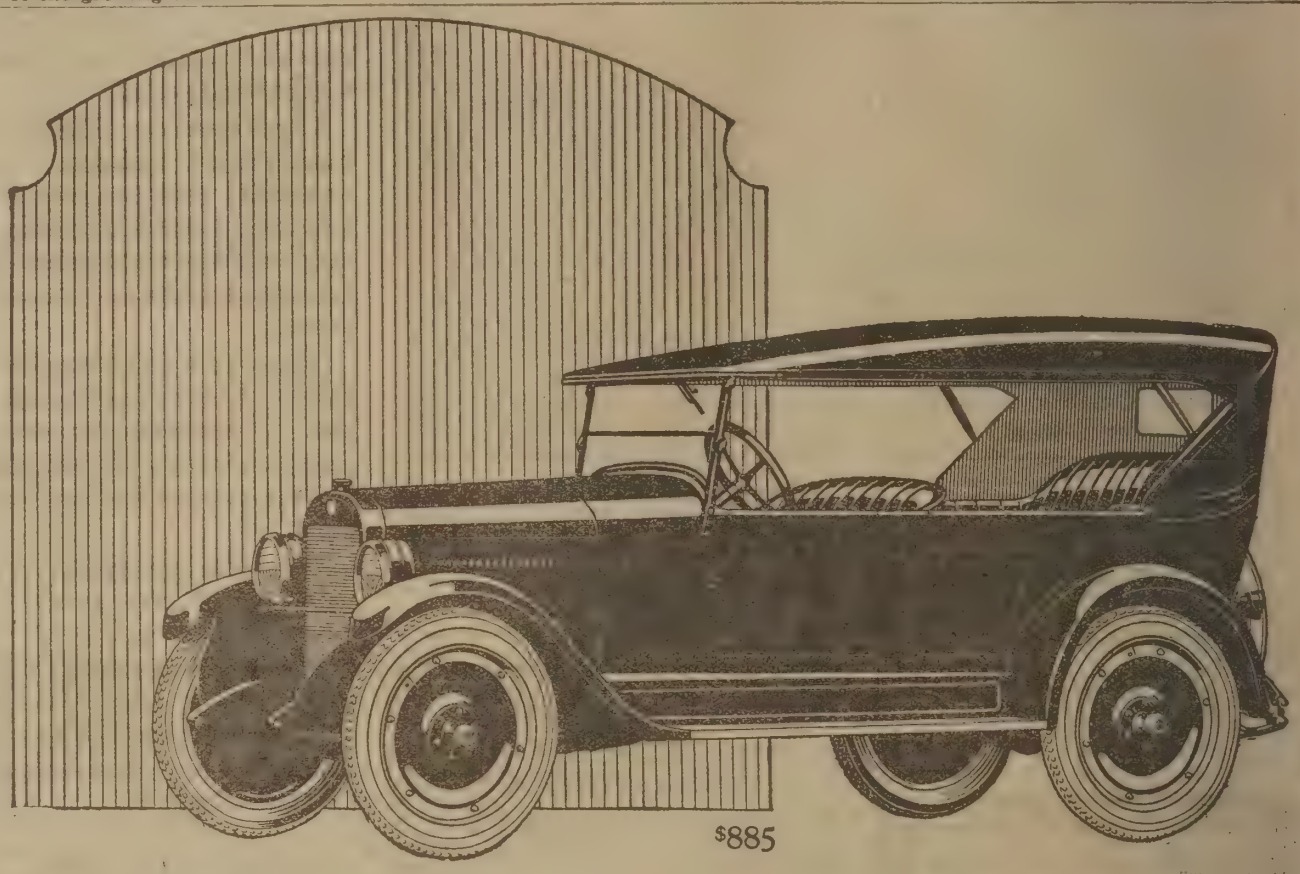
Good Sales Policy

Start on Reasonable Basis and Create a Demand

In a recent issue of The Oregon Grower, the official organ of the Oregon Growers' Cooperative association, M. J. Newhouse, assistant general manager, in discussing thep rune market, gives some valuable suggestions to producers of any kind of farm crop who desire to market them cooperatively.

Mr. Newhouse says that his association has made sales in more than 60 carload markets, representing every important center in England, central Europe, Canada and the United States. Individual growers could not possibly invade these widespread markets successfully.

Discussing the prices decided upon by the asociation a few weeks ago, Mr. Newhouse said that these prices were about what would give early and substantial sales. The prices were not as high as some growers might have desired, though it is apparent that most members of the association have accepted them as satisfactory. On this point, Mr. Newhouse utters this fundamental: "The problem at present is not how high we can sell a small portion of our crop, but how high we can sell the entire crop, which necessitates the taking of 30,000,000 to 35,000,000 pounds of additional prunes into old markets or into new markets which must be established this season."



Again on this point, he says: "To start on a reasonable basis and create a demand is always good, conservative sales policy."

Cooperation must be conducted along strictly business lines. Theory will not get us anywhere. Sentiment is a fine thing and plays an important part in cooperation, but dollars and cents are the things that tell the story. Mr. Newhouse says: "The greatest objection to cooperative marketing in the northwest is the slow manner in which returns are made to the growers. The only way to have sure money for the growers upon or soon after delivery is to have actual sales contracts to take to our banks. In other words, the committee thought that large and early payment to the members was more of a factor to consider than comparative prices."

Cutting Down the Sick List

Three millions of people used to be ill in the United States all the time, stated Miss Mary Sutherland, state college extension specialist in nutrition, at Spokane recently. Owing to better knowledge of nutrition and to vigorous campaigns to promulgate this knowledge, 600,000 persons less are ill today.

Miss Sutherland is urging the housewife to plan the year-round food budget so as to insure sufficient consumption of the fruits and vegetables at all seasons. "There are too many colds; there are too many bad teeth," she said. In many of the common vegetables and fruits, as in milk, there is lime for the teeth and there are the protective vitamines.

MAXWELL

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor-driven electric horn; unusually long springs; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight wind-shield.

First among the virtues of the good Maxwell are the ruggedness and reliability which the farmer wants and needs in his motor car.

Extracted Honey

When Marketing, Do It Right

By GEORGE W. YORK.

It will soon be time to think about putting extracted honey on the market. While not as much care is required in handling this kind of honey, compared with honey in the comb, still it is well to see that it is done right.

We will suppose that the honey has been extracted and strained in a sanitary way, and is ready to put up for market.

Now the question will arise at once as to the proper containers to be used. If sold in a wholesale way, there is nothing better than the 5-gallon tin cans with about a 4-inch screw cap opening on the top of each can. These cans are then put two in a box and shipped.

But for retailing extracted honey either small tin or glass containers will be used. On account of glass being more expensive than tin, and also because easily broken, more extracted honey is sold to consumers in tin.

Perhaps for quantities up to three pounds, glass containers may be used, and for larger quantities use tin cans or pails.

Honey in glass, of course, can be made more attractive than in tin as it shows so beautifully through the clear glass. But, really, after one has purchased a certain brand of honey once, it is not necessary to see it through the glass. In fact, it is unnecessary ever to see honey through glass. Most purchasers do not expect to see canned corn, peaches, apricots, etc., through glass. They buy all such canned goods in tin, without a thought of seeing before buying.

When selling honey in tin containers it should always be a fine product, and the cans neatly labeled. A name or brand should be adopted, so that purchasers will know what to ask for. Another thing: All honey sold under a certain name or brand should always be of the same color and flavor. In order to insure this it may be necessary to blend several flavors of honey, as do the large bottlers of honey. There would hardly be a sufficient quantity of any one kind of flavor of honey to bottle and sell the year around, but by making a blend, it has been found that ample supplies may be secured.

In these latter days, the tendency is to put up extracted honey in 5 and 10 pound tin cans and pails. As it keeps splendidly, it is more economical for a family to buy at least five pounds at one time. But always be sure to keep the unused part in the driest warmest place in the house. Never put honey in the ice box or cellar. The highest pantry shelf is a good place. Honey attracts moisture, and then sours, so look out for that.

A JOB FOR THE BEES.

Bees aid greatly in pollinizing fruit.

TO EXCHANGE—Real Estate 705

40 ACRES TO TRADE FOR SMALL TRACT close to town. Write Clara Lyness, Elk, Wash.

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test.

CHAPTER SIX.

Sixty-Five Miles to Water.

Not very fast did the little procession march. Thirst, which had also kept them from eating, had robbed the men of much of their strength. But they were more hopeful now, most of them, and trudged along determinedly, even if wearily and slowly. The cattle appeared even more jaded, dragging their feet and moving with drooping heads.

In the exhausted condition of the travelers, those five or six miles seemed several times as long. And very glad were they all when at last they found themselves where could be seen the white sands of the river bed shining in the sunlight.

"Looks mighty dry over yander. What'll we do—what in the blazes can we do if we dig and fail to strike water?"

All looked very solemn at Esau's question. But nobody answered. It was a situation the bravest of them did not like to discuss, or even to think about.

On coming to where the road ran nearest the river channel, they turned aside and struck across the prairie. The distance was not much more than a mile.

At length the whole party found themselves on the river bank. Unlike where they had first seen it, the river was wider and very shady here, with low banks. The wind-marked sands of its bed could not have looked drier if they had been a part of the great Sahara desert. So long had it been since water had flowed there that scarcely a trace of it remained.

No sooner had the procession halted than Esau, leaving his partner to unsaddle the cow, caught a pick and shovel out of the wheelbarrow and sprang down the bank. After him hurried all the handcarters, armed with similar tools, and also one of the wagon party—Holloway. The other men with the wagon stayed to unyoke and hobble and bell their work cattle.

Making their way across the deep, loose sands till out near the middle of the river bed, the men with shovels and picks found a low place and forthwith fell to digging.

"Boys," Sanders said, "we're none of us very strong just now. As not more than two can work at a time, we want to be ready to relieve one another promptly. We'll dig as fast as we can while we're digging, and shovel out as fast as we can while we're shoveling. As soon as a fellow feels too tired to work fast, he must climb out and let somebody else jump down. That way, it seems to me, we ought to get along fastest."

After marking out a large-sized circle, big enough for two men to work in, they began to shovel out the sand.

When the excavation was about a foot deep, the two shovelers stepped out of it, and two others stepped in, to relieve them. All except the men at work were sitting or lying on the sand, close by the big well. As yet the picks and mattocks had not been used, the surface being already loose enough to shovel.

When the well was about a yard deep, Orlando got up, approached the sand pile and examined a handful of what had been thrown out.

"No sign of moisture in that," he reported, as he flung the dry stuff from him.

"Not yet. But there's plenty of time for the moisture to show up," Sanders answered. "Nobody knows how far we'll have to dig, though."

"But s'posin' we fail to strike water at any depth, then what?" demanded somebody.

"Why, we'll just keep on digging, digging till we do strike water—or solid rock. Water or hard rock is the only thing that can stop us."

"If it's water that stops our digging, we'll be all right—all right," Esau Haggerty remarked. "But if it's a rock, God help us!"

In order that there might be plenty of room to work, the diggers had started their well about five feet in diameter. That was more convenient than a smaller hole in the ground would have been; but it also made more sand to shovel out. Only a very few minutes did it take for any digger to exhaust himself. And when he relinquished his shovel or mattock to another, he schambled out and threw himself down to rest.

Again and again those not actually at work caught up handfuls of sand, as it was shoved out, and squeezed it hard. At first, and for a good while after, it refused to cling together. But by the time the well was a deep as a man's head, the sand began to form a sort of ball in the hand.

"That—to me that's a right smart encouragin'," announced Esau, tossing away a handful that he had squeezed. "Not a great sight of dampness in it yit. But—but who knows—who knows what will be soon?"

In a remarkably short time the big well was deeper than a man's head. Now the digger who was being relieved had to be boosted while climbing out.

As the hole went down, the amount of moisture in the sand thrown out continued to increase. And the toilers needed something to encourage them; for the deeper the well sank the harder and heavier was the sand to shovel.

"Boys, do you know it's getting almost damp, this that I'm digging in now?" Abe Sanders looked up from the bottom of the well to say. "Last handful I squeezed had so much moisture in it I almost wanted to suck it."

Had they been able to lower the deeper well as fast as they had lowered the shallow one, their digging would soon have taken them into the river bed. But when the well's bottom was so low that a man found it hard to throw out a shovelful of moist sand, their downward progress was much slower.

Gradually the amount of moisture increased. In time some of the men, tortured by thirst, began to try to relieve their mouths with the moist sand. And Frisk, who now looked the picture of misery, was seen to approach the sand pile and lick it.

"No doubt about it now, I think, boys," Sanders told them, after being pulled and boosted out of the well. "We're going to find water at the bottom of this big hole."

"How deep do you reckon we'll have to dig for it, Abe?" inquired a handcarter.

"Hard to say as to that. But we ought to reach it in an hour or two more. That is, if we don't have a cave-in, or strike something so hard we can't pick through it."

"Reckon it'll be so deep we'll have to rig up a bucket and windlass?"

"Yes, we may have to do that—if we can. Not easy to make a windless where timber's as scarce as it is here. But guess maybe we can manage the business somehow."

At length the bottom of the big hole was so far down that throwing sand with a shovel was no longer possible. Now one of the men with the wagon suggested that they had some short planks; and that, by placing those across the well, they could use a rope and a bucket.

The planks were brought, two of them, and laid across the well's mouth, a little more than a foot apart. The wagon travelers also had a water bucket; and a rope was quickly tied to its bail. With a foot on each plank, Esau Haggerty stood over the well and let the bucket down. When it had been filled with sand, he drew it up, hand by hand, and passed it to somebody else to empty. Bucketful after bucketful was drawn up in this way.

Now the digging progressed very slowly. This was partly because what was dug up could not be drawn out fast; and partly because getting into the well and out was hard, and the men in the well could not be relieved as easily or as often as before. A man could hang by his hands to a plank's edge and drop into the well. But when he wanted to get out, he had to climb upon the shoulders of another man, then reach up his hands and be dragged out by men on top.

By this time all the men not actually at work were lying with their faces over the edge of the well, gazing down at the workers below. All were eagerly hopeful that before long some lucky stroke of the pick would show water.

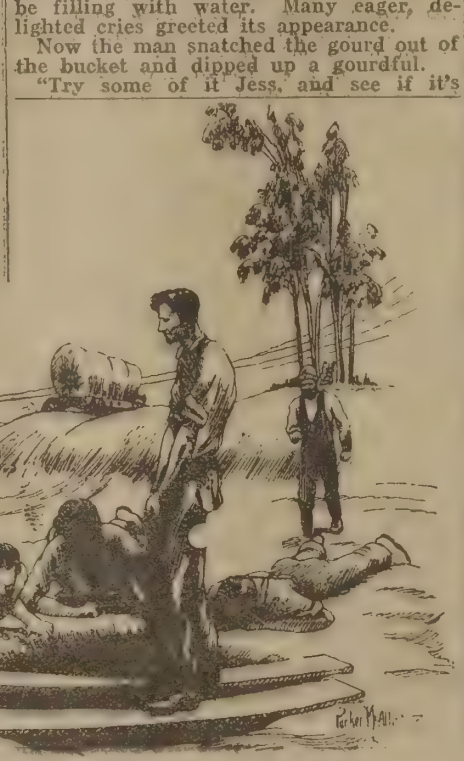
In time the pick struck something that gave out a different sound.

"To me that sounds a right smart like gravel," somebody called out.

"And gravel it is; gravel it surely is," called up Holloway, the man who was using the pick.

"Mighty hopeful sign that is, boys," Esau told them. "Of course we could strike water in sand. But gravel is the common place to find it."

As bucketful after bucketful of sand and gravel came up, the gravel was found to be actually wet. Finally Holloway looked up.



"Boys," he called, "some of you had better fetch our gourd. And next time the bucket goes up, send the gourd down. Going to be something to drink here pretty soon, or I'm the worst kind fooled."

As soon as somebody could go for it, the gourd was brought from the wagon and lowered with the bucket. Now all the men, tortured by thirst, gathered around the well's mouth and gazed down eagerly, expectantly.

And not long did they have to wait. Holloway laid aside his pick and, taking his shovel, set his foot on it and drove it deep into the gravel. When he had pried up the shovelful of gravel and thrown it aside, the hole left was seen to be filling with water. Many eager, delighted cries greeted its appearance.

Now the man snatched the gourd out of the bucket and dipped up a gourdful.

"Try some of it Jess, and see if it's good!" called down one of the wagoners.

Face down, watching the workers below.

"Good or what not, I want some of it—I'm dyin' for some of it!" declared a handcarter, who was gazing down.

Holloway held out the gourd to Sanders, the other man in the well. "Try it," he said.

"Why didn't you try it yourself first? But I'm too awful dry to stand on ceremony. Here goes!" Sanders seized the gourd and gulped the water down. "It's all right—you bet it's all right!" he cried.

Holloway drank all that he could dip up at once, then began to fill the bucket. When the vessel was about half full, he put the gourd in and called out:

"Up with it!"

The bucket was quickly drawn up, and the eight men on top eagerly gathered around it. Now man after man was given a gourdful. Somewhat muddy though it was.

While the men on top were drinking the men in the well, after lying down and quenching their thirst, were digging a larger, deeper hole in the well's bottom. When the empty bucket was let down again, it could be filled quickly, and was sent up promptly. While it was being emptied, the men in the well kept digging. When the bucket came down another time, there was a hole large enough to dip it in; and the water was running in faster than it could be dipped out.

As soon as his own thirst was partly quenched, one of the wagon party—his name was McKinley—hurried away to the wagon. Soon he was back, carrying a not very large pot, which he set down a few yards from the well's mouth. By this time Wallace, another man with the wagon, was going for an ox, and Orlando was hurrying toward Brindle.

All the cattle, of which there were seven, were standing or lying near the wagon; and most of them were bawling dolefully, miserably. For fear she would start off in quest of water, Orlando had fastened his cow to a stake. Now he jerked the rope loose and started toward the well, leading her. At first she moved slowly, reluctantly, and he had to get behind her and drive. But, on coming closer, she must have smelled the water, for she suddenly became another cow. Up went her drooping head and tail, and she was off at a gallop.

For a few yards Orlando tried to keep up with her; but he soon gave the rope a toss and let her go. She found a pot level full of water, and Frisk lapping out of it. In went her nose, and soon the pot was empty.

Now Esau seized her rope, dragged her away and held her fast. By the time the pot had been filled again, Wallace came leading an ox. This animal, too, broke into a run when he smelt the water. As soon as the pot was empty, he was forced away and Brindle was given another potful. By the time the ox had emptied the pot a second time, McKinley arrived with a cow. The lead team that pulled the wagon was a yoke of cows.

In this way, one at a time, all the animals were brought across the sand bed to the well and watered. But they were not permitted to drink all they wanted for a good while. Indeed, more than an hour passed before the last ox was turned loose to drink his fill. Even then two or three of the animals lay down on the sand, the water having made them sick. But the trouble soon passed, and when driven back to the bank all fell to grazing as if starved.

And the men were almost as hungry. After gathering up a few sticks of driftwood, which the river, in wetter days, had left here and there, they kindled their camp fires. The three wagon travelers had their fire by the wagon; but the men on foot kindled theirs near the shade of a lone cottonwood tree. All were very weary, as well as ravenously hungry. It was already understood that nobody would move from here till they had taken a long rest.

Their hunger satisfied, the foot travelers all lay down in the shade of the cottonwood and slept most of the afternoon. A hundred yards away the other party slept in the shade of their wagon. All were getting the sleep and rest they had lost the night before.

Late in the day Orlando awoke and sat up. There was a pleasant breeze now; and the noise it made among the cottonwood leaves sounded like a shower of rain. Seeing the three men with the wagon awake he got to his feet and strolled down the river bank to their camp. They were from Missouri, he soon learned.

"There were three wagons of us when we passed along here the first time," Holloway told Orlando.

"And what became of the other two?" the visitor inquired.

"Why, they thought it was so far back to water, they'd rather risk pushing ahead till they found it. They thought they could reach water sooner by going on than they could by turning back. And maybe they did. I certainly hoped they did. But the three of us with this wagon had had all we wanted of such a route. So we turned back and let the others drive on. We'd only got with 'em at Council Grove and didn't know 'em very well."

"I wonder if they've found water yet," young McKinley remarked. "If they haven't they must be suffering agonies from thirst by this time—them and their work stock."

"Just as we'd ha' been sufferin' if we had failed to dig up water here," observed Wallace.

Now Orlando inquired: "What do you know about the abandoned wagon we passed several miles back—before we met you?"

"Did you pass a wagon?" asked Holloway. "That must be one of the wagons we started from Council Grove with. Those men dropped behind. Their team had trouble keeping up with ours. We thought they'd overtake us at camping time. But we didn't see 'em, and we guessed they must have got discouraged over this desert country and turned back."

"So they abandoned their wagon, did they?" said Wallace. "Was their team close by?"

"We saw no team anywhere. We couldn't tell whether they took their oxen with them, or had turned them loose and the oxen had wandered away. They didn't turn back cast, men or oxen, or we'd have met them."

"And they didn't follow the road west or we'd ha' met 'em when we turned back," Wallace said.

"Then they must have struck off either north or south. More probably south toward the river bed," was McKinley's opinion.

"Let's hope they've found water," said Wallace.

Later Orlando remarked: "We've got

Experience Letters

From Our Family Circle Women

Dear Family Circle: Many of you write me expressing concern in the rearing of your children and because I am so deeply interested in the young people I am minded to write this personal letter to you. Perhaps I can warn you against some practices and encourage others. I can not do less, as the subject is so near my heart.

I think I may help some of you by telling you of a family I have known very intimately since the two young people were married. There are four children, the oldest now almost 25 years old. The oldest and youngest are boys.

The parents of these children were convinced that children should be taught while young, to begin to do their own thinking and so when any of them had an idea they were given the means and permission to carry it out, providing it was reasonably practical and within their means.

They were frequently allowed to carry out their plans, even when it was quite certain that the outcome would not be pleasing to the children nor what they expected. These parents could have told the children how it would be, but they would not have been convinced, no more than are grownups often, when advised against certain things.

These parents reasoned that what the children learned by experience would be very profitable to them and the experience, being their own, would leave a deeper impression than if not allowed to try out their plans and told what the outcome would be. I am speaking of childish plans, you will remember, and not things of any vital importance to their welfare.

As little children the girls were allowed to choose the dress they wanted to wear, and as they grew old enough they were always consulted and taken along to choose their clothes when new ones were purchased. Suggestions along the line of good taste were given by the mother, but in a general way these girls had a chance to decide for themselves.

You can see how this system encouraged independent thinking or "using their heads." You can also see that it taught them early in life to be cautious about their selections because having once decided, even though against the advice of the mother, they had to abide by their choice and had no one on which to place the blame for their mistakes.

The boys were managed in much the same way. If they wanted to build something, and most boys are always wanting to do this, the materials were provided. I remember well when the oldest boy was not more than 4 we never could find a string because he was always using every one he could get to make fences by putting tiny sticks in the ground for posts and using the string to wind around in imitation of wire.

When the string question became serious his wise mother quietly purchased a ball of string for the child's express use. Inside his fenced inclosures the boy would build tents by spreading bits of cloth over little sticks, and the sticks were toothpicks, also provided for his use. Many happy hours were spent by him in this innocent amusement, carrying out ideas which he had received from some picture. At that time he had never seen a military camp nor any other kind.

The youngest is a boy and he, like the others, has had his chance to try out what he can do. He has always been intensely interested in watching men build houses and especially so in watching the electricians and when he was only 12 years old he asked his father if he might install some additional electric connections in different parts of the house. This father and mother pull together in the management of their children, and so the 12-year-old boy was given permission to go ahead and install the connections, and arrangements were made by the father so he could get from the store such things as he needed, as wire and fixtures. The boy put in a socket for the electric iron and the floor lamp, he also wired the fruit room of the basement, which had never been done. The work was inspected by the city inspector and pronounced perfect. Next, the same boy wired the entire summer cottage of his father, which passed inspection without a single change. From this on he had about all he could do vacations wiring other summer cottages. He is on the way to being a very expert electrician.

Supposing his father had paid no attention to his request to try out what he felt sure he could do, and had refused to supply him with the things necessary for him to work. Isn't it easy to see how bitter he would have been when his whole heart was set on doing a really useful and skillful piece of work? It takes very little to sidetrack children because they have a limited vision of the future. Perhaps this boy's whole life would have been changed and his interests diverted into channels where he would never have been successful had he been denied the practice in the work he loves.

You fathers on the farms, take your boys into consultation. Perhaps you don't know all there is to know about everything, even though you have been doing your work the same as your father did for years. I have received many ideas from the younger generation and, anyway, let me advise that you at least listen to what they suggest. Perhaps the idea won't work, but do give the boys a chance for a little independent thinking and give them the joy and satisfaction of putting their ideas into form.

The trouble with all of us is that we do not put ourselves into the other fellow's place. We do not give thought enough to the other fellow's viewpoint. I have seen the joy all taken out of the lives of some boys on a farm because the father would never pay any attention to their ideas, not even to consider them or talk them over with the boys. How can a father expect a boy to stay on the farm or to be a very enthusiastic worker if he is set to work like a machine to do the same things in the same way year after year?

And you mothers, if your girls want to change the furniture around in the living room let them do it. Perhaps the change will not be for the better and the girl will come to realize that after the change; if so, make it easy for her to acknowledge it and don't say, "I told you so."

Dear parents, let me ask you, is there anything in all this world dearer to you than your children's happiness, welfare and success in life? I am sure there is not. Then let me advise you, out of my more or less large experience and observation, that you think more and more about what will make for the best in the management of your children. It is as natural for a child to love his parents as for the sun to shine. Love and respect go hand in hand, therefore hold their respect and increase their love.

Don't imagine I am advising that children should always have what they ask for or be indulged in every sort of whim. I do not mean that, nor would I assume that you have so little judgment. What I am striving to impress is that children and older ones still in their teens should become part of the company, be given a chance to advance their ideas and to work them out. This should be done for their mental development as well as their happiness.

Dear fathers and mothers, keep close to your children; don't let them slip away. All too many are going swiftly and surely to their own destruction. I make this plea out of my deep desire for the good of all of you who make up my great Family Circle. Sincerely your friend,

ALICE W. BARLAND.

Just Folks

What would it mean for one to be deaf and dumb and blind for one hour each day? ?

It is not good for one to see too much, to hear too much or to speak too much.

There is a place for the chamber of silence among the affairs of men. Revelation comes out of the darkness and stars are seen from the depth of the well at midday.

Out of the solitude have come the deliverers of men. The burning bush is not on public exhibition. The still, small voice is heard in the darkness of the night.

The meditations of the heart are not carried on in the market place.

Digestion of thought as well as digestion of food is an unseen process.

Talk may easily weaken, while silence may as easily strengthen.

My grandfather's farm was on the rocky slopes of a New England mountain. Life, indeed, was a struggle for existence. My grandfather himself was a man of few words and much silence, but his smile of welcome stamped itself upon my memory ineffacably.

The ruggedness of austere life was his, and, as a rule, the hard conditions of life impressed themselves upon his features.

In more than one respect he was master of the situation. For example, instead of going to the shoemaker, he half-soled shoes of the family himself. In place of buying pegs, he made them. From the white birch trees in the farm wood lot he would saw disks from the trunk eight or 10 inches in diameter. The thickness of these disks formed the length of the peg. With a sharp knife he would channel disks one way and then channel them across. By splitting the wood along the channel each way he would have a pointed shoe peg.

He made his own buckets to catch the sap to make the maple sugar for the family use. From the sumach, he would make the spills through which the sap ran into the buckets, burning out the marrow of the sumach with a red hot iron.

Experiencing nothing of the levities of life himself, he was rather impatient at the exhibition of those levities on the part of the grandchildren.

I wondered what his thoughts might be as he sat beside the fireplace by the hour in silence. He defied the storms of life like the great granite boulders in his farm pasture. Without engineering instruments, he built the stone wall up the mountainside straight as an arrow, for a dollar a rod. His hours of forceful silence stamped themselves upon my memory.

Silence may be the cover for emptiness and ignorance. Silence may also be the token of knowledge deeper than words. Many years ago I read a book entitled "The Genius of Solitude." For several months I have been trying to get a copy of that book for a friend, but it seems to have faded from the book shelves. The big book sellers of eastern cities fail to find it for me. Its author was comparatively well known in his day, but now finds himself confined to a few lines in the encyclopedia. It is a great book on a popular subject. Bright volubility is more attractive. Probably it is better so; better to banish all silence than to be moping around without a thought worth while. Even a chatterer is better than a moper.

It yet remains to be said that intermittent periods of blindness and deafness and dumbness are not to be despised. The tower of Babel is not to be compared with Mount Sinai. The meditations of John Bunyan in prison outlast a thousand and one garrulous and popular authors. Dumbness has a virtue even as a medicine. Blindness is not necessarily the loss of sight, but the loss of the glare that prevents seeing. Deafness enables one to hear the still, small voice in the night time.

So, I repeat, periodic times of blindness, deafness and dumbness are good for the soul.

E. A. S.

Home Recipes

My Washing Fluid: One-pound can concentrated lye, 2 or 3 lbs. of salsoda or, if you can't get it use 1 lb. of common baking soda, 3 tablespoons of powdered ammonia, 3 tablespoons borax; dissolve the whole in 1 gal. of water and let stand a few minutes. Use about ½ cup in half a boiler of water for your boiling suds. A glass jug makes a fine container for this. As it freezes in the bottom of the vessel it must be stirred each time. Use the clothes stick for this.

MRS. J. C. G., Oregon.

Lemon Butter: Grated rind of 2 lemons, juice of 3, 1 lb. of sugar, 2 oz. of butter, 7 eggs well beaten. Put the sugar, butter and lemon juice on to heat in a double boiler and when it is boiling hot add the beaten eggs and stir till thick like custard and the last thing add the grated rind and pour into jelly glasses or jars.

E. H. CAREL, Idaho.

Potato doughnuts. Three medium-sized potatoes cooked and mashed, two eggs, one cup sugar, one-half teaspoon salt, two teaspoons baking powder, one-half teaspoon nutmeg and enough flour to make a stiff dough.

To the potatoes add the butter and beaten eggs, then add sugar, salt and nutmeg; mix baking powder with the flour, make the dough stiff and roll one-half inch thick. When fried roll in powdered sugar.

Washington. MRS. J. K. COOPER.

A Good Cake: Half cup butter (generous measure), 1 cup sugar, ½ cup milk, 3 eggs, 2 teaspoons baking powder, 2 cups flour, flavor as desired.

Cream butter and sugar, add 1 egg and beat 5 minutes by the clock, then another and beat and then the third. If milk is cold warm a little and sift together the flour and baking powder and put together by adding a little flour then a little milk and so on beating all the time. Bake in layers in a shallow pan. This way will actually take no longer than when the eggs are beaten separately and there will be fewer articles to wash.

2400 telephone wires in a cable little larger than a man's wrist.

Science keeps down costs

When the Bell System installed its first successful telephone cable, fifty wires was the largest number that could be operated in a single cable without "cross-talk" and other interference. Today it would require 48 cables of the original type to accommodate the number of wires often operated in one cable.

Without this improvement in cable, the construction of new underground and aerial lines would have cost the Bell System upwards of a hundred million dollars more than has actually been spent. In addition, the cost of maintenance would have been greater by eighteen million dollars a year. These economies in the Bell System mean a saving in telephone rates to each individual subscriber.

In all branches of telephone practice science has similarly contributed to economy. Even in such a comparatively small item as switchboard cords, improvements have reduced the cost of renewal by four million dollars a year.

Every new telephone added to the Bell System increases the usefulness of *all* telephones, but this multiplication tends likewise to increase the complications and the expense of service. The scientists of the Bell System, to offset this tendency, are constantly called upon to develop new devices which simplify complications and keep down costs.

By virtue of a united system the benefits of these improvements are shared by all subscribers—and the nation is provided with the best and cheapest telephone service in the world.

High Points in News of the Week

The predicted settlement of the railroad strike through the personal intervention of President Harding did not materialize last week. It is problematic how early the strike will end, but the belief is expressed by persons close to the heart of the controversy that settlement will be effected without further tying up of the transportation of the country.

The outstanding development of last week was the submission by President Harding to railroad executives and employees of the president's recommendations as a basis of settlement. The unions accepted the suggestions. The railroad executives rejected them unanimously. The suggestions were three in number as follows:

"First, railway managers and workmen are to agree to recognize the validity of all decisions of the railroad labor board and faithfully to carry out such decisions as contemplated by law.

"Second, the carriers will withdraw all lawsuits growing out of the strike and the railroad labor board decisions which have been involved in the strike may be taken, in the exercise of recognized rights by either party, to the railroad labor board for rehearing.

"Third, all employees now on strike to be returned to work and to their former positions with seniority and other rights unimpaired. The representatives of the carriers and of the organizations especially agree that there will be no discrimination by either party against the employees who did not strike."

The employees accepted the recommendations on the assumption that the railway labor board would give them a speedy rehearing on the question of wages and working conditions. The employers rejected them on the ground that they could not restore seniority rights to striking employees without violating their faith with the new employees, to whom they pledged permanent positions.

The most significant feature is the first of the three proposals, namely, that both railroad executives and employees acknowledge the authority of the railroad labor board and abide by its decisions. The railroad executives have accepted that proposal. Hence, it is possible that the railroad executives may be compeled to accept the three Harding proposals by an official act of the board in the form of an order putting them into effect.

The railway executives declare that the strike has not badly crippled transportation, but that adequate freight and passenger service is being rendered. Nevertheless, many trains have been canceled and others are running badly off their schedules. The heads of employee organizations say that the strike is still thoroughly effective and that the roads can not continue long to operate successfully unless the 400,000 striking workmen return to work in the railroad shops. Representatives of other railroad unions, such as the engineers, firemen, conductors and so on, declare that as a result of inefficient and inadequate workers in the shops, train equipment, especially engines, is becoming unsafe for service. The four big brotherhoods last week in a public statement following a request that they be permitted a conference with President Harding, said that they feared their organizations would be drawn into the strike if settlement was not soon effected. Other union leaders said that violence on the part of guards about railroad property rendered the lives of their members unsafe, and that unless a settlement were reached or the guards removed there was likelihood that these unions, with an aggregate membership of 800,000 workers, would have to decline to render further service.

The railroad executives declare that they will be able to give continued satisfactory service in view of the fact that they are employing many new workers and that many of the strikers are returning individually to work. They report approximately 60,000 persons employed in shops, out of which 400,000 union men walked when the strike began.

* * *

Little change in the coal strike situation was evident during the last week. Under the direction of Administrator Spencer coal now available and that being mined and secured from foreign producing countries will be apportioned with a view to enabling essential industries to operate effectively. The rationing will be on the basis similar to war-time rationing of necessities.

* * *

Dr. Alexander G. Bell, inventor of the telephone, died last week. It is less than half a century since the invention, the patent for which he secured on his 29th birthday, was made. There are now over 13,000,000 telephone instruments through which billions of conversations are carried and by means of which much of the world's business is transacted. The telephone patent has been called the most important ever issued.

Visit West Side Stock Farms

(Continued from page three.)

The new herd bull at the W. J. Burns herd of grade Holsteins, in the Wynooche valley, was the center of interest. Mr. Burns also has three purebred heifers which have averaged 390 pounds for the year.

"It is useless to sell purebred stock to people who will not give them good care or become interested in their production," remarked E. L. Brewer, who spoke at the luncheon given at the Elma Commercial club that noon. "Proper care and treatment should be given, even when cows are dry, if they are expected to produce better returns when they freshen."

The last stop in the county was at the Johnson Brothers' farm, where they are raising purebred Shorthorns. Mr. Johnson is following a plan of fattening calves for veal, instead of keeping all animals to a mature age.

Back in Thurston County.

There were 40 grade Jerseys on the C. C. Aspenwall farm and Eminent of Ingleside heads the herd. One instance shows an increase of from 414 pounds of fat by the dam to 445 pounds by the daughter.

At Olympia the Thurston county farm bureau gave a banquet for the breeders of the community. The next stop was at the Cloverfields farm, where both Holsteins and Jerseys are being bred. An increase of 1 per cent in butterfat production has been secured in the last five years from the use of purebred sires. Mr. Eells, the farm superintendent, has found that there is special demand for both Jersey and Holstein milk and delivers both kinds.

See McGuire's Shorthorns.

The next stop was at Tenino at the J. D. McGuire herd of registered and grade Shorthorns. The top crosses from a registered bull have been carried out for the last six years. The herd sire was purchased at the Pacific International Live Stock exposition last fall. Mr. McGuire is fitting a herd of 15 animals to be taken out on the fall show circuit.

John Hackman, in the Nisqually valley, is milking 80 head of grade Holsteins and has used two purebred sires on the herd during the last six years with excellent results. A large part of the young animals were purchased from the A. L. Brown farm of the same locality.

The first stop in Pierce county was at the Western State hospital at Fort Steilacoom, where Governor Hart served a luncheon before taking the visitors through the barns in the afternoon. Governor Hart is building up a foundation herd which will be used to supply stock to the other state institutions. There are now only 21 grade cows left, which will be disposed of as they can be replaced. Two herd sires are Sir Pietertje Ormsby Blossom and Carnation King Matador Mutual, the former animal being sired by a bull who won first at the National Dairy show in 1912. The junior herd sire is a son of Carnation King Sylvia.

Perhaps the most interesting part of the visit to the hospital was the Bang herd, in which some excellent healthy calves are being raised from tubercular cows. The question arose as to why the state could keep tubercular animals when farmers are required to kill all reactors. Governor Hart explained that eight years ago Governor Lister started a herd of reactors, which he kept in quarantine by using the Bang method. All calves are taken from the cows at birth, and fed tubercular-free milk. In this way the state has been able to save some exceptional cows, and to give some advertisement to the breeder, who would otherwise have lost the animal because of being unable to quarantine on a small scale. All milk from the tubercular cows is pasteurized at a high temperature before being fed to the calves.

Sunday, July 30, was spent by the excursionists in or near Tacoma, from which the start on the second week was made Monday. A report of the second week's tour will be given in a later issue.

Urges Holding Grain

President George E. Marcy of the Armour Grain company issued a signed statement last week urging farmers to hold back their grain for reasonable prices and saying that as prices for grain go up, better business conditions throughout the whole country will follow. He says:

"An upward movement in grain prices is in prospect and the situation promises to be of such financial benefit to the American farmer that he in turn will be in a position to materially improve general business conditions.

"An orderly and gradual marketing of existing wheat stocks will end the present depressed price condition and there are tremendous economic factors at work to force a slower and more stable market.

"Settlement of the coal strike will result in decreased amount of rolling stock capable of moving grain to terminals and expected improvement in general business conditions should further affect the amount of equipment available.

"On the other hand, the demand promises to constantly get better.

"The American farmer holds the key to the situation. He sold his surplus grain last spring at high prices. Good crops and good supplies are in prospect."

Farm Business and Markets Outlook

(Continued from page five.)

and there is a probability of export demand with small imports at the present level of prices.

Prices for 92 score fresh butter on August 2 were:

Chicago, 33 1-2c; New York, 34 1-2c; Boston, 35 1-2c; Philadelphia, 35c.

Both country and distributing markets for cheese declined further last week, but the reductions were not enough to attract buyers on a large scale as many dealers are looking for a 16-cent level or lower in the country. Receipts of cheese are gradually decreasing and storage holdings are not excessive so that these expectations may not be realized. The embargo on perishable goods by one or two railroads may have interfered with trade from the south and southwest which usually begins to open up at this season.

Prices for No. 1 American cheese on August 2 were:

Chicago—Twins, 18 1-4@18 1-2c; S. Daisies, 18@18 1-4c; D. Daisies, 18@18 1-4c; Young Americas, 18 1-2@19c.

FRUITS AND VEGETABLES:

Potato prices declined further last week, but receipts have dropped approximately to normal size for this season and the slump should be checked soon. Virginia, New Jersey, Maryland and Kansas are the leading shippers. Kansas Irish Cobblers are quoted at $1.20 and Minnesota Early Ohios at $1.10 in the Chicago carlot market.

Shipments of new apples up to August 1 amounted to 3177 cars, compared with 1281 cars to the same date last year. Prices upon good Duchess and Transparent stock range from 50 cents to $1 a bushel wholesale in middlewestern cities.

The official forecast upon the commercial production of onions in seven intermediate states is 6753 cars. The acreage in 14 late producing states is estimated at 38,100 acres, compared with 35,200 acres in 1921. Total shipments of onions from producing sections up to August 1 amounted to 7630 cars, compared with 6783 cars to the same date last year.

Range of Live Stock Prices for the Week Ending Aug. 2

CATTLE.	Chicago.	Spokane.	Portland.	N Salt Lake

Detroit.—Adv.

Bits of Fun for Everyone

Father's Chances.

She—I do wish you hadn't borrowed from father.

Her Suitor—Yes, I know, darling, but I had to. I was so anxious to get out of debt!—Bulletin (Sidney).

But Not Twice.

Young Mother—What in the world makes the baby cry so?

Ditto Father (wearily): I suppose he overheard me say that I managed to get a little sleep last night.—American Legion Weekly.

Something to Praise.

"You don't seem to think much of my car," said the owner of a dilapidated machine.

"I wouldn't say that," replied the tactful garage man. "What do you call this contraption here on the front of your radiator?"

"That's a figure of Mercury. I bought it for an ornament."

"Well, now, that's about as neat a piece of work as anything I every saw."—Birmingham Age-Herald.

Stop! Look! Listen!

"Is this a fast train?" the salesman asked the conductor.

"Of course it is," was the reply.

"I thought it was. Would you mind my getting out to see what it is fast to?"—Evansville Crescent.

He Won.

A young but exceptionally brilliant professor in a western college was dismissed from the faculty because of his inordinate betting. The president, interested in his career, secured him a position in an eastern college. To the president there he wrote: "The young man has a promising future, and anything you can do to cure him of betting will be a benefit to society."

The professor went east, and was cordially received. Conversation had proceeded but a few minutes when he said to the president, "I'll bet you $75 you have a wart between your shoulder blades."

The president hesitated. "Young man," he said, "I never bet; but just to teach you a lesson I will take you up."

He thereupon proved to the young man's satisfaction that he was in error, and the professor paid the $75.

The president wrote west relating the incident, concluding—"I hope that I have cured him."

The other wrote back: "I fear the case is hopeless. The very day he left here he bet me $100 that he could make you take off your shirt."—Judge.

Preparedness.

"Doctor, if there is anything the matter with me don't frighten me half to death by giving it a long, scientific name. Just tell me in plain words.

"Well, sir, to be frank, you are lazy."

"Thank you, doctor. Now, tell me the scientific name for it. I've got to report to the missus."—Birmingham Age-Herald.

Happy Suggestion for Uncle.

Little Spencer let no grass grow under his feet, when uncle came for a visit, before rushing up with this:

"Uncle, make a noise like a frog."

"Why?" asked the old man.

"'Cause when I ask daddy for anything he says: "Wait till your uncle croaks."—The Van Raalte Vanguard.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4040-4048. Lady's Costume. Waist 4040 cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. Skirt 4048 cut in six sizes: 25, 27, 29, 31, 33, and 35 inches waist measure. To make this dress for a medium size will require 9 1-4 yards of 32-inch material. The width at the lower edge is about 2 1-4 yards.

Two separate patterns, 10 cents for each pattern.

3654. Child's Dress. Cut in four sizes: 1, 2, 4, and 5 years. A 2-year size requires 2 3-4 yards of 27-inch material. Price, 10 cents.

4062. Girl's Bathing Suit. Cut in four sizes: 8, 10, 12, and 14 years. A 10-year size requires 3 3-4 yards of 32-inch material. For yoke and sleeve and skirt facing, 3-4 yard will be required. Price, 10 cents.

4050. Lady's Dress. Cut in six sizes: 34, 36, 38, 40, 42, and 44 inches bust measure. 38-inch size requires 5 5-8 yards of 32-inch material. The width of the skirt at the foot is 2 3-8 yards. Price, 10 cents.

3846-3843. Lady's Costume. Guimpe 3846 cut in seven sizes: 34, 36, 38, 40, 42, 44, and 46 inches bust measure. It will require 2 3-4 yards of 44-inch material. Skirt 3843 cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 2 7-8 yards of 38-inch material. The width at the foot is 2 yards. Two separate patterns, 10 cents for each pattern.

4063. Boy's Suit. Cut in four sizes: 4, 6, 8, and 10 years. It will require 3 5-8 yards of 27-inch material for a 6-year size. Price, 10 cents.

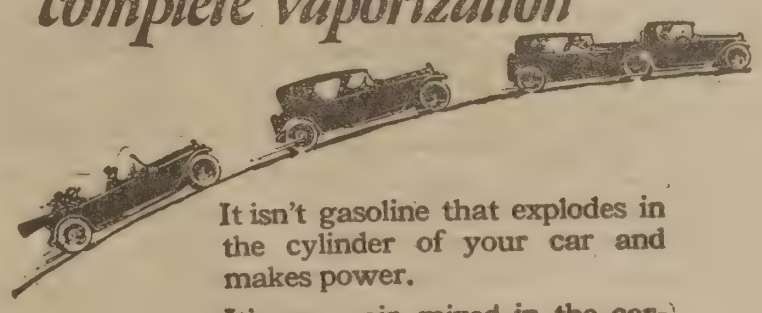
THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.



Write today for Circular.

AERMOTOR CO. Chicago Des Moines Kansas City Minneapolis Oakland

HUGHES & COMPANY, Spokane Distributors.

Aermotor Towers are Towers of Strength

More mileage—
the result of *complete vaporization*

It isn't gasoline that explodes in the cylinder of your car and makes power.

It's gas—air, mixed in the carburetor with gasoline to form vapor.

Red Crown gasoline *vaporizes completely*. It forms a homogeneous mixture with 12 to 16 times its volume of air. That mixture explodes cleanly and powerfully, leaving comparatively little carbon residue on valves, spark plugs and cylinder walls.

That's why you get better mileage out of "Red Crown"—and a cleaner, sweeter-running engine.

Fill at the Red Crown sign—at Standard Oil Service Stations, at garages and at other dealers.

STANDARD OIL COMPANY
(California)

RED CROWN GASOLINE

The Gasoline of Quality

On Faith Elm's last birthday she became a graduate of the Children's Corner, for then she was 12 years old. She is in the seventh grade. Her home is in Pierce county, in western Washington.

"I have three little rabbits, and they get out every day and I have to catch them. We have about 400 little chicks, 19 ducks and about 40 turkeys. My age is 11 years, and my birthday is August 5. Here is a riddle: Dresses upon dresses with not a stitch or a seam. An onion," writes Matilda French, who lives in Yakima county, Washington.

Birthday Greetings

THURSDAY, August 10—Frank Blackburn, 9 years old; Mabel D. Hayes, 11; Emil Hoveling, 10; Elinora McKillip, 11; Grace Marlatt, 10; Ellen Nelson, 10; Mildred Wuorinen, 11; Catherine C. Lenhart, 8; Vera Neff, 11.

FRIDAY, August 11—Eva Brown, 11 years old; Anna Bell Peters, 9; Orven Ware, 11.

SATURDAY, August 12—Edith Bell, 11 years old; Frances Higginbotham, 10; Martin Sather, 11; Clare Fuller Woodward, 8.

SUNDAY, August 13—Margaret Bradfield, 8 years old; Kenneth Dodge, 11; Wilba McInturff, 11; Hazel Niva, 11.

MONDAY, August 14—Ruby E. Hult, 10 years old; Joyce Matthews, 10; LeRoy Smith, 11.

TUESDAY, August 15—Clayton Dick, 10 years old; Ella Schrenk, 9; Alice E. Young, 10; Thelma McTavish, 8; Helen A. Tomlinson, 8.

WEDNESDAY, August 16—Margaret Wise, 11 years old.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOBBY TAKES HIS OWN MEDICINE.

Bobby Coon had been out all night, and he was tired and so sleepy that it was all he could do to climb up to his home in the hollow tree. No sooner did he tumble into bed than he was fast asleep.

Now, Bobby Coon is a great practical joker. There is nothing he likes better than to play a joke on some of the little people of the Green Meadows and the Green Forest, and every night after he has filled his stomach he goes about playing tricks.

Ever since the morning when Johnny Chuck had slept until nearly noon because Bobby Coon had covered his doorway with hay so that no light could get down to his bedroom, and so he didn't know when to get up, Johnny had been trying to think of some plan to get even with Bobby Coon. He had called in Jimmy Skunk, who had spent all of one morning trying to find his own house, which Bobby Coon had buried in sand while Jimmy was out hunting for beetles. Suddenly they heard a sound in the big hickory which made

There wasn't a sign of any one anywhere.

Jimmy Skunk jump up and dance a jig.

"I have it!" he shouted. "Do you hear Drummer the Woodpecker? We'll get him to help us."

So it happened that Bobby Coon had not been asleep in his hollow tree more than half an hour when into his dreams broke the sound of knocking. Bobby waked up to murmur sleepily:

"Go 'way. There's nobody home."

But the knocking kept right on—ta, tap, tap. Bobby couldn't get to sleep again, try as he would.

"Go 'way, I say!" he called crossly.

The only reply was tap, tap, tap. Bobby crawled out of bed and climbed up to his doorway. When he stuck his head out the sun made him blink, and almost blinded him. He rubbed his eyes with both fists, and then he looked to see who had knocked. No one was to be seen. There wasn't a sign of any one anywhere. Could he have dreamed that some one was knocking? He must have. He took one more look around and then scrambled back to bed. No sooner had he begun to doze than there began a terrific noise—rat-a-tat-a-tat-a-tat-a-tat. It seemed as if it was right in his ear.

Bobby Coon was wide awake this time as he scrambled up to his doorway, and then he was mad way through. He knew now who was making such a racket; it was Drummer the Woodpecker. If he wanted to drum he could just go and find some other hollow tree! Bobby stuck his head out. No one was to be seen; but this time the noise didn't stop. Oh, my, no! It was louder than ever, but it came from the back side of the tree.

Bobby crept out and very quietly crawled around the tree, but when he got to the back side no one was to be seen and the rat-a-tat-a-tat-a-tat-a-tat was louder than ever and came from the front. Back went Bobby, with the same result as before. Then he lost his temper and scrambled 'round and 'round the tree as fast as he could, but never once did he catch sight of Drummer, who just went around the tree as fast as Bobby did, and all the time he kept up a terrific drumming.

Finally Bobby Coon stopped to get his breath. He happened to look down, and there he saw Johnny Chuck and Jimmy Skunk rolling over and over on the ground with laughter. Gradually Bobby Coon began to see the joke.

"I guess you fellows are even," said he. "Now, do let me sleep a little."

So, after a while, Jimmy Skunk and Johnny Chuck called off Drummer the Woodpecker and Bobby Coon went back to bed.

Pike's Peak or Bust

(Continued from page fourteen.)

long, hard march ahead of us before we come to water again. That is, unless we dig another well in the river bed somewhere."

"How far do you reckon it is back to water from here?" asked McKinley. "Fifty or sixty miles?"

"Abe Sanders, with the handcart, declares we've tramped every inch of 65 miles since we left the last watering place."

"Sixty-five miles is a long, dry pull. You fellers on foot all figger on turnin' back from here, I 'low," remarked Wallace.

"Oh, indeed, we do! Indeed, we're going to take the back track! And how about you three men? Got enough of the Smoky Hill route, I'd guess."

"Enough for one lifetime. We're heartily sick of it, and disgusted with our fool selves for ever turnin' off from the Santy Fe trail, like we done. It's back to a watered country for us. In fact, we're so disgusted with this blasted desert, apt as not we'll turn round and mosey back to Missouri. Or at least that's how I feel about it."

"What! Are you as badly discouraged as that?" exclaimed Orlando. "We haven't even thought of going home. But we're expecting to follow a better watered route next time. The Santa Fe trail is supposed to be a hundred or two hundred miles longer than this. But it's the shortest road in the long run. We expect to stick close to that when we get back to it. But I wouldn't miss the trip to the Rocky mountains for anything."

"It's not recorded that we're going all the way back home," Holloway spoke up. "Five years ago this spring I started from Texas to California. But I never arrived there. We had a big drove of beeves that we couldn't get through, and we had to turn and drive 'em another direction. Of course I couldn't desert the outfit. So I've never set eyes on California; and there's no certainty that I ever will. But I've started to the Rocky mountains gold diggings, and I don't want to turn tail this time till I've dug up at least a little of the yellow metal."

"Well, I'm thinkin' you'll have to dig it up without me, Jess," said Wallace, in a tired way. "I've come near enough to leavin' my bones in this sunburnt desert. No more of that in mine. Barton county, Missouri, will be good enough for me hereafter."

So exhausted were all the travelers by their exertions and hardships that they spent not only the following night here, but another day and night. But early on the morning of the third day they were ready to get in motion again.

Knowing that a journey of 60 or 70 miles lay before them, through a waterless region, they made the best preparations possible. The men with the wagon filled their water barrel, and the foot travelers filled their water kegs, which were placed in the wagon. Last of all, they watered every animal from the well; and they themselves drank every drop they could swallow. Immediately after that they all set out, the wagon leading the way.

They were traveling the same road they had come, but in the opposite direction.

Steadily the two parties traveled till about the middle of the afternoon. Then they camped, by the roadside, turning their animals loose after giving each of them a bucketful of water from the barrel. There they rested and let the cattle rest and graze till the sun was setting. After that they got things in readiness and were soon rolling eastward again.

Till about midnight they kept in motion. Then they took out their animals for a two-hour rest and gave each another bucketful of water. That left but a little in the barrel and kegs for emergencies. At the end of the two hours they journeyed on till daylight, then camped for breakfast.

While eating they estimated that they had covered about 50 miles since leaving their camp by the well. That left them perhaps 15 miles yet to travel.

When at length they were moving once more, all were so weary, men as well as animals, that they seemed scarcely able to drag their feet along. The three wagoners were walking, to lighten their load. And even with that it seemed doubtful if some of their work animals would be able to keep the wagon going. So slowly did the travelers creep along that it was about the middle of the afternoon when they arrived at a creek with water in it.

Here they found some green grass; and here the whole party were glad to take another long rest.

During this time, or most of it, the men with the wagon were debating as to whether they should return home. Wallace was heartily in favor of retreating, McKinley undecided, and Holloway eager to push on to the mountains. Holloway owned the wagon and the two yoke of oxen; and there was much uncertainty as to what the three men would do. After dinner of the third day they yoked up and traveled on toward Council Grove, that matter being still undecided.

The foot travelers remained where they were till the following morning. After three whole days of resting, eating and sleeping, they had fully recovered from their hardships and starvation. At length they were in motion again and they followed the wagon party eastward, day after day.

For $1 You Employ Scores of Workers for 5 Years

Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

THE WASHINGTON FARMER, ...1922.

If your subscription is already paid in advance it will be extended from the date to which it is paid. Aug. 10, 1922.

News for Breeders

SOON SAW THE DIFFERENCE.

B. M. Luck of Woodland, a Guernsey breeder, has developed an exceptional herd of 29 cows by 15 years of breeding up with registered sires. The original herd, a bunch of grade Jerseys, was started by George A. Gay, and there were two different registered Jersey bulls used until the change was made a few years later by the present owner, who rents the farm from Mr. Gay.

"People don't realize what they can do with a pure bred bull," said Mr. Luck, "I could see the difference in the first cross when a better bull is used. I have eight daughters from the last herd sire, and they all show splendid uniformity and are good producers. They are seven-eighths purebred."

The present herd sire on the Luck farm is a 3-year-old of the Langwater and May Rose breeding. He was recently purchased from the Daybreak farm at Ridgefield, in Clark county, and is the sire of a number of heifers in that herd. When he first came to the farm in April he weighed 2150 pounds.

GUERNSEY TOUR IN PIERCE COUNTY.

Forty Guernsey fanciers held an interesting tour and visited a number of prominent herds in Pierce county on June 29. A total of six dairy herds were visited, and the party met at Paul's Pantry in Puyallup for luncheon. It was here that a meeting was held and the Pierce County Guernsey Cattle club organized. Immediately after the meeting the party adjourned to the local theater where a motion picture film, "Guernseys in America," was shown.

Officers of the new club are as follows: William Morris, Buckley, president; A. L. Johnson, Buckley, vice president; John Vernhordsen, Gig Harbor, secretary and treasurer; and Peter Gammeltaft, Roy, and J. A. Berg, Graham, were elected as extra members of the executive committee.

MAKES NEW RECORD.

Alpha's Lady May, a Jersey cow in the Barker Askew herd of Montesano, has made a new record of 12,751 pounds of milk and 713.40 pounds of butterfat in a year. During this time she carried a calf 225 days while on test and made an average test of 5.59. She was sired by Ferndale's Stoke Pogis and is out of Pogis' Lady Alpha. She is related to Rosaire's Olga Lad.

A CORRECTION.

J. H. Quick, a Jersey breeder of Castle Rock, asks that a correction be made to a recent report of his herd records in THE FARMER. The article gave a number of production records, which Mr. Quick says should have been mentioned as private tests instead of official records.

VETERINARY

By DR. S. B. NELSON.

Bitter Milk—I have a cow that came fresh in September and the cream and butter has a bitter taste and a bad odor. We set the milk in earthen crocks and keep well aired and sterilized. I am feeding wheat hay and give about six quarts of carrots at a feed once daily, also some potatoes and feed a little straw outdoors in the daytime. J. M. R.

Valleyford, Wash.

I would suggest that you give your cow one and one-half pounds of Epsom salts. Following this, wash the udder before and after milking with a 2 per cent solution of lysol. I would cut down some on the potatoes and if possible add a little grain.

Insufficient Nourishment—I have an old Jersey cow that has been out on pasture without shelter and with corn fodder beside for feed. She has been dry a month and we expect her to freshen the last of February. She came in from the pasture one night and we put her in the barn and fed her a half gallon of mill run soaked in water and all the bunch grass hay she wanted. She ate fine, but that night she lay down and can not get up now, but she tries to get up. She eats and drinks and her kidneys and bowels seem all right. She moves around the barn some in trying to get up. The trouble seems to be in her hind legs. We are keeping her blanketed. P. N. A.

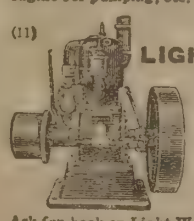
Monse, Wash.

I am afraid that this is a case of insufficient nourishment for your cow during the time she is carrying her calf. The only thing I can suggest is that you continue to feed her mill-run and hay and she may gather enough strength to get up before she calves. If not, the chances are she will after she has freshened. Medicine will not do her any good.

No Sure Cure for Ringbone—Can you give me a sure cure for ringbone on a horse's hoof caused by an injury about 10 months ago? J. C.

Yakima, Wash.

I can not inform you of a sure cure for ringbone either caused by injury or from any other cause. I do not know of a sure cure for ringbone.



New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hopper-cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

(11)

LIGHT WEIGHT 4 H.P.

For all power jobs up to 5 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

UNIV OF ILL
EXPERIMENT STATION
URBANA ILL

what method of feeding do you use—

trust -to- luck

or

trust -to- cluck

THE difference between a poor-paying flock and a profit-paying flock is the difference between take-chances and take-NO-chances. Indifferent, haphazard, "trust-to-luck" feeding will never pay. It can't! Nothing will rob you of your rightful profits as quickly as blind feeding. True, your hens may live and be fairly healthy on a poor ration. But—

You are in the poultry business to make money. The more eggs you get the more money you net. You must realize, then, that it takes an excessive amount of a hen's energy to convert poor feed into money as against converting good feed into money. So that—far from saving money—the only result of a "cheap" ration is a *higher cost* for each dozen eggs produced.

A tasty, well-balanced ration is absolutely necessary for maximum production—that's sure! Equally sure is the fact that a uniform, quality-feed like SURELAY pays its way—and more! Its slight added cost comes back to you many times over in the extra eggs produced.

Have you ever compared the results you're getting from "trust-to-luck" feeds with the results other poultrymen are getting from SURELAY? After all, the real profit-point is this: What do your *hens* think of the feed you give them—and what do they do with it?

Why not put this egg-production question squarely up to your hens? Feed them SURELAY—a prime, true-to-test formula that has weathered the years—and let the results speak for the feed and for us. Meanwhile we suggest that you write for your copy of the new, enlarged edition of "Makes Hens Happy." It is the most complete and helpful handbook on poultry husbandry we have ever issued—and it's free. Simply clip the coupon—and mail today!

Visit West Side Stock Farms

By RALPH ERSKINE

In a previous issue was published a report of the first week of the two weeks' live stock tour in western Washington under the auspices of the extension department of the state college. The second week began with an inspection of the animals at the western Washington experiment station at Puyallup, the excursionists having spent the first week visiting farms in Clarke, Cowlitz, Lewis, Thurston, Grays Harbor, Mason and Pierce counties. L. T. Oldroyd and H. E. McNatt took the crowd through the dairy barns at the station and emphasized the results of better breeding by the type of offspring. "Good producers come only from good foundation stock," said Mr. McNatt. "A purebred that does not come up to standard will never produce a good offspring."

Further proof that purebreds are a paying undertaking was brought out on the Tresch dairy farm at Puyallup. Mr. Tresch is keeping a commercial herd of registered animals. A real treat awaited the dairymen at the C. W. Orton farm at Sumner, where certified milk is being produced systematically and at a good profit to the owner. More than 100 gallons of this special milk is sold daily, most of it going to Seattle.

Another striking example of the value of a good sire came at the C. J. Lawson farm at Orting. A daughter produced 76 pounds more butterfat than did her dam. The tour then crossed into King county and was taken in charge by A. B. Nystrom, county agent.

At the C. J. Orton farm at Renton was another certified dairy. A new milk house had just been completed, but the equipment not yet moved. Five cows, all daughters of Yorick of the Willows, showed an increased yearly production of nearly $50 each above that of the average cow in the herd. These animals were purchased for $100 per head more than the average of the herd.

The Pacific Hog ranch, near Kirkland, was the first large hog farm listed on the tour. Here there are 6000 animals which are being fed in part on garbage from the city. Five hundred and twenty-five of the brood sows have been bred to farrow in the fall. There are a number of breeds kept, but no cross breeding is done except for meat production.

A Record Breaking Guernsey.

The Dr. Park Weed Willis herd of registered Guernsey cattle came next and the visit to Orchard Hill farm was one of the best of the day. While Sammamish Topsy, the highest producing Guernsey cow west of the Missouri river, was the main attraction, there were other individuals that demanded attention because of their exceptional quality and breed characteristics. The herd bulls are from Robinhood and King of the May breeding.

There were six purebred Jersey females at the E. W. Trezise farm near Tolt. Bessie, a 10-year-old cow, produced 419 pounds of fat, while Emma Foxy Fern made 700 pounds as a 7-year-old. The latter took second place in her class at the state fair last year. All cows of this herd are being milked only two times and will average 400 pounds on the mature cow basis.

After five years of breeding with a good sire, the Methow Valley Live Stock company of Tolt have secured seven daughters from the herd sire that will average 500 pounds of fat. In all cases the daughters

DEPENDABILITY
in the next tire you buy

Dependable tires will operate continuously day in and day out with little or no annoyance or tire trouble for the user.

Efficiency in handling farm goods without costly delays and interruptions demands a sturdy tire that will stand up and work loyally through dirt and mud and sand, over rough and rutty roads, in all kinds of weather.

The Savage Cord is such a tire. It is a Mighty Tire, with a tread that grips the road, does not skid, and wears slowly.

With Savage Cords on your car or truck you can start out any time, any place, under any conditions, with the assurance that you have the most dependable tire equipment money can buy—dependable because unusual care is exercised to build them so. We have incorporated *seventeen outstanding constructional features* into our Cord to make it the wonderful tire it is—ask your tire dealer about the Savage Cord, compare it with other tires.

The reliability of the institution manufacturing Savage Tires is further assurance that you will be satisfied.

Other good makes of tires may use one or more of the seventeen constructional features we have incorporated into the Savage Cord but no other tire that we know of begins to embody them all.

WE GUARANTEE
that not an ounce of shoddy or adulterants is used in the building of the

For Good Farming, Attractive Country Homes and Happy Country People

U. S. Grain Growers Reorganize

New Board of Directors Takes Charge--Wallace and Hoover May Assist

An article in THE FARMER a few months ago reported the stormy session of the first annual convention of the United States Grain Growers, Inc., held in Chicago in March. At that convention a majority of about 54 per cent completely routed the minority of 46 per cent, keeping the control of the organization in the hands of the old line farmers' elevator companies. At that time the Chicago representative of THE FARMER was quoted as saying:

"It is simply a question of whether the United States Grain Growers are to market their grain cooperatively or whether they are to sell it through farmers' elevators by way of speculative channels, as some 5000 of these elevators have been doing for years."

Farm Bureau Disappointed.

That the action of the convention was highly disappointing to the American Farm Bureau federation, which had fathered the United States Grain Growers, Inc., was indicated by a formal statement of the bureau, in which occurred the following:

"The farm bureau has pledged itself to see that its members get improved methods of marketing. The farm bureau has sponsored, fostered and financed the United States Grain Growers, Inc., in an effort to secure harmony in the various grain marketing organizations. Whatever happens to the United States Grain Growers, the farm bureau will continue its earnest efforts to secure a more efficient system of marketing grain."

Since this convention it has been apparent that the United States Grain Growers has been making little or no progress, while the organizations based on the 100 per cent pooling idea have been advancing both in the middle west and the Pacific northwest.

Comes now the announcement by the farm bureau federation of a sweeping reorganization of the United States Grain Growers, Inc. That the reorganization is the direct result of the pledge of the farm bureau above quoted is indicated by the fact that it came about through the efforts of a special committee of the Midwest Farm Bureau federation.

Of the 19 members already appointed to the board of 21 directors only seven were members of the former board. Former President C. H. Gustafson, whose organization machine was winner by the small majority at the March convention, is not a member of the new board, his place being taken by E. H. Cunningham, secretary of the Iowa Farm Bureau federation. Howard Leonard, president of the Illinois Agricultural association, which association was a part of the defeated minority in the March convention, is a member of the new board.

Farm Bureau Makes Statement.

The following in brief is a statement issued by the farm bureau federation announcing the reorganization:

"The United States Grain Growers, Inc., was completely reorganized during a meeting of the board of directors in Chicago on August 4 and 5. The new board of directors is as follows:

"Howard Leonard, Eureka, Ill., president of the Illinois Agricultural association; John F. Boland, Webster Grove, Mo., president of the Missouri Farm Bureau federation; Ralph Snyder, Oskaloosa, Kan., president of the Kansas Farm Bureau federation; John G. Brown, Monon, Ind., president of the Indiana Federation of Farmers association; Charles W. Hunt, Des Moines, Iowa, president of the Iowa farm Bureau federation; O. E. Bradfute, Xenia, Ohio, president of the Ohio Farm Bureau federation; J. F. Reed, St. Paul, Minn., president of the Minnesota Farm Bureau federation; George McKerrow, Pewaukee, Wis., president of the Wisconsin Farm Bureau federation; E. H. Cunningham, Cresco, Iowa, secretary of the Iowa Farm Bureau federation; R. A. Cowles, Bloomington, Ill.; W. R. Crowther, Golden City, Mo.; T. I. Ferris, Pleasant Lake, Ind.; H. L. Keefe, Walthill, Neb.; A. J. McInnis, Dazey, N. D.; Charles B. Steward, Red Cloud, Neb.; Eugene Funk, Funks Grove, Ill.; Herman Danford, Washington, Ill.; B. F. Parmenter, Lincoln, Neb.; A. G. Burgeson, Douglas, N. D.

"Two places on the board of directors are vacant and will be filled later. Of the new board of directors, Cowles, Crowther, Ferris, Keefe, McInnis, Steward and Burgeson were members of the retiring board.

"The new board of directors elected officers as follows: President, E. H. Cunningham; vice president, H. L. Keefe; secretary, J. M. Mehl; treasurer, Charles E. Gunnels.

Only One Salaried Man.

"Secretary Mehl has been assistant to the president of the United States Grain Growers, Inc., since its incorporation. Mr. Gunnels is treasurer of the American farm bureau federation and is instructed by that organization to serve the grain growers without pay. Secretary Mehl receives a salary of $5000 per year. No other officer and no director of the United States Grain Growers, Inc., receives any salary. Per diem compensation for the directors was fixed at $10.

"The new board of directors elected an executive committee of three—E. H. Cunningham, R. A. Cowles and J. F. Reed—and vested in it broad powers for carrying on the affairs of the organization. The subsidiary United States Grain Growers' Sales company is controlled by this executive committee.

Advice on Financing.

"An advisory executive committee of three was appointed to advise on questions of finance and marketing. The members of this committee are: Bernard M. Baruch, financier, New York; Alexander Legge, president of International Harvester company, Chicago; Frank O. Wetmore, president of First National bank, Chicago. All three have accepted appointment on this committee.

"Secretary of Agriculture Henry C. Wallace and Secretary of Commerce Herbert Hoover were invited to serve as ex-officio members of the new board of directors, representing the public.

"The auditors' report on the financial affairs of the United States Grain Growers, Inc., on July 26, 1922, showed the total liabilities to be $394,582.75. Assets totaling $109,315.48 were reported, leaving a net deficit of $285.267.27.

"The Farmers' Finance corporation is in status quo.

A Farm Bureau Movement.

"The reorganization of the United States Grain Growers, Inc., was effected through the recommendations of the midwest farm bureau creditors committee. This committee consists of E. H. Cunningham, secretary of the Iowa Farm Bureau federation; W. S. Hill, president of the South Dakota Farm Bureau federation, and J. W. Coverdale, secretary of the American Farm Bureau federation. It was authorized on May 13 in a conference of the midwest farm bureau presidents and secretaries and has been at work ever since untangling the affairs of the farmers' cooperative grain marketing organization as disclosed in the first annual meeting in Chicago on March 21. The creditors' committee holds powers of attorney for most of the creditors who have claims against the United States Grain Growers, Inc. The plan for reorganization was worked out by the creditors' committee and submitted to a meeting of the midwest farm bureau presidents on August 3. The recommendations of the committee were unanimously adopted."

A Colville Valley Problem

Draining of River Creates Peculiar Condition of the Soil

By HENRY J. PLUMB, County Agent.

Undoubtedly the draining of the Colville river, coupled with the recent dry years, has brought a particular soil problem to the foreground.

The presence of alkali in the soils of the Colville valley has long been a matter of common knowledge but not until the moisture supply has been reduced to such a low point has this problem loomed up as serious. It is now regarded as one of the most pressing problems confronting the farmers of Stevens county at the present time.

The effect that alkali salts has on plant growth is a physical one. It reverses the osmotic action, by which plants get their moisture supply from the ground water, causing moisture to osmos from the plant interior outward rather than inward. It can be readily seen that the plant is thus robbed of its moisture supply.

A Scientific Problem.

A physical law controls this as osmotic action induced and caused by differences in concentration of different fluids causing them to flow through membranes always in the direction of the greatest concentration. In a normal soil the greatest concentration is on the inside of the root of the plant, but in an alkali soil this is usually reversed. Surrounding the roots of plants in alkali soils is soil water carrying salts. If the soil water is abundant the concentration of this soil water may be held down and the normal osmotic action takes place through the root walls into the plant. If, however, through any cause, the supply of soil moisture becomes restricted, it can be readily seen that the concentration of the soil water becomes greater than that of the sap of the plant and osmosis takes place from the plant outward, causing great injury.

Thus is explained the reason why the draining of the Colville river has brought this soil problem to the front and makes it a pressing one for solution. In former years when, before the draining of the river, there was always a superabundance of soil water, and the moisture supply was augmented by alleged wet seasons, the alkali problem was not serious. At the present time it behooves us to apply ourselves to the solution of this problem to the end that the Colville valley may be restored to its former high standard of productiveness, and placed permanently on the map as one of the richest agricultural regions in not only the state of Washington, but the whole northwest, and I personally would not hesitate to include the entire United States.

Sulphur Would Help.

One or two suggestions can be made at this time looking toward the solution of this problem. The application of sulphur in some form to the soil will assist. This is particularly true where we have the black alkali, as sulphur reacts chemically, changing the black alkali, which is comparatively insoluble, into the white alkali, which is soluble and may be leached out of the ground with water. The use of sweet clover as a forage and green manure crop will help; and the application of barnyard manure in large quantities, where this material is available, is a very good remedy.

An important suggestion, however, is that in order to augment the present moisture supply, dams be placed in the Colville river at intervals sufficient to retard the flow of the water and raise the water table. Sub-irrigation can then take place for a considerable distance from the river, just how far it will take place being problematical. These dams should be so constructed that they can be thrown wide open during the winter and spring months and the waters allowed to flow unretarded until all flood waters have passed off; they can then be closed and during the dry season the life giving water can sub out to supply the crops growing in the valley. This sub-irrigation should be supplemented wherever possible with irrigation on the higher ground lying more remote from the river. Numerous creeks entering the valley give opportunity in many places for such projects.

To sum up, it can be said that the recent dry years have greatly stimulated consideration of the problems of moisture for crop production with a consequent interest in irrigation. I do not hesitate to say that it is my opinion that every possible use will be made of available waters for irrigation purposes and that, as fast as it is possible to do the engineering work and make the installations.

Likes Alfalfa Cover Crop

"The main objection to vetch as an orchard cover crop is the fact that it becomes very dry when it goes to seed, and there is a greater chance of fire," remarked J. F. Wright, manager of the Wright & Day Land company orchard at Peshastin. "It is partly for this reason, and partly because an alfalfa crop needs no reseeding, that we use the latter method almost exclusively. Vetch is an easy crop to handle and it reseeds itself readily. The crop can be sown in the fall or spring as desired, but should be allowed to remain on the ground the first year."

Mr. Wright prefers fall disking, since it gives the vegetable matter a better chance to decay, but he considers it out of the question, since the ground must be disked again in the spring, and two diskings would cause the soil to pack. There are one or two trees in the Wright orchard which show a yellow color, supposedly due to the fact that a fir stump once grew on this spot. This, however, can be remedied by digging four large post holes and filling them with barnyard manure. When the irrigation waters run over these spots the food elements will be leached into the soil. Such a treatment will produce a great difference in the color and vitality of the tree within 10 days, according to Mr. Wright.

The Pipe Line Sprayer

One of the most interesting features of the coming summer meeting of the Washington State Horticultural society in Wenatchee August 18 and 19 will be the demonstration and discussion of the pipe line spraying system, which is becoming more and more popular in that district.

Visits will be made to several orchards in which this system has been installed. New ideas are being worked out by orchardists along this line, which will be explained and discussed by the visitors and by local officials as well.

Facts and figures on the costs of installation and operation of pipe spraying outfits are being collected by County Agent William Meikle and Soils Expert Roy Larsen. O. B. Shay sunk his sprayer half way under ground and spent $150 for pipe, which was all that his outfit cost for spraying a 20-acre tract. He saves that much each year on time and labor costs.

Other more elaborate plants cost as high as $1000 for 10 acres. One East Wenatchee orchardist, O. E. Etzkorn, attached his spray pump to an electric motor and uses some of the same power that operates his pumping plant. His power costs him nothing. He sprays his entire 20-acre orchard in two days himself, while it formerly took three men three days to do the job as well.

Much depends on the shape and location of the orchard as to costs of installation and operation, but generally speaking the saving in cost of operation will pay for the installation within two or three years.

The pipe spraying method originated in the Wenatchee district, but orchardists in the Yakima and other northwestern orchard sections are making inquiries and preparing to adopt the plan. Local horticultural authorities regard it as one of the most important progressive achievements of recent years. It is claimed that more thorough and efficient spraying is possible with a pipe line system than with the old moveable spray method.

THREE FULL SISTER GUERNSEYS.

The first prize 3-year-old at the Pacific International in 1920, a cow that finished an official record last November of 7811 pounds of milk and 365.86 pounds of butterfat as a senior 3-year-old, recently gave birth to her third heifer calf, full sister to the other two, at Ruby Dell Guernsey farm of H. E. Angel & Son, Mabton. She is Middledale Grace Darling, a daughter of Langwater Emigrant, out of another of his daughters, and the sire of her fine trio is France's May King, the only advanced registry bull in the Yakima valley. Her first daughter, Aloha Darling, has just completed a record of around 360 pounds of butterfat in class G, in the herd of Wallace & Fordyce. France's May King also sired Golden Rod of Olga, 12,190.6 pounds of milk, 535.82 pounds of butterfat in class D (state champion); Angel's Lila May, 9568.20 pounds of milk, 419.84 pounds of butterfat in class F; O. C. Butter Girl, 13,171.50 pounds of milk, 490.38 pounds of butterfat in class E; Georgia Dunn, 11,901.3 pounds of milk, 512.11 pounds of butterfat in class E, and Alga Dunn, 10,346.7 pounds milk and 442.06 pounds of fat in class G.

PROTECT BEES IN WINTER.

The department of agriculture is recommending the insulation of the bottom of beehives, as well as the tops and sides, as a means of maintaining proper heat during the winter months. A circular discussing the protection of bees in winter is being issued by the department and can be secured by addressing the division of publications at Washington, D. C.

THE WASHINGTON FARMER

VOL. XLVII. NO. 7.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Fifty Million for Highway

Since 1893 Washington has expended $50,000,000 on state highways, as shown by a statement by Director L. D. McArdle of the state business efficiency department. That will be the grand total expended when the appropriations made by the last legislature are exhausted.

Three-fifths of the $50,000,000 total will have gone into construction and maintenance of the past four years. Appropriations made by the last legislature equal more than half the entire sum expended for state highways between 1893 and 1921. The last legislature appropriated nearly $18,000,000 and the legislature before it about $13,000,000.

This official statement from Olympia confirms the belief of The Washington Farmer, expressed when the pernicious Carlyon bill was before the people, that the state, without the Carlyon bill, would have all the funds that it could economically and advantageously spend upon its highways. There never was sensible justification for the proposal to lay a bonded debt of $42,000,000 on the taxpayers when, as THE FARMER pointed out, other sources totaled many millions of dollars annually, and the state was on the sound, safe basis of paying as it goes.

The Washington Farmer is for good roads and shall continue to work enthusiastically for them, but we do not believe in running recklessly into bonded debt with the inevitable wasting of a large part of the people's money. Moreover, we believe that it would be mistaken policy to spend such gigantic sums upon the limited mileage of paved state highways, which are used chiefly by tourists and pleasure-seekers. The first need is for better roads to enable the producers to take their products to market. Fortunately, the farmers and thoughtful people in the towns and cities voted down the Carlyon bill, a measure that was boosted by comparatively small groups of city boomers.

The Earnings of Railroads

Reports of 170 of the 201 class 1 railroads to the interstate commerce commission for June show that the roads were coming back to a more prosperous condition when the strike July 1 brought on renewed unsettlement. These 170 roads had a net operating income of $70,601,448 in June, an increase of more than 47% over the net operating income in June of last year. These earnings are sufficient to return the roads 4½% on their investment as fixed by the interstate commerce commission. To earn a 6% return the same roads would be required to earn $90,000,000 a month.

It is to the interest of farmers and other producers to see them earn good returns, for that will afford a basis for a demand for further reductions in freight rates.

Two Grain Marketing Systems

Government marketing of Canada's wheat crop is to be resumed. A dispatch from Ottawa, the Canadian capital, reports that the dominion government has been officially notified that Alberta and Saskatchewan have passed legislation for cooperation with a proposed dominion board to supervise the marketing of the 1922 crop. Canadian government officials indicated that federal action soon would follow, and that the marketing board would operate along the general lines of its predecessor in 1919, using existing grain-trade machinery for handling the crops. It is expected that the Canadian cabinet will promptly take up the appointment of the members of the marketing board.

This further experimentation with government marketing of a great product will be watched with interest by farmers of the United States. When we had government handling of the wheat crops in this country the results were not such as to excite enthusiasm among our producers. On this side of the line the government seems to have its hands as full as they should be, with all sorts of unsolved and conflicting problems. There appears to be no sentiment at all in the United States in favor of a revival of government marketing of grain.

At the same time, our growers are coming more and more to the conviction that there must be effective cooperative marketing to take the place of the old individualistic competitive system under which every producer was in competition with every other producer. Hence, the encouraging growth of cooperative wheat marketing organizations in the United States. The impression prevails on this side of the border that the producers, through their own cooperative organizations, can elect officers and managers who will be more capable of marketing their products in a broad and advantageous way than boards of politicians appointed by partisan state or federal government officials.

Perhaps it is just as well that the two systems should be tried, side by side—government marketing in Canada and cooperative marketing in the United States—so that a better comparison can be made of the two methods. In the end it will be results that will count. If the Canadian wheat growers should get better results under government marketing than American growers get under cooperative or individual marketing, we shall see renewed interest in the Canadian method.

A Forest Tragedy

He left his camp fire burning to see if the fire lookout would pick it up.
He did.
He thought this would be a good test to see if the district ranger was on the job.
He was.
He wondered if a fire would burn very fast in the dry forest.
It did.
He thought he could get away before the ranger could catch up with him.
He couldn't.
He thought he could bluff the judge at his trial.
He didn't.
He wondered if the judge would have the nerve to sentence him.
He did.
We wonder if he will put out his camp fire the next time he is in the forest.
He will.

English and Swiss producers have the Indo-China condensed milk market all to themselves, according to advices just received from American Consul Leland L. Smith, Saigon. The 19,000,000 people in that country have just begun to appreciate condensed milk. The consul states that 2,500,000 pounds were imported last year. Besides keeping better in that tropical climate, the natives prefer the sweetened condensed milk to the evaporated article.

State Farm News

Approximately 20 bushels of wheat to the acre will be the general average in Walla Walla county this fall, according to reports. Heavy land is yielding about 30 bushels on an acreage, but the light land yield is cutting down the general average. In the Waitsburg section the yield is below normal, due in part to a large amount of smut in the grain.

More than 600 acres in the Walla Walla and Milton-Freewater districts have been planted to prunes during the year, according to J. B. Wiley, district horticulturist. Within another year prune shipments will materially increase, he stated. Some apple growers have torn out apple trees and are replacing them with prune trees. The growers say the market for prunes is steadier and that they require less care. About 15 years ago scores of prune trees were grubbed out, prunes at that time being a drug on the market.

* * *

Secretary H. P. Vermilye of the Washington state fair has selected Charles H. Burnett of Hollywood farms as the poultry judge this year.

* * *

Organization of a hay sales agency sponsored by the county farm bureau has been perfected at Yakima, the name selected being Alfalfa Sales corporation. N. H. Massie, secretary of the farm bureau and temporary secretary-treasurer of the sales group, says the membership is small, but that the group has 250 cars of hay to sell.

Claude White of Grandview is president and members of the board of trustees in addition to White and Massie are G. F. Varnum, Mabton; Edward Flannigan, Wapato; J. F. Schreiner, Broadway; H. L. Hull, Tieton. One more member is to be chosen.

* * *

Hop growers met at Tampico recently and agreed to pay $1.25 a box for picking. Frank Eglin believes the market outlook for hops is not good and says $1.25 a box is all the growers can pay.

* * *

Two hundred opera chairs have been placed in the grandstand on the state fair grounds at Yakima. This section will be used for reserved seats. The racing stables were moved early in the summer in order to allow for an additional entrance at the north side of the grounds. This will relieve much of the congestion at the main gate. One additional entrance has been built at the street car gates, which will also help to handle the crowd. The races this year include many new features, including Roman chariot races with four horses abreast.

* * *

Ai Camp, pioneer farmer of LaCrosse, has purchased 416 acres belonging to Jim Kerns and will take possession this fall. The price was reported to be around $30,000.

* * *

Six acres of land surrounding the Covington house at Orchards, the oldest structure in the northwest, has been purchased by the Kalsus Historical society and will be turned into a public park. The Covington house, tradition says, was built in 1845 by the Hudson's Bay company. It is now owned by a group of native sons who bought it to preserve it. It was being used as a sheepfold when the move was started to save it from destruction.

* * *

The new water system at Coulee has been put in service. It is at the springs on the old Dan Paul homestead. The tank contains 50,000 gallons and is 70 feet from the ground and gives the town a fall of approximately 92 feet.

* * *

M. N. Lewis, federal hunter, who is stationed in the Egypt country north of Davenport to kill predatory animals, stood third on the list of federal hunters in the state in the number of coyotes killed during June, according to a report from Olympia. Mr. Lewis killed 16 coyotes during June. Thirty-nine coyotes have been killed by Lewis since he has been stationed in Lincoln county, May 1.

* * *

A large threshing machine, working on the farm of Robert Divers, near Goldendale, was wrecked August 5 by a smut explosion. In the ensuing fire the thresher, strawstack and 600 bushels of wheat were destroyed.

* * *

The second annual fair of the Neuwaukum Fair association will be a three-day fair at the farmers' picnic grounds September 28, 29 and 30, all day and evening. Harry Hagerman of Auburn is manager. Other officers elected were: President, J. W. Jones, Neuwaukum; vice president, Harold Hanson, Enumclaw; secretary and treasurer, W. J. Hann, Enumclaw; trustee, Ralph Hewitt, Neuwaukum.

* * *

Clarke county dairymen have formed a sales organization of their own, the Clarke County Dairymen's association. The new association is reported to have members in every part of the county.

* * *

The Biggam Fruit Growers' company has sold its warehouse to the Big Y company of Yakima and members of the company have signed up their fruit crops with the latter concern for the season. Growers in the Biggam neighborhood, in Benton county, organized three years ago, erected the warehouse and have been handling their own fruit.

* * *

E. W. Rau, living nine miles south of Tacoma, has a two and a half acre farm, with about 700 hens, but plans to make it 1000 hens for next winter. From these 700 hens he reports $300 net in March; taken the year through, his hens pay him a clear gain over all expenses of about $2 apiece.

* * *

At a meeting of Elberta peach growers held at Donald the Yakima valley Elberta peach crop was estimated at 500 carloads. A former estimate by these growers was 800 carloads, but one veteran grower said the peach drop has cut the former estimate 300 cars. Much of the fallen fruit has been found to be affected with "black centers."

* * *

The "Daybreak" dairy ranch of 320 acres, one of the most improved farms in Clarke county, and operated for a number of years by A. D. Calkins and Mrs. N. Riggs, near Pioneer, has been sold to Mr. and Mrs. Pircie of Upton, Wyo. The reported price was $45,000.

* * *

J. L. Jackson of the Tucannon river region, in the Blue mountains, reported that he had lost 95 sheep recently as a result of the activities of bears. These animals, he says, are rapidly increasing and are causing heavier loss to stockmen than ever before.

FARM BUSINESS AND MARKETS OUTLOOK

During the last few weeks reports of inability to obtain cars have been coming forward with increasing frequency. Some country elevators are closing because of inability to ship the grain which they have taken in already. The strike of railway shopmen in the last few weeks has aggravated the situation since the percentage of cars and locomotives in bad repair has increased and the roads have been unble to move freight with as much dispatch as usual.

Other causes were at work, however, and the shortage would have arrived eventually any way. The business revival has increased the retail and wholesale trade and enlarged the volume of goods moving through the channels of distribution. The building boom and enormous sales of automobiles are suggestive of the bigger load which has been placed upon the transportation system. In the week ending July 22 car loadings other than coal were only about 1 per cent less than during the record week of October 15, 1920.

The coal strike is the most serious factor in the situation. It has directly hampered some of the roads already and will increase the car shortage as soon as it is ended and coal production rises to meet the actual demand. Reserves of coal in all sections have been depleted, householders will try to lay in their winter supply and the movement to the northwest, which usually takes place during the summer, will become enormous in order to make up for lost time. Box cars are likely to be requisitioned for the purpose.

At the present time the railroads report some surplus box cars, but part of these are in bad order and others are remote from the sections where shortages exist. If business expands further during the fall, the crop movement confirms the estimated yields and the movement of coal reaches the high mark expected, it will not be surprising to see car orders each week exceeding the available supply 20 per cent or more.

EXPANSION IN CATTLE RECEIPTS.

The clause "at owner's risk" inserted in freight bills has deterred some cattle shippers and the movement of cattle put on the rails has been retarded by the strike, but receipts at the leading markets are running equal to or above the average for this season.

The western range movement is gathering volume slowly as roads in the northwest need coal, but Montana, the Dakotas and Canada were represented at Chicago, St. Paul, Omaha and Sioux City last week. The pilgrimage from the southwest is in full swing and is bringing a raft of inferior stuff to St. Louis and Kansas City.

A fancy load of steers probably would bring $11 at Chicago, but the position of medium and common grades is not strong and the plainer the cattle are the more likely they are to sell lower later on. She stuff of all kinds was relatively scarce last week, but the trend is toward a larger supply and greater competition from low grade steer beef. Bulls, on the other hand, were numerous, as it is the weeding out season on the range.

Cattle feeders have not begun an aggressive purchasing campaign, but the movement is up to or above normal in spite of the rail strike, and the scarcity of suitable cattle. A big corn crop, an abundance of fall pasture and roughage and the profitable outcome of recent feeding operations promise to maintain a broad outlet for thin steers this fall.

HOG MARKET COLLAPSES.

Hog prices suffered the severest drop in months last week. Receipts at the leading markets are the largest ever seen at this season and 35 per cent above the ten-year average for the corresponding period. In addition, the strike situation has affected the demand for pork, prices on all hog products being at a low level.

Fear of a rail tieup may be causing shippers to rush to market, but it begins to look as though hog production was increased a year or so ago much more than has been generally believed and that the increase is being concentrated on the market at the present time in the form of heavy barrows and discarded brood sows.

Stocks of hog meats on August 1 at the 11 leading packing points amounted to 269,526,000 pounds, compared with a five-year average on that date of 356,377,000 pounds. Stocks of lard were 101,391,000 pounds, compared with an average of 89,375,000 pounds. In spite of heavy hog slaughter during July, the increase in hog meat holdings was less than the average for that month while the decrease in lard was considerably greater than the average, showing that consumption is heavy. In part the rapid rate of distribution is at the expense of price, as packers have been forcing the market. They report that export buying has broadened materially.

LAMB MARKET RECOVERS.

Lamb prices advanced toward the close of last week, although the total supply at market points was fairly liberal. Rail conditions are interfering with the range lamb movement. The supply at eastern points is expected to be more uniform hereafter and natives are becoming less numerous at all points. The country demand for thin lambs and breeding ewes shows no abatement.

STRONG TONE IN WOOL.

Moderate sales of wool were reported last week at steady prices and mills generally are showing more interest. Sentiment in the trade is rather strong, the outcome of tariff legislation being the biggest uncertainty. The American Woolen company opened additional lines of men's wear at prices ranging from 10 cents a yard higher to 22 1-2 cents lower than a year ago, although wool prices are much higher. The volume of orders for cloth obtained is reported to be satisfactory. The series of auctions of colonial wools at London closed with prices 5 to 10 per cent higher than the previous series. British interests bought 70,000 bales and the continent 62,000 bales, while Americans bought only 1000 bales.

Scoured basis:

Oregon eastern No. 1 staple, $1.30@1.35; fine and fine medium combing, $1.20@1.25; eastern clothing, $1.10@1.15; valley No. 1, $1.07@1.10.

Territory—Fine staple choice, $1.30@1.35; 1-2 blood combing, $1.10@1.15; 3-8 blood combing, 88@93c; 1-4 blood combing, 75@78c.

The government estimated the total wheat crop as of August 1 at 805,000,000 bushels, a loss of 12,000,000 bushels during July. An increase of 15,000,000 bushels in the spring wheat yield was more than offset by a decline in winter wheat. Last year's crop was 795,000,000 bushels, and the average for the five years, 1916 to 1920, was 799,000,000 bushels.

MOVEMENT EXCEEDS AVERAGE.

Receipts of wheat at primary markets since the new crop season started on July 1 total 52,232,000 bushels. This is much less than the movement of 79,541,000 bushels during the corresponding period last year, but it is substantially above the ten-year average of 38,373,000 bushels. Farmers evidently are not holding wheat. Recent statements by Julius Barnes and George Marcy, two of the most prominent men in the grain trade, to the effect that "an orderly and gradual marketing of existing wheat stocks will end the present depressed price conditions," are significant in this connection.

Prices reached a new low for the season last week, due to heavy receipts and slow foreign demand. Mills have expanded operations one-third since new wheat started to move. Total sales for export in the last two weeks amount to around 20,000,000 bushels, but part of these transactions were merely the purchase of actual grain to fill contracts made several months ago, so that the amount of new business is in doubt.

It is believed that about 50,000,000 bushels will be needed to take care of August and September shipments abroad. Since the heavy movement of winter wheat is believed to be nearly over, especially if the car shortage becomes more acute, there is a possibility that enough wheat may not arrive at terminals in the next six weeks or so to satisfy both domestic and foreign needs.

CORN CROP ANOTHER BUMPER.

The government's forecast on the corn crop was 3,017,000,000 bushels, indicating another bumper yield. If the weather is as favorable in the next month as it has been recently the final outturn may yet exceed that of last year at 3,080,000,000 bushels. The record yield was 3,151,000,000 bushels in 1920.

The oats crop improved in July and the August 1 estimate was 1,251,000,000 bushels. Counting farm reserves of old oats, the total farm supply would be about 100,000,000 bushels more than last year.

CHICAGO.—Wheat—No. 2 red, $1.09@1.10; No. 3, $1.07 1-2@1.09; No. 4, $1.06 1-4@1.07 1-4; No. 2 hard, $1.08 1-2@1.10 3-4; No. 3, $1.06@1.08 1-2. Corn—No. 2 mixed, 61@63 1-2c; No. 3, 61@62 1-2c; No. 2 yellow, 62 3-4@64c; No. 3, 62@63 1-2c; No. 2 white, 61@63 1-4c; No. 3, 61 3-4c; No. 4, 61 1-2@61 3-4c. Oats—No. 2 white, 32 3-4@38c; No. 3, 31 3-4@35c; No. 4, 31 1-2@32 3-4c. Rye—74 3-4@75 1-2c. Barley—54@61c.

BRAN MARKETS AT LOW POINT.

Bran prices lost the recent $3 gain and are back to the low point of the summer. Cottonseed meal also is selling at the lowest point of the season. Wheat feeds may go a little lower, especially if weather is favorable for fall pasture, but a drastic loss does not appear probable.

Prices per ton (100 pound bags) in carlots: Chicago—Bran, $17.25; standard middlings, $19.50; flour middlings, $25; cottonseed meal, 36 per cent, $40; 43 per cent, $44; hominy feed, $25; gluten feed, $29.85; old process oil meal, $48; tankage, $55.

HAY CROP A RECORD BREAKER.

New crop hay predominates and prices are much lower than for old crop, but are comparatively steady upon good hay. Receipts of low grades are large. The total crop is estimated at 110,000,000 tons, the largest on record and about 8,000,000 tons above the average. In addition, pastures are excellent in almost all sections.

Prices per ton in carlots: Chicago—No. 1 timothy, $20@22; No. 2, $16@19; No. 3, $13@16; No. 1 light clover mixed, $18@19; No. 1 clover mixed, $15@18; upland prairie, $14@18; midland prairie, $12@16; rye straw, $11@12; oat and wheat straw, $8@10.

EGG PRICES RECOVER SLIGHTLY.

Fresh egg prices have worked a little higher in the last ten days, but hold within a narrow range. Quotations on storage eggs are gradually declining. The preliminary report on storage holdings on August 1 showed 10,133,000 cases, compared with a seven-year average on that date of 6,698,100 cases. This means nearly 50 per cent more storage eggs than usual to be worked off during the fall and winter. Egg consumption is slightly above the average of recent years, but the increase is smaller than the increase in production. Receipts of poultry are expanding and prices are working lower. The season in which frozen poultry is stored will soon be here and storage operators expect to buy cheaply.

Latest quotations: Chicago—Eggs—Fresh firsts, 19@20 1-2c; ordinary firsts, 18@18 1-2c. Live poultry—Hens, 16@22 1-2c; broilers, 24c; springers, 27c; roosters, 14 1-2c; ducks, 22c; geese, 14@21c; turkeys, 25c.

BUTTER STRENGTHENED.

The gradual decline in receipts of butter which has been under way since the middle of June finally reached the point where the supply of fine butter was not larger than the demand, which is unusually broad at the present level of prices, and the market became firm. Some butter is still going into storage. Storage holdings on August 1 were 102,822,000 pounds, compared with 82,838,000 pounds last year and a five-year average of 97,027,000 pounds. It is possible that the market has seen its worst, although no pronounced upturn is probable in the next few weeks. Low grade butter is abundant and not moving freely.

Prices on 92 score fresh butter on August 9 were: Chicago, 31 1-2c; New York, 33 1-2c; Boston, 35c; Philadelphia, 33 1-2c.

CHEESE TRADE IMPROVES.

Cheese trade was more satisfactory, both in country markets and at distributing points, last week. Prices were slightly higher in some cases, with a further advance expected. Stocks in distributive channels are said to be cleaning up. Buying was mostly on the hand to mouth order, especially in the east, but a few large sales were made at Chicago. Receipts at the leading markets declined slightly, but were considerably higher than a year ago. Co'd storage holdings on August 1 were 46,560,000 pounds, compared with a five-year average of 54,368,000 pounds.

Prices on No 1 American cheese on August 9 were: Chicago—Twins, 19@19 1-2c; S. Daisies, 18 1-2@19 1-4c; D. Daisies, 18 1-4@19c; Young Americas, 19 1-2@20c; Longhorns, 19 1-2@19 3-4c; square prints, 20 1-2@21c.

FRUITS AND VEGETABLES.

The decline in potato prices seems to have run its course as prices are a little firmer. Carlot shipments are the smallest in many weeks, but home grown potatoes are abundant everywhere and many are being sent to consuming centers in small lots. The crop of white potatoes is estimated at 440,000,000 bushels, compared with a record crop of 442,000,000 bushels in 1917. The sweet potato crop is of record size, making the total supply of both kinds the largest ever known.

The commercial apple crop is estimated at 33,400,000 barrels, compared with 21,200,000 barrels last year and an average of 26,800,000 barrels in the five years, 1916 to 1920. The 1920 crop was only 33,905,000 barrels.

LIVESTOCK AND DAIRY

San Juan Wool

Pool Shipment of 46,897 Pounds

There was a total of 46,897 pounds of wool shipped from the San Juan islands as a pooled shipment from the growers early in July. The shipment was a result of a cooperative movement among the many wool growers, who are found on practically all of the larger islands in San Juan county. Wool buyers had offered to buy the product from the farmers, but there were many who felt certain that a better price could be obtained by the united effort.

Roy Madden was immediately appointed temporary chairman for the wool growers of the county, who hope later to organize themselves as a wool growers' association. Through the assistance of Mr. Madden the entire county was solicited and practically 90 per cent of this season's wool crop secured for the shipment. The recent returns from the shipment indicate that the men have averaged approximately 24 1-2 cents a pound for their wool after deducting all expenses. This figure was 10 cents more per pound than was offered at any point in San Juan county. The wool was handled by a sales agency controlled by the farmers, but which works in conjunction with the government warehouse at Portland. The wool is graded and put into bins, from whence it is sold between September 1 and February 1 of each year, which is the same time that wool sales are made on the Boston market. The pool, however, is sold direct to the mills instead of through agencies, as heretofore has been the case.

Farmers have already begun to receive statements concerning their shipments, which when signed and returned are good for 60 per cent of their shipment based on the price of the Boston wool market at the time of shipment. In this way the men are able to cash in a large part of their wool crop, the balance of which will be paid upon the sale of the entire pool.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES—ARTICLE V.

Since the stomach of the horse is comparatively small and the foods are not retained there for any great length of time,

but pass through rather quickly, there is not as much trouble there as there is in some other parts of the digestive tube. It is true that the foods are mixed with the gastric juices in the stomach and that some digestion goes on there, but the stay there is relatively short, as may be supposed when we remember that the stomach holds about three and one-half gallons. We may be sure, then, that the first part of the meal has passed on before the last of it has entered the stomach, as there is not room enough for the entire quantity at one time.

Fermentations may take place in the stomach with the resulting accumulations of gas, and since the horse can not readily belch or vomit, this is a very serious thing. In other animals this is not likely to be serious unless it forms very rapidly, but in the horse it is always dangerous. The animals manifest indications of abdominal pain and may make attempts to belch or vomit, but usually with only very little result, though they may expel some material through the nose and it can be seen as soiling on the nostril. This appearance is an indication of extreme danger, as when vomiting occurs the stomach is likely to be torn and if this is the case the result is most certain to be fatal, though some times this has occurred without bad results. The most certain method of correcting this trouble is the passage of the stomach tube and if the veterinarian has been called he will in all probability pass the tube at once, when the gas can escape quickly and the serious part of the trouble is over. Lacking such service a drug should be given that will stop the fermentation, such as turpentine or one of the coal tar products, lysol or creolin, well diluted with water. It may be difficult to get the animals to swallow when the stomach is distended and for this reason the tube is much to be preferred.

Overloading the stomach or so-called impaction is another grave stomach trouble and this occurs from the ingestion of substances that have a tendency to form into a solid mass, such as finely broken chaff or materials of a similar nature; this may also be caused by overloading with whole grains, such as wheat, etc., and it causes a very serious condition, as the whole mass is unable to move forward and remains as a heavy, solid mass in the stomach. The stomach tube is the most useful instrument in the treatment of this condition, as it can be used to inject fluids and soften the mass and to wash out quantities of the materials within the stomach. In the absence of the veterinarian and the stomach tube the use of drugs to keep down fermentation and oils to induce the passage of the materials backward is in order, but it is well known that many animals die from the effects of impaction of the stomach, though if early and suitable treatments are administered recovery may take place.

Animals with distended stomachs are prone to stretch the abdomen and sometimes sit up like a dog; they may also have the appearance of being distended well forward and not back in the flank, where the bloat is usually found.

Most of the stomach troubles are serious and are likely to be of short duration, causing the death of the animals if relief is not rather quickly given.

Cows Bring Profit

"I raised 60 bushels of wheat to the acre last year, but I don't consider it as much as what I received from the herd of cows," said H. C. Stroops of Oak Harbor. "It would be difficult to estimate such a return because the animals were turned onto the stubble after the hay was taken off and there is some of the waste grain that can be fed. The pasture was only about 10 acres and they were confined to this a big part of the time."

Mr. Stroops told how he had succeeded with alsike for a hay and pasture crop on a four-acre field. The seed was put in as a spring crop and contained a mixture of red clover, timothy and alsike, seven pounds of each. Although the second crop is usually the best, the first season's cutting was approximately four tons, according to Mr. Stroops.

A New ESSEX

A Roomier Open Car--A Greater Chassis

You can have no appreciation of what this price buys until you examine and drive it.

To all that made Essex such a wonderful value in the past are added refinements and comforts never before offered in a car of its price class. Roomier seating; wider doors and greater riding ease contribute something new in personal comfort.

smoothness is even more pronounced. You will instantly note its greater beauty. Its care and attention are easier, cleaner, more convenient.

It will reveal a charm you never suspected in any except the large costly cars.

The Result of Three Years' Experience

Back of the new Essex is all we learned in building 70,000 earlier Essex cars. Finer precision standards have resulted and Essex

- Wider Seats
- Wider Doors
- Lubricated with an oil can—no messy grease cups.
- Thief-proof Lock, reduces insurance cost 15% to 20%.

It Improves in Service

Old owners tell you of a car so enduringly designed and built that its performance improves for thousands of miles. But today's Essex combines advantages no earlier owner knows. Go see, and ride in it. It is the best Essex ever built, and at the lowest price.

Touring, $10.95. Cabriolet, $1195 Coach, $1295

POULTRY AND RABBITS

Chinese Eggs

Over 11,300,000 Imported Into This Country Last Year

Charles A. Robertson of the American Consulate at Shanghai, after studying the statistics of Chinese egg exports to the United States, reaches the conclusion in a report to the department of commerce that the Chinese egg has invaded America for good.

"While China's egg business experienced a period of prosperity during the war," he says, "with a return now to normal conditions the demand still continues, which would indicate that Chinese eggs have made good. During the war a great trade in the export of fresh eggs grew up, and the profits were so great that the exporters did not even trouble to insure the cargo, as they could easily afford to suffer the loss of an occusational shipment. Over 11,308,000 fresh eggs came int othe United States last year from China; also millions of pounds of frozen eggs, egg albumen and yolk. Eggs, fresh and preserved, and products play an important part in the export trade of China."

The development of this business puts a vital problem squarely before the egg producers of the United States.

Green Feed

No Limii Should be Placed on the Amount in Summer

By W. D. BUCHANAN.

Many poultrymen overlook the importance of green feed during the summer weather. Some depend on grass or grain pasture, not stopping to think that pasture during the summer months is likely to be dry and tough. Growing alfalfa, or in some sections, second growth clover, is the only green pasture that can be depended upon.

Then it must be remembered that chickens will not range far in hot weather. Even where there is plenty of shade they can not be depended on to forage far enough for green feed. It is necessary to cut alfalfa, clover, kale or other green feed, and feed it in a house or under a shed. No limit should be put on the amount of green feed fed in summer.

A lack of green feed in the ration of growing pullets will show up in pale shanks, lack of vigor and indigestion, terminating sometimes in partial or complete paralysis. Stinting the green feed in laying flocks is likely to result in smaller eggs, decreased egg production and an early fall molt. All this, in spite of the fact that green feed is the cheapest feed that the farm produces.

Indicates Poisoning

By W. D. BUCHANAN.

My chickens act as if there were something in their throats, but there isn't. They keep swallowing, then open their mouths and close their eyes and throw their heads. It seems to be a cramp in their necks. They live about 12 hours. I have cured some of them by pouring coal oil in their mouths. I feed them wheat and some corn and they have free range. What is wrong and what can I do for them? MRS. G. L. M.

The trouble in your flock would appear to be due to some source of poisoning. The most common sources are salt put out for live stock, arsenic secured from rat poisons, some forms of tree sprays and nitrate of soda used as a fertilizer. Ptomaine poisoning, resulting from ptrid meat or milk would have a similar effect. Seek out the cause and remove it. Then give the flock a dose of epsom salts, one ounce to a gallon of water.

The American Blue Rabbit

By DAN SIZEMORE.

The first American Blue rabbit was exhibited by Judge Lewis H. Salisbury at Los Angeles, Cal., 1917. It reaches the frying age as quickly as any other breed and its beautiful silky blue fur can be used either long or clipped. Its type is different from any other rabbit. Its front quarters are much narrower than the hind quarters, the latter being large. This breed is considered one of the best meat types in existence. It has a small head, short ears, fine bones, heavy hind quarters and very small stomach. They will weigh about 5 1-2 pounds at 4 months and dress a high percentage net meat.

DOUBLE EGG BAGS.

By W. D. BUCHANAN.

Two years ago my wife said she had a hen that was laying two eggs a day. In the fall she killed a hen with two well-developed egg bags. Last year she killed three with double egg bags. This year out of three hens killed, two had two egg bags. The question is, have we something new in the hen line?

P. W. C.

The right ovary and the right oviduct of the hen are formed at the same time as the organs on the left side, but degenerate usually during embryonic life. If they remain at all, it is only as functionless rudiments. If you have hens with both ovaries functioning you have something decidedly unusual. It would not necessarily follow that they would lay two eggs a day.

MAY BE INDIGESTION.

We have a turkey hen, 1 year old, which is very poor in flesh and droopy. The upper half of her beak is much too long, probably because of lack of use. Her head has not the color it should have, but is a blackish pink and scaley. She refuses to climb on a roost or in a tree at night. She is not lousy and I fear that she may have tuberculosis.

Dayton, Wash. MRS. W. J. L.

You may have diagnosed the trouble correctly, though it might be due to so-called blackhead or merely to indigestion. If the turkey is thin, it would be best to kill her and burn the carcass. If it is indigestion, a tablespoonful of castor oil would help.

NO COST TO RUN

International Motor Trucks

Hours are Often Dollars

Save Hundreds of Them by Fast Haulage

TIME is money—as the practical farmer knows from his own experience. Many times the lack of a half day has cost him a pretty penny. And of all his routine work the job of hauling is about the most reckless waster of time. Month in, month out, he sees his horses plodding with loads while farm help sits idling the valuable hours away.

Many thousands of farmers, fully alive to this great leak in efficiency, have invested in the swift reliability and economy of **International Motor Trucks.** They have stopped the leak by faster haulage, choosing the truck of excellent record and long service—made by the makers of high-quality farm power equipment.

International Motor Trucks are built in eleven sizes, from the 1,500-lb. speed truck to the 10,000-lb. truck for heavy-duty service. Bodies can be supplied for every farm-hauling purpose. Your own farming may be made the better, the more valuable, and the more profitable by investment in a motor truck that will serve you dependably for years. Talk the matter over with the nearest International truck dealer. For a catalog, write the address below.

ORCHARD AND GARDEN

Cover Crops

Critical Period for the Orchard

By O. M. MORRIS, Head Horticultural Department, Washington State College.

The extreme drought of this summer is causing some of the orchards that were planted to cover crops this spring to show the effects of the growth of the cover crop. This effect is usually most pronounced in orchards in which nitrogen fertilizer was not used during the winter. The orchards are passing through the critical period of the establishment of a cover crop. Fall-planted vetch is dying rapidly and will soon cease to draw on the moisture supply in the soil. This crop can usually be kept on the ground with best results. Any attempt to plow or disk it into the surface soil will expose the soil and cause the water to evaporate more than if the vetch be left on to dry and shade the surface.

Spring-planted vetch is nearly all in full bloom or past by this time and in orchards where the vetch is drying rapidly, it will usually be found to use less water during the rest of the summer than will be given off by the soil if any attempt is made to plow this under or disk it into the soil. The best practice that can be followed is to leave the vetch to dry on the surface, even though the trees show the effects of shortage of water. It would be better to do some summer pruning and heavy thinning of the fruit rather than to turn the cover crop under with deep plowing.

Clover planted for cover crops has by this time made most of its growth. Some of it is dry now and in orchards where most of the clover has completed its growth and seems to be drying down, this clover will use but little more water and will save more by shading the soil, if there is a good stand, than can be saved by any process of working it into the ground. If the drought on the trees is becoming severe and they are not in a condition to admit of summer pruning, then the best that can be done often will be to plow this under, but such plowing should be just as shallow as possible and still turn the clover under. Any deeper than that will tend to expose the soil and cause it to dry more rapidly than if the clover were left on the land.

Practically all of these cover crops planted slow down in their water use as they attain maturity and probably use no more water than the soil would give off if these cover crops were plowed under.

I have been able to find many case in which it proved helpful to allow the cover crop to remain on the ground in order to save water. As long as these cover crops remain green and vigorous they can grow in as dry or drier soil than can an apple tree and whenever the tops are cut down a new growth starts making new demands upon the soil moisture supply. The apple tree can often be given a light summer pruning and thinning of the fruit to a very great advantage in saving it from drought.

Nitrogen Fertilizing

By R. R. SNOWDEN.

The action and interdependence of the fertilizer elements are becoming better understood each season, and especially is this true of the element nitrogen, which is, after all is said, the most important of them all. It is an established fact that nitrogen can not properly function unless accompanied by an adequacy of each of the other plant food elements. Indeed, in the absence of any one necessary element, it can not function at all, so that in order to get the best action of nitrogen even in the most available form—towit: A nitrate, the soil must be balanced.

It has been learned experimentally that a goodly supply of decaying organic matter in the soil enhances the value of even nitrate nitrogen. The carbon dioxide produced by the organic matter in the process of decay seems to be necessary to profitable production. This organic matter is best obtained from plowing under cover crops of various kinds. A legume cover crop will of course furnish some nitrogen, but owing to certain agencies in the soil it is not always reliable as a source of supply of that element. And in the early spring, when the stored up plant food in the tree is used up the rootlets are not sufficiently active and the nitrifying bacteria are more or less dormant before the soil warms up. It is then that nitrate of soda is especially needed in order to be ready to continue the supply of immediately available nitrogen when that stored up in the plant is used up.

As suggested before, a deficiency of any necessary element becomes a limiting factor. When people permit the extra demand caused by greater production to exhaust one or more of the plant food elements additional use of the nitrate fails to give results and the farmer may conclude that the continued use of nitrate of soda has "killed the soil," when, as a matter of fact, if he would discover the real limiting factor and remove it by adding more of the deficient element, production would continue unabated.

Twenty-Year Old Trees

C. W. Babcock of Cashmere has an orchard of 20-year-old trees, which have about reached their maximum production. The crop is estimated to run approximately 25 boxes to the tree this year. The varieties are principally Delicious, Winesaps and Jonathans. There are a few Yellow Newtowns and Spitzenburgs.

Mr. Babcock feels that his trees do not have quite enough room since they are an average distance of 25 feet apart. They would produce much better, he thinks, if they were about 30 feet apart with no fillers. The trees will average about 70 to the acre with the present system of planting. Some of the trees have been wired to brace the limbs and prevent their breaking when heavily loaded with fruit. This system was used several years ago, but Mr. Babcock feels that it is much better to prune the trees and thin the crop so that no bracing will be needed.

CANNING COMPANY SELLS.

The Puyallup and Sumner Fruit Growers' Canning company was recently sold and will be known in the future as the Pacific Northwest Canning company. Men who compromise this new company include W. G. Allen of Salem, Ore., manager of Hunt Brothers' Packing company at Salem, H. G. Bradt, California, and W. J. Vary of Puyallup, who has been superintendent of the cannery until a few months ago.

It is understood that the new company will handle products of the Puyallup and Sumner Fruit Growers' association. All brands and advertising rights used by the former company is included in the sale. Mr. Vary has been appointed to act as general manager for the new canning company.

Congress appropriated $10,000,000 during the war to import

Nitrate of Soda

into the United States to be sold to farmers at cost. It would not have done so had it not realized how necessary it was to have Nitrogen. NITRATE OF SODA is as necessary now as it was then. If you do not understand what Nitrogen does and why Nitrate Nitrogen is preferable send for my Bulletin, "Common Sense About Nitrogen."

WADE'S ANNOUNCE NEW SERVICE FOR FAMOUS NEW PEORIA DRILLS

WE now offer you a personal service in obtaining the best drill in the world for your fall seeding. If you live in Oregon, Washington or Idaho our traveling representative whose route is nearest you will call and personally give you drill facts, which have increased grain yields. Just fill out the coupon and ask us to have the Peoria drill man call on you. You will be under no obligation.

We'll also be glad to send you, FREE, new catalogues on the New Peorias, 12 sizes, single and double disc, plain or fertilizer, horse-drawn or tractor hitch.

Don't Take Chances With a Worn-Out Drill

New Peoria disc shoedrills bring full, even stands. The patented disc shoe cuts trash, stalks, hard ground; shoe opens furrow; seed dropped evenly on packed seed bed; every seed covered, safe from wind and birds; all seeds germinate, sprout, grow, head out and ripen uniformly.

Now Is the Time to Get the Facts

A new Peoria will not only bring you increased yields but it will also save you money on seed. Our new catalogue gives users' own testimony on these points and the satisfaction the New Peoria gives. Your neighbors will tell what it has done for them, too.

Fifty-seven years of experience back of Wade lines. Since 1865 we have been supplying farmers of the northwest with implements and machinery particularly adapted to the needs of this territory. The New Peoria is one of these "hand-picked" implements.

Whitewash Recipe

An old recipe for whitewash, issued by the bureau of lighthouses of the United States department of commerce, said to be very good for outdoor exposure, is as follows:

Slake half a bushel of unslacked lime with boiling water, keeping it covered during the process. Strain it and add a peck of salt, dissolved in warm water; three pounds of ground rice put in boiling water and boiled to a thin paste; half a pound of powdered Spanish whiting and a pound of clear glue, dissolved in warm water; mix these well together and let the mixture stand for several days. Keep the wash thus prepared in a kettle or portable furnace, and when used, put it on as hot as possible with painters' or whitewash brushes.

SECRET OF GETTING EGGS.

The whole secret of getting eggs, after you have the right kind of birds, lies in how you feed and house them.

160 ACRES, IMPROVED; 60 UNDER CULTIvation; small timber; near railroad; good town, school; good roads. J. M. Finney, Harrison, Idaho.

BEAUTIFUL 286-ACRE FARM HOME 25 miles west Spokane. For particulars, write G. A. Peterson, N4717 Adams St., Spokane, Wn.

160 ACRES, ¾ MILE ADDIE; GOOD BUILDings; 10 acres cleared. $3000. $1200 cash, balance easy. Box 20, Addie, Idaho.

TRACT AND SMALL DAIRY, WITH GOOD paying milk route; price reasonable. J. W. Sharp, Moscow, Idaho.

FOR SALE—MY DAIRY RANCH NEAR COOS bay. H. W. Sanford, Sumner, Ore.

FARM LANDS—Wanted 654

WANTED—TO HEAR FROM OWNER OF land for sale. O. K. Hawley, Baldwin, Wis.

FARM LANDS FOR RENT 657

FARM FOR RENT. STOCK AND EQUIPment for sale. 200 acres near Goldendale. Good water. Edward Abeling, Goldendale, Wn.

IRRIGATED LANDS—For Sale 663

IRRIGATED LAND FOR SALE IN SOUTHERN Alberta; having bumper crops this year. Write for prices and particulars. Apply W. M. Harris Agency, Ltd., Lethbridge, Alta.

FOR SALE OR EXCHANGE 702

STOCK RANCH, EASTERN ORE., PRICED right; 840 acres, fully equipped; trade for farm west Cascades, low altitude, Ore. or Wash. State price, full particulars first letter. Owner, Box 224, Fossil, Ore.

STOCK AND POULTRY RANCH, 380 ACRES, large barn, two houses, 175-foot poultry house, brooder, orchard, running water. Box 453, Olympia, Wash.

40 ACRES IRRIGATED, IMPROVED; $1500 will handle, or trade for town or Coast property. Chas. E. Davis, owner, Fruitland, Idaho.

320-ACRE FARM, GOOD CROPS; SELL AT bargain, or trade for coast property. Ed Green, Soda Springs, Idaho.

640-ACRE WHEAT RANCH, UNDER COLUMbia basin project. D. Cottingham, Big Bear Lake, Cal.

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test, with the result that at no great depth they reach water. After a long rest, they fill their kegs and turn back for the old Santa Fe trail, some inclined to give up the journey to the gold fields, others determined to get to Pike's Peak or bust.

CHAPTER SEVEN.

A Big Wagon Train for Santa Fe.

When at last they arrived at the Santa Fe trail the wagon track showed that Holloway's party had traveled on toward Council Grove.

"They concluded to take the back track, after all," Orlando remarked.

"Yes, they went on. Guess that's the last we'll ever see of them," surmised Sanders.

While the foot travelers were camped for dinner, here at the forks of the road, several wagons arrived from the east. This party had fully intended to turn off on the Smoky Hill route. But, learning what they could expect in that direction, they promptly changed their minds and kept to the main trail.

Their noonday rest ended, the men with the handcart and the wheelbarrow followed the wagons. And they passed them an hour or two later. The trail was now leading toward the southwest. After the lonely route they had been on for days this great, much-traveled road seemed liked civilization, even though it was leading them through a wilderness.

Some time during the afternoon the foot travelers met a wagon train of perhaps 30 wagons. These, they learned, were coming from Santa Fe. And from the next high point they could make out another wagon train ahead. That one was much longer, and was traveling toward the mountains. Late in the day they overtook it.

This train, they soon found, numbered nearly 150 wagons. The wagons were traveling in two strings of equal length. The strings were rumbling along side by side, near each edge of the broad road. Some of the teams were mules, but most of them were oxen. Nearly all the wagons were huge freight wagons, with wide tires. Each wagon was drawn by 10 mules or 12 oxen.

The foot travelers pushed in between the two sections of the wagon train; but, after that, they traveled only as fast as the wagons. Long they had been hearing of these great trains that followed the Santa Fe trail, but this was the first one they had ever seen.

All the drivers, each with a long-handled whip, were tramping along by the slow-moving teams. Guiding Brindle to one side, Orlando was soon walking near one of the drivers. From this man he learned that this train was bound, not for the gold fields, but for the old-time destination of wagon trains crossing the plains—Santa Fe. The wagons were loaded with goods, 6000 pounds each. Some of the wagons would not unload at Santa Fe, but would travel on to Chihuahua, Mexico.

"Do you think there's any danger from Indians now?" the young cow driver ventured to inquire of the ox driver.

"Well, no; I ruther reckon not. Certainly not on this part of the trail. So many people travelin' this trail now it's got the red devils kind of—kind of flabbergastered, they say. Don't know what to make of it all, the red varmints don't. Chances air they didn't s'picion the' was so many white folks on earth. But they're likely to get over that any day. And when they do, look out! If they strike at all, they'll strike sudden and strike devilish hard, these plains redskins will. That's their way of doin' things. I know. For I've been traipsin' this old trail, off and on, for 23 years now, goin' on 24."

"You have! Have you ever been in a fight with the Indians? I mean in a wagon train that was attacked by them?"

"Well, I reckon I have—I ruther reckon I have! Seven times, to my recollection, they've attacked us in force; usually 200 or 300 strong. And when—"

"Did they circle round you, like I've read that they attack wagon trains?"

"That's what they done. That's jist precizely what they done, young man. They circled the whole wagon train on their horses, ever' last one of 'em goin' as fast as his pony could clatter. 'Bout all you could see of any of 'em was a head and a laig, or maybe only a laig. And ev'ry red devil of 'em was lettin' fly arr's as fast as his bow could twang. Some shot over their horses' necks, but most of 'em shot under. Of course their main purpose in ridin' so fast was to keep our bullets from hittin' 'em."

"And could you ever hit any of 'em in spite of that?"

"Couldn't we, though! You bet your Sunday breeches we could! Not as many as we wanted to hit, of course. Mighty doggoned hard to plug a flyin' laig or a flyin', bobbin' head with a rifle bullet. Still, our boys could do that very trick now and then. More commonly, though, some of us would knock over the redskin's pony first. Then, when the painted varmint scrambled out from under and started to run, every rifle gun on that side would crack loose at 'im. Mighty seldom one got away."

"You whipped 'em off every time, I suppose.

"That's what we done. But they al'ays managed to kill a few of us and wound some more. Not half as many, though, as we killed and wounded of them."

"What would you do if redskins should approached and attack this train now?"

"Well, first thing, the captain—we've got a captain, you know. Most of the big wagon trains has got captains. They elect 'em at Council Grove, goin' west. That's been the custom for many years—ever since I've been on the trail. And that's why the place is called by that name; because they hold a meetin', or council, there to elect a captain."

"Yes, I've read about that."

"Well, as I started to say, if we was to diskiver a big bunch of redskins makin' at us to attackt us now, first thing on docket the captain would give orders to corral our wagons. I mean we'd circle 'em, and then stop so's to leave the near fore wheel techin' the off hind wheel of the next wagon ahead. That would put all our teams inside the circle. That way we'd have our teams safe, and our wagons to fight behind."

"It must be pretty exciting, when several hundred yelling, yelping savages are circling a wagon train as fast as they can ride."

"That's a fact, if the' ever was one! As I mentioned before, I've been in seven big fights with the savages, all told. Of course I wasn't as bad skeered in the last fight as I had been in the first. Jist the same, though, I couldn't keep from feelin' a little shaky in the knees, even the last time."

"It's something a fellow would never get used to, I suppose."

"Hardly. Of course them seven big fights I spoke uv ain't all the fights I've been in with redskins. How many little scrimmages I've had a fist in I don't recollect. Lost count years ago. Used to be a wagon train couldn't cross the plains without havin' trouble two or three times. Instid of attackin' the whole train in force, the redskins would come in little bunches and dash yellin' among the work animals at night. They'd shoot the night herders or chase 'em away, and then they'd stampede our stock—scatter 'em fur and wide. And that would cause us no end of trouble."

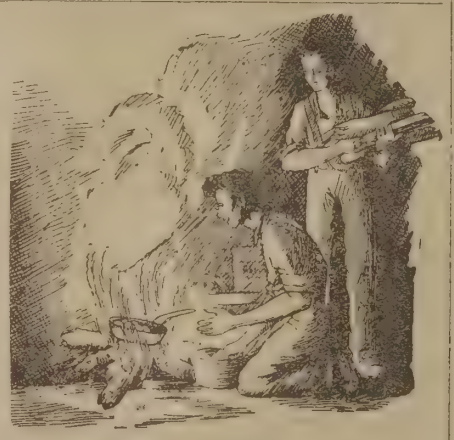
"Lay by till—till we could scour the country for miles in every direction and round 'em up."

"Could you always find them?"

"Most of 'em. Redskins would'nt chase 'em many miles off. Commonly it would take us a week or so to hunt 'em up and drive 'em back. That way we'd lose lots of time. You see—"

"What's the matter yonder?"

"Why, we've come to a campin' place, and the cap'n's give orders to corral our wagons. You see the lead wagons turnin' out now. If you'll watch a few minutes you'll learn jist what we'll do if a big gang of redskins was to come chargin' and screechin' t'wards us. We do the same thing every night, except that we leave a little openin' in the corral, and take our work stock out through that. Of course we have to water our teams, and then the herders drive 'em out to grass."



Now the foot travelers stopped and stood watching the 150 wagons form themselves into a big circle—more accurately an ellipse. Even if there was no known danger at present, the captain evidently thought it just as well to be ready for an attack. When stopped for the night, the wagons made almost a complete enclosure, and the long teams were inside. However, the oxen were soon unyoked and the mules unharnessed; and after that they were let out through a narrow opening. A few hundred yards away was a pond covering an acre or two. And to the pond they were allowed to go for water. That done, they were placed in charge of the night herders and driven farther out to graze.

The foot travelers had been invited to camp with the wagon train, and they now stopped their cart and wheelbarrow not many yards from the wagon corral. After removing Brindle's pack and packsaddle, Orlando led her away to the pond. At the same time he was carrying their water keg, to bring back water for cooking and other camp purposes.

While the cow was drinking, out in the pond, Orlando was filling his water keg, at one edge. The pond was so shallow at the edge that he could not sink the keg into it, but had to use a cup. While he was there numbers of other men came, all with water kegs or water buckets. He chattered a little with some of them, and found what they had to tell him very interesting.

On returning to camp he hobbled Brindle, belled her and turned her loose to graze. By this time many of the travelers, each with a sack of some kind, were scattering over the surrounding plain, picking up buffalo chips. There being no timber here, some substitute had to be found for wood. Not a buffalo could be seen now. But evidently those plains cattle had been here in large numbers, and that within a year or two. This pond must have been a favorite watering place for them.

For a few days the foot travelers had been resorting to the same fuel. It could be picked up everywhere, but in abundance only in the vicinity of water. They had found the stuff rather sorry to cook with.

They baked a skilletful of biscuits.

But now, by watching these experienced plains travelers, they learned now to burn it to better advantage. After seeing how the teamsters prepared for their fires, the foot travelers gathered some chips in sacks and prepared to use them.

The handcart party would have one fire and Esau and Orlando another. And some digging was necessary before the fires could be started.

For every vessel they expected to put on the fire a round hole was dug in the ground, from four to six inches deep. That is, if they wanted to fry meat or cook flapjacks, they dug the hole just a little smaller than their frying pan. So small that the pan would rest on the edges of the hole and not on the fire itself. Then they dug another hole for their camp pot. Between the holes, which were only two or three inches apart, a passageway was cut, so that the fire could spread from one hole to another. The chips were sorry fuel at the best, and it was important that everything to be cooked should be ready before the fire was actually lighted. The fire would scarcely be hot enough to bake bread in their little skillet, so they would have to be satisfied with flapjacks cooked in their frying pan.

Esau had gathered the chips while his partner was milking Brindle, and the two had cooked supper together. After eating they visited several near-by camps. There they chatted with the teamsters and heard them relate their experiences in this western country. The great camp was a lively, noisy place, and a cheerful one, in spite of the fact that most of the camp fires had been allowed to go out as soon as the cooking was ended. It was late when the visitors returned to their own camp and went to bed.

Next morning they were up rather early. The two got things ready and cooked breakfast, kindling another chip fire in their cooking holes. After breakfast Orlando walked out and found Brindle, unhobbled her, led her to camp and milked her. She was permitted to graze a while longer, however. Her owner strolled over and chatted with some of the wagon drivers. The men themselves were ready to travel, but would not start for an hour or two. Their oxen and their mules had no feed but the grass, and could not drag those wagons without plenty of time to rest and graze.

"Well, goin' to jog along with us today?" one of the teamsters wanted to know.

Orlando shook his head. "Guess we'll have to push on faster than you people will care to drive. I'm sorry, too. I'd love to keep company with such a big train as this. The wilderness we're in doesn't seem a wilderness while one is part of such a great caravan as you have here."

"That's right. Not much chance to suffer with lonesomeness while you're in this big bunch. You're havin' a mighty long tramp, seems to me like."

"It is rather long. But we've got used to tramping and don't mind it. Of course I have things easier than my partner does. But even he stands the trip well enough and never complains. We're all right, now that we've got our muscles hardened. When we first started—but I see my partner's getting ready to roll out. So guess I'd better go back and saddle up and pack up. We may be detained somewhere, and see you again. But, whether we do or not, good luck to you."

"The same to you, and plenty uv it!" answered the teamster.

The handcarters were now ready, and as soon as her pack was on the cow the party of seven moved away. On reaching the top of the next rise they looked back, to see the herders pushing the big drove of work cattle toward camp. After that the rise hid the great corral of white-topped wagons from view and the foot travelers saw the train for Santa Fe no more.

The handcart and the wheelbarrow were now in the buffalo country, and the party began to catch sight of little droves of the animals, but always at a distance. The many wagons rumbling along here had doubtless frightened them back from the trail. Other game was also more or less scarce along this great highway. But the foot farers, by sending out hunters while in camp, were able to supply themselves with fresh meat. They were now out on the high plains, where was neither tree nor bush nor shrub. Their sole dependence for fuel was on buffalo chips, which could be picked up everywhere. Finally, after days of steady traveling, the party found themselves at the Arkansas river.

This was a broad stream, with low banks and a sandy bed. The water at this time was scarcely a foot deep anywhere, but spread out, in most places, from bank to bank. Indeed, the stream was shallow enough everywhere for a wagon, or even a wheelbarrow, to ford it.

It would not be necessary for these travelers, bound for Pike's Peak as they were, to cross the river. But for a long distance their road would lead near it and parallel to it. There were numerous creeks running into the Arkansas, and those on the north side would have to be forded.

After coming close to the river the great trail kept most of the time in sight of it, and oftener not far from the north bank. There was little timber along the stream, only a cottonwood tree or bush now and then, and an occasional cottonwood grove.

The party with a handcart and the wheelbarrow first sighted the wide sheet of water not long after dinner time. And when the hour arrived to halt for night they made their camp by a few trees on the river bank. Instead of gathering buffalo chips, as they had been doing for a week or two, they now sought fuel from a different source.

While tramping along near the river during the afternoon they had noticed an occasional chunk or other small piece of driftwood floating downstream.

"I'm sick and tired of them half-done flapjacks!" a handcarter exclaimed, on catching sight of the driftwood. "They keep me with the heartburn half the time. Let's bake some shore 'nough bread tonight. I want to see how skillet bread tastes one time more."

"So do I, Bill; so do I," declared another of the handcart's crew. "I've never had half enough to eat since we struck the buffalo chip country. Let's camp early tonight and ketch plenty of driftwood, and try to git one good meal."

Others agreed with him. And not long after the party had gone into camp Orlando pulled off his boots and socks and rolled up his pantaloons. The handcarter who hadn't had enough to eat was doing likewise. Soon the two bare-footed, bare-legged men were down the bank and starting into the river.

"Better look sharp for quicksand, boys!" Sanders called after them. "They say this stream is mighty bad for sand bogs!"

"We'll look sharp—won't we, though!" called back Orlando, who was already a few yards out in the shallow water.

Now the two men moved on toward midstream, followed by Frisk, and wading slowly and cautiously.

"You're all right while you keep movin'," the handcarter remarked. "But if you stop a few seconds you can feel the sand

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I have been a reader of the Family Circle for a long time and enjoy it and receive much help from it. We live on a farm and although we are having rather hard times I like the country best and wouldn't care to live in the city.

I am always busy and never lonesome. We have a girl and boy, 4 and 1 year and I am very much interested in child training.

I raise chickens and flowers and sometimes help with the cows in the busy season and I love it all and the children enjoy it with me. I patch and mend and take delight in making over and using odds and ends. Recently I made some pretty dresses and aprons out of flour sacks, using the blaket stitch in black and applique work for trimming.

I try to be saving and make the most of everything without spending more time than the thing is worth, for I count my time valuable. MRS. A. F., Idaho.

Dear Mrs. Barland: I have had spendid success in waxing flowers by using the common white wax or paraffin. I cut up the wax and melt it in a deep can and when melted I set it in hot water. Dip the flower in this and if a large flower, as roses, dip several times. Hold in the hand till the wax hardens, so the flower will hold its shape. Care must be taken that the wax isn't too hot or the flower will turn brown. With a little practice one can prepare them so they will be very natural. JEANNETTE NOYES.

Dear Mrs. Barland: As the season advances many an old hen will find her way into the stew kettle and I have an excellent way of roasting the same. After the bird is drawn and washed loosen the skin over the breast bone and with the hand work under the skin up to the neck and under the legs and wherever it can be loosened. Stuff this large pocket as well as the inside of the fowl. Cut a piece of muslin and sew over the gap, wrap the legs in pieces of muslin and roast, basting often.

The stuffing will steam the bird as tender while roasting as when stewed.

Sharon, Wash. MRS. A. K. S.

Dear Mrs. Barland: Flowers may be preserved by dipping in melted paraffine or parowax. It must be quite hot, so the coating on the flowers will not be too heavy. They will look like wax flowers, though the colors will not be quite so bright as natural. This may be too late for the "June graduate," but it may be of help to some one. E. M. M.

Dear Mrs. Barland: Will some one please tell me how to tan a calf skin so it will be leather. H. M.

Centralia, Wash.

To Normal Weight

Campaign Among School Children

From communities here and there in Spokane county Miss Inez Arnequist, county home demonstration agent, reports striking results of the campaign to bring to normal the underweight child.

Weighing of the children systematically, with accurate record of weights and dietary changes effected, have usually been the first steps effected. Introduction of the glass of whole milk at morning and afternoon recesses and of the hot noon lunch have been possible through the wholehearted cooperation of strong community leaders, earnest community organizations and the public schools, Miss Arnequist stated. "The women have taken hold of the problem wonderfully," she added.

The primary aim has been to reach the child who is 7 per cent below the normal weight for one of his age and height. Such children medical science pronounces to be at the danger line. Nutrition classes are formed to include such children and marked changes in dietary and rest habits have been effected.

The method of providing the milk for underweight children has varied with community conditions. Usually, said Miss Arnequist, children are not encouraged to bring it individually from home, their aversion to carrying the heavy and breakable bottle dampening their ardor for the end in view. The general policy has been to appoint a community leader in the work, with two assistants, and not infrequently some local body undertakes to stand responsible for the milk supply. In other cases individual mothers have given their time and efforts in numbers and in concerted efforts that have kept the milk supply and the materials of the hot lunch forthcoming. The serving of the latter has been variously managed, sometimes through rotating committees of mothers, sometimes under direction of the teacher. In larger schools the food is handled most easily by selling and daily punching tickets.

"Almost invariably we find that the child who is underweight is interested in his own standardization," said Miss Arnequist. "Each child is given a score card to be kept by the cooperating mother, who finds it a useful check on the meals she offers from day to day, as well as on what her child is actually eating."

Results have indicated, she stated, that a death blow will never be struck at undernourishment until a hot dish at the noon lunch is possible in rural schools generally.

Scales, costing an average of $36, have been contributed by various means. In some communities funds for them have been obtained by giving dinners or socials; in some the Red Cross has furnished the scales for the work.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

We hear much about the power of mind over the body. We ought to hear more about the influence of the body over the human mind.

Dr. Copeland.

The mind can not function without a proper supply of pure blood. When one feels dull and weak, sleepy and lazy the blood is filled with toxins, the poisons of lowered elimination. One can not be forceful, full of "pep" if his body is not sound and strong.

Eat regularly, but moderately. Eat to live—do not live to eat.

Get enough sleep, and remember the old adage:

"All work and no play makes Jack a dull boy."

It takes courage to fight the battle of life. The more of this important element you have the better fitted you are for the contest that comes to all of us in this strenuous age. We can not have courage without physical strength. I do not refer to brute courage, but to the splendid courage of mind and soul which can not exist without physical strength.

We have here an unbroken circle: Physical strength depends on right living and right thinking, but you can not think rightly unless your body is under control. You can not control thought, but you can control your body. When your body is under control your thinking will be of the right order.

When we clearly understand that the human mind can not function as it should if there is poor health it will be easier to clear away the mental cobwebs.

I can not refrain from another reference to the great importance of localized infections, such as are found in the teeth, tonsils and other organs. Nothing is more essential than the early discovery of any source of infection, and the removal of the dangerous cause. Diet, exercise and proper living generally will be of little avail if you have within your body a factory which is producing poison all the time. This poison is taken up by the blood and carried to all the tissues of the body. Naturally, the delicate and sensitive cells of the brain suffer from the effects of these harmful substances.

We can not disregard the effects of hte body on the mind. In every case of mental distress or disturbance the physical basis should be sought, found and removed.

Just Folks

To save is to go without.

Growth is the best freedom.

Confession may be confusion.

Travel dulls as well as sharpens.

Words get sick from abusive use.

Disposition grows upon what it is fed.

A real duty does not have to be explained.

A right guess is better than a wrong conclusion.

It is better to be top-heavy than not to have any top at all.

To grow into riches and authority is far different from having riches and authority conferred upon you.

People are depleted persons.

Passive agreement does not amount to much.

Conventional excuses do not generally deceive.

Favorite advice backs up your own opinion.

To control is a bigger thing than to destroy.

A losing fight may show no signs of feebleness.

There are fortunate as well as unfortunate mistakes.

A lot of things hide themselves under the cloak of education.

The same conditions may either close or open the door of opportunity.

Whatever your religious faith, accountability to God remains fundamental.

Parents who are in the limelight are handicapped in the training of their children.

Continuous work may be too continuous and intermittent work may be altogether too intermittent.

Accepting the situation may be very near to mastering the situation. E. A. S.

New Way to Keep Your Kitchen Cool All Summer

I have discovered a new kind of heat that dispenses entirely with coal and wood. It burns 95 per cent air and 5 per cent kerosene. The device is installed in one minute in any cook stove, heater or range. This new invention is already sweeping over the country like wildfire. It eliminates hours of work, perspiration and drudgery for the housewife in sweltering summer kitchens. Just turn a valve and you have plenty of heat for cooking or baking. Another turn and the heat is off.

It fits any stove without change of parts—simply sets in the firebox. It generates its own gas from kerosene. I will send an attractive booklet to any one who writes for it. I am making a special introductory offer, including a thirty-day free trial plan. I am looking for good live local distributors. Just write me and I will tell you how you can earn $500 a month easily. Request my sales plan. Address your letter to me personally, B. M. Oliver, 2121-H Oliver Bldg., St. Louis, Mo.—Adv.

Just What You Want

may be offered in this week's want ads at a bargain. It's a good idea to look them over every week

Look at this shingle a moment

You will see little holes, or pores, through which flowed the sap in the living tree. In new shingles much of this natural oil is still present. But if roofs are left unprotected, the weather dries out the wood, causing it to warp and crack.

You can keep *your* shingles "alive"—by treating them with ORONITE SHINGLE OIL. It penetrates the wood fibre, fills the pores, and retards evaporation of natural oils. Rain cannot easily soak in, nor can sun or wind effectively attack roofs or shingled side walls treated with this excellent preservative.

Our agent, near you, has formulas for mixing ORONITE SHINGLE OIL with colors. Have him show you how easily it may be applied.

SHINGLE OIL

High Points in News of the Week

The question in the minds of the American people today is the same as that of last week, but is being asked with more wrinkles in the brow: Is the country's business going to be paralyzed by a complete or nearly complete tieup of the railroads resulting from a walkout of the employees, 400,000 of whom are already on strike and the balance of which are being drawn daily closer to the edge of the strike precipice?

A second question little less important is: Must a considerable part of the people of the United States go cold this winter and must employment in industrial plants be curtailed because of a coal shortage due to the long-continued coal strike?

The answer to neither question may be given at this writing with absolute certainty, but a blanket answer may be given that already industry is suffering a degree of paralysis as a result of the strikes in the coal mines and the railroad shops. While there is a constant claim on the part of the railroad executives, and others who are in the habit of whistling as they pass graveyards that they know are peopled by ghosts, that the railroads are able to operate adequately under present conditions with partial crews in the shops, it is becoming daily more and more evident that the shopmen's strike is badly crippling train service.

Shippers of perishable crops, including the fruits of the northwest, are on the anxious seat. Meetings of fruit growers and fruit organizations are being held this week in this territory in the hope of exercising some influence on somebody that may have some power to provide cars and engines and workmen to operate them. The wheat grower is alive to the fact that if the wheat can not be moved the price will be adversely affected.

But there is a chance, and possibly a good chance, that before long the coal mines will be operating again and the railroads all running again and business in general picking up in consequence. In fact, it is freely predicted by those in position to know the situation that the coal strike will be settled within a short time. Negotiations have been going on between mine operators, mine workers and government representatives for several weeks, with the result that the situation is fairly hopeful.

In the railroad strike, however, there appears more of a fight-to-a-finish spirit on both sides. There is much more involved in the strike than the question of wages, working conditions or the bugaboo of seniority rights of workmen. Organized railroad workers declare that the opposition of the railroad executives is due to a determination to wipe out the unions. Railroad executives declare that they are resisting because their roads can not be operated profitably under the conditions laid down by the workers. In what was looked upon as a final proposal last week, President Harding urged the strikers to return to work and the employers to accept them, leaving to the railway labor board the question of whether or not the workers would be reinstated with their seniority and pension rights and also providing a rehearing of the wage scale question by the board.

The railroad executives accepted this proposal conditionally, the condition being that they take back enough striking workers to fill their ranks, leaving the 60,000 or more shopmen employed since the strike in their present positions. The strikers at this writing have not made public their replies to the proposal, but it is understood that they are flat refusal to accept.

The latest development is a conference between the railroad executives and officers of the four big brotherhoods of railway workers (not on strike) with a view to working out a plan for arbitrating the seniority question, which is the one now standing in the way of a settlement of the strike. It is reported at this writing that this conference offers hope of success. It is believed that an arbitration plan approved by the big brotherhoods would be accepted by the striking shopmen. The results of the conference and the plan worked out are being laid before President Harding, who is known to be favorable to arbitration as a general policy where disputes can not be settled by the disputants. The peculiar situation is that both railroad executives and empioyees are refusing to abide by the decision of a board that is given authority by act of congress to pass upon such disputes. The explanation is that there is no provision in the law for inflicting a penalty on those who do not abide by the board's decision. This fact led last week to speculation as to whether or not President Harding would call upon congress this week for legislation to put teeth into the law so that both sides would have to abide by its decisions. Indications now are that no such legislation will be asked. The president has power in an emergency to take over and operate both coal mines and railroads in the name of the general welfare, and there is some likelihood that this will be done soon if success does not crown efforts at a peaceful settlement. Several middle western governors last week officially asked the president to take this step, but it is known that he is averse to it, and will adopt this method only as a last resort.

Take it all in all, the situation at the beginning of this week is perhaps a little less gloomy than a week ago, though any hour may bring the collapse of negotiations. Likewise, any hour may bring announcement of agreement.

* * *

Under the supervision of the department of commerce, of which Herbert Hoover is secretary, steps have been taken to prevent increases in coal prices and to apportion the coal throughout the states on an equitable basis with a view to serving the needs of industry and the general public as fully as the limited supply of fuel may do.

* * *

The United States senate last week adopted a clause in the tariff bill providing for a flexible tariff schedule. The provision would authorize the president to decrease or increase tariffs under certain regulations up to July 1, 1924. Tariffs will be provided in the bill now before congress, however, the idea being that the president shall be empowered to alter rates from time to time as conditions may appear to warrant.

* * *

Though too late to do grain crops any appreciable benefit, at least on the east side of the Cascades, rains that fell generally throughout the northwest last week served good purposes. Pastures, gardens, some fruits and other small crops were helped, while the forest fires situation was greatly relieved, though the fires were not all wiped out. With seasonable weather from now on it is likely that little additional destruction of timber will be recorded.

* * *

The American Bar association, in session at San Francisco last week, adopted a resolution favoring the prohibition of the manufacture and sale of pistols except for governmental use. The resulution declared that the pistol no longer has a useful purpose to serve, and that it is the cause of much crime.

* * *

King George of England last week signed the treaty for the reduction of naval armaments. Ratification is still to be given by France, Italy and Japan, though there is thought to be no likelihood that any of these nations will fail to ratify.

* * *

The situation between Great Britain and France is still tense as a result of differences of opinion on the question of leniency toward Germany in the matter of reparations payments. England favors extension of time in which Germany may make payments that are due, while France clings to the desire to make Germany toe the mark in fulfilling the provisions of the peace treaty.

* * *

Lord Northcliffe, publisher of the London Times, one of the most noted journalists of the age and one who did much to arouse England to the necessity of strenuous methods of warfare against Germany when his country's cause seemed hopeless, died last week.

Visit West Side Farms

(Continued from page two.)

of the grade cows are better than their dams.

A trip through the Carnation farm barns and pastures came immediately after lunch and everything was explained in detail as the crowd went along. A group of mature cows in one lot had been selected, keeping only those that produced 1000 pounds and better yearly. In the test barns were cows that were being milked three and four times a day, while in the commercial barn the animals were milked only twice daily. Each cow's name and record was placed above her stall.

The two herd bulls are full brothers and are known as the Matador brothers. Matador Segis Walker, however, is a year younger than his brother, Segis Matador Walker.

The dam of the present herd sire at the Tualco Valley farm at Monroe, owned by Dr. H. K. Stockwell, has a record of 22,012 pounds of butter. She is also the dam of the world's record cow in class, Cascade Blossom. Ten of the bull's daughters are in the Stockwell herd and have exceeded the production of their dams at the same age.

At the Glenwood farms, near Snohomish, owned by Ed Hoem and A. H. Buck, the 5-year-old herd sire has two full sisters with over 1000-pound records. All of his heifers are producing more milk than did their dams.

There are four daughters of Lishman's Son, the senior herd sire, on the Valley Gem farm at Arlington, that show the wonderful prepotency of this animal. The herd is owned by J. E. Wrage and G. H. Grew, who have developed some typy Guernseys, many of which are on official test. The entire herd is being milked three times a day and has produced an average of 995 pounds of milk and 47.2 pounds of fat per cow per month.

F. O. Coe, also of Arlington, has an exceptional herd of grade Jerseys, which have been tested in the cow testing association for the last six years. The herd bull, Eminent Ferndale King, is a distinct Island bred animal and shows much quality.

At Hans Thompson's place was a herd of grade Guernseys which Mr. Thompson is breeding up with a registered bull from the Valley Gem farm. "I believe in using the best bull I can get," said Mr. Thompson, "and then I can raise all the heifer calves and get good cows as a general rule. I aim to have all the mature cows producing around 300 pounds of fat or I don't keep them."

Practices Line Breeding.

Dr. E. E. Heg's farm at East Stanwood was the last stop of the day. Dr. Heg has been doing line breeding on Sir Johanna Ruth Fayne and has 10 daughters of this breeding in the herd. One of the most interesting animals in the herd are Tyee Hiske Fayne, who produced 25,213 pounds of milk and 889 pounds of butter in 305 days. Tyee Sir Johanna, the herd bull, won first in his class at Portland last year.

The entire trip through Snohomish county was planned by W. D. Love, the county agent.

At Mount Vernon the members of the Skagit County Live Stock association held a banquet for about 75 people, the program being carried out by H. K. Willis, their president.

The tour through Skagit county brought out 35 cars at the first stop, the H. S. Ruley's Jersey farm. This was a well-selected bunch of Jerseys that showed the effects of proper care and management. One of the old cows made a record of only 211 pounds and after she had been sold for beef her daughter by the former herd sire produced 375 pounds in 237 days. The present herd sire is Bluster's Lad, a son of Engineer's Bluster.

Princess Fayne Johanna, one of the registered Holsteins in the Youngquist Brothers' herd of Mount Vernon, made a record of 401 pounds of butter in 112 days. She was the highest cow on semi-official test for the months of April and May. The best cow in the herd for her age is Vernway Pontiac Segis De Kol, a daughter of the herd sire. She freshened as a senior yearling and made 577 pounds of fat in 349 days.

Tom Lockhart exhibited eight cows from the herd that had reacted to the tuberculin test. Since these were all exceptional individuals, Mr. Lockhart placed them in quarantine. All of the animals were apparently healthy and one grade cow produced 676 pounds of fat.

The cow testing association records showed that one generation in the F. J. H. Gallicher herd had made an increase of 100 pounds more than the dams, due to the use of a good bull. This figure was estimated for the general average of the herd.

A poultry flock at the A. R. Besgrove farm gave a little variety to the program

Bits of Fun FOR Everyone

Concentration Gets the Answer.

An absent-minded man returned home one evening, and sat down in a chair to think. He had decided to do something and could not for the life of him remember what it was.

He sat and sat. Time passed. Still the elusive thing evaded him, but he determined that this time he would not be beaten, and that he would not give up. One o'clock chimed.

At 2 o'clock he suddenly gave an exclamation of delight.

"Ah!" he cried, "I remember at last. I had decided to go to bed early!"

The Main Thing.

An old darky got up one night at a revival meeting and said: "Brudders and sisters, you knows an' I knows dat I ain't been what I oughter been. Ise robbed henroosts, an' stole hawgs, an' tole lies, an' got drunk, an' slashed folks wi' mah razzah, an' shot craps, an' swore; but I thank the Lord der's one thing I ain't nebber done; I ain't nebber lost mah religion."—The Furrow.

Mighty True.

"This setting down and folding our arms and waiting for sumthing tew turn up, iz just about az rich a spekulashun az goin' into a 400-acre lot, setting down on a sharp stone, with a pail between our knees, and waiting for a cow tew back up and be milked."—Josh Billings.

His Wife, Perhaps.

The man who had struck one of those rare not-so-very-prohibition parties and didn't want to leave it, had made two unsuccessful attempts to get into the telephone booh, the third time negotiating it like a ferry going into a strange slip. He dropped his nickel in.

"H'llo, h'llo, h'llo," he cried. "Say, gimme Line's Busy, thassa good girl. H'llo, whassat? Line's busy?? Aw right."

He staggered out.

"Lord knows I tried to get her anyway," he murmured.—American Legion Weekly.

Signing Up the King.

Two fishmongers having shops directly across the road from each other, strove hard all the time to outstrip each other in the matter of display signs.

One day a sign appeared above the window of one of the rivals: "We serve the King."

Not to be outdone, the merchant on the opposite side of the road hoisted a sign the following day which read: "God save the King."—Dry Goods Economist.

No Limitations.

The wealthy city man had taken a fancy to visit his village birthplace.

"Ah me, there is the little red schoolhouse, and yonder is the old church. How

The Difference.

There's a difference between notoriety and merit. A thousand dollars' worth of roses will barely fill a room with perfume, but with a dollar's worth of fried onions you can scent up a whole block.—Nuggets.

Taking No Chances.

The wife of the great botanist beamed at him across the supper table. "But these," she exclaimed, pointing to the dish of mushrooms that had been set before her, "are not all for me, Aristotle, are they?"

"Yes, Mabel," he nodded. "I gathered them especially for you with my own hands."

She beamed upon him gratefully. What a dear, unselfish husband he was! In five minutes she had demolished the lot.

At breakfast the next morning, he greeted her anxiously. "Sleep all right?" he inquired.

"Splendidly," she smiled.

"Not sick at all—no pains?" he pressed.

"Why, of course not, Aristotle," she responded.

"Hurrah!" he then exclaimed. "I have discovered another species of mushrooms that isn't poisonous."—Pittsburgh Chronicle-Telegraph.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

3746. Ladies' dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 4 3-4 yards of 44-inch material. The width of the skirt at the foot is about 2 1-4 yards. Price 10 cents.

3685. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 7-8 yards of 38-inch material. The width of the skirt is 2 3-4 yards. Price 10 cents.

3312-2939. An "up-to-date" frock. Waist 3312, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. Over dress 2939, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. To make the waist will require 2 1-2 yards of 36-inch material. The over dress requires 3 1-2 yards of 40-inch material. Two separate patterns, 10 cents for each pattern.

4093. Child's coat. Cut in four sizes: 6 months, 1 year, 2 and 3 years. A 2-year size requires 1 5-8 yards of 40-inch material. Price 10 cents.

3993-3837. A pretty cape "suit." Cape 3993, cut in four sizes: Medium, 38-40, and large, 42-44 inches bust measure, for ladies, and 14 and 16 years for misses. Dress 3837, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. It will require eight yards of 36-inch material for a medium size, for cape and dress. The width at the foot is about two yards. Two separate patterns, 10 cents for each pattern.

3788. Ladies' apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 5 1-4 yards of 36-inch material. Price 10 cents.

4081. Ladies' house dress, cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 5 3-4 yards of 32-inch material. The width at the foot is 2 5-8 yards with plaits extended. Collar and cuffs of contrasting material require three-fourths yard 32 inches wide. Price 10 cents.

3723. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. An 8-year size requires 3 3-4 yards of 27-inch material. Price 10 cents.

3646. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. An 8-year size requires 3 1-4 yards of 27-inch material. Price 10 cents.

4084. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 2 1-8 yards of 32-inch material for the blouse and 2 5-8 yards for the skirt. Price 10 cents.

4071. Ladies' blouse. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 1-2 yards of 32-inch material. Price 10 cents.

4101. Dress accessories. Cut in three sizes: Small, medium and large. To make No. 1 for a medium size will require 1 1-2 yards; No. 2 will require 1 1-4 yards; No. 3 also 1 1-4 yards, of 32-inch material. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

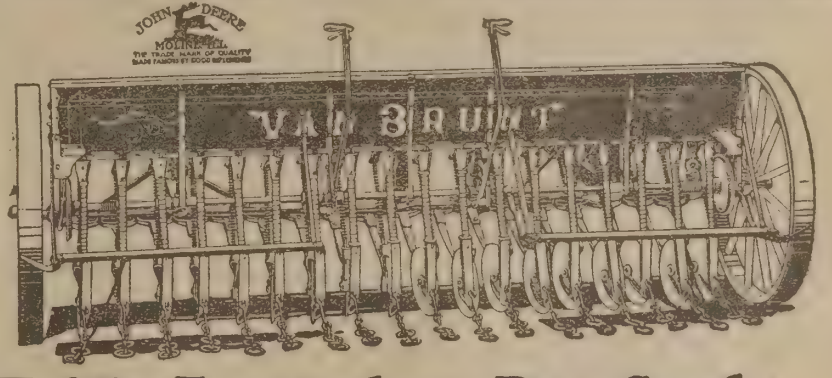
New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).



The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Drills Treated or Dry Seed in Difficult Conditions

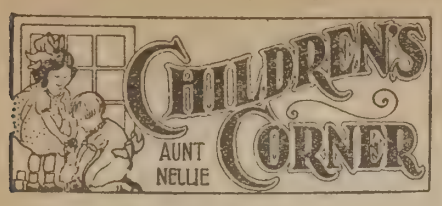
Kernels of every size and kind can be planted at regular distances apart, the desired quantity per acre, in trenches of uniform depth, and without bruising or cracking the seed, with the

JOHN DEERE
VAN BRUNT GRAIN DRILL
WITH DOUBLE-RUN FEED

Van Brunt features compel accuracy and provide a wide range of adjustment. The adjustable gates of the Van Brunt double-run feed, together with the multiple gear construction, make it possible easily to adjust drill to plant 48 different quantities of grain—wheat, 16 to 258 pounds per acre, and other grains in proportion. No wire reducers or other contrivances are required.

Operates on steep hillsides without axle end-play, and the grain cannot shift to one side, leaving part of the box empty. *The grain box will not sag*, even after years of use—it is trussed to the frame and axle at five points.

The frame is angle steel, reinforced. The Van Brunt is built like a steel bridge—it cannot buckle or sag. Frame is supported on long, strong wheel hubs.



Gears always in mesh—no sudden jerks to strip them. They are self-aligning, dirt-proof, and are provided with spring relief—obstacles pass through without breaking or damaging the gears.

Guaranteed disc bearings; tilting levers for adjusting position of furrow openers to cut deep or shallow; single discs, double discs or hoe furrow openers.

Sold by John Deere Dealers

FREE BOOK. Write today, address John Deere Plow Co., Portland, Oregon, for free booklet describing the Van Brunt Drill with Double-Run Feed. Ask for Booklet RD847

JOHN DEERE
THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

We are glad to hear from another new cousin in southern Washington, Walla Walla county. This letter is from Helen A. Tomlinson, who is 7 years old. August 15, 1922, she will be 8.

May 14, Nina Downing had a birthday party and received some nice presents. She is 11. Her home is in the Big Bend country, eastern Washington. She helps care for 70 little chickens and enjoys doing it. Next year at school she will take seventh grade work. We are glad to hear from Nina.

A letter comes to us from Okel Sperline in Chelan county, Wash. Okel says she was ill for a few weeks and that is why she waited so long to write to us. Her papa and brothers are picking cherries. Okel will be a sixth grade student at school next term.

Bernice Williams, a southwest Washington girl, sends this joke:

Teacher—Jennie, how do you plant potatoes?

Jennie—In the ground.

Bernice is in the sixth grade at school. She has a little calf.

Clara Breitmeir lives in southern Chelan county, Wash., near the Wenatchee river. She will be 8 years old July 11, 1922. She says they have a nice crop of apples this year. Clara's pets are a dog, a cat and some little chicks.

Dorothy Timm writes from Lincoln county, Washington. Dorothy is going to have her picture taken soon and send us one, maybe. Here is a riddle: What is a valuable book? The full pocketbook.

Here are the grades that Adelaide Sanborn got in four of her examinations: Spelling, 97; arithmetic, 99; geography, 96, and language, 96. Adelaide is 11 years old and her birthday is March 3. She passed into the sixth grade this year. Her home is a 42-acre farm in northwestern Washington. Her father has three cows, a yearling calf and 37 chickens. Adelaide goes to school in the bus with 49 other children.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER, and others will appear from time to time in The Junior Farmer.

Evelyn Glenn, Alice Branscom, Goldie Richardson, Stella Huffman, Marie Thornton, Elwood Smith Guffer, Harold Puffert, Elva Woods, Paul Gribbin, Anna Jakiewiez, Elsie Stark, Christian Larsen, Lottie McNeil, Chloe Lane, Martha Slikker, Grace Middleton.

BEDTIME STORIES

By THORNTON W. BURGESS.

JOHNNY CHUCK GETS UP LATE.

"It must be I've waked up early," said Johnny Chuck, rolling over and looking up the long hall which led from his bedroom up to his doorway. The hall was dark, it certainly must be that he had waked very early. He yawned sleepily, stretched, and then curled up for another nap. By and by Johnny Chuck opened his eyes once more. It was just as dark as before. "What ails me to keep waking up in the night like this?" said Johnny, "I never have before. And, my goodness, how hungry I am!"

Just then Johnny heard a sound that made him sit up so suddenly that he bumped his head, for the roof of his bedroom is very low.

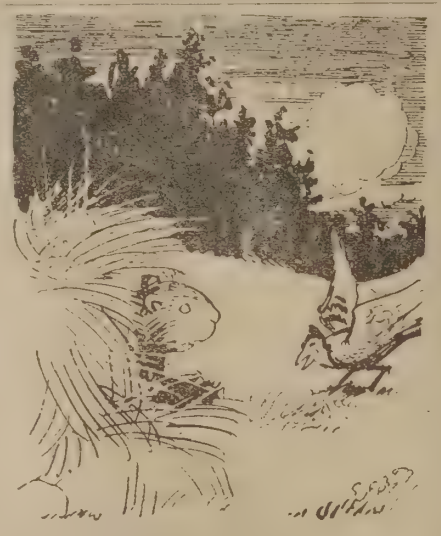
"Ouch!" cried Johnny Chuck.

Then he hopped out of bed and without waiting to wash his face or comb his hair he started up the long hall toward his front door. He had heard Sammy Jay laughing fit to kill himself, and he knew that Sammy Jay never, never would be out there laughing in the night. It was still dark in the hall and outside he could still hear Sammy Jay laughing. What could it mean?

Finally Johnny Chuck reached his doorway. It was all covered up with hay and that was why the hall was dark. Johnny pushed the hay out of the way and stepped out. The bright sunlight made him blink. Sammy Jay screamed louder than ever with laughter. Johnny blinked and blinked and Sammy Jay laughed and laughed. Johnny looked upat olly, round, red Mr. Sun. He was almost overhead. Usually he was just beginning to climb the blue, blue sky when Johnny Chuck came out for his breakfast.

"Oh, you sleepy head!" shouted Sammy Jay.

Johnny Chuck looked sheepish, but he couldn't say a word, for here it was the middle of the day and he hadn't had breakfast yet.



Just then along came Jimmy Skunk. Jimmy looked most disreputable. He certainly did. His clothes were tumbled and rumpled and dirty. And Jimmy was so sleepy that he could hardly keep his eyes open. Evidently he had been out all night.

"Have you seen anything of my house?" asked Jimmy Skunk.

"What!" exclaimed Johnny Chuck.

"I asked you if you had seen anything of my house; have you?" replied Jimmy Skunk crossly, for he was very, very sleepy.

Johnny stared at Jimmy for a full minute. "Are you crazy, Jimmy Skunk?" he asked. "How should I see anything of

Sammy Jay screamed louder than ever with laughter.

your house when I've just got up? Besides, houses don't run away."

"Mine has," replied Jimmy mournfully. "And I want to find it and go to bed," he said.

Sammy Jay, who had been listening, laughed louder than ever, and even Johnny Chuck smiled. "Wait till I get something to eat and then I will help you find your house," said he.

So Johnny Chuck got something to eat and then he followed Jimmy Skunk up the Crooked Little Path to the top of the hill.

"Right here's where I left my house, but now it isn't here," said Jimmy mournfully.

Johnny Chuck looked around. No house was to be seen. He idly began to kick a pile of sand. "Ouch!" he cried as his toe hit something hard. Then he began to dig away the said, and there was a stone filling up the doorway of Jimmy Skunk's house. Together they pulled it out and Jimmy Skunk crept in, almost too sleepy to say thank you. "I wonder who did it?" said Johnny Chuck. Then he found a footprint. A great light broke over Johnny Chuck.

"Bobby Coon has been playing tricks on us!" he exclaimed. "Just you wait. Bobby Coon, you'll have to take your own medicine yet!"

Birthday Greetings

THURSDAY, August 17—Wilma Dwire, 9 years old.

FRIDAY, August 18—Roy Prater, 9 years old.

SUNDAY, August 20—Raymond Polly, 11 years old.

TUESDAY, August 22—Bessie Cyran, 11 years old; Sylvia Nasi, 10; Beryl Snyder, 10.

WEDNESDAY, August 23—John Hundt, 11 yeasr old; Grace Stewart, 11; Eva Worster, 11.

Kitchen Conveniences

Some interesting work has been carried on in the way of a testing circle in Grays Harbor county by Miss Mabel Webber, with the assistance of the community project leaders. The plan is to try out different kitchen conveniences and report the results in a general meeting when all the members are present.

Such articles as steam pressure cookers, dustless mops, egg beaters, can openers, dish drainers, etc., are distributed. Each woman upon taking any one of these articles agrees to give it a thorough trial for a certain period of time. When the period is up a meeting is held and a report is given on each article which demonstrates the value of this article in the home. A considerable saving of time is accomplished, since each woman does not have to try out each article, but relies on the results of her neighbors.

One woman found that she saved 410 steps in the preparation of a meal by the use of the kitchen utility table.

Another woman found that a bread mixer was a "friend indeed," for it gave her lame left arm a vacation from the usual kneading.

"I am going to have one of those hand vacuum cleaners if we have to sell a cow," said another housewife. But her husband said that would not be necessary, since he believed it would save enough labor to pay for several cows in the course of time.

"The boys are going to make me a utility table like the one I tried out in the circle," is the report of another woman.

Some of the small articles are accepted very readily and many of the women are able to pick out the best of each kind and thus save many bad experiences in trying out such articles as they might pick up at the stores. In some cases the women do not buy a similar article to the one they have tried out, but, on the other hand, some of their neighbors will purchase one of the same kind.

The articles are the property of the county home demonstration agent's office, since they have been donated by different merchants in the county for demonstration work. In some cases results will show up a year or two later. Whenever a demonstration of this kind is held in any community the reports for the different articles are kept by the community leader and can be referred to at a later date by any one wishing information about any particular article.

You Can Win a Walking Doll

Nothing will make any girl happier than one of our UNBREAKABLE WALKING DOLLS. The walking feature intensifies the attractiveness of the doll 100 per cent. Moreover, it is light in weight, has a soft body, and is well made from top to toe. It stands 13 inches high.

There are no springs or sharp edges in our walking dolls—the mechanism is all concealed in the body. OUR UNBREAKABLE WALKING DOLLS sleep, sit, stand, and when led by the hand they REALLY WALK WITH YOU.

A walking doll with sleeping eyes and real hair will be awarded to YOU in return for your services in securing nine 3-year subscription orders to your State Farm Magazine at the regular rate of 50 cents each, or $4.50 for the nine subscriptions. A little time spent securing subscription orders and one of these wonderful walking dolls will be your very own for keeps. Get busy now before some one else starts to harvest the orders in your neighborhood.

Visit West Side Livestock Farms

(Continued from page twelve.)

and brought out the fact that the use of the best possible sires bring results that are worth the extra trouble and expense.

After the picnic lunch at Pete Omdahl's farm the visitors were told of the improvement of the animals of the herd. One cow, a granddaughter of a grade Shorthorn cow, has a record of 371 pounds of fat, while another of similar ancestry has a record of 352 pounds. Mr. Omdahl has 63 head of animals in the herd, of which 25 are purebred.

The Nels Anderson herd of Shorthorns, near the Omdahl farm were being bred up by the use of a registered sire. This herd consisted of over 200 head and is one of the largest in western Washington.

There was a big difference in the appearance of two calves in the Noble Brothers' herd of Guernseys near Edison. One was from a cow that had received the proper attention before calving, while the other had received only poor care. The entire herd shows the result of good management and breeding. A new herd bull has recently been purchased. He is of the Langwater Traveler breeding and is out of a 457-pound cow that had but three-quatters of a udder.

A group of the workers who helped to make the tour a successful undertaking. Reading from left to right: H. B. Carroll Jr., county agent of Whatcom county; Dr. S. B. Nelson, director of the extension service; C. M. Hubbard, live stock specialist; William D. Love, county agent of Snohomish county, and Lincoln Lounsbury, extension news editor of the extension service.

Fifty head of registered Holsteins on the A. J. Lawson farm showed uniformity of type and the entire herd was being tested each month in the cow testing association. Three daughters of the same dam show from 50 to 100 pounds increase for butterfat production.

C. H. Bergstrom planned the trip through the county, after which it was turned over to H. B. Carroll Jr., the county agent of Whatcom county, who completed the trip the following day.

The Last Day.

On the morning of the last day there were nearly 75 people who started out from Bellingham. The first stop was made at the David McLeod Jersey farm a short distance from town. Here there was a gold medal cow, Double St. Mawes, and an 18-year-old animal that made 10-700 pounds of milk and 592.19 pounds of fat in a year. This record was made at the age of 16 1-2 years. This cow is a half sister to two gold medal cows and is a grand dam to the herd sire.

The VanHorn poultry farm has a modern laying house, which was designed by the owner. The yearly records, which have been kept for the last 17 years, show a gradual increase in the production of eggs and has now reached an average of 192 eggs per hen. Line breeding has been carried out with excellent results.

Traveling toward Ferndale, the expedition stopped at another poultry farm, that of B. Hillier, who has a large commercial flock. Private records have been kept for the last two years on a pen of 970 breeders. From this pen there were two exceptional hens that made 302 and 206 eggs, the latter record being made in 11 months. No hens are kept in the breeding pens that will not produce 180 eggs a year.

J. A. Porter, a Jersey breeder near Custer, had a neat herd of grade animals, which he had been testing in the cow testing association for the last four years. All of the records, which he read to the crowd, showed an increase since the first year of the test, running from 30 to 134 pounds per cow. This increase has been possible because of the better feeding and management that goes with the testing work wherever taken up.

The first herd of Ayrshires seen on the entire tour was that owned by William Lauckhart, near Lynden. This herd was started with only a few head at an early date and was increased and selected until it reached 30 animals. This was during the war and the labor question forced Mr. Lauckhart to sell off all but eight head. One of the cows has a record of 655 pounds of butterfat as a 4-year-old.

A picnic lunch was held at the Berthusen grove. The farm bureau donated the coffee and ice cream. Dr. Nelson gave a short talk regarding the results of the tour and the benefits of better live stock.

Some striking figures were given at the Leonard Koole farm, where Louis Zweegman pointed out each cow as he gave her testing association record. "The high cow in the herd," he said, "gave 441 pounds of fat and a net profit of $74 for the entire year, while the second highest produced 241 pounds and returned a net income of $44. The former cow made her profit at a cost of 16 1-2 cents a pound of fat, while the latter showed a cost of 18 1-2 cents." Mr. Sweegman is doing his own testing and feels that it is more than worth while.

At the farm of Andrew Benson & Son was a herd of registered Holsteins which had made some good records on official test. A number of the dams and daughters were cited to show the increase of milk and fat production of the daughters over their dams. This was due to the use of the herd sire that had a good record behind him.

"It was my object to get the best individuals that could be had and I started in to increase the production of the grade animals," remarked R. I. Tanner, Jersey breeder of Sumas. "I decided to get a few purebreds and bought one cow from Oregon for $800. It seemed like a lot of money, but later I refused $2000 for one of her daughters. This $800 animal is now a gold medal cow and could not be bought at any price.

There were 60 head of registered and grade Guernseys in the J. O. Anderson herd at Sumas, all of which had been in the county cow testing association. One record of 710 pounds of fat was made by a junior 3-year-old and the grade cows made as high as 450 pounds even while the grass was poor. The best investment ever made on the farm was the shipping of the best cow in the herd to be bred to a Langwater bull, according to Mr. Anderson.

At Milky Way Farm.

A. T. Smith of the Milky Way farm at Sumas told how the herd of registered Holsteins had been selected for size and conformation as well as high records. Twenty head of these cows averaged 19,000 pounds of milk in a year, and the entire herd is said to be one of the highest producing herds in the west. The herd sires are both junior yearlings, one being sired by the herd bull in the Bishop herd and the other by a son of Spring Farm King Pontiac.

There were 55 cars during the last day and about 250 persons. For the entire tour the number was estimated at over 1000.

FRUIT EXPOSITION POSTPONED.

Announcement is made that the second annual Pacific northwest fruit exposition has been postponed from the original dates of October 28-November 5 to November 11 to 19. The exposition is held in Seattle, at the Bell street terminal, where more room will be available than at the arena, where it was previously planned to hold it.

Pike's Peak or Bust

(Continued from page ten.)

crawlin' right out from under the soles of your feet."

"It won't do to stand still long. I've already discovered that," answered Orlando.

When out in midstream the two men stopped, not far apart. That is, they stopped moving along. But they had to keep stepping about constantly to prevent their feet from getting fast. A piece of drift wood was in sight, not far upstream, and they were waiting for it. When it came near, Orlando seized it.

Other chunks and sticks kept floating down, drifted all the way from the mountains, doubtless, and the fuel catchers moved back and forth, snatching them up from the current. Orlando was the first to get his arms full, and then he waded away toward the north bank with it. Not till each of them had lugged two armfuls of wood ashore were they ready to pull on their boots again.

But before doing that they threw off their clothes and were soon rolling and splashing in the deepest part of the shallow stream. Swimming was out of the question, but they could at least have a good bath. Their example was contagious, and the whole party were presently stripped to the skin and splashing about in the water. Most of them, not content with washing themselves, also took occasion to wash out their underclothes and shirts. These, when the bathers went ashore, they spread on the grassy bank to dry.

"Don't know whether this wood's much better than dry buffalo chips or not," Esau remarked, after the party had kindled their campfire. "Makes more smoke than heat, seems to me like."

"It is pretty soggy firewood, Esau," his partner admitted. "But that can't be helped, as far as I can see. Only chance for it to get here is by drifting. And you couldn't expect it to drift all the way down here from the mountains without becoming more or less watersoaked. If it could lie in the sun and wind for a few days—"

"But we hain't got time to hang around here for a few days and wait for this wood to dry out," Esau declared, positively.

"Of course not. But maybe the fire will dry it out."

"It will dry it out," Sanders spoke up. "Has to dry it out before it can burn it. That's why our fire start off so lazily."

In spite of their soggy wood the travelers managed to cook themselves a fairly good supper. In addition to other things, each of the parties succeeded in baking a skilletful of biscuits. And by keeping the rest of their wood near the campfire during the night they had better heat to cook breakfast by.

Now the seven footmen journeyed on, day after day. The trail kept always close to the Arkansas, which insured them an abundance of water. Also, as on their first night near it, they obtained most of their fuel from the river. Here, as farther back, the great road was teeming with immigrants. Many thousands of them were toiling along it, nearly all toward the mountains. Sometimes the foot travelers, pushing ahead as fast as possible, would pass more than a dozen wagon trains in a day. Other wagons, moving faster, passed them. There was also a number traveling with wheelbarrows, a larger number with handcarts, and still others in various makeshift ways. And, of all the thousands, every one seemed eager to reach the scene of the great gold excitement.

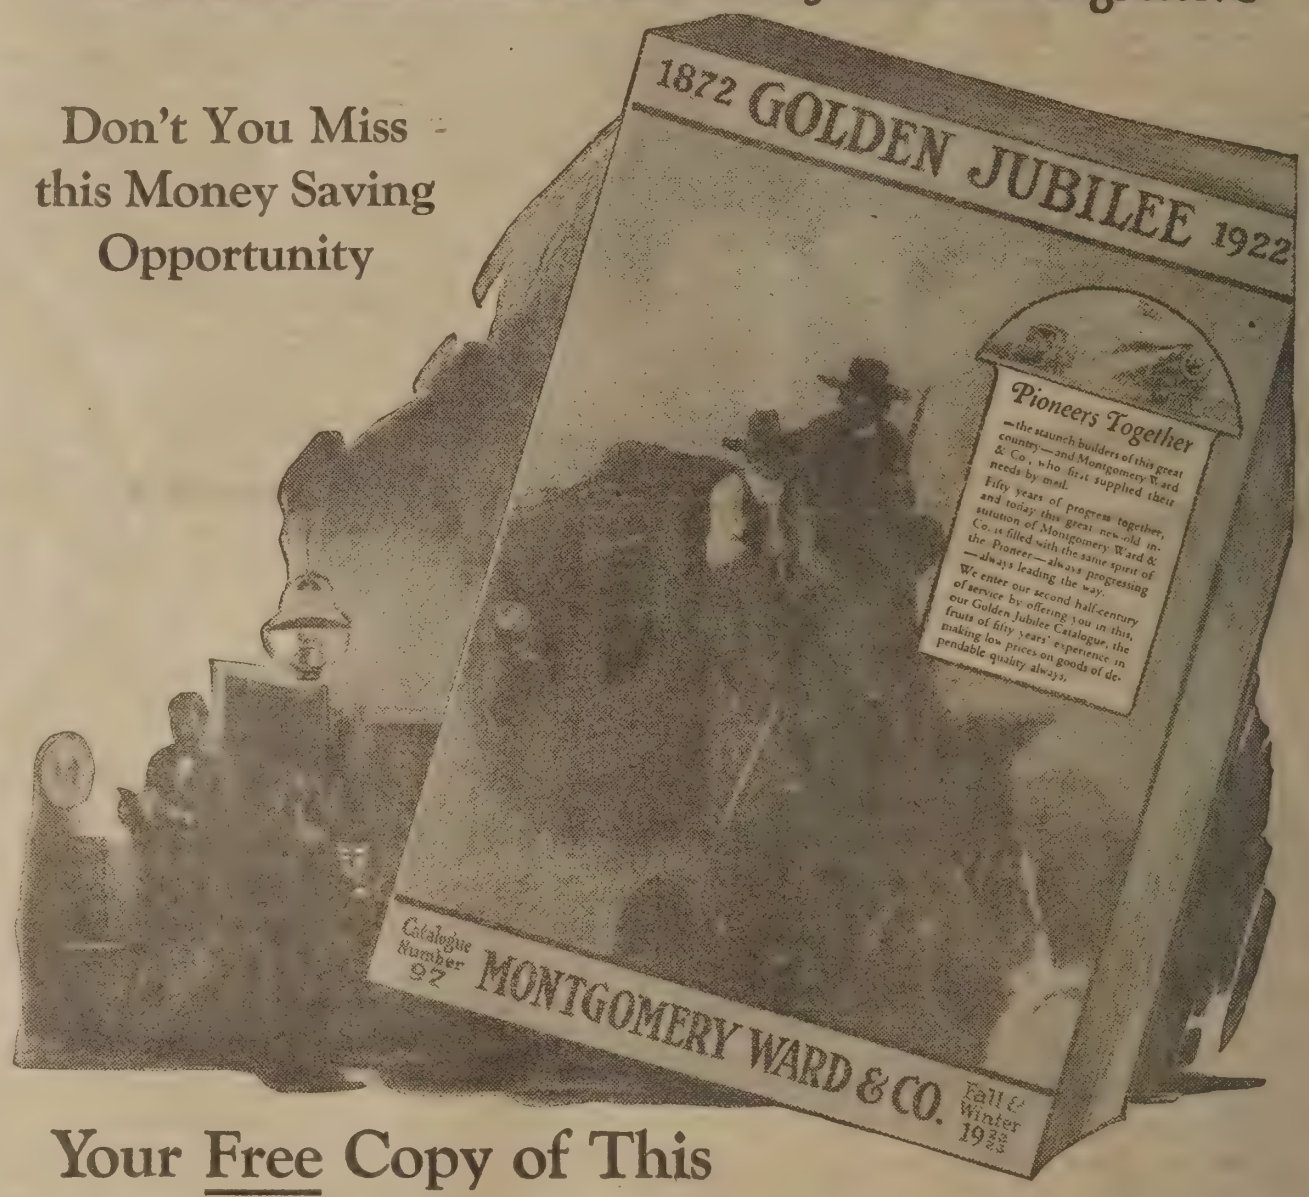
But, in the midst of it all, the two men from Illinois and the five from Michigan made a party of their own. They traveled by themselves and usually camped by themselves. Now and then, however, they spent a night with other travelers.

Once they camped near a rather large handcart party. There were about 20 of the carts, which had started from a point on the Mississippi. Some of the handcarters were from Missouri, the others from across the river in Illinois. This party was headed, not for the Pike's Peak country, but for California. They expected to go by way of Santa Fe and then on by the southern route, through Arizona.

(To be continued.)

Grain and Hay Show

The dates for the second annual Northwest Grain and Hay show at Pendleton, have been set for September 18-23. Last year the greatest lot of threshed wheat was assembled there that was ever shown at one exhibition in the northwest. Montana, Idaho, Washington and California joined Oregon in participating in the show.



Most of the prizes were won by eastern Oregon. Gilliam county was among the prize winners, John Denison of Condon winning prizes in three different classes.

This year the management hopes to make the show better than its first attempt. The building in which the show is housed is rather unique. It takes four carloads of baled alfalfa to make the sides and ends and 16,000 square feet of canvas is used for the roof.

Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive

Don't You Miss this Money Saving Opportunity

Your Free Copy of This

Golden Jubilee Catalogue

Is Now Ready for You

Fifty years' experience in making low prices, in selecting worthy, serviceable goods, and offering them at a saving, has gone into the making of this big complete Golden Jubilee Catalogue.

Your FREE copy is waiting here for you. To write for it today is to learn the lowest price you need to pay for everything you need for the Home, the Farm and the Family.

There is a Cash Saving of at Least $50 for You

Getting the right price today is a matter of choosing the right place at which to buy. To know the lowest price, to get the actual market price on everything you buy, will mean a saving of at least $50 on your needs and your family's needs this season.

Montgomery Ward & Co. quote the lowest prices possible on new, fresh merchandise of serviceable quality. We do not sell cheap unreliable merchandise. We do sell good goods at the lowest cash prices of the year. To buy from Montgomery Ward & Co. is complete assurance of Satisfaction and Certain Saving.

Everything for the Home, the Farm and the Family

For the Woman. Are you interested in the newest styles? Ward's own fashion experts have selected the latest styles in everything for you and for your children — coats, suits, dresses, hats and shoes, and all are offered to you at a big saving.

For the Man. Do you want full value for your dollar? All your personal needs, everything from clothing to a good cigar, is offered you at prices that bring you the greatest return for your money.

For the Home. Everything that goes to make the home modern and pleasant, rugs, wall paper, furniture and home furnishings are shown in this catalogue at prices that save many dollars.

For the Farm. Everything the farmer needs—tools, roofing, fencing, paint, hardware, of guaranteed dependable quality —at amazingly low prices.

Every item in this catalogue is guaranteed exactly as pictured and described. Your money back if you are not entirely satisfied with everything you order.

AUGUST 24, 1922 Washington's Great Farm Magazine EVERY THURSDAY

THE WASHINGTON FARMER

ESTABLISHED 1894 SPOKANE. SEATTLE.

THE THRILL OF THE FAIR IS FELT ONCE MORE

The Farmer and His Wages

In the course of a talk before an eastern farm bureau recently Secretary of Agriculture Wallace said:

"It is worth while to compare wages in the organized industries with the wages received by the farmer, as represented in the price he gets for the things he grows. The value of income, whether it be in the form of wages or of money received for sales of products, is represented not in dollars and cents, but in what that income will buy by its purchasing power.

"Take the average wage received by the coal miner for mining a ton of coal. In 1913 this wage per ton would buy 1.1 bushels of corn in Iowa; in 1921 it would buy 2.5 bushels of corn in Iowa. In 1913 the ton wage would buy .7 of a bushel of wheat in North Dakota; in 1921 .9 of a bushel. In 1913 it would buy 4.7 pounds of cotton in Texas; in 1921 8.5 pounds. In 1913 7 pounds of hog in Nebraska; in 1921 14 pounds. In 1913 .8 of a bushel of potatoes in New York; in 1921 1.2 bushel. In 1913 11 pounds of sheep in Wyoming; in 1921 18 pounds. In 1913 1.6 bushels of oats in Illinois; in 1921 3.1 bushels. In 1913 2.4 pounds of butter in Missouri; in 1921 3.2 pounds.

"Taking the average yearly earnings of railroad employees, we find that in 1913 the yearly wage would buy 1492 bushels of corn in Iowa, and in 1921 4112 bushels. It would buy 1028 bushels of wheat in North Dakota in 1913; in 1921 1466 bushels. In 1913 it would buy 6449 pounds of cotton in Texas, and in 1921 13,934 pounds. It would buy in 1913 102 hundredweight of hogs in Nebraska, and in 1921 237 hundredweight. It would buy 148 hundredweight of sheep in Wyoming in 1913, and in 1921 296 hundredweight. In 1913 it would buy 1087 bushels of potatoes in New York; in 1921 1916 bushels. In 1913 2174 bushels of oats in Illinois; in 1921 5109 bushels. In 1913 3309 pounds of butter in Missouri; in 1921 5285 pounds.

"In 1913 the freight revenue per ton mile received by the railroads would buy 1.4 bushels of corn in Iowa; in 1921 this revenue per ton mile would buy 3.1 bushels of corn in Iowa. In 1913 1 bushel of wheat in North Dakota; in 1921 1.1 bushel. In 1913 6.1 pounds of cotton in Texas; in 1921 10.5 pounds. In 1913 10 pounds of hogs in Nebraska; in 1921 18 pounds. In 1913 1 bushel of potatoes in New York; in 1921 1.5 bushel. In 1913 14 pounds of sheep in Wyoming; in 1921 22 pounds. In 1913 2.1 bushels of oats in Illinois; in 1921 3.9 bushels. In 1913 3.1 pounds of butter in Missouri; in 1921 4 pounds.

"In 1913 the price of a ton of coal f. o. b. the mine would buy 2.4 bushels of corn in Iowa; in 1921 6.2 bushels; in July, 1922, 9.3 bushels. It would buy in 1913 1.7 bushels of wheat in North Dakota; in 1921 2.2 bushels; in July, 1922, 4.4 bushels. In 1913 it would buy 10.4 pounds of cotton in Texas; in 1921 21.1 pounds; in July, 1922, 22.9 pounds. In 1913 16 pounds of hogs in Nebraska; in 1921 36 pounds; in July, 1922, 53 pounds. In 1913 1.8 bushel of potatoes in New York; in 1921 2.9 bushels; in July, 1922, 4.7 bushels. In 1913 24 pounds of sheep in Wyoming; in 1921 45 pounds; in July, 1922, 70 pounds. In 1913 3.5 bushels of oats in Illinois; in 1921 7.7 bushels; in July, 1922, 14.2 bushels. In 1913 5.4 pounds of butter in Missouri; in 1921 8 pounds; in July, 1922, 16.1 pounds.

"In fairness it should be noted that before the corn, wheat, hogs, sheep, cotton, butter or other farm products get to the consumer's table, a good deal has been added to the price the farmer receives. This margin between the farmer and the consumer has considerably increased during the last eight years, but it is also fair to note that a good deal of this increase has been due to the increase in the wages paid the people who handle these products. What these figures show is that the wages of the farmer, as represented by the prices paid for his crops, are lower than his wages were before the war, measured in purchasing power, while the wages of the workman, and especially in organized industries, are considerably higher than they were before the war, whether measured in dollars and cents or in purchasing power. The purchasing power of the wages of the railway employee in 1921 was 51 per cent greater than in 1913. The purchasing power of the wages of the coal miner in 1921 was 30 per cent greater than in 1913. The purchasing power of the farm hand who works for wages in 1921 was 4 per cent less than 1913, while the purchasing power of the farmer himself was, on an average, from 25 to 45 per cent less than in 1913.

"In short, the farmers of the country, numbering almost one-third of our entire population, have borne altogether the heaviest burden of deflation. They have endeavored to get relief by all lawful means. They have appealed to the administration, to congress and to every other agency which they thought might be able to help them, but while making these efforts to avoid their heavy losses they have not struck. They have not created disorders. They have kept on producing and in the face of extraordinarily low prices have this year grown one of the largest crops in our entire history. The farmer believes in law and order. He believes in government. He belives in fairness between man and man. He believes in working hard and producing efficiently.

"If other groups would do as the farmer has done, our economic troubles would soon be over. Prices would soon be adjusted to their normal relationships. There would be work for everybody

"But there are too many people who seem to be thinking only of themselves and how they can profit at the expense of the community at large, and especially at the expense of the farmer. The farmer is sick and tired of this sort of business. He is disgusted with these recurring disputes between capital and labor, especially as connected with the essential industries. He sees no reason why such disputes can not and should not be settled in an orderly and lawful way and without the interruptions of service which cost him so dearly."

THE PRICE OF AN AUTOMOBILE.

One of the leading automobile manufacturers stated recently that during the month of June farmers throughout the United States bought approximately twice as many automobiles of his make as did any other class of citizens. Another manufacturer reported the farmer in second place as the buyer of automobiles of his make. While there may be many things that the farmer buys, a reduction in the price of which would be of greater benefit to him, it is significant that considerable reductions have been made by automobile manufacturers during recent weeks. Reductions announced by several manufacturers run all the way from $10 to as high as $300, depending upon the make and style of the machine. These reductions no doubt have enabled many farm families to buy cars who otherwise would have postponed purchase indefinitely.

FAIR AT SALT LAKE.

The Utah state fair will be held this year October 2-7 at Salt Lake city.

Visit Shorthorn Herds

The first annual Yakima Valley Shorthorn Breeders' association tour, held August 15, brought out a gathering of over 40 people interested in developing the breed's interests in the valley.

The first two stops were at Frank and Ethan Taylor's, some good calves being shown the visitors at the former place. Six especially fine heifers, sired by Lilou Lad, he by Gainsford Perfection, were inspected at the latter stop. These heifers were out of Henry Delaney cows. From there the pilgrims journeyed to Clarence Baker's, Sunnyside, where another good lot of calves, sired by Beau Cumberland, were shown. Several of the older cows in this herd were sired by a Golden Goods bull.

I. L. Jones of Grandview is the lucky owner of Lilou Lad, mentioned above, and is using him on his breeding cows. Lilou Lad's calves stamp him as a real sire. Mr. Jones' present calf crop, sired by Beau

(Continued on page twenty-three.)

Steadfast as the Oak Tree—Time's Judgment on the Colt "Gas Well"

THE oak tree is a living symbol of solidity, sturdiness and durability.

Only after an amazingly long and sturdy existence does it bow to the will of Time.

Having read about the marvelous COLT Lighting and Cooking Plant, you doubtless have wondered how *permanent* it is. How long it will continue to shed its incomparably beautiful white light. How long your wife will have that delightful city convenience of cooking, ironing and heating water by Carbide Gas. How simple will be its operation. How economical. How much attention will be required. How often you will have to call for service, replace parts and units, mend and repair. *In a word, how will the COLT weather the Test of Time.*

Let COLT users speak. They know. They speak from experience—*long* experience. And there are legions of them. Altogether close to a half million farmers and others in rural communities light and cook with this wonderful, non-poisonous Carbide Gas. Here are three letters out of scores that testify to the oak-like durability and sustained perfection of the COLT.

Twenty-four years' Service, practically no repairs

April 28, 1919.

J. B. Colt Co., New York City.

Gentlemen: — Answering your letter of recent date, will say: We have used your Colt Generator for about twenty-four years. It is a 200-light machine and we have 200 lights hanging on it. The Generator has given us the best of service in all this time. The machine has been doing its work at practically no cost to us for repairs of any kind. Very truly yours,

(Signed) P. R. JOHNSON.

There is the test of time.

Another letter from Bradford Norman, 5 West Marlborough Street, Newport, R. I., reads:

"J. B. Colt Co., New York, N. Y.
"Dear Sirs:

"Will you please send me one felt filter for my machine? This machine was installed over twenty years ago and has given perfect satisfaction during that time and the above order is the first expense outside operating (an occasional drum of carbide) that I have had to make."

The test of economy—less than one dollar in twenty years for part replacement!

After Ten Years, Works Like New

Cheapest and Best Farm Light

Shiloh, Ohio, May 22, 1920.

To whom it may concern:—

Ten years ago I had a J. B. Colt lighting system installed in my former home at Lexington, O., for which we used continuously during that time for both lights and cooking, and never cost one penny for repairs, to-day my younger brother lives there and it works as well as the day it was installed.

One year ago I purchased the farm where I now live, and one of the first things I did was to buy another J. B. Colt light plant and have it installed. I have my house and barns both lighted with it and wouldn't do without it for several times the cost, after ten years use I figure it the cheapest and best light for the farmer.

Very Respectfully Yours,
C. K. INK, Shiloh, Ohio

The Final Test

The Government needs for its beacon lights at the entrance of harbors and along rocky ocean shores the most dependable and economical lighting system it can procure. What light is used? CARBIDE LIGHTING! What generators? MOSTLY COLTS!

Simplicity and Economy

Feed the generator Carbide once in a while and run water into the water chamber—that's all you need do. The machine makes the gas automatically. *No continual replacement of parts and power units. No service necessary. Your Colt is a lifetime investment in reliability, simplicity and economy.*

The COLT comes from factory to farm—sold direct to you by COLT solicitors—no distributors or dealers to take a profit. This applies everywhere. A substantial saving here.

Don't Invest in Any System Until You Have Heard the Full Story of COLT

An investment in better light, better cooking, comfort, convenience and happiness indoors is the best investment you can make—*Get the FULL STORY of the COLT before you make that investment.* Send post card to address below today.

Skagit County Fair Sets 1922 Standard

West Side County Opens Season at Burlington With One of the Best Expositions in Its History

By RALPH ERSKINE

It takes good weather, a well-balanced entertainment program and clean concessions as well as a good live stock show to bring out a large attendance and make any fair a success. The Skagit county fair at Burlington last week had all of the above qualifications and was pronounced by far the best fair that has ever been staged in the history of the association.

The live stock department drew animals from other counties and states as well as attracting many local breeders. The great difficulty this year was in finding stall room for all comers and there were a number of horse entries that were turned away. Stalls were set up all along one side of the two live stock buildings for the overflow of the cattle barn and some were housed in an annex at the rear. Next year the association intends to have plenty of room for all comers.

"The association received splendid cooperation from departmental superintendents," said W. J. S. Gordon, secretary of the fair, "and without such dependable aid it would have been impossible to put on a successful fair." A list of these departmental heads and the board of directors follows:

The horse department, Dr. C. S. Phillips; cattle, Thomas G. Lockhart; swine, sheep and goats, Oliver Currier; poultry, C. L. Murdey of Mount Vernon, and agriculture and farm products. E. D. Hunter of Burlington. The board of directors are: Nels Anderson, Bow; W. S. Deighton, Mount Vernon; Pete Omdahl; A. P. Johnson, Bow; W. E. Jennings, LaConner; E. G. Ludwick, Sedro-Woolley; T. G. Lockhart, Mount Vernon; D. M. Donnelly, J. H. Gould, Burlington; W. J. S. Gorgon, Mount Vernon; Dr. C. S. Phillips, Mount Vernon, and E. L. Wilson, Burlington. The ladies' auxiliary department was made up of Mrs. George A. Pringle, Burlington, president; Mrs. W. E. Jennings, Mount Vernon, vice president, and Mrs. W. L. Jackson, Burlington, secretary.

Good Poultry Show.

Although there were not quite the same number of birds in the poultry department as there were last year, the quality of the exhibit is said to be superior to any show ever held in the county. There were 440 chickens, 34 ducks, 9 turkeys and 4 geese, as well as a large display of rabbits. Many of the birds came from local poultrymen, but the show also attracted out-of-town breeders.

Some of the outstanding poultry awards were: Champion pen of old birds, a pen of Rhode Island Reds owned by Mrs. J. C. Boyce, Seattle; champion young pen, Mrs. Joe Bronsel, Mount Vernon; best hen, R. C. Simpson of Seattle, on a Buff Orpington. Best cock was won by J. C. McKennedy of Mount Vernon, while the best cockerel award went to Carl Carpenter of Mechias. Mrs. Bronsel had the best pullet of the show.

The Live Stock Show.

The live stock department of the fair this year was better in quality of the stock as well as there being a larger number of entries. There were four dairy breeds, the largest representation being in the Holstein classes. There was also some keen competition in the Jersey classes. Dr. McRae Smith of Berlingham entered his herd of Guernseys in competition with local herds and the Ayrshires came from the E. W. VanTassel herd at Wenatchee. George S. Bulkley of the Carnation company judged the classes of dairy breeds.

Holsteins—There were 68 head in the Holstein show, which made a strong exhibit of this breed. All of the classes were well filled, especially the class of senior heifer calves, which had 18 individuals. George S. Bulkley, who judged all dairy cattle, said that it was one of the strongest classes he had ever seen at a small fair and was certainly a credit to the community.

The senior and grand champion bull honor went to William Bishop of Chimacum, Jefferson county, on Skagit Korndyke Vale Pietertje. This animal is a five-year-old, a grandson of King of the Pontiacs and Sadie Vale Concordia, the first 30-pound cow. The bull has a wonderful conformation, shows a great capacity and has exceptionally fine handling quality.

Lee Brothers won the silver cup offered senior grand champion cow, Duchess Nena Mechthilde. She is a 4-year-old and out of the same dam as Nena Newman Cornucopia, the former world's champion 3-year-old for milk production. The animal won her placing on her excellent dairy type and conformation and a well-formed and well-placed udder.

Other breeders who deserve mention here are the following, who brought out some of their young Holsteins and a few to fill some of the older classes: Dr. E. E. Heg & Sons of East Stanwood; Youngquist Brothers of Mount Vernon; R. E. Waugh of Burlington; A. J. Lawson of Blanchard; F. N. Gallacher of Mount Vernon; Tom Lockhart of Mount Vernon, and the Northern State hospital at Sedro-Woolley.

Lee Brothers won the silver cup offered for the best senior dairy herd in the show. The cup was given by the Carnation stock farms.

Guernseys—The Guernsey classes were filled by five breeders: Enos Barrett, H. H. Anderson, J. M. Miller, Johnson Brothers and Dr. A. McRae Smith, all being local breeders except Dr. Smith, who is of Bellingham.

The junior and grand champion bull was Faircrest LaFrance's Rival, an 8-month-old calf from the Dr. Smith herd. He is a son of LaFrance of Bralee, the senior and grand champion female. Mr. Bulkley, when placing the animals, said that it was a very unusual occurrence that an animal so young be placed above an older animal, but the quality and type of the young bull was outstanding. The senior champion bull yas Chicona Lucifer, a 6-year-old animal in the Miller herd. This animal was grand champion last year at the same fair. Mr. Miller showed 11 head of his registered Guernseys, which showed splendid dairy type and quality.

Ayrshires—All of the Ayrshire classes were filled by E. W. VanTassel of Wenatchee. His junior yearling bull, Peter Pan's Choice, wan grand champion and Glen Garry's Scottish Queen was senior and grand champion female. She is 7 years old. The dam of the grand champion bull holds ninth place in the 3-year-old class with a record of 13,740 pounds of milk and 533.5 pounds of butter. All of the animals in this herd show excellent type and quality.

Dual Purpose Breeds.

Red Polled—The Red Polled classes were filled by the F. H. Porter herd of Halsey, Ore. In this herd were 15 animals, which filled all of the classes listed. The senior and grand champion bull, Peach Knot, is a 4-year-old animal from the Jean Duluth herd of Minnesota.

Milking Shorthorns—There were two herds of milking Shorthorns exhibited, namely, the 13 head from the Northwood farms at Redmond and the 15 head from the E. C. Truesdale herd at Chehalis. The former herd had the grand champion bull, Gretna Challenger, a typy 4-year-old animal, and the senior and grand champion female, Lilly L. 3d, one of the foundation cows.

The animals in the Truesdale herd won several firsts and seconds and some of the group classes. It is interesting to note that there was but $6.50 difference in the prize money awarded. Both of these herds showed fine milking Shorthorn characteristics and had some excellent classes.

In the Beef Barns.

Aberdeen Angus—The beef breeds were represented by outside breeders as well as local herds. The Aberdeen Angus were shown by J. A. Scollard of Chehalis, who brought out his show herd of typy animals. His senior and grand champion bull, Ericaman C. B. 5th, was in splendid condition and made a fine showing. Rose of Rosemere 8th was senior and grand champion female. She is a 2-year-old, a very typy individual. There were 11 head entered in these classes.

Shorthorns—One herd of Shorthorns was shown, four head form J. H. Hulbert's farm at La Conner. The grand champion bull was Premier Champion, a junior yearling, while Hercules Violet 2d, also a junior yearling, was grand champion female.

No Herefords were shown.

A Great Horse Show.

The horse show was a creditable exhibit and was made up entirely of animals from local farmers. Most of the entries were high grade mares from farmers who showed from one to four head with perhaps one or two head of colts. There were 20 different exhibitors in all and the quality of stock which they brought out was far superior to anything ever shown in the county before.

There were 50 head of horses shown, some of which were entered as teams. The mare and colt classes, however, made up the greater part of the show. Dudley Kroumar, the 5-year-old Percheron stallion owned by J. H. Hulbert of Laconner, was the sire of 13 out of the 14 colts shown.

"We could have had twice the number of horses this year if we had had the room for them," said Dr. C. S. Phillips, who was in charge of the horse department. "We were actually surprised to know that there were so many horses of show type in the county. Next year we expect to have more room and a larger display for all classes of live stock."

Four Swine Breeds.

There were four breeds of hogs shown, Poland China, Berkshire, Chester White and Hamshire. Henry Vercoe and C. C. Woolen of Burlington showed the Poland Chinas, the former having the largest number and taking the highest awards. Thomas Lockhart and J. E. Perin showed the Berkshires, the former getting grand champion sow and Perin taking the sweepstakes on a senior yearling boar. C. L. Murdey of Mount Vernon was the only exhibitor in the Chester White breed and took all awards in the classes filled. William Joyce showed his herd of Hampshire hogs and took all of the awards in that breed.

Small Sheep Show.

The classes in Shropshire sheep were filled by William Schroder of Mount Vernon, who also took the sweepstakes on his exhibit. Thomas Lockhart showed part of his flock of Hampshires and took the grand champion ram and ewe awards.

Agricultural Products.

The agricultural exhibits were especially good this year and excelled last year's display in the quality of the products and the beauty of arrangement. The individual farm displays were shown as a new feature and brought out a number of additional entries. First prize in this class was won by H. L. Willis of Mount Vernon, while the Mount Vernon Garden company took second and Mrs. S. P. Walsh of Anacortes third. The Northern state farm at Sedro-Woolley sent in a very complete display in this class and took fourth place. C. J. Johnson of Mount Vernon won the special prize of $20 for the best sheaf of oats.

The Skagit Valley Seed Growers' association fitted up a special booth displaying their seed crops; showing all of the seeds that are being produced in the county under a five-year contract.

The Fruit Show.

The fruit exhibit was very good this year and in spite of the late season there were a large variety of apples and pears shown. The early apples were particularly good. There was also a fine exhibit of soft fruits, such as berries, cherries and others, that went to show what interest was taken in the varieties in the county.

There was a large variey of grains dislayed in different parts of the building, but there was one booth fitted up by the help of a number of farmers and E. D. Hunter, the county horticultural inspector. This display contained varieties of oats, barley, rye and wheat, all of which had been collected this year.

Extension Service Display.

A booth was fitted to show the work

(Continued on page twenty.)

Fairs for Washington Folks to Attend

The first fair of the season in this state was held last week, the Skagit county fair at Burlington. Others follow in rapid succession, inviting the people of the state to take leave of their many duties for a few days and mingle with their friends, enjoy the entertainment and store away information that will be of value throughout the coming and future years. The following list of fairs and shows was compiled by the extension service of the state college:

FAIR.	PLACE.	DATE.
Skagit county	Burlington	Aug. 14-19
Southwest Washington	Chehalis	Aug. 28-Sept. 2
Interstate	Spokane	Sept. 4-9
Grays Harbor county	Elma	Sept. 5-9
Walla Walla agricultural	Walla Walla	Sept. 11-15
Kittitas county	Ellensburg	Sept. 14-16
Community	Tolt	Sept. 14-16
Mabton hay	Mabton	Sept. 14-16
Prosser corn and hog	Prosser	Sept. 14-16
Frances community	Frances	Sept. 16
Clallam county	Port Angeles	Sept. 14-16
Halls lake community	Snohomish county	Sept. 15-17
Washington state	Yakima	Sept. 18-23
Willapa community	Willapa	Sept. 22-23
Tenino community	Tenino	Sept. 22-23
Bothell community	Bothell	Sept. 25-27
Spurgeon creek community	Thurston county	Sept. 26
King county	Newaukum	Sept. 28-30
Schneiders prairie	Thurston county	Sept. 28
Stevens county	Colville	Sept. 26-29
Snohomish county	Granite Falls	Sept. 25-30
Whatcom county	Lynden	Sept. 25-30
Yelm community	Yelm	Sept. 28-30
Cowlitz county	Woodland	Sept. 27-30
Cranberrian community	Long Beach	Sept. 29-30
Klickitat county	Goldendale	Oct. 4-7
Western Washington	Puyallup	Oct. 2-7
South Bay community	Thurston county	Oct. 3
Menlo community	Pacific county	Oct. 5-7
Pend Oreille county	Dalkena	Oct. 5-7
Snohomish county breeders'	Everett	Oct. 12-14
Chinook community	Pacific county	Oct. 6-7
Wahkiakum county	Skamokawa	Oct. 12-14

In addition to the foregoing there are many smaller events the dates and places of which have not become available. There are also the two great winter live stock shows and the three neighboring state fairs in which interest is keen:

Idaho State	Boise	September 25-30
Oregon State	Salem	September 25-30
Montana State	Helena	September 25-30
Western Royal Live Stock	Spokane	Oct. 28-Nov. 2
Pacific International	Portland	November 4-11

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Prepare Ye the Way

Who shall come forth as the commanding leader of the agricultural industry of the state of Washington?

The morals as well as the economics of farming must be united in that leadership. Understanding and courage must unite in placing the agricultural industry of the state upon the high stand where it belongs.

That leader must be able to say "no" and stick to it, as well as to say "yes" with the crowd.

Following an unalterable purpose, that leader must vary his program from day to day, from year to year—no man is wise enough to map out the agricultural program in America for the next five or 10 years.

Bedrock knowledge is necessary in such a leader, but bedrock courage is yet more necessary.

That leader will warn against obvious failures in farming as well as quicken enthusiasm toward successful farming.

That leader will formulate policies which will protect the unwary, as well as to formulate other policies which will limit the power of farm lords.

These policies will have to receive the support of the voters at the polls, become laws of the state, but some one of paramount ability and honesty of purpose must initiate them, must fight for them, must gather the hosts to their support.

The coming leader of the agricultural industry in the state of Washington must not be an office-seeker nor an office accepter; he must possess persuasiveness as well as courage; he must smile when another would get mad; he must devise more than one way to the desired end; the vision of the future must lighten his way through the darkness of the present; he must even put apart from his soul the pride of martyrdom.

Shall we look with searching eyes for the coming leader of the agricultural industry in the state of Washington? Shall our prayers be unceasing that he may appear and shall his disciples go forth two by two without scrip or purse?

You may say that this is wholly impracticable and visionary, that the genius of the day is the highly-paid promoter and publicity agent, that even the missionary is worthy of his hire.

So be it!

But tell me when gold inspired unselfishness. Tell me when mother-love has been born of shekels.

All the institutions, even the most beneficent in their origin, finally settle down to more or less of barter and trade. But no beneficent institution was ever born of barter and trade.

Who shall lead the farmers of the state, not primarily into wealth, but into the way of joyful serving, into the way of happy homes, into the way of community helpfulness, into the way of neighborly cooperation?

Some things always are to be added when a worth-while work has been accomplished, but those same things do not establish the work.

We have yet to see the commanding leader of the agricultural industry in the state of Washington. He will not appear until his need is uppermost. The way must be prepared for him. Forerunners will preach his coming in the desert land.

This is as it has been and that which has been, it is that which shall be.

False prophets may appear, but in the ripeness of time the true leader will come forth, for farming is a part of God's business.

More Than a Good Time

The fair offers to those who attend much more than a good time. It offers this, to be sure, but in addition there is the opportunity to grasp new ideas that may be applied to farm life the coming year with worth-while benefit.

It is thrilling to see the airplane loop the loop; to see the big tractor pull up the steep incline and turn on a spot little larger than itself; to see the sheep dog drive a herd of his charges before the grandstand in the live stock parade. But these thrills are more or less temporary in their value. The thing of value is the idea that can be carried home and applied in one way or another to better living.

It may be that the dairyman will discover a better method of milking his cows than he has formerly used. He may get an idea for greater convenience and sanitation in his barn.

The housewife may see a demonstration of a labor saver that she can buy reasonably or make easily that will save her many steps during the year or enable her to get her work done in fewer hours so that a little more time can be spent in rest or reading.

It may be that the boy or girl will see something that will give a stimulus that will follow them throughout their entire lives. Ideas of how the farm and its work may be made more enjoyable and worth while may be grasped with the result that these boys and girls will see the desirability of remaining on the farm and developing modern homes for the future, rather than leaving for the city where opportunities are much less golden than they appear.

Go to the fair! Take the entire family! Live at the hotels if you want to; take your camping outfit if you prefer. But go to the fair! Take enough time off from your work to make it a period of recreation and education.

The Farmer's Automobile

In Europe few low-priced automobiles are made and only the man of means is able to own his own motor car. Over there cars are confined almost exclusively to pleasure uses, while in the United States the motor car has come to be regarded as an economic necessity. In the United States automobiles are owned and enjoyed by all classes of our citizenship—by the farmer as well as by the banker, by the wage earner as well as by the manufacturer.

The result is that five-sixths of all the registered motor cars and trucks in the world are in use in the United States. A recent statement by the U. S. department of commerce shows that 10,448,632 motor cars and trucks are registered in this country, while in all foreign countries combined there are only 2,081,784. Canada, with a registration of 463,848, is the next largest user, followed by Great Britain and Ireland with 463,600, France with 235,948, Germany with 91,390, Australia with 84,000, Argentina with 72,206 and Italy with 53,600. In the United States there is one car registered to every 11 of the population; in Canada, one to every 21, and in Great Britain and Ireland, one to every 110 persons.

There is, however, another reason than the financial one for the much higher percentage of cars in this country than in Europe. European countries are small and farmers and other producers have relatively short hauls to market and over good roads. In France and other western European countries the farmers congregate in villages and seldom live directly upon their holdings. There is not, therefore, the necessity of a frequent trip to town for supplies, repairs, etc.

Public opinion, moreover, is a factor in this matter. In France and Belgium, for instance, a farmer who would buy an automobile would be looked upon by his neighbors as reckless and extravagant. In the United States the purchase of an automobile is usually good business by the American farmer. It is a great time-saver as well as a means of pleasure for the farmer and his family on Sundays and holidays.

Of course there are instances where the buying of an automobile by some farmers is an act of bad judgment. But in this matter, as in all other human relations, circumstances alter cases. What is extravagant for one person may be good business for another, but in the aggregate the automobile has become a valuable aid to the farm and brings with it the added benefit of making the farm home more attractive to the farmer's wife, daughters and sons.

State Farm News

According to the report of County Agent A. E. Lovett to the Yakima county commission, Lovett, home demonstration agent; Edna M. Ladwig and County Club Agent E. C. Scott, in July spent more than half the time in the field and made 140 visits, received 81 personal calls at headquarters, answered 104 telephone calls and reached 349 persons in the county.

The seriousness of the red spider invasion of county orchards was the outstanding feature of the field report. Lovett says that he has sent for a specialist from the government entomology department to help work out some control for this new pest.

* * *

During a cow testing association tour held by County Agent A. B. Nystrom of King county, the visitors were shown a purebred Holstein bull with nine daughters that averaged over 500 pounds of fat for the year. The bull is owned by the Methow Valley farm.

* * *

Several live stock breeders met at Garfield recently and formed the Garfield Live Stock association. The association will hold a stock show in October.

The following officers were elected: J. H. McCroskey, Garfield, president; Dr. W. N. Divine, Elberton, vice president; Dr. A. P. Galbraith, Garfield, manager; A. P. Johnson, Steve Shoemaker, George Imler, J. E. Thimble, George Ickez, Robert C. McCroskey, H. S. Curtis, William Duling, Charles Walters, Clarence Kribel, Howard Webster, George Draper, J. E. Love, R. V. Perringer, L. P. Sain and Nat Williamson, directors.

Prices for packing pears, which are being harvested throughout the Yakima valley, will be 5 cents a box, the labor committee of the Yakima Traffic and Credit association has announced.

* * *

The Daybreak Dairy ranch of 320 acres, one of the most improved farms in Clarke county, owned and operated for a number of years by A. D. Calkins and Mrs. N. Riggs, near Pioneer, has been sold to Mr. and Mrs. Pircie, proprietors of the Hotel Upton at Upton, Wyo. The consideration was $45,000, eastern income property at Upton, Wyo., being taken in exchange.

* * *

Eighteen bushels to the acre on 140 acres of hybrid No. 143 was the first yield to be reported in the Pullman vicinity this year, coming from the Gordon Klemgard farm, west of Pullman.

* * *

Wilbur claims to be the only town of its size in eastern Washington to own and operate a municipal farm. The city purchased 140 acres in 1898 and part of the property has been used for a fairground.

In 1911 the city seeded 31 acres and since that time the returns have made the farm a profitable asset. A smaller field in the property has also been cultivated.

* * *

County Agent Oldroyd of Pierce county reports that 60 cows are being tested for butterfat production at Gig Harbor. The work is being performed by C. A. Barker, principal of the grade school. Three of the cows under test will go to the butcher.

* * *

Another trainload of Yakima valley lambs started for Chicago market August 10. The Yakima Sheep company loaded eight cars at Cle Elum, Kemp & Pryor added six cars to the train at Yakima, and 17 more were consolidated at Toppenish, being shipped by William McGuffie and N. Jenses. The train left that point with 31 cars and a tourist sleeper which will be used by the shippers.

* * *

According to an announcement of the Cowlitz Produce company of Winlock a carload of Winlock eggs will be shipped every eight days to the Hawaiian islands, under contract, and under the trade mark of "Winlock Eggs."

* * *

New fruit storage and shipping warehouses, having a capacity of more than 600 carloads, are being built in north central Washington this season. In Wenatchee the Fruit Growers' Service company is building a 50x90-foot warehouse, consisting of two stories and basement. This will have a capacity of 70 carloads of apples. At Omak a new one-story frame warehouse 50x130 feet is being built. A similar structure is being erected at Omak by Keller & Peterson. At Okanogan, Clair Ward, who represents G. M. H. Wagner & Sons, is building a 50x90 warehouse, with a capacity of 50 carloads.

Three new warehouses are being built at Chelan station, where more building activity is noted than at any other point in the entire district. One of the buildings is a brick structure 50x154 feet. The Lake Chelan Fruit Growers are building a modern warehouse of brick and concrete, 50x126 feet. The Isenhart Bros. company is also building a brick and concrete warehouse at Chelan station.

FARM BUSINESS AND MARKETS OUTLOOK

Cattle Supply at High Mark.

The rail strike undoubtedly is retarding the movement of cattle to market, nevertheless receipts at the seven leading markets last calendar week were the largest of the year and 15 per cent above the average for the corresponding week in the last eight years. The run of southwestern grassers at Kansas City is extremely heavy and the first good sized run of western rangers of the season arrived at Chicago and Omaha.

All classes of steers declined slightly under the heavy run, the loss being greatest on lower grades. Shortfeds are meeting competition from the best rangers.

In the last few days receipts have dwindled again, due, it is reported, to the rail situation and prices have hardened, the top at Chicago again reaching $10.85, the high point of the year. If the rail strike is settled it is likely to mean a sudden increase in receipts. Quite aside from this factor further increase in receipts is probable in the next two months if events follow a normal course.

Cows, heifers and bulls fluctuated while light vealers advanced to the highest prices of the summer at Chicago

Cattle Feeders Buying Briskly.

Cattle feeders are buying more briskly every week. The movement from the twelve leading markets in the five weeks ending August 5 totaled 241,472 head, compared with 126,262 in the same period last year and 178,929 two years ago. In 1917, 1918 and 1919 the movement to the country at this season was about as heavy as at present. Most of the western rangers thus far have been only in feeder finish and Canadian cattle have found the same outlet. These arrivals have increased the available supply of well bred thin steers materially. It is reported that an unusual amount of direct buying on the range is under way at prices around $6 to 6.50 per 100 pounds. A profitable outlet for thin steers throughout the fall is probable.

Hog Market Unstable.

The hog market rallied early last week due to light receipts, but the demand is spasmodic and most of the advance was lost again. Choice light hogs have fluctuated most owing to uneven shipping demand. Receipts at the eleven leading markets last week equaled the previous record for the corresponding period in previous years running back to 1906.

Smoked meats and lard are being moved in to consumption fairly rapidly. Stocks are not extremely heavy, but with fresh receipts of hogs of exceptional size, the total supply of hog meats available is considerably above the average for this season of the year. Foreign buying is fairly broad and if German financial affairs were in better shape, this outlet would broaden still further, as foreign stocks are reported to be light.

Hog prices are due for a sharp decline from the present level in about two months. The course of the market meanwhile may be either up or down depending upon the volume of receipts.

Thin Lambs Outsell Fat Ones.

Top prices on feeder lambs were higher than on fat lambs at Chicago during part of last week. The same thing occurred in the early fall of 1920 with a price level not much higher than at present and the results were disastrous. Thus far, however, the number taken out has not kept pace with the same period two years ago. Shipments of feeders from the 12 leading markets in the five weeks ending August 5 totaled 194,898 head, compared with 128,454 head in the corresponding period last year and 282,027 head two years ago.

For the last four weeks receipts of sheep and lambs have been below the average for the corresponding period in previous years. This may have been due to a retarded movement because of rail conditions on the long haul from the range states, to the movement of thin lambs being late in reaching the flood tide stage, to small size in the range crop or to other causes. As long as conditions remain as abnormal as at present, price trends will be uncertain, but if receipts continue to fall below normal and feeders continue rampant to get into the lamb feeding game, lower prices on finished stuff are unlikely.

Horse Markets More Active.

Horse markets have been more active recently, although prices have not responded much. Eastern cities are buying with fair freedom, the lumber sections are after big horses and a prospect of resumption of coal mining has improved the demand for horses as well as mules. Farm prices as reported each month by the department of agriculture have advanced about eight per cent in the last few months.

CHICAGO.—Good and choice drafters, $200@300; common and medium drafters, $100@200; 1350 to 1550 pound chunks, $110@170; good and choice wagon horses, $100@165; farm chunks, $75@150.

Wool Market Strengthens.

The wool market is becoming active again and the amount changing hands at seaboard markets is fairly large. Mills have covered their needs for about three months ahead and are buying leisurely, but more or less steadily. Prospects of a high permanent tariff are favorable which means a continued strong situation for the domestic clip.

The woolen goods market is in good shape in spite of strike conditions. Mills have had enough coal thus far so that there has been no curtailment from that cause.

Wheat Needs Foreign Outlet.

Foreign buying of the United States wheat surplus has failed to reach the breadth expected and the lack of this outlet has been mainly responsible for the decline in wheat prices practically to the "dollar" mark at Chicago and Minneapolis.

Receipts at primary markets since the new crop started to move have been about one-third larger than the average for the corresponding period in past years. Since this is normally the season of largest sales, the burden has been unusually heavy. Domestic mills are grinding about 12,000,000 bushels weekly, compared with approximately 8,000,000 bushels at the end of June. Flour production in the week ending July 29 amounted to 2,489,000 barrels compared with an average of 2,100,000 barrels in the corresponding week in the four preceding years. While the increase has been marked there is no extensive buying of flour for later requirements so that mills have not been contracting wheat freely for future use.

Expansion in the export outlet has been much less satisfactory than in the milling demand. July exports from the United States were approximately 17,000,000 bushels. August promises to exceed that figure, but the amount is much less than at this time last year

Foreign finances are in a deplorable state and this is the chief limiting factor in the demand from abroad. There is every indication that foreign needs are large—as large as or larger than the surpluses available for export, but since the European harvest is now under way and since Argentina still has a small balance to ship, the amounts immediately necessary from North America have not been as large as the amount of surplus wheat pressing on the market.

Eventually, Europe must come to North America and the time is believed to be not far away. "Dollar wheat" may mark the turning point. It would be useless to look for a pronounced upturn in prices, however, in view of the impaired finances of central Europe with the German mark at nearly 1000 to a dollar. Canada has even more surplus wheat than the United States and harvest is starting in that country. The plan to handle the crop through a special wheat board has been abandoned so that Canada will soon be a serious competitor.

Corn Distribution Is Enormous.

The rate of distribution of corn continues far above the average. Receipts of corn in the last four months have been far above normal for the corresponding period. At the same time more than the usual decrease has taken place in the visible supply at terminals so that the latter is no longer burdensome.

Corn prices have declined about 10 cents a bushel in the last two months. The improvement in the crop prospect and the slump in wheat values were responsible. The price is not as low as at one time last fall, but seems to be on solid bottom in view of the breadth of demand. Hot, dry weather has damaged the crop recently.

Oats Movement Below Average.

Receipts of new oats at primary markets are increasing, but the movement thus far has been matetrially below the average for the corresponding period in previous years. The price is the lowest in years and producers are selling reluctantly.

Cash grain prices—The range of cash grain prices for the week ending August 16 follows: Chicago—Wheat: No. 2 red, $1.02 1-4@1.09 1-2; No. 3 red, $1.00 1-2@1.08 1-4; No. 2 hard, $1.03@1.10 1-2; No. 3 hard, $1.03@1.09 1-4. Corn: No. 2 mixed, 60 1-4@62 1-2c; No. 3 mixed, 60 1-4@62c; No. 2 yellow, 62 1-4@63 3-4c; No. 3 yellow, 61@62 1-4c. Oats: No. 2 white, 31@34 1-2c; No. 3 white, 29 3-4@34c; No. 4 white, 29@32c. Rye: No. 3, 71 1-4@75 3-4c. Barley: 48@59c.

Feed markets are quiet with buying limited to immediate needs. Cottonseed meal from the new crop is being offered at $3 below prompt shipment price. The linseed meal market is weak.

Prices per ton (100 pound bags) in carlots: Chicago—Bran, $17.25; standard middlings, $20; flour middlings, $26; cottonseed meal, 36 per cent, $39; 43 per cent, $43; hominy feed, $25.50; gluten feed, $29.80; old process oil meal, $47.50; tankage, $55.

Light Receipts at Hay Markets.

Hay prices are steady as a result of light receipts. Demand is light as forage and pastures are generally abundant, although some sections are in need of rain.

Price per ton in carlots: Chicago—No. 1 timothy, $24@25; No. 2, $21@23; No. 3, $18@20; No. 1 light clover mixed, $23@24; No. 1 clover, $15@17; No. 1 clover mixed, $15@18; upland prairie, $14@18; midland prairie, $12@16; rye straw, $10.50@11.50; oat and wheat straw, $8@10.

Egg Markets Improving.

Conditions in the fresh egg market are improving and prices in the last few days have been stronger than for several weeks. Receipts are only about one-third as large as at the high mark of the season with a further contraction of 15 or 20 per cent in prospect in the next six weeks. The direction of the current of storage egg movement is now out-bound.

CHICAGO.—Eggs—Fresh firsts, 22@22 1-2c; ordinary firsts, 19@20c. Live poultry—Hens, 23c; broilers, 24 1-2c; springers, 27c; roosters, 15c; ducks, 21c; geese, 14c; turkeys, 25c.

Butter Market Breaks and Rallies.

An increase in receipts of butter and issuance of a report showing 20,000,000 pounds or 25 per cent more butter in storage on August 1 than last year caused prices to drop to a new low for the year last week, but most of the loss was recovered before the close. The seasonal decrease in production is taking place, although the movement into storage remains fairly heavy. In spite of heavy production the increase in storage stocks during July was slightly less than the five-year average increase for that month, showing that butter is going into consumption rapidly.

Prices for 92 score fresh butter on August 16 were: Chicago, 33 3-4c; New York, 34 3-4c; Boston, 36c; Philadelphia, 35 1-2c.

Cheese Holdings Below Average.

Receipts of cheese increased last week to the largest in a month and a half and embargoes on perishable goods on some of the railroads interfered with distribution so that prices weakened. Large blocks of cheese could only be moved at concessions, as dealers lacked confidence. The decline is not expected to extend far.

Prices for No. 1 American cheese on August 1 were: CHICAGO.—Twins, 19@19 1-2c; S. Daisies, 19@19 1-2c; D. Daisies, 18 1-2@19c; Young Americas, 19 1-2@20c; Longhorns, 19 1-2@19 3-4c; Square Prints, 20 1-2@21c.

Fruits and Vegetables.

Carlot shipments of potatoes in the week ending August 12 totaled 4341 cars, compared with 3860 cars in the same week last year, 3006 cars two years ago and 2942 cars three years ago. New Jersey is by far the leading state at present, but shipments are increasing from Kansas, Minnesota, Idaho and Colorado. Prices on Early Ohios range from 90 cents to $1.10 per 100 pounds, sacked, on the Chicago carlot market.

The detailed forecast on the apple crop shows 13,437,000 barrels in the boxed apple states, compared with 13,819,000 barrels last year. The barrel shipping states are credited with 19,965,000 barrels, compared with 7,385,000 barrels last year. The carlot movement of apples this year up to August 12 amounts to 4787 cars, compared with 2472 cars last year, the increase being entirely from the barrel shipping states.

Orchardists Hold Double Session

Demonstrations in Orchards Studied in Leading Fruit-Producing Districts

The annual summer session of the Washington Horticultural association was held last week in two sections, the first two days being in and around Yakima and the last two being in and around Wenatchee. Speaking programs were held, with visits of inspection of several orchards in both districts for object lessons and observation of results of particular methods in orchard practice.

One of the points impressed upon growers by Edwin Smith of Wenatchee was that there was little prospect for much influence on the apple market by foreign demand this year, owing to the inability of foreign countries to purchase heavily. He declared that the United States was the market for northwestern apples and other fruits.

F. A. Wiggins of Toppenish declared that the east was awakening to the necessity of producing fruit of a quality capable of competing with the northwest fruit, and that nothing short of the best efforts on the part of westerners would prevent serious inroads on the market by eastern products.

Mr. Wiggins and other speakers urged a united advertising campaign for all northwestern apples with a view to increasing the already great popularity of this product.

Statistics on production per acre and per tree in the Wenatchee and Yakima districts were presented by E. G. Wood, extension horticulturist of the Washington State college. When 12-year-old trees produce only three-fourths of a box of apples more than they did when nine years old, there is something wrong, he declared. When hay is cut in the orchard, the increase in yield is checked at nine years of age, and without special attention to orchard fertility and proper use of the cover crop the trees reach their maximum production at 12 years and it is difficult after that to prevent decrease in production.

Orchards visited in the Yakima valley included those of Arthur Karr, Howard Wright, J. S. Kloeber and William McGonagle, in addition to a number of orchards where soft fruits predominate.

The Yakima sessions were attended by a considerable number of visitors from Wenatchee, as well as other parts of the state, though attendance apparently was reduced by uncertain railroad conditions. A considerable number of Yakima orchardists made the journey across the mountains to Wenatchee for the sessions there.

In that valley the orchardists made special studies of fertilization methods and heard Roy Larsen, soil specialist, explain the demonstrations. Mr. Larsen took them to a dozen of the demonstration orchards and pointed out the difference in growth between fertilized and unfertilized trees, also between those fertilized with different materials and methods.

Among the orchards visited were a number of the American Fruit Growers' properties, where Regional Supervisor Earl Barnhill carefully went over the methods employed in building up these orchards to their present high state of perfection and production.

The fact is that most of the orchards purchased by the American Fruit Growers in this district three years ago last spring had been neglected and allowed to run down, which made them appear unattractive to the average orchard buyer. But the men who conduct the destinies of this organization were looking for just such orchards, if made up of the proper varieties, with good soil, and if they could be purchased below the regular market price.

The American Fruit Growers employed their own horticultural experts. In fact, every one of their superintendents are experienced and trained horticulturists, but they also took full advantage of the work being done by Roy Larsen and County Agent William Meikle, to say nothing of the state department of horticulture and the U. S. pathologists in the district.

The result of three years cultivation, pruning, spraying, thinning and fertilization is a complete transformation in all their properties. From what were regarded as among the poorest orchards in the district, they have been brought up to the very highest standard, ranking among the best producers here.

Other orchards where fertilization was studied are the Thayer & Gellatly property of 26 acres in East Wenatchee, the O. T. Clawson orchard near Wenatchee and the R. G. Graham orchard above Cashmere. The Thayer & Gellatly orchard has been fertilized consistently for several years and has been brought to a high state of production, almost every kind of fertilizer known having been used.

The C. T. Clawson orchard is notable because a large number of Delicious trees 14 years old were dug up and moved last winter, yet they have survived and are bearing a heavy crop. The trees were planted too close together, so Mr. Clawson took up each alternate tree and set it out elsewhere.

The Captain Graham orchard is one of the show places of the valley. The owner was master of steamships on the Pacific for many years, and he still maintains the same kind of "ship-shape" order on his orchard that he did on board his vessels. Fertilization has been his hobby and the results are apparent in yields of approximately 1000 boxes per acre for the past three seasons.

Thins the Thinned.

Another phase of recent orchard practice that the visiting growers studied was radical thinning. John R. Peters of Sunnyslope is the chief apostle of heavy thinning. It is said of him that he will go to an orchard that has already been thinned to the last degree, and take off one-half the remaining apples. And then the owner will have more boxes in the fall than he estimated at thinning time.

Growers were skeptical about the Peters thinning system two years ago, but when he took them out to his own orchard and thinned tree after tree exactly according to his "gospel," they saw that he had the courage of his convictions. And in the fall, he invited the same growers to come and see the results of his work. They were all convinced, for each tree had a limit crop of apples, all of large size and mostly extra fancy.

Visiting orchardists admitted that the fruit on the trees that have been severely thinned is larger and of better quality generally than they have seen in any other district. Mr. Peters claims that fewer apples on a tree will develop more perfectly, will be freer from worms and will color up better than if the apples are crowded. And his theories are backed up by growers who have adopted his plan.

Pipe Spraying System.

The third and most interesting development which was shown to visiting orchardists, for the first time in many cases, was the pipe system of spraying. On the William Moss orchard on Sunnyslope was seen the first pipe system successfully installed and operated in the Wenatchee district. The plan is simplicity itself and it operates successfully.

A tank and engine is installed at the proper point, preferably near the center of the tract, and pipes are laid so as to reach every row. Valves are placed so that only the pipe in use is connected with the engine. The nozzles are attached to the pipe by means of long hose. Careful estimates are to the effect that a saving of one-half is effected by the pipe system, over the movable sprayer system. In addition to this saving, the orchard is kept in better condition, ditches are not filled up, and branches not broken as is the case when a sprayer is driven through the rows.

A favorite plan is for the orchardist to operate one nozzle, with another played by his hired man, while the wife attends to the engine and tank. This requires little actual work. Such a team can spray an orchard in less than one-half the time required with the same force under the old method.

Among the speakers at both Yakima and Wenatchee were E. G.Wood, horticultural specialist of the Washington State college, who called attention to the fact that apple trees in the state are often planted too close together. He favored from 30 to 35 feet as the proper distance instead of from 20 to 25 as is the usual practice. As orchards get older, the trees will crowd each other and must be thinned out. He gave figures to show that production decreases rapidly in orchards planted 75 trees to the acre after 15 to 18 years.

Howard Wright of Yakima, former president of the association, narrated the results of his recent trip to Europe studying market conditions there. He held out little hope that Europe would be able to absorb many American box apples this season, owing to financial and industrial conditions.

D. F. Fisher, U. S. pathologist of Wenatchee, gave an interesting demonstration of the adbantages of oiled paper wraps. E. J. Newcomer of Yakima spoke on the relation of atmospheric temperature in the spring to the calyx spray, and W. D. Whitcomb, U. S. entomologist, talked of the relation of the growth of apples to the cover spray.

Wheat Market Depends on Many Factors

By Gilbert Gusler.

Will the surplus wheat in the principal exporting countries be sufficient to meet the needs of the importing nations in the next 12 months? The conventional remark that "World conditions establish wheat prices" implies that this ratio between the supply of surplus wheat and the demand for it by importers determines the world level of wheat values which sets the prices at terminal markets and then on back to the country elevator, mill or loading station.

Estimates are at variance as to just how much wheat the importing countries will need. European crop reporting systems are woefully inadequate, so that official estimates have not been made in many important countries and those which have been made public lag two to four weeks behind the actual facts, which are changing constantly with the weather.

European Need Is Greater.

The available material as assembled from a variety of sources, including comprehensive private foreign crop reports, points to a yield per acre about equal to or slightly below the average, whereas last year's crop was above the average. The loss compared with last year appears to be about one bushel per acre in European countries, which usually have a joint acreage of about 100,000,000 acres. In addition there is a slightly smaller acreage than last year. These conditions point to a total yield in the chief importing area of 100,000,000 bushels less than that of last year, with a possibility of even greater loss. This means that if all other conditions remain the same, import requirements will be increased 100,000,000 bushels over the preceding 12 months.

An analysis made by the department of commerce shows that wheat consumption in central and western Europe fell off sharply in the early years of the war, but that it has increased rather steadily from 1,200,000,000 bushels in 1917 to 1,850,000,000 bushels in 1921, when it was still about 150,000,000 bushels below the pre-war normal. If another increase in consumption occurs in the present year it will necessitate a further addition to the amount which must be imported.

But there are counter influences. Oriental countries, which were heavy importers last year, have better crops and are not expected to take so much this year. Russia, which has been an importer in the last 12 months, is expected to take care of its own needs, although recent reports have been rather pessimistic. Europe substitutes rye for wheat and the rye acreage is larger than a year ago, both in Europe and North America. Last and most important is the European pocketbook, which may not permit the purchase of all the wheat needed. Germany, Austria, Italy and France all could use large quantities of outside wheat, but their finances are in a deplorable state and are apt to be the limiting factor. Under the circumstances a further increase in per capita consumption looks doubtful, especially since the use of substitutes is already being extended.

Summarizing the situation, the conditions as outlined point to some increase in import needs. This may be estimated conservatively at 5,000,000 to 75,000,000 bushels. Last year world imports were approximately 645,000,000 bushels. If the increase indicated above occurs it will means 700,000,000 to 725,000,000 bushels for the present year. Broomhall apparently expects greater limitation due to financial conditions and places the "effective demand" from importers at 656,000,000 to 672,000,000 bushels for the present year. Broomhall apparently expects greater limitation due to financial conditions and places the "effective demand" from importers at 656,000,000 to 672,000,000 bushels.

What Is the Supply?

So much for the demand. To supply it, reliance must be placed in the surpluses of the United States, Canada, Argentina, Australia and India with small amounts from the Balkans.

This year's crop in the United States and the carryover of old wheat makes a total supply about the same as a year ago, so that if domestic consumption is not larger than last year there should be about the same amount for export in the year ended July 1, 1922. But last year's crop is believed to have been underestimated. Using average domestic disappearance in the last seven or eight years, our exportable surplus from this year's supply would be only about 215,000,000 bushels.

Canada has the second largest crop on record, present prospects indicating a yield of about 345,000,000 bushels, which means an exportable surplus of 255,000,000 bushels.

So far as Argentina, Australia and India are concerned it is necessary to assume average crops, since they are now some distance from maturity, and even the acreage has not been reported upon. Conditions as a whole in those countries are fairly favorable, however, so that the assumption looks safe.

The average crop in India in the last seven years has been about 325,000,000 bushels in round numbers, of which approximately 25,000,000 bushels have been exported. Argentina has raised 165,000,000 bushels and exported 100,000,000 bushels, while the Australian crop has averaged 105,000,000 bushels, with 60,000,000 bushels sold abroad.

The combined export surplus from the five countries for the present year, as arrived at in this way, amounts to 655,00,000 bushels. In addition, a small amount may be available from Rumania and Bulgaria, in the Balkan region. Those countries exported about 6,000,000 bushels last year and reports indicate that they may do better this year. Manchuria and Siberia are expected to furnish some wheat to other oriental countries. Altogether the exportable surpluses from the harvests in the 1922-1923 crop year add up to about 675,000,000 bushels. This is slightly less than the estimated import requirements.

If importing countries take the full amount credited to them and the exportable surpluses do not exceed the foregoing estimates, then the difference must be made up by cutting into the carryover at the end of the crop year.

The Annual Carryover.

There is always some old wheat on hand in all countries when the new harvest starts. A few producers hang on and there is enough in distributive channels to keep the stream moving. A careful analysis shows that the carryover or remaining exportable surplus on July 1 this year in the five chief exporting countries was approximately 170,000,000 bushels, compared with an average of about 177,000,000 bushels. The figures for this year, however, include an allowance of 25,000,000 bushels in India, which has prohibited exports, and 40,000,000 bushels in Argentina and Aus-

(Continued on page twenty.)

Taxes Must Be Reduced

Another step in the state-wide effort for the reduction of taxes in Washington was made recently when representatives of a considerable number of county taxpayers' associations met in Seattle and completed the formation of a State Federation of Taxpayers' associations. J. T. S. Lyle of Tacoma is president, with Frank M. Dallam Jr. as assistant to the president and field director.

In a public statement Director Dallam declared it to be the purpose of the federation to bring about establishment of business methods in the conduct of all public offices with a view to sweeping reduction in governmental cost. The federation has outlined five proposed laws, looking toward this improved business policy in state, county and local government. These proposals are:

(1) A budget law that shall apply to every official who spends public money and that shall hold him personally liable for any expenditure in excess of his budget estimate made prior to the period during which the spending occurred. This proposed budget law would also require the different counties to classify their county roads and to adopt a road building program in connection with the budget, requiring that all road money be expended in exact accordance with such prearranged program.

(2) A "pay as you go" plan in all bond issues, requiring that all bond issues be serial in type with provision that instead of the entire bond issue becoming due at the expiration of a given period of time, such as 20 years, part will fall due each year or each five years, with provision made for raising the money to pay off each part respectively. It is estimated by the federation that the serial bond plan, if now in effect, would save as high as $2,500,000 annually in bond interests in this state.

(3) A law to require all divisions of government to standardize their publicly owned automobiles and to fix a limit of price which may be paid for such automobile and to provide a penalty for private use of one by the officer to whom it is given for use in the conduct of his official business.

(4) A measure providing that the consolidated election law shall apply to all counties in the state.

(5) A measure requiring that automobile license plates shall be issued by each county auditor direct to the applicant at the time application for license is made. This measure is estimated to save a considerable amount in the cost of temporary cardboard number plates and in the cost of mailing the permanent plates from the state capital.

The State Federation of Taxpayers' associations is conducting a state-wide campaign for the organization of county taxpayers' leagues or associations and their affiliation with the state federation. A strong appeal is being made to the people of the state generally to join their home county associations and take part in the movement for bringing about lower taxes.

Vetch in Wheat

Results in an Unwarranted Dockage

By H. J. PLUMB, County Agent.

It has come to the attention of the county agent's office at Colville that some wheat buyers are docking farmers on their wheat because of the presence in that wheat of vetch seed. This practice is wrong.

Vetch seed can be readjly and easily separated from the wheat. The machine necessary for this purpose is an inexpensive affair and requires no power to operate it, it being simply a spiral enclosed so that the mixed vetch and wheat can simply be poured into the top and the vetch seed rolls out at one hole at the bottom and the wheat slides out of another.

This spiral works on this principle. The vetch being a round seed and somewhat heavy, rolls to the outside of the spiral as it descends through, while the wheat being oblong and flattened slides through from the top to the bottom and remains in the center of the machine, the vetch seed coming out of a hole on the outside of the machine and the wheat coming out of the center of the machine.

To dock a grower for the presence of such a mixture is wrong for several reasons. First, the vetch seed is worth so much more per pound than the wheat that it really makes the grain more valuable than it would be without it being present. The vetch seed is worth about from 15 to 20 cents per pound, while the wheat is worth much less.

A second reason why this practice is detrimental is that it discourages a very good cultural and grawing practice recommended by the county agent's office; namely, the practice of sowing vetch with wheat and rye for the improvement of the ground. Vetch, being a legume, incorporates nitrogen into the soil, an element found inadequate in so many soils of this county. A sowing of 20 to 30 pounds of vetch and two or three pecks of wheat or rye per acre will result about as follows: If the crop is cut for hay, it will be a most excellent feed crop, as the feed value of vetch is superior to that of alfalfa. If the crop is cut and threshed the presence of the vetch straw will greatly enhance its food value and the presence of the seed in the wheat ought to add to its value instead of detracting from it.

This office urges the sowing of vetch and rye or vetch and wheat as a feed crop, a silage crop or a grain crop. The plowing under of such a crop as a green manure would prove highly beneficial, especially on some of our alkali soils.

Candidates for Congress

The following is a complete list of the candidates for nomination at the September primaries for United States senator and representatives in congress from this state. The letter D means democratic, R republican and F-L farmer-labor. The filings closed at Olympia August 12, 30 days before the primary election, which will occur on Tuesday, September 12:

United States Senator.

C. C. Dill, Spokane (D); Austin E. Griffiths, Seattle (R); Miles Poindexter, Spokane (R); Mrs. Frances C. Axtell, Bellingham (R); James Cleveland Longstreet, Port Townsend (D); George H. Stevenson, Seattle (R); Lyman Seelye, Bellingham (D); George D. Lamping, Seattle (R); James A. Duncan, Seattle (F-L); Lee Tittle, Yakima (R).

Representatives.

First District—Philip Tindall, Seattle (R); John F. Miller, Seattle (R); H. Alvin Moore, Seattle (R); James W. Bryan, Bremerton (R); Fred N. Nelson, Bremerton (F-L); Edgar C. Enyder, Seattle (D); Thomas Jefferson Casey, Seattle (R).

Second District—Nelson J. Craigue, Everett (R); Lindley H. Hadley, Bellingham (R); P. B. Tyler, Everett, (F-L); Charles A. Turner, Everett (R); Minerva E. Troy, Port Angeles (D); Fred A. Clise, Mount Vernon (D).

Third District—O. M. Nelson, Montesano (R); Albert Johnson, Hoquiam (R); J. M. Phillips, Aberdeen (F-L).

Fourth District— Charles R. Hill, Colfax (D); John W. Summers, Walla Walla (R).

Fifth District—J. Stanley Webster, Spokane (R); Harry J. Vaughan, Spokane (F-L); Fred Schade, Spokane (D); Sam B. Hill, Waterville (D).

SNOHOMISH LIVE STOCK SHOW.

The Snohomish County Breeders' association is making a new venture this fall in holding its first annual live stock show. The event will be at Everett, October 12-14. H. K. Stockwell is president of the association and C. H. Brewe is secretary. The purpose of the show is to stimulate the breeding of a better class of live stock and the upbuilding of live stock and the dairy industry of the county. Breeders from outside of the county are invited to show their live stock. Club members will take an active part in the show. Dairy products exhibit will also be included.

Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive

This Catalogue is Yours FREE

This Golden Jubilee Catalogue Celebrates Our Fiftieth Anniversary by Offering You Everything for the Home, the Farm and the Family at the Lowest Prices of the Day

TO write today for your free copy of this big Golden Jubilee Catalogue will mean a saving of many dollars to YOU this Fall.

It answers every question about price, establishes for you the right price to pay for everything you buy.

Fifty years' experience in manufacturing—in right buying—has gone into this book. Fifty years' experience in low price making is here at your service.

Write for this Catalogue. Know the right price to pay for everything you buy. Take advantage of the many big bargains it offers—the many, many things offered at less than market prices.

This advertisement is printed to tell you of the saving this book offers you, and to tell you that one copy of this Catalogue is yours—FREE. You need merely write us a postal, or fill in the coupon below, and one copy of our big Golden Jubilee Catalogue will be mailed you FREE.

TO THE WOMAN: This free catalogue offers you the newest styles, selected by our own Fashion Experts And all the usual extra "style profit" has been eliminated from our prices.

It offers you everything for the home at a big saving: Rugs, Carpets, Curtains, Furniture, Home Furnishings of all kinds of standard quality at money saving prices.

TO THE MAN: Think of an all wool—virgin wool suit for less than $15.00. This is an example of our Golden Jubilee Bargains. Everything a man needs, to wear or to use, is offered at prices that mean many dollars saved.

FOR THE FARM: For fifty years the American Farmer and Montgomery Ward & Co. have helped each other. This book outdoes all our past achievement in making low prices for you.

Fencing, roofing, tools, paint, hardware—everything the farmer needs is offered at a saving.

Your Orders Shipped Within 48 Hours

We announce a new perfected service for you.
After a year's work and study, originating and testing new systems, and employing experts, we have perfected a new system that makes certain a very quick and satisfactory service to you.
Practically every order that comes to Montgomery Ward & Co. this season will actually be shipped and on its way to you in less than 48 hours.
Lower prices, better merchandise, and now a new service. True it is indeed that: "Montgomery Ward & Co., the oldest Mail Order House, is Today the Most Progressive."

LIVESTOCK AND DAIRY

How to Cooperate

Eighteen Fundamentals Laid Down

W. F. Schilling, president of the Twin Cities Milk Producers' association of Minneapolis and St. Paul, also vice president of the National Milk Producers' association, has for several weeks been busily engaged in dairy organization work along cooperative lines in the middle west. The Twin Cities association, of which Mr. Schilling is president, is reported to handle the largest single pool of milk in the world, and is looked upon as an outstanding example of successful cooperative marketing. In his organizing work, Mr. Schilling lays down 18 fundamental points for the officers and members of cooperative organizations to bear in mind. In brief they are:

1. The first duty is to restore confidence in cooperation, mistakes of the past having made many producers suspicious.
2. Representatives from each bank in the district to be organized should be called into conference and the cooperative plan laid before them in its entirety.
3. Many meetings of locals throughout the district should be called so that the actual producers may know exactly what the objects and methods of the organization are and get acquainted with the officers.
4. Officers must keep the members thoroughly advised of the program and tell them the absolute truth. In this way only can confidence and loyalty be maintained.
5. The general business public should be informed of the objects and methods of the cooperative organization.
6. None but the most capable and honest solicitors should be employed to secure memberships.
7. Members must stick together, for dissension is sure to be used by the organization's enemies to help break it.
8. The support of the farm bureau and other like organizations should be secured.
9. Farmers around condensary territory or around privately owned milk plants must be thoroughly organized.
10. At least 75 per cent of the milk produced in the district should be under contract before operation is begun.
11. Complete harmony must be maintained with dealers and customers until the organization has a plant of its own with capacity for handling its own products.
12. Expenses must be kept down. Payment to members must be made promptly in order to maintain their confidence.
13. There must be harmony and loyalty among all officers of the organization.
14. Complaints should be aired in membership meetings, but never on the outside where non-members or the opposition may make use of such dissatisfaction.
15. Officers should draw reasonable salaries for their services. Relatives of officers should not be employed.
16. Definite and regular reports should be made to the members showing the operation of the organization and the results secured.
17. Officers must remember that the organization is for the profit of the members at large and not for the officers or a particular group.
18. It must be remembered constantly that the organization must render real public service as well as bring profit to the members if its existence is to be justified.

No "Best Breed"

By A. B. NYSTROM.

Which is the best all-around purpose cow, the Jersey, Shorthorn, Ayrshire or Holstein? I have the Shorthorn and Jersey and have them now under the testing association, and feel just a little unsatisfied with their test. Some of my Shorthorns will produce 40 pounds of butterfat when fresh and the others from 23 pounds up. Three Jerseys produce 48 pounds when fresh, the others about 25 and 30 pounds. Is that a good yield for one month? Also will a cow so vary in her test? For instance, a cow testing 6 per cent last month on a larger flow of milk and this month on a smaller flow tested 5. The pasture hasn't been so good the last month. Would it decrease their test?
W. F. W.

There is no "best breed" of dairy cattle except as they satisfy the individual desires of the person raising them. There are good individuals in all breeds, and to be sure, there are poor producers in all breeds. Many competitive tests have been conducted to determine the relative merits of the different breeds. In some cases one breed comes out ahead and in others another breed wins. So much depends on the individual cows selected for such tests that conclusions can not be drawn that will apply to the breed as a whole. No one should feel satisfied with the production of his herd, or even an individual cow, until he knows that further improvement is not possible. There are many cows that give from 50 to 70 pounds of fat a month in all breeds, and keep it up for eight or nine months, and then drop off to 30 to 40 pounds the remainder of the lactation period. Such cows are sure to make a profit to the owner. You should not be satisfied until your whole herd has reached that production. High production can be obtained by any dairy breed so long as you select fairly good cows to start with and use a purebred bull that comes from a line of high producers.

No doubt your test of 6 per cent represents only one or two days' milk. In such a case it is not surprising that there is a variation of 1 per cent in the test from one month to the next. Poor pasture will cause a slight decrease in the test, but usually there is a more decided decrease in the amount of milk rather than the test.

Milking Machine Sterilizer

A 12-ounce can of ordinary bleaching powder, 50 pounds of common salt, and clean water are the ingredients which go to make up a cheap and effective sterilizing solution used by the New York agricultural experiment station for keeping the tubes and teat cups of milking machines in a sanitary condition. The bleaching powder is mixed with one gallon of water in a two-gallon covered crock, just enough water being added at first to make a paste. The rest of the water is then added and the mixture stirred thoroughly. The clear solution is the part to be used.

After preparing the stock solution, 50 pounds of salt are placed in a 20-gallon water to within six or eight inches of the top. One quart of the sterilizing solution is then added. The mixture is now ready to receive the milker tubes and teat cups, which should be kept in the solution between milkings. One pint of the stock solution should be added once a week during the winter and twice a week during warm weather, and fresh water and salt added when needed to maintain the original water level.

Experience With Milk Fever

A treatment for milk fever was tried, almost accidentally, but seeming wonderful success, by Ed Rogers of Monmouth, Ore., recently. Mr. Rogers is owner of Lad's Likeness, a Jersey cow that is starting on a record which gives promise of being the most remarkable ever made. She was started on official test on April 22. She went down with milk fever 12 hours after calving. A veterinarian was not at once available and, although her udder was inflated, as is recommended by the best veterinary scientists, she continued to grow worse. Mr. Rogers has an "electric blanket," with fine wire woven all through it, for sick room uses. This he put on the cow and turned on the power from his farm lighting and power plant. When he did so the cow's nose was cold, her eyes glassy and she was almost rigid. The blanket was left on for 45 minutes, when warmth had returned and she was greatly improved. It was then taken off for an hour and then put on again for 15 minutes, with further improvement, and Likeness was soon eating again and showed no further effects of the fever. She is a great feeder and is eating normally and milking around 80 pounds a day. If there is any virtue in the treatment, Mr. Rogers wants other breeders and dairymen to have the knowledge of it, and thinks it worth trying.

Commenting on this care, Dr. S. B. Nelson of the veterinary department of THE FARMER said: "It may be that heat given to the body from the electric blanket might have some regulating effect on the animal to overcome the trouble. We used to sweat them several years ago and some of them recovered. However, most of them died."

THE MARKET FOR FURS.

The fur trade has developed extensively within the last 25 years, and in this period the United States has grown to be the largest fur market and fur consuming country in the world.

WHILE HELP IS PRESENT.

Shed the heavy harvest machinery before the crew disbands.

TARX
SOLIDIFIED DISINFECTANT
A Better Dip in a Handier, Cheaper Form
Comes in cube-marked cakes instead of cans. Solid like soap. You simply cut off and drop one of the handy Tarx cubes in a gallon of water and you have 1 gallon of the best dipping and disinfecting solution you ever used.
Each Cube Makes 1 Gallon
No guess work—no waste—no bother—no leakage—no breakage. You pay nothing for bottles, barrels or cans. No freight on factory water which you can just as well add at home. Easily shipped anywhere. Packs in small space. Keeps indefinitely.
Order Direct from This Ad
Send only $3.00 (check or M. O.) for 5-lb. package. Makes 160 gallons. Shipped prepaid. If you are not pleased your money will be refunded. You take no risk. Send today.

Time to Re-tire?
(Buy Fisk)
TRADE MARK REG. U. S. PAT. OFF.

THE evidence still piles up to support our statements concerning the remarkable service quality of the Fisk Red-Top where the demands on the tire are greatest. Read this letter from Arizona:

COCHISE MOTOR COMPANY
Bisbee, Arizona March 14th, 1922
The Fisk Tire Co., Inc., Chicopee Falls, Mass.
Gentlemen: This morning a man of this district came in from his lease over Tombstone way, in a very rough section of the mountains, and purchased two more Red-Tops for his Ford. He remarked when he was leaving that the Red-Top tire was positively the only tire that was giving satisfaction in the mountains up over the Continental Divide.
Very truly yours, E. SIMMONS

There's a Fisk Tire of extra value, in every size for car, truck or speed wagon.

FISK
RED-TOP
CLINCHER TIRE
Extra Ply of Fabric *Extra Heavy Tread*

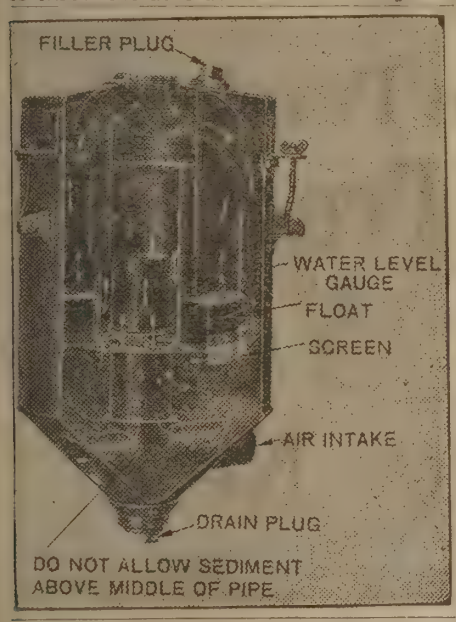
Two Purebreds

Take Places of Eighteen Scrubs

There were once 18 grade bulls in the St. Urban district, Lewis county, while today there are two registered bulls owned by a bull association. It is estimated that fully a thousand dollars in feed alone has been saved during the last year by the elimination of the grade bulls.

The senior herd sire, Clotheda Chimacum Spring Farm King Pontiac, a 4-year-old, comes from the A. E. Smith herd at Sumas. He is a double cross on the Rag Apple Korndyke strain, and his get shows that he has good prepotency. He is kept at the Al. Neuert farm.

While there are a large number of grade cows in the association, there are 32 purebreds, and it is the aim of all the members to increase the fat production and at the same time hold up the milk flow if possible. All outside members are charged a fee of $10, while each share holder bought one share in the association, which cost him $25. So far there are only three daughters from the association bull, but his bull calves show excellent type. All members have found the plan to be very satisfactory, and seem to have found no inconvenience in bringing their cows to this farm which is centrally located.



All herds with the exception of one have been given the tuberculin test, and so far there have been no reactors found.

Clean the Air

By PROFESSOR L. J. SMITH, W. S. C.

Not so many years ago, in the drier portions of the country, a brand new tractor would have its cylinders wear so badly out of round that reboring was necessary in two seasons. It was such a serious matter that it often came to a lawsuit against the tractor firm. Then we woke up to the fact that each season a tractor breathes in hundreds of thousands of cubic feet of air laden with dust and dirt that cut the pistons and rings and cylinders to pieces.

What was the remedy? Why, wash the air. Get rid of the dust before it enters the carburetor. The first idea was to remove the objectionable dust by a centrifugal air cleaner, which was supposed to throw the dust down into a fruit jar at

the bottom. Many tractors installed this type of air cleaner. It was better than none, but was not very efficient, and still the cylinders went bad. Then came a new idea for cleaning the enormous quantity of air that the tractors must inhale to produce power. The air was drawn through a given amount of water and the dust was left behind, that is, probably well over 95 per cent.

The figure shows a sectional view of a well-known and very good air washer. The air enters at the bottom, rises above the water line and beneath a float which has a hollow tube above the water line. The air then turns downward, as shown by the white arrows, and passes through the water up around the float. A fine screen is often attached to the bottom of the float to break up the air bubbles. Just before passing out at the top on its way to the carburetor, the air passes between baffle plates which take the surplus moisture out of the air.

Actual power tests show that the air cleaner does not cause the engine to lose power, but, if anything, to gain a slight amount of power because of the moist air.

The water should be changed once or twice a day to remove the accumulated sediment.

The time will doubtless come when automobiles will be equipped with air cleaners for certain parts of the country.

A third type of air cleaner is now on the market. It uses waste oil to remove dust, and will be taken up in a later article.

STATE FAIR JUDGES.

Secretary H. P. Vermilie of the state fair has announced his selection for live stock judges for the fair this fall as follows: Holsteins and Ayrshires, Axel Hansen, Minneapolis; Guernseys and Jerseys, George P. Grout, Duluth; beef cattle, J. L. Smith, Spokane; horses, George Wilson, Wilbur; sheep, O. V. McWhorter, Boise; dogs, Jack Bradshaw, Los Angeles.

Goes Back to Sheep

On a small promontory, separated from the mainland and Oak Harbor by only a small neck of land, is the home of Alfred Maylor, who has cleared nearly 170 acres of the entire 355. At first the farm was devoted entirely to sheep raising, but in 1916 there was so much loss from dogs that the entire lot was sold. A mere handful were retained, however, as a farm flock to keep in connection with a few dairy cows. Since the wool market is looking better Mr. Maylor has decided to increase his flock of sheep and keep fewer dairy cows.

"I feel that there are about the same profits to be made from sheep as from cows," said Mr. Maylor, "and they do not require as much labor. We have, of course, an unusual condition that is hard to equal, since we need not fence the fields which border on the salt water. The pasture is the best, and we can raise excellent hay in a normal season. This year the yield was almost up to normal in spite of the dry season and it is a good quality of mixed timothy and clover."

Mr. Maylor seeded 17 acres of winter barley last fall and it was in the shock by the middle of July, thus getting it out of the way for the spring grain crops. Winter wheat and vetch have also made good showings, and is found to be a splendid crop to build up the soil, which has been in grain for a number of years.

Should Test Every Cow

Princess Fayne Johanna, one of the registered Holsteins in the Youngquist Brothers' herd at Mount Vernon, made a record of 401 pounds of butter in 112 days. She was the highest cow on semi-official test in the state for April and May.

"An interesting thing about her is the fact that we did not think she would make any kind of a record until her half sister took sick and we had to take her off test," said Mr. Youngquist. "This goes to show that every cow in the herd should be tested in order that no good ones be passed up or any poor ones kept where they do not belong. There is no one who can tell what a cow will do until she is tried out."

Another animal in the herd, Vernway Pontiac Segis De Kol, a senior yearling, made a production of 577 pounds of butter in 349 days. She is the best for her age in the herd. The Youngquist Brothers have been breeding registered cattle for the last five years, a few grades having been in the herd prior to that time.

Give the Calf a Start

"All of our calves are fed whole milk for the first two months of their lives and then they are given skimmed milk as long as they will take it," said A. M. Gormley, farm manager of the Carnation Stock farm at Tolt, King county. "They are kept in the barn until they are old enough to be turned out in the pasture lots a few hours each day. We believe that it pays to keep the calves growing and give them good shelter. One of the best practices is to feed plenty of grain just before the cow freshens. This is the most critical periods of a cow's life and she should have feed enough for her own body as well as for the growing calf."

The GUARANTEED Car That Makes Good Oakland's Promise

Many months ago the Oakland Motor Car Company announced its purpose to build the finest light-six in the world. It was admirably equipped to undertake this difficult task.

As a permanent division of General Motors Corporation, it was enabled to utilize the technical genius of the General Motors laboratories, as well as its own six years of experience in manufacturing light-sixes exclusively.

Oakland held fast to its purpose. It built the finest motor car that the sum of this engineering and manufacturing genius could build. It called this car The New Oakland Six-44.

So certain was Oakland that its new car was *right*, that it placed upon it —in addition to the manufacturer's standard warranty—a special written 15,000 mile performance guarantee.

Many thousand New Oaklands are now in service. If you would learn whether Oakland has accomplished its high purpose—question any one of these thousands of owners.

They will tell you that they have never driven a car more powerful, more flexible, more economical or more unwaveringly dependable.

They will praise its wonderful six-cylinder, overhead-valve engine, which insure such abundant power with all of the flexibility and quiet natural to a six.

They will tell you of its unusual pulling power through mud and sand; of its uncommon hill-climbing ability; of its troubleproof construction which makes it such an ideal car on the farm and in communities far removed from service or garage facilities.

Nor will they fail to tell you of the care and attention given to details of comfort and convenience: long, buoyant springs; unusually roomy body; door-opening curtains; genuine leather upholstery; cord tires, and other similarly high grade and complete equipment. Examine this New Oakland yourself.

Remember, it is the only car in the world that carries, in addition to the manufacturer's standard warranty—a special written 15,000 mile performance guaranty; and yet—at the reduced prices announced August first, it is one of the world's lowest-priced sixes.

Oakland's special, written, 15,000 mile engine guarantee is conclusive proof of high quality in every part of the New Six-44. It is possible to give this unusual guarantee only because of this high quality. The guarantee PROTECTS you; the New Oakland car will do infinitely more — it will satisfy you COMPLETELY in every thing that you demand in a fine motor car.

OAKLAND MOTOR CAR COMPANY, *Pontiac, Michigan*
Division of General Motors Corporation

The New Oakland Six

POULTRY AND RABBITS

Culling the Flock

Culling is but one of several necessary phases of successful poultry management, says H. E. Cosby, extension specialist in poultry husbandry at the Oregon Agricultural college in a recent bulletin. It has no more relative importance than proper feed and feeding methods, freedom from external and internal parasites, time of hatching, good housing facilities and other factors.

Careful, systematic culling of the entire flock will not transform poorly housed, lousy, crowded and improperly fed hens into high producers. Culling is profitable only when the flock has and will continue to receive uniform and sensible care. Accuracy in culling depends upon the judgment of the poultryman, and his judgment must be based upon definite knowledge relative to the management of that flock during the preceding year. Any factor, such as moving the flock, sickness, forcing under lights, partial molt, crowding, or change in feed or feeding methods, if not taken into consideration will result in many errors of judgment. Many profitable hens have been sold as culls, not that the methods of culling as herein described were at fault, but because the poultryman failed to consider all the characteristics of the hen and the care she had received. A daily egg record of the flock during the preceding seasons discloses the care the flock has received and is a valuable asset in doing intelligent, accurate culling.

Culling should begin at the time eggs are selected for incubation; weak, malformed and undesirable chicks should be culled when transferring from the incubator to the brooder; chicks that are of low vitality should be culled as soon as discovered during the developing period, and pullets that are a few months later in starting to lay than the average of the flock should be culled. Culling should be a continuous 365-day watching for unprofitable hens.

In addition to continuous culling of low-producing hens, one or more systematic examinations of the entire flock should be made from June to August, inclusive. The select breeding hens may then be chosen from the number remaining after the August culling, preferably between September 15 and October 15.

If more culling were done during the growing period there would be less to be done with hens that have been kept a year or more at a loss. It isn't number of hens that pay, it is the kind.

Vigor is the very foundation of a successful poultry business. An active disposition, bright, clear eye, and well-worn toenails indicate health. Small, weak, deformed, inactive hens with long beaks and heads lack vigor and should be culled. Hens with baggy abdomens have broken down and become very fat; when they stop laying they seldom start again, and the death rate is very high.

Hens that are large, coarse, and have small sunken eyes are big eaters, poor layers, and rightly belong to the "beef" class.

A laying hen removes the fat from the skin. In yellow-skinned breeds the same pigment that colors the yolk of the egg colors the vent, eye ring, beak, skin and shanks. As the hen starts laying this yellow pigment begins to disintegrate, break up and disappear. The different parts of the body fade out white in proportion to the amount of fat stored in those parts, the kinds of feed fed, the weight of the body, the size of egg laid and the length of the production period.

The skin around the vent is first to whiten, then the eyelids, the ear lobes, the beak, and last the shanks. When a hen stops laying the color returns in the same order that it leaves, only very much more rapidly. The loss of yellow color in the shanks indicates a long laying period, which varies from three to six months, dependent upon the breed, the rate of production, size of egg and kind of feed. The presence or absence of yellow pigment in the vent, eyelids, ear lobes and beak denotes a shorter laying or resting period, varying from a few days to four or five weeks.

Sick hens and hens in a dry yard, fed little or no yellow corn and green feed, will have faded beaks and shanks, even though not laying.

The person culling a flock of Orpingtons, Minorcas, Dorkings or breeds which do not have yellow skin must disregard yellow-pigment indications and make the selection on the value of the other characteristics.

It is not using the best judgment to cull on yellow pigment alone.

Precautions to Observe.

Culling is an intelligent comparison between hens of the same flock which have had equal opportunity to lay so far as housing, feeding and management are concerned. There is no set rule or rules that will apply to all flocks, because it is a matter of intelligent judgment based upon management of the flock.

It is not safe to judge a hen solely by any one of the indications previously discussed. Such procedure will result in untold errors. Only when all indications are applied to each hen can intelligent judgment be passed.

Unless hens have been kept under conditions favorable to egg production no one can do accurate culling work. Parasitic infection, improper feed or irregular feeding methods, poor housing conditions, crowding and forcing for egg production at some season of the year will cause many otherwise good hens to be classed as culls. There are culls that are so because of poor inherent ability to produce and there are hens easily mistaken for such because of the poor care they have received.

Give the questionable hen the benefit of the doubt, in culling for egg production, but not in selecting breeders.

Watch Out for Pests

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

Readers of THE FARMER should be on the lookout for troubles that are always present in the good old summer time; that is, unless they have been anticipated and prevented.

One of the troubles is mites, and mighty are the mites during hot weather. A new now. Cylinder oil, mixed four of oil to pests. Even the fact that it is cleaned every day does not prevent them. If it has been treated with carbolenium it may be free for years. If it has not been treated it should be thoroughly sprayed now. Cylinder oil, mixed four of oil to one gallon of crude carbolic acid makes a good spray. I mean the oil drained from your car!

Lice are also plentiful during the summer. They lay more eggs than the chickens and produce more young. A hot summer day, on the other hand, is an ideal time to get rid of them. Make a solution of four gallons of water and four ounces of sodium fluoride, having the water blood heat.

Grasp the hens by the wings and dip in the solution, taking care not to hold the head under more than a second. Add to the solution as needed. If the dipping is well done, and no birds are missed, it will not be necessary to repeat the treatment for a year. Sodium fluoride is poison, so don't leave the solution standing around for the chickens or cows to drink.

A scarcity of green succulent feed is also a drawback during summer. Plan to have green growing alfalfa or kale or mangels, or some other equally succulent feed. This is especially important for the growing pullets. If compelled to eat dry fibrous grass or grain as a substitute they will probably get leg weakness or partial paralysis.

WATER BAGS IN BIRDS.

By W. D. BUCHANAN.

We have found a bunch of water bags in two young cockerels that we recently dressed. One had several bags that were half the size of an egg and the other had two bags of pink looking water around his entrails, to which the bags seem to be attached. They were fat and apparently healthy. Can you tell me what is wrong and what to do for others affected the same way? D. R. WOOD.

Concrete, Wash.

I am unable, without making a physical examination of the birds, to locate the cause or prescribe a remedy for the trouble, if trouble it is. If the remainder of the flock is in good condition I would pay no attention to it. If, however, you kill a sickly bird affected in this way I would advise sending it to your state experiment station.

GENERAL ADVERTISING.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

ORCHARD AND GARDEN

Ten Acres Squash

Favors Planting on Higher Spots

A number of farmers in the Coupeville district of Island county have found Hubbard squashes to be a profitable crop. One advantage in their favor is the fact that they are a cultivated crop which makes a good rotation with wheat or hay.

F. W. Krueger of Coupeville has 10 acres of squash planted this year. While there is said to be little difference in the kind of soil which is best adapted for squash, there is a marked difference in favor of the higher spots, which seem to produce better growth because of their being warmer during the early part of the season. Mr. Krueger has tried out several kinds of fertilizers, but finds that there was very little difference between any of the trials, but the best squash were produced on the lighter soils, which warm up earliest.

"I tried storing my squash until the late winter months," said Mr. Krueger," and find that it more than paid for my trouble. I built a regular squash cellar in which I stored the squash in layers, and covered each layer with enough straw to keep them from touching. They were piled about eight feet high in this manner and the cellar banked up entirely frost proof. I found that practically all the squash kept in good condition until January, when they were sold on the Seattle market. At this time squash sell for a better price, and I was able to make up for the extra time and expense required for storage."

Mr. Krueger has tried other varieties, but finds the Hubbard to be in best demand on all markets, and one of the easiest varieties to raise. Aside from squash he has a few acres of wheat and a crop of field peas. The rotation of squash, however, may come after any kind of a farm crop, but usually follows wheat in order to get the land clean-cultivated for the eradication of weeds.

Feeding the Bees

By GEORGE W. YORK.

After the surplus honey season is over the first thing to be done with the bees is to see whether each colony has a good queen, for it is the young bees that are reared after September 1 that are likely to live over the succeeding winter, and not the bees that are in the hive during July and August.

For fairly safe wintering there should be about three quarts, or 15,000, young bees in each hive. Then for winter stores there should be from 40 to 50 pounds of honey and sometimes even 60 pounds might not be found too much. In case the bees do not use all their allowed stores during the winter, they probably will need it in the spring, before a new crop of honey is secured.

For fall feeding for winter stores, if necessary, ordinary white granulated cane sugar is all right. Dilute it at the rate of one quart of sugar to one pint of boiling water. Dissolve thoroughly and feed while warm.

As a fall feeder probably most beekeepers prefer a friction top pail or can. First puncture the top with enough nail holes so that the contents of sirup may be taken by the bees in about 48 hours or less. The pail or can may be filled with the prepared feed, the perforated friction top cover put on, and then the full can or pail inverted right down on the brood frame top bark. An empty hive super should then be put on the hive, deep enough so that the feeder will be entirely covered when the regular hive cover is put on the super.

The feeding should be done as rapidly as the bees will take the sirup, and all feeding completed at least by October 15.

In case any colony should be found without food during the winter, a rather soft sugar candy can be made and given them. One recipe takes six pounds of granulated sugar, three-fourths pounds of glucose, three-fourths quart of hot water, with one-sixth teaspoon of cream of tartar.

The glucose can be put into the water at once and then the sugar added only as rapidly as it will dissolve, as by doing so it is not so likely to be scorched. The cream of tartar is added as the whole contents of the vessel comes to the boiling point. As soon as it is boiling well it should be removed, and be constantly stirred till rather thick, when it can be poured into a mold.

A very convenient form into which it can be poured is an ordinary brood frame (a wired one preferred). Simply fasten a very thin board to one side of the frame, then lay it down and pour in the thick, warm sirup. When the candy has cooled sufficiently the thin board can be taken off, as the wire will hold the candy cake in the frame.

To feed it to the bees, simply remove a frame of empty comb from near the center of the brood chamber and put the candy frame in its place, being careful to see that it is next to the cluster of bees. This feeding should be done during the warmest part of the day in winter.

If two frames of candy are desired just double the recipe.

Stationery Spray Machine

Ed Eells is installing a stationary spray machine in his apple orchard near Cashmere, Wash.. Pipes are laid about the orchard so as to allow for the spraying of five trees from each spray hydrant. One hundred feet of hose will be used, which can be dragged in four directions from the point where it connects to the pipe. Two thousand five hundred feet of pipe will be used on the entire 10 acres of orchard.

An ordinary spray machine will be equipped with two supply tanks and a tractor will be used to supply the power. In this way 400 gallons of spray mixture can be used at one spraying without refilling, and can be applied with greater force, since more power can be secured with a larger engine.

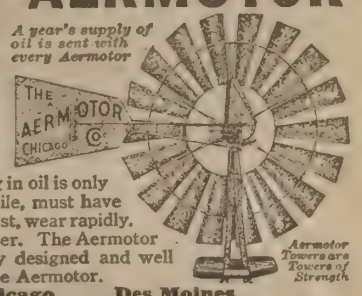
One advantage to this system is that there will be no packing of the soil from the wheels of the spray machine, and there will be less wear on the spray machinery from hauling it over irrigating ditches. The work can be done by one man if necessary, since he can start his engine and then attend to the spray hose until the tank is empty. After refilling he can continue the process until the orchard is finished.

The only disadvantage seems to be that the larger amount of hose must be dragged about by the one doing the spraying. This is considered much harder work than if one were to use a shorter length of hose attached to a movable rig, such as is commonly done in most orchards. Mr. Eells prophesies that within five years there will very few portable spray rigs in the Wenatchee valley.

TO PREVENT SPREAD OF PESTS.

A freight car fumigating house, having a capacity of 14 railway cars at a time, has been completed and put into operation by the federal horticultural board, United States department of agriculture. It is a part of the chain of fumigation houses maintained to prevent the entry of the pink bollworm of cotton into this country.

Preparing for Fruit Display



"Uniformity of size and color can best be attained by selection from one tree instead of picking from several," says W. L. Close, horticultural inspector. "It is well to select the trees best suited for exposition purposes early and give these trees special care in thinning and watering.

"Where the specimens appear perfect in every way they can be favored by removing some of the surrounding foliage in order that the fruit may color in a uniform manner."

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Perfection Plaster Wallboard makes beautiful homes

USE "PERFECTION" FOR

Adding an extra room to the house.

Fixing up the basement or attic.

Inclosing the porch or dividing a room.

Building a church, club or lodge hall.

Improving the garage, dairy barn or chicken house.

Modernizing the walls and ceilings of your home.

This modern building material enables you to make all kinds of wonderful improvements around the farm and home. It is simply the best plaster in portable form, and gives you all the advantages of good plaster construction without the old-time muss, delay and uncertainty. "Perfection" Plaster Wallboard is fireproof, water proof, insect proof and sound proof. It can be finished with wallpaper, tint or calcimine if desired, giving you the most artistic interior effects. Broken plaster walls can be patched perfectly and permanently by applying it right over the old plaster. Get booklet of information and a free sample today, while you're thinking about it.

Why SUNBEAM PIPE and PIPELESS FURNACES Are Better

—Because They Have the Following Features:

Solid cast, oxidized register.
Extra large warm air outlet gives greatest volume warmth.
Oversize casings insure perfect warmth in every room.
Full length cast smoke pipe extension.
Large radiator provides greatest radiating surface. Double-seal joints.
Enlarged radiator opening insures perfect combustion and fuel economy.
Large combustion dome insures perfect combustion. Radiator properly supported.
Big feed door (same on all sizes) makes firing easy.
Two-piece fire pot with wide cut joints will outlast a solid pot twice its weight.
The short feed section makes firing easy.
The "Sunbeam" vapor pan provides humidity.
The high, roomy ash pit provides greater capacity for ashes. Is easily cleaned.
Full width ash pit door makes removal of ashes easy.
Every joint in castings and casings is sealed air tight. "Sunbeam" furnaces do not smoke.

Fertilizing Clover

Superphosphate Has Good Result

By A. B. NYSTROM, King County Agent.

In the spring of 1921 the county agent recommended to T. A. Garrett of Auburn that he try some commercial fertilizer in addition to his barnyard manure to help him get a stand of clover. Accordingly some plots were laid out in 1-10 acre sizes, trying out superphosphate, muriate of potash and a mixture of the two. One plot was left untreated between the phosphate and the potash plots.

The whole field of two acres was seeded to red clover and timothy, using oats as a nurse crop. During the growing season of 1921 there was only a slight noticeable difference on the oats in the different plots, except on the manured portion. One half of all the plots were manured at the rate of 15 tons per acre and the oats on the manured plot was much heavier and darker green than on the other half not manured.

After the oats was taken off, however, the clover began to show up and the different plots were distinctly visible. Those plots that had received an application of superphosphate had a much better stand and the young clover plants grew much faster than on any of the other plots.

The differences were noticeable all during winter and spring of 1922, and when haying came the plots were cut and weighed separately. The potash plot was no better than the check plot. The mixture of potash and phosphate plot was just about as good as the phosphate plot. The check plot yielded 4060 pounds of cured hay of poor quality to the acre. The phosphate plot yielded 8240 pounds of hay to the acre.

Here was a difference of over 2 tons of hay from the use of 300 pounds of acid phosphate. The cost of the material was $5.25 and allowing $1.25 for getting it to the farm and putting it on the land, the total cost is only $6.50 an acre. The value of the increased hay yield for one year only at the rate of $10 per ton is $20. This makes a net return of $13.50 per acre by the use of acid phosphate.

Cold Storage

A Little Journey to the Market

The total capacity of cold storage plants in the United States is estimated at approximately 500,000,000 cubic feet. This would be equvalent to a space about 1 1-3 miles square and 10 feet high.

The impression is given that cold storage is undesirable from the farmer's viewpoint, but it would be as futile to argue that the canning of foods is objectionable and should be abandoned.

It preserves the surplus of perishable and semi-perishable products, such as butter, eggs, cheese, meats, poultry, fruits and vegetables produced in large quantities at certain seasons of the year until the market will absorb them. It tends to keep prices down in the seasons of light production, but purchases for storage sustain prices in the periods when production is far in excess of immediate consumptive needs.

Local markets in producing sections use cold storage while assembling enough volume for economical shipment. It is used while these perishable products are being transported to the consuming market and while they are being distributed. Without it the variety of foodstuffs in the large centers of population would be decidedly limited.

Cold storage is of two kinds, refrigeration in which the temperature is kept above but close to the freezing point, and freezing in which the temperature may be reduced close to the zero point. Freezing plants are used when meats and poultry are to be preserved for several months.

The department of agriculture reports each month the cold storage holdings of various products. In any consideration of the available supply and the rate of consumption, these storage reports are quite important.

A Good Jersey Herd

There are several herds of Jerseys in Whatcom county, but there are few that can beat the records made by R. I. Tanner of Sumas. In his herd are three daughters of Rosaire's Olga Lad, with some of the blood also of St. Mawes Blossom. Poppy's Koffee Rosaire, one of the cows in the herd, won a silver medal as a two-year-old with a production of 527 pounds of fat. The following year she produced 675 pounds, thus winning a second silver medal. As a 5-year-old she won a gold medal by producing 739 pounds and as a 7-year-old she had a production of 674, which made her another gold medal.

"I was critized for paying $800 for a heifer calf some years ago," said Mr. Tanner, "but I would not sell her now at any price because she has made me two silver and two gold medals and is still milking in fine shape. I refused $2000 for one of her heifers and I turned down an offer on two of her calves.

"Two other cows in the herd have made gold medals, Susie Pearl of Scampoeg making 740 pounds of fat as a mature cow and Rosaire's Olga Gem, that produced 827 pounds. It has always been my object to produce the best under the conditions, but I soon found that I could not get far with grades, so I began to look for purebred animals. Now there are only three grade cows in the herd."

Most of the foundation stock of the Tanner herd has been secured from Oregon herds. The herd average has run very high, making 827, 740 and 764 pounds for the past three years, respectively.

Appeal Filled Milk Case

Attorneys of the Carnation Milk company announce their purpose to appeal the "filled milk" case to the United States supreme court. As we previously advised our readers, the Wisconsin legislature passed a law at the last session prohibiting the manufacture and sale of skimmed milk and vegetable oil compounds. The Carnation company contested the legality of the law in the state courts of Wisconsin, and lost. Now an appeal is to be taken to the supreme court of the United States, but Deputy Attorney General Hoyt of Wisconsin declares that "this appeal will not prevent law enforcement here, unless an injunction is secured from the United States court. As far as this court goes, the decision is final." Mr. Hoyt added that the Wisconsin court decision sustained completely the validity of the law. Both the decision of the court by Judge Crownhart and the concurring decision of Judge Rosenberry sustained contentions based on the deceptive nature of filled milk, and inferior nutritional value. The decision of the majority of the court, by Judge Crownhart, goes further and sustains the law as to protection of the reputation of the dairy industry of Wisconsin.

J. Q. Emery, dairy and food commissioner of Wisconsin, declared that the "effect of the decision of the high tribunal on the 'filled milk' case is that the law is sustained and will be enforced."

Sell Guernseys at Snohomish

A sale of 36 Guernsey cattle was held at Snohomish, August 7, by the Snohomish County Guernsey Breeders' association, all of which brought fair prices and went largely to breeders in the county. While there were only 15 registered animals in the sale, the grade cows and heifers were of a high standard.

In order to induce more of the smaller herd owners to buy purebred bulls the sales committee made a special condition which allowed grade or scrub bulls to be accepted at one-half the price bid on any purebred bull. No grade bull, however, was to be accepted at a value greater than $60, and provided such bulls had been used for 3 months as herd bulls.

The top animal, a 6-year-old, consigned by F. J. Jenner of Oso, Wash., was bought by Henry Steve of Marysville for $231.

The sale was cried by D. P. Funk of Monroe, while W. H. Clark of Monroe acted as clerk. Charles H. Grew of Arlington, partner with J. E. Wrage of the Valley Gem Farms, was sales manager.

You Make Your Land More Valuable by Building Up the Home Town

The closer your land is to a good town the more money it will bring when placed upon the market. We all know that. About the first thing the owner tries to do when you dicker for a piece of land is to justify the high price he is asking by pointing out how close the land is to town and the good roads leading to it. He knows this is the most appealing argument he can put up.

Land close to town and adjoining good roads is not only desirable because crops can be marketed with the least trouble and expense, but there are many other advantages as well—including schools, churches, doctors and shopping privileges.

The conclusion is plain. Do what you can to build up the stores and institutions of your home town and you will benefit not only in the increased value of the land you own, but also in many other ways.

You may pay more for the Hupmobile than for a lighter, smaller car—but you are money in pocket at the end of the year.

Farmers who buy the Hupmobile, after a period of motor car experience, find the Hupmobile is a better business proposition.

Its savings for them—its actual earnings—more than offset the larger outlay in the beginning.

Such an investment, when it can be made, is good business.

Simply because the Hupmobile *is* such an investment, its numbers on the farms of America are increasing year by year.

Big corporations employ fleets of Hupmobiles for their reliability and low costs

The Hupmobile is manufactured by an old, well established company, known all over the world for the quality of its product

Touring Car, $1150; Roadster, $1150; Sedan, $1785; Coupe, $1635; Roadster-Coupe, $1335. Cord Tires on All Models. Prices F. O. B. Detroit---Revenue Tax Extra.

Hupp Motor Car Corporation, Detroit, Michigan

Hupmobile

Proves Value of the Sire

"One of the best hopes of the dairyman is a good purebred sire," remarked A. E. Smith of Sumas, of the Milky Way farm, where 40 head of registered animals are kept. "We have demonstrated the value of the sire to our own satisfaction and we have developed cows with good size and conformation. If the average farmer takes a good sire with the right conformation he can breed up some good stock from ordinary cows, provided they are strong animals. The one precaution to take is to get a sire that has a better production record than do the cows in the herd."

Mr. Smith has two herd sires: Korndyke Chimacum Hartog, a son of Spring Farm King Pontiac, the former herd sire, and King Pontiac Maun Ormsby, sired by Greenbank Sir Ormsby Hengerveld, the Bishop herd bull, at Chimacum. There are 20 head of cows in this herd that will average 19,000 pounds of milk in a year. It is said to be one of the highest producing herds in the west.

PREVENT ANOTHER CROP.

Even though the weeds took your garden, cut them down before they go to seed, thus avoiding a repetition next year.

THE POINT IS, GET HIM.

The motto of hunters in the United States biological survey is "If you are sent after an animal, bring him in."

Salesman, Onalaska, or write Graham Land Co., 1008 American Bank bldg., Seattle.

FOR SALE BY OWNER—15 ACRES, ALL IN cultivation; 2¼ miles from Forest Grove; extra good buildings; on gravel road; milk and mail route. Price $6800, including all the crop and some personal property. Box 488, Forest Grove, Ore.

BIG LUMBER CO. LAND SALE IN SKAGIT county; 40 acres, $1400; 20 acres, with new house, $1500. Lumber furnished for building. Lots of work for the settler; splendid district, roads, schools and towns. H. C. Peters, 726 3d ave., Seattle.

FOR SALE—GOOD HALF SECTION MONtana farm; 190 acres under cultivation; 8 miles south of Saskatchewan; 1½ miles to inland town, with daily mail; school, etc. $4000 cash required. Owner, Wm. Jungers, Turner, Mont.

7000 ACRES SEQUIM LAND SETTLEMENT project, containing the finest berry and dairy land in the state, now offered for settlement at attractive prices and terms. Free booklet. Thos. G. Mortland, Sequim, Wash.

FOR SALE—200-ACRE FARM, HIGHLY IMproved; 75 acres in orchard and garden; all can be cultivated; good buildings and equipment. Price and terms liberal. Write to Harvey McCann, Maryhill, Wash.

SELL YOUR PROPERTY QUICKLY FOR cash; no matter where located. Particulars free. Real Estate Salesman company, 501 Brownell, Lincoln, Neb.

WINTER SHEEP RANGE FOR LEASE; 40,000 acres, western Franklin county; fine grass, 3 springs, lake, corrals. The Big Bend Land company, Spokane, Wash.

AN EXCELLENT BUY IS THE NORTH HALF of the Colby homestead (N½ sec. 15, township 12 south, range 14 E.); for $500. Address Mrs. Sarai E. Witt, 7811 Greenwood ave., Seattle.

160 ACRES, IMPROVED; 60 UNDER CULTIvation; small timber; near railroad; good town, school; good roads. J. M. Finney, Harrison, Idaho.

30 ACRES, LAKE CHELAN, $1500. TERMS. Reply, stamped envelope, Stokes, Lakeside, Wash.

NORTHERN IDAHO FARMS, WESTERN OREgon timber lands; some good buys. Address B. Hanson, Medimont, Idaho.

147 ACRES, FAIR BUILDINGS; SPRING WAter; some timber, $1200; terms. F. T. Drumheller, Careywood, Idaho.

160 ACRES, ¼ MILE ADDIE; GOOD BUILDings; 10 acres cleared, $3000. $1200 cash, balance easy. Box 20, Addie, Idaho.

TRACT AND SMALL DAIRY, WITH GOOD paying milk route; price reasonable. J. W. Sharp, Moscow, Idaho.

FOR SALE—MY DAIRY RANCH NEAR COOS bay. H. W. Sanford, Sumner, Ore.

FARM LANDS—Wanted 654

WANT TO HEAR FROM OWNER HAVING farm for sale. Give particulars and lowest price. John J. Black, 80th street, Chippewa Falls, Wis.

FARMS WANTED—SELL YOURS QUICKLY for cash, no matter where. Particulars free. R. A. McNown, 310 Wilkinson bldg., Omaha, Neb.

FARM LANDS FOR RENT 657

WANT TO LEASE MY 320-ACRE WHEAT ranch in S. W. Idaho and sell summer fallow; a money maker for a little cash, and some work. C. A. Beckman, East Farms, Wash.

IRRIGATED LANDS—For Sale 663

IRRIGATED LAND FOR SALE IN SOUTHERN Alberta; having bumper crops this year. Write for prices and particulars. Apply W. M. Harris Agency, Ltd., Lethbridge, Alta.

FOR SALE OR EXCHANGE 702

STOCK RANCH, EASTERN ORE., PRICED right; 840 acres, fully equipped; trade for farm west Cascades, low altitude, Ore. or Wash. State price, full particulars first letter. Owner, Box 224, Fossil, Ore.

760-A. STOCK RANCH; DOUGLAS COUNTY; good orchard; fine water system. Price $20,000; mtg. $5380; trade for smaller ranch or city, 415 Jamieson bldg., Spokane.

320-ACRE FARM, GOOD CROPS; SELL AT bargain, or trade for coast property. Ed Green, Soda Springs, Idaho.

PIKE'S PEAK OR BUST

By LEWIS B MILLER

Copyright. 1921

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test, with the result that at no great depth they reach water. After a long rest, they fill their kegs and turn back for the old Santa Fe trail, some inclined to give up the journey to the gold fields, others determined to get to Pike's Peak or bust. Esau and Orlando, a little later, come upon a great wagon train of freighters out on the prairie and accompany them until they reach the Arkansas river. They continue alone, finally entering the open buffalo coutnry.

CHAPTER EIGHT.

Fording a Sea of Buffaloes.

At length the party of seven arrived at a little trading post—the first they had seen since passing Council Grove. An Indian trader, with a small stock of goods, mostly ammunition, had put up a sod house in a little grove of cottonwoods on the river bank. His house was surrounded with a stockade. He was there mainly to trade with the Indians, he told the travelers. But since the great tide of immigration had set in toward the gold diggings he was selling considerable quantities of powder and lead and caps to white men.

Night was nigh, and the foot travelers went into camp almost against the stockade, and in the edge of the grove. After supper the trader came out of his sod house and sat by their camp fire for an hour or longer. He informed the party that when trading with Indians he never permitted any of them to enter his enclosure. The gate was kept shut and barred. Through a hole in the stockade the goods were passed out and the pay taken in. Most of the pay was in buffalo robes, and all of it in skins of some kind.

Many thousands of immigrants had already marched by here on their way to the mountains, he told the campers. And, from what he had learned, vastly greater numbers would be sure to follow if the gold excitement kept up.

Next morning, the handcart and its fellow traveler, the wheelbarrow, moved on up the Arkansas. And so they continued to do day after day.

For a good while the wayfarers had been catching sight of little droves of buffaloes from time to time. But it was always from some high point. As yet the hunters they sent out had not been able to kill any, probably because they never ventured far enough from the trail. That was partly from lack of time and partly because lurking redskins might be waiting there to surprise stragglers. But at last, about the middle of a forenoon, the seven men looked ahead and saw the whole country, on both sides of the river, black with buffaloes. The animals were on their yearly migration northward.

As the little party of footmen neared the great drove Brindle gazed at them with wild, frightened eyes, and Frisk barked at them. Even the men themselves viewed that mighty throng of wild cattle with something akin to awe. For the trampling of so many hoofed feet kept up a dull but continuous roar. The buffaloes were moving and grazing at the same time. Mingled with the roar of their hoofs was the bellowing of the bulls. Indeed, those huge, shaggy fellows seemed to be trying themselves to see what an uproar they could make. Many of them, paired off, were engaged in furious battles. And others, facing each other, were pawing up the dust and making the whole plain resound.

"Reckon it's safe for us to vencher in among all that swarm of wild brutes?" questioned Esau. His words were addressed to Sanders.

"Why, yes; I rather guess it will be. They'll be apt to open a way for us when we come to 'em."

"But what if they get scared and stampede while we're among 'em?" suggested Orlando.

"They wouldn't be likely to crowd too close to us, I'm guessing."

"But if they got too bad skeered they might run right over us. And if they done that they'd tromp us all to mincemeat," protested a handcarter.

"Chances air we can tell what they're goin' to do when we git clost to 'em," Esau remarked. "But if they don't sidle away from us purty skittish-like, don't know but what I'll be in favor of callin' a halt right here till some wagons happens along. A wagon train will split a way through 'em if anything can."

"If they don't open a road for us of their own accord we can learn 'em good manners by pluggin' a few of 'em with lead," a handcarter suggested.

"No, let's not try that. That's too dangerous—altogether too dangerous," objected another man. "If there's anything that would start 'em to runnin' pell-mell, helter-skelter, that would be the thing."

"But we've got to shoot some of 'em, boys," Sanders reminded his partners. "We're just bound to lay in a supply of dried buffalo meat; and the time to do that is while we're close to this big herd. If we miss the present chance it's little we'll have to live on while we're mining. Little meat, I mean. Our supply of bacon wouldn't last hungry men very long when they're digging early and late."

"That's right," agreed Orlando. "For my part, I brought only bacon enough in old Brindle's pack to make grease to fry my other meat in—the meat I kill."

"That part's all right. I'm heartily in favor of loadin' up with plenty of dried buffalo meat." Esau was speaking. "But I'm not in for tryin' any butcher business while we're passin' through that whoppin' big drove. No tellin' what kind of a rumpus they'd kick up if we got 'em started good. Them crooked-back beasts looks danger's to me—downright danger's."

And Sanders answered: "Guess maybe it would be just as well to hold off till we arrive at the far edge of the herd. In fact, that would probably be safer."

The foot travelers were now within 200 or 300 yards of that vast, loud-voiced drove. As had been expected, the buffaloes parted when the cart and the wheelbarrow came close. But they opened only a narrow passageway, perhaps 300 yards wide. The travelers moved right on into the drove, though some of them did so with fear and trembling. For by the time they had marched 100 or 150 yards into the opening a handcarter said in tones that quavered and were pitched unusually high: "Boys, I ruther reckon this here's all right—what we're doin'. But for the life of me I cain't help feelin' a little—a little juberous. Ruther reckon I must feel a heap sight like pore old Pharyoh felt, him and his army, when they marched into the split-wide-open Red sea after the children of Isr'el. It was resky—downright resky. And so's what we're doin' this minute, I 'low. It's—it's shaky business. But I can stand it if the rest of you boys can. Yes, sir! I'll never be the first to flinch and holler stop."

"Oh, we'll pull through all right! Yes, we'll make it through safe enough, I've no doubt," Sanders answered, in light tones. But it could have been noticed that even he looked a trifle uneasy as he glanced around, and that his tones betrayed some nervous tension.

"Now that we've venchered in, ruther reckon we might as well keep moseyin' along and push through to the open country as soon as we can," Esau observed.

And a little later somebody else said: "About as safe to keep straight on now as it would be to turn back. If any of you doubts what I say, jest right-about-face and look behind us."

All eyes were turned at once, and everybody saw that the buffaloes were fast closing up the passageway. Already there was only a narrow lane scarcely as wide as the trail itself, through that trampling, bellowing host. And a few minutes after, when the nervous handcarter turned his head again, it was to exclaim: "The Red sea has already shut together on Pharyoh—has already swallered up Pharyoh! We're fordin' the Red sea!"

Once more the other six men looked back, to see that they were now completely surrounded by buffaloes.

On the little band of footmen marched, with their cart and their cow and their wheelbarrow, through that trampling, bellowing throng of crooked-backed cattle. And they could not help feeling few and weak and insignificant in the midst of those millions of wild brutes.

Orlando's eyes happened to wander to the far side of the camp.

"Gee whillikins! Did anybody ever see the like," exclaimed a handcarter, after they had been marching through that brown, restless sea for nearly half an hour. "Must be a million of these hump-shouldered critters!"

"Worse than a million! Million on millions of 'em!" declared the man tramping between the handcart's shafts.

Brindle, with her wild eyes and with her head held high, was marching along at a brisk gait. She did not seem to feel her pack, and she was in no need of urging now. Frisk, too, seemed very much impressed with the strangeness of his surroundings. He had ceased to bark, and kept very close to Esau and Orlando. His bristles remained up, he kept glancing about him uneasily, and from time to time he uttered low growls, scarcely audible above the general uproar.

As the seven men marched along, the buffaloes kept opening a way for them. But the passage was opened rather grudgingly; nor did it appear to be as wide as at first. Indeed, the nearest buffaloes seemed now but little more than 100 yards away, and within easy rifle shot. More than once Orlando, who was carrying his gun on his shoulder, pointed it towards the big game and took aim. But the gun was not cocked, and he had no serious thought of firing. None of the party had the courage to shoot and risk starting a stampede among that innumerable throng of wild beasts.

Finally Sanders exclaimed: "Boys, it's getting along toward dinner time! And I'm beginning to feel just a little bit hungry."

"Powerful sight of good eatin' here," Esau suggested. "All we need to do is to camp, kill and cook and then cram our carcasses till we're fit to bust."

"Bein' as we're where we air, and got around us what we have got, I couldn't—couldn't work up much appetite to eat here. Too much—too all-fired much like kindlin' a camp fire in a powder house," declared the timid handcarter.

Dinner time though it was known to be, nobody insisted upon halting for dinner. None of these travelers had ever been very close to a buffalo until that day; and as they pursued their way through the throng they gazed at the animals wonderingly. Most of the brutes had shed their winter coats. But their heads and necks and shoulders were still shaggy, only the hinder parts of their bodies being bare, or almost bare. Awkward and ungainly they appeared, and they did not seem capable of any considerable speed. Most of the bulls—all that were full-grown—were of huge size and of fierce aspect. And they were as warlike as they looked, for some furious battles they were waging among themselves.

At last, after perhaps an hour of steady marching, the travelers reached the far edge of this uncountable drove. As they emerged from among those plains cattle and saw open country ahead of them again, more than one man might have been heard to draw a long breath of relief. Indeed, all of them felt greatly relieved that they had passed through the peril without any trouble.

"Boys, now's the time to capture a mess of fresh beef. And here's the best place to dry all the meat we want to carry with us," Sanders told his fellow travelers, as soon as they were well clear of the drove.

"Jest for all the world what I was thinkin'" answered Esau.

And Orlando called out: "Yonder's the Arkansas ahead! And the trail leads rights along its bank, I can make out. Yes, and I see a little drove of cottonwoods that we can camp under for shade while we're drying our meat."

"That's what!" exclaimed a handcarter. "And if we want to barbecue any meat, we can fish driftwood out of the Arkansas for fire. 'Tain't the best fuel anybody ever seen, that driftwood ain't, but it' ll beat buffalo chips all holler."

The whole seven agreed that this was the very place to lay in a supply of meat. And a little farther on they turned out of the trail and marched over to the river bank. There, among some cottonwood trees and bushes, they went into camp. Now that moving stream of buffaloes was but little more than half a mile away.

"Jest looky yander, boys! You cain't see no end of 'em!" called out Esau, after he had removed the strap from his shoulders and let down the handles of his wheelbarrow. He was pointing to some hills on the far side of the river. Down those slopes thousands of the brown beasts were still moving.

"My stars! What goshens of good beef is goin' to waste here!" exclaimed a handcarter. "Sech a lot of steaks—sech a lot of fine, juicy steaks, and not a soul to eat 'em!"

"Somebody to eat one, and a mighty thick one at that," announced Esau. "Pushin' a wheelbarr' all the way from Illinois to the Arkansas gives a feller a starvin' good appetite."

"I'll bet it does! I'll just bet a button it does that very thing!" Sanders was speaking. "Same way with pushing and dragging this old gocart of ours all the way from Michigan to the present camp. But we'd better hustle out, quick as ever we can, and lay in a supply of fresh meat. If we're too slow about it that live stream may run dry before we get a drink."

Ere long began the excitement of making ready for a buffalo hunt; this party's first buffalo hunt. Brindle had been tied securely to a bush. And now Orlando, after putting fresh caps on his rifle and six-shooter, as the others had done, was soon following his party to attack that marching army of big game.

Near the point where the first animals were coming up the river bank was another little cluster of cottonwoods—a few trees and numerous bushes. Toward that grove the hunters moved. When once among the bushes there they found themselves within shooting distance of the nearest buffaloes.

"What's the best kind to shoot for beef?" questioned Orlando, in rather cautious tones.

Sanders paused in his preparations to fire and answered: "They say any cow is good, but a half-grown heifer makes away yonder the best eating."

Presently the cracking of rifles, little more than a faint popping out in this open country, began to be heard among the cottonwoods. Some of the hunters killed their game outright, while others only wounded theirs. One or two, owing to nervousness, missed their live targets altogether. Those who had only wounded animals ran out and finished them at close range with shots from their six-shooters. And those who had missed shot again, as soon as they could reload their rifles. When it was over, all had brought down a buffalo apiece.

Being thoughtful, sensible men, most of them, they killed one animal each for meat, and to be able to say they had killed a

buffalo. After that they were well content to let the others go in peace.

As the hunters rushed out of hiding the nearest buffaloes retreated. Soon all the men were at work removing the skins from their game and cutting up the carcasses. There was more meat than could be used, and they would save only the best.

When the game had been cut up in pieces, ready for carrying, three of the hunters returned to camp. There, with an ax, they cut some slim cottonwood poles. On those poles, working in pairs, they carried their meat to camp. There they laid it on the skins or on the grass until they could cut it into strips for drying.

While one or two were starting a fire of twigs and buffalo chips, others, barefooted and barelegged, were wading out into the shallow river, where they captured driftwood and carried it ashore. With this, aided by some dry limbs found in the grove, they quickly had a good camp fire burning.

Now they put on two skilletfuls of biscuits, seasoned with buffalo tallow, to bake. On those and on broiled buffalo steaks they all made a hearty meal. After eating they rested a while.

When well rested they fell to work with their knives and sliced their meat into long, rather thin strips. Some of these they strung on strings of buffalo hide, stretched from cottonwood to cottonwood, and left to be dried by wind and sun. Other strips they thrust through with sticks. The sticks were then laid in forks, so that the meat would hang over the fire. There the heat and smoke would dry it fast.

"All of it would dry quicker if we had it over a fire," somebody suggested.

"That it would—to be sure it would," admitted Sanders. "But barbecued or smoked meat soon gets very tiresome if you make a steady diet of it. I know. I've tried eating it often—barbecued beef. A little now and then goes down all right. But too often or too much, thank you."

The meat hanging in the sun dried as fast as could be expected. But the party had to remain in camp for a few days before all they would need would be dry enough to pack away. The great stream of buffaloes continued to flow by; but it was now a mile or more east of the campers.

While the footmen were busy with their meat drying, great numbers of other travelers passed by, moving in every possible way. Once, not long before sunset, a wagon train went into camp on the river bank, only about half a mile below.

After supper Orlando and Esau strolled down there. And almost the first people they saw were three men they knew—Holloway, Wallace and McKinley.

"Well, you didn't let that little dry spell on the Smoky Hill route send you back home, after all, I see!" Esau called out, on recognizing the three men at their camp fire.

The wagon party sprang up. "Why, hello there, Haggerty! No, we made up our minds to keep a-comin'," Wallace answered. "For my part I own up I was in the notion to march straight back to old Barton county. But the boys here talked me into goin' ahead. I'm mightily afeared we're all on a fool's airnd. But reckon maybe I can stand it if Jess and Tom can."

"I'd started for Pike's Peak; and even if we did get a little bit thirsty when we strayed off on the wrong road, that didn't discourage me," Holloway spoke up. "I've got a miner's pan there in the wagon, and I don't want to sneak back home without getting the pesky thing wet."

"That's just the way I feel about this trip," Orlando assured them. "It will take a lot to turn me back."

The visitors soon seated themselves, and they and the campers began to exchange experiences. But Orlando's eyes happened to wander toward the far side of the camp. At once he sprang to his feet.

"Believe I see somebody else over yonder that I know. Guess I'll step over and make sure," he remarked, by way of excusing himself.

Passing by a number of camps that had no special interest for him, he had soon stopped at a particular wagon and was greeting the Cooper family. They gave him a warm welcome.

"So you didn't get to the mountains ahead of us, after all," Mrs. Cooper remarked, when the visitor had been given a box to sit on.

"No, ma'm. Fact is, we've lost a lot of time from traveling. Two days we've been camped here already, drying buffalo meat. And we lost nearly two weeks, all told, back toward Council Grove. We're trying hard—"

"Nearly two weeks! How did you come to lose so many days?" asked Cooper.

"We tried the Smoky Hill route—that's how."

"And why didn't you keep on on the Smoky Hill route?" Cooper's wife wanted to know.

"Well, after tramping a straight stretch of 60 or 70 miles without water we thought we had a good excuse for taking back track."

"Sixty or 70 miles without water! Why, how in the world did you live through it?" questioned Hazel, eagerly.

"Oh, people can live a good while without water—when they have to. We trail trampers were still pushing ahead as fast as we could. But when we met a wagon with three men, all three walking and driving for life, then we called a halt."

"And did you have to travel all the way back without water?" asked Hazel's mother.

The visitor shook his head. "We thought at first we'd have to do that, or try to. Chances are we'd have died by the roadside, most of us. But instead of that we dug for water and found it—dug in the sandy bed of the Smoky Hill river. And even after that we nearly traveled ourselves to death getting back to a watering place. The men we met driving for life are camped over yonder now."

"Oh, was it you that had that experience with Holloway and his partners?" asked Cooper. "I spent a few minutes at their camp last night and heard 'em telling about what a terrible time they had. They were talking to some other men when I stopped there, and I didn't hear all of their story."

For an hour or so longer the circle around the Cooper's camp fire chatted, the visitor giving all the details of his party's experience in the waterless region, and the family relating their own experiences since he had seen them.

"You fellows were lucky to scramble out of your scrape as easily as you did," Cooper remarked.

"How much longer do you expect to remain in camp here?" Mrs. Cooper inquired, when the young fellow had stood up to go.

"Till our buffalo meat gets thoroughly dry. About one more day ought to be long enough, we think. Two at the outside."

"Reckon maybe we ought to dry some meat in the sun," Cooper said. "We ran onto some buffaloes two or three days ago and most of us killed one apiece. My folks and I cut up the one I killed and we kept it over a slow fire all that night. Next morning it was as dry as need be."

"Well, if we don't see you before we roll out in the morning, you're likely to overtake us again before many days, I suppose," Mrs. Cooper was speaking.

"Yes. Our party ought to come up with you in three or four days at the longest. But I'll see you again before you start in the morning. And Esau will come with me, I guess. Don't s'pose he knows you're here."

Now the visitor returned to his own camp. But after breakfast next morning both he and his partner strolled down to see the Coopers. They found the family ready to start and helped the man to yoke his oxen.

The young man made excellent use of the time allowed him. And when at length the wagon train was starting, he congratulated himself that he and the girl were already pretty good friends.

"I'm expecting to see you again in a few days," he told her. "We ought to overhaul you before very long."

"I hope so. I'm sure I hope you will," she answered shyly, at the same time giving him a half smile and a timid glance from her dark eyes.

The family climbed up and disappeared into their big wagon. But Orlando and Esau tramped along by the wagon till they arrived at their own camp. And more than once on the way Hazel raised the canvas and looked out to say something, or to answer her admirer's questions. When the two men had turned aside, Orlando stood gazing after the wagon train. And he continued to gaze till the last wagon had disappeared.

After the long wagon train had crept beyond his range of vision Orlando busied himself about the camp for a while. First he walked out a few hundred yards to where Brindle was grazing and examined her foot. At the time of stopping here she had shown some signs of becoming lame.

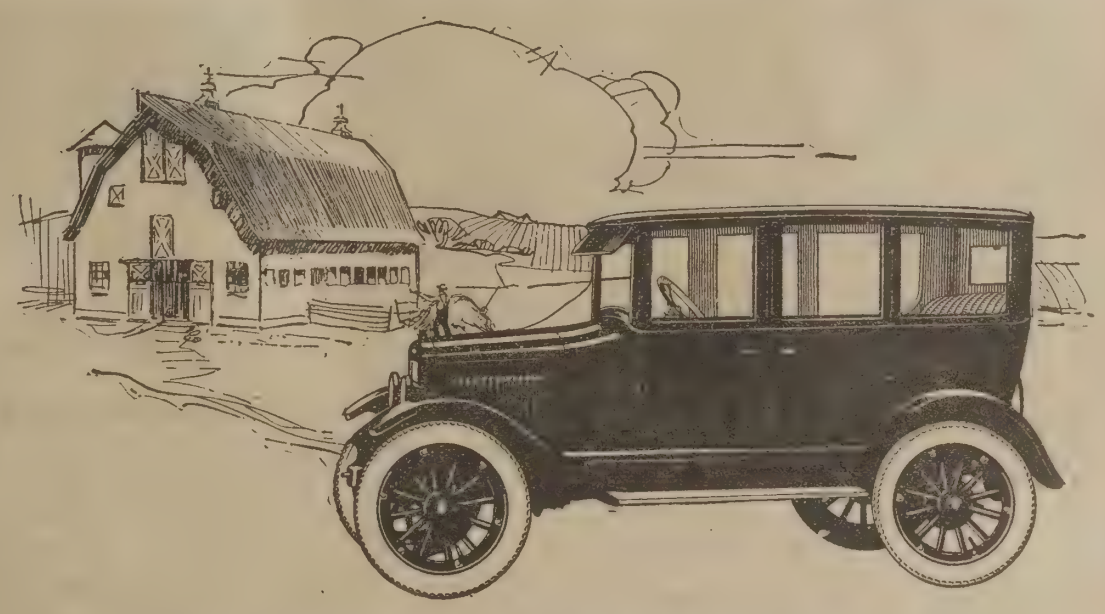
"I'm sorry to have to do this," said little Johnny, as he spread the jam on the baby's face, "but I can't have suspicion pointing its finger at me."—Everybody's Magazine.

Ins and Outs.



"Business ain't nothing like the army," complained an old-timer. "In a business office you walk right into the room marked 'General,' but you gotta keep out of the one with 'Private' on the door."—The American Legion Weekly.

Why They Went.

As the Sunday school teacher entered she saw leaving in great haste a little girl and her smaller brother.

"Why, Mary, you aren't going away?" she exclaimed in surprise.

"Pleathe, Miss Anne, we've got to go," was the distressed reply. "Jimmy swallowed hith collection."—Boston Transcript.

The IDEAL FAMILY CAR

THE wonderful dependability of the Overland Sedan makes it the ideal car for the American farm.

Every riding and driving convenience is yours in this beautiful car. It comes completely equipped with electric starter, lights, battery, demountable rims and regular three-speed transmission.

Triplex Springs swing you over the rutted road or smooth macadam in a riding comfort equalled only by cars of longer wheelbase and much higher price.

The 27-brake horsepower motor carries you more miles at less cost than any other car. Owners average 25 miles and more to a gallon, and repair costs are surprisingly low.

You cannot afford to buy another car before you see the Overland Sedan.

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I find so many good things in the CIRCLE that I want to pay a few of my debts to it. I want to thank Mrs. C. F. L. for her fritter recipe which I have wanted for a long time and which is fine.

To keep vegetables fresh when one has no cooler, use a container, preferably glass or crockery. Put just enough water in the vessel to keep the roots of the vegetables covered and stand them upright and cover and keep in a cool, dark place. I take a whole bunch of celery just as it comes, place it in a glass jar with a wide mouth and put in water enough to come up well over the root. Then I make a cone of paper and slip over the whole thing, crushing the paper firmly around the bottom of the jar. The celery will grow and blanch beautifully and I have kept a bunch two weeks this way. Asparagus will keep a week or more this way and grow and be more tender and crisp.

Leave the foliage on such vegetables as radishes, putting just the tips in the water and if badly wilted, sprinkle with cold water. Any kind of vegetable of this sort can be kept this way, taking care to keep only the roots in the water. The darker the place the better. I have kept a cabbage this way for a week and greens washed and sprinkled and covered tightly and put in a cool place will be as crisp as when fresh cut by the next day.

We have taken THE FARMER ever since it was printed and before it had its present name.—Mrs. J. J.

Dear Mrs. Barland: I am like hundreds of other farmers' wives. I live 30 miles from a railroad and there is very little except work in our lives. And yet I feel as you do about the beauties of our wonderful country and its privileges. There are very few who do not get mail every day, no matter how remote we are from the railroad.

This valley where we live is beautiful and rich. We came here seven years ago and put all the savings of years into this place and we have lost out. Drought and high prices have been too much for us and we are only one of many in like circumstances. The mortgage holders are closing out one after another and our time will come. But if we can only have our health I do not fear.

I started this letter to tell you how much I appreciate your talks; they have the true friendly ring to them and I will say in he words of the soldier boys, "Carry on." The poor mothers get discouraged and need the friendly talks you know so well how to write.

It is well, as you say, to take time to enjoy the sunsets. Some are very beautiful and when I look on them I seem to hear the words: "At even time there shall be light," and I think the dark valley which we must all pass through will be lightened by a glow from the other shore.

I will close with a good remedy for burns. There is nothing better than to apply common baking soda, wet with lime water. It is well to have some such remedy prepared. Take a lump of lime the size of an egg, put it into a glass jar, cover it with water and let it settle. To use, wet the soda in this and apply as soon as possible and it will take out the pain and is something so easy to have on hand.—Mrs. C. T. C.

Dear Mrs. Barland: I take the greatest interest in the Family Circle page and after reading "Columbine's" letter and noting her wish that more young girls would write I have taken courage to do so.

I am 18 and an "honest to goodness" farmer. I stay in town and attend high school during week days, but I feel 100 per cent better when I cross the city limits on Friday nights.

It is one of my favorite pastimes to get lost in the sweet apple blossoms and sit and daydream. The roan and buzz of the city gives me a repugnance for it. The saying, "What is so rare as a day in June?" should have "in the country" added to it.

I do not milk cows and such work unless dad is gone, but I do pick cherries, now hay, drive derrick and countless other things and enjoy it much more than my necessary housework.

We have no time to get lonesome, mother, dad and I. When one has 100 acres of fruit land it keeps one busy cooking for hired men and doing other odd jobs. I style myself professor of odd jobs, because I have done most everything, from feeding the cattle to painting. Don't misunderstand me, my dear readers, I mean painting my nephew's wheelbarrows.—Elsie Schwald, Oregon.

Dear Mrs. Barland: I am only 15 years old, but I enjoy the Family Circle and I, too, would like to have more girls write. I would like to correspond with "Columbine."

I live on a large farm on the Columbia river and I have a pony to ride. We have lots of fruit and good swimming and boat riding. We live just across the river from the Colville Indian reservation.—Olive M. Willard.

Dear Mrs. Barland: You said when we have anything good, to send it in. I want to say a word to lighten the separator work. To those who don't have a good deal of milk, strain into the separator can and put in about one-third as much cold water. In a couple of hours you can run off the milk and the cream will come last, pure and sweet. Then just wash the can for the next batch and all is done. No worry these hot days and I assure you that you will get all the cream from the milk. Try it, you tired, busy housewives, and see the difference.

As a last word will say take that separated milk, put in a little flour for your pet lambs and see them smile and grow fat.—Mrs. Jennie Hain.

Here are some things which relieve whooping cough and will no doubt be good for those which accompany colds so common with children.

One mother says eucalyptus oil did wonders for her children. She says: "The odor is so strong that they often object to it so I rub it on the soles of their feet and a little on throat and chest and when I put them to bed I pull the bed clothing close about their necks to shut out the odor. When I had fixed them up this way they would often sleep all night without coughing." MRS. K. E. K.

Another—Take half a glass of sorghum and stir into it half a teaspoon of soda and let ferment for 24 hours, then give a little frequently to children with whooping cough. This will shorten the duration of the disease. MRS. L. L.

Montana.

Home Recipes

Grape Juice—Bring to a boiling point 25 pounds of grapes, one pound of sugar and one quart of water. Squeeze through a jelly bag and return the juice to the kettle with four pounds of sugar. Boil well for 15 minutes, bottle and seal.—Mrs. I. J. H., Washington.

Pear Butter—A long time ago there was a request about putting up pears which are blown from trees before they are ripe. I will tell how I saved mine. Pare and core the pears and cook as for canning. Then put through a fruit press or a colander and add spice to taste and sugar. Sometimes I use only cinnamon and sometimes I add clove and nutmeg. Another way to save the pears is to cut in halves and core, but do not peal. Put in a pan and sprinkle with quite a good deal of sugar and cook in a slow oven for half a day or all day till they are a light brown and the juice like sirup.—Mrs. B. S., Wash.

Spiced Pickles—Put fresh cucumbers into fruit jars or stone crocks, make a brine of 1 gallon of boiling water, 1 cup of salt, allowing enough to cover the pickles. Scald this same brine and pour over for nine mornings, then wash cucumbers and cover with spiced vinegar to taste, pouring it over hot and seal. I add a piece of alum to keep pickles firm.

I make some pickles by adding to the cucumbers small onions and bits of cauliflower. I pour the hot brine over these for two or three mornings, then mix with the cucumbers and add spiced vinegar same as for the cucumbers alone. This is an old and tried recipe.—A Subscriber, Oregon.

Drying Prunes—Put them in boiling water for two or three minutes in which has been added one teaspoon of baking soda to a gallon of water. Remove from the water and place on shallow dishes and place to dry in a rather high temperature which should be lowered after a few hours. I start mine in the baking oven and afterward remove to the warming oven. I do not remove the seed or use any sugar, and they are like those we buy in the stores when dried this way. Plums can be dried the same way, only being so juicy they require longer to dry.—Mrs. Hattie McClure, St. Maries, Idaho.

Soap from cracklings, No. 2: I use all kinds of clean fat scraps, rinds, etc., unless the cracklings have been put through a lard press, and in that case there will not be enough fat to make it worth while to use them.

Five pounds of cracklings (if very fat 4 1-2 will do), one can of lye, three gallons of rain water. I put all this together in a five-gallon coal oil can and set it on the stove where it will boil slowly. It should become soap in four or five hours and when finished will drip from the ladle like thick sirup. It is best to test some in a small dish to see if it is solid soap; if there is water in it continue to cook longer. Set aside until next day to cool and then cut into cakes.

It should be thoroughly dry before using, as it improves with age. This recipe has been in the family for years and I make all the laundry soap I use. MRS. J. E. H.

Idaho.

To Can Fresh Milk—Put the milk on stove and bring to a boil; be very careful not to scorch it. Scald your jars and fill with the milk and put on the rubbers and caps and cook just a few minutes in the jars in hot water. Tighten the caps and set in a cool place. I have kept milk canned this way for months and it was just as good as the day I canned it. This is a good plan for people who keep but one cow.—Mrs. E. B., Oregon.

Just Folks

There is something in trying to make of each day the whole of life.

The evening and morning make up a complete day.

When the day is done the books are balanced. They may be and they may not be opened again.

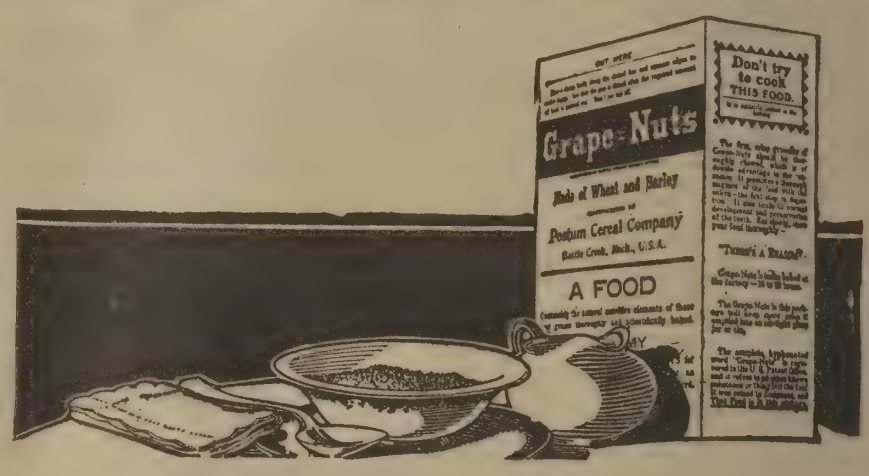
There is nothing necessary that is carried over from the evening to the morning.

Every morning is the joyous dawn of a new life; and the evening satisfies with the joy of the harvest.

There is no magic about the morning miracle of work and the evening miracle of rest. It is simply the beginning and the ending of the chapter.

Plan for the new chapter always, but let it always be a new chapter.

Let the freshness and vigor of youth enter into every morning. Let the ruggedness of action characterize the midday. Let the graciousness of age close the chapter at night. So shall growing content come with the days; so shall new visions enter into the years; so shall there be light at eventide.



This is no new philosophy of life. It is as old as the Bible.

"And God said, Let there be light: and there was light. And God saw the light that it was good: and God divided the light from the darkness. And God called the light day, and the darkness he called night. And the evening and the morning were the first day."

And the other five days of creation, composed of the evening and the morning, each told its own completed story. It will be noticed that it was not the morning and the evening that made the first day in the drama of creation, but it was the evening and the morning that made up the day. It is the evening that makes the morning worth while. Results tell the story of the day. The morning, of itself, has no results. It is the beginning, it is opportunity, it is a prophecy. But the fruitage of the day is in the evening. The evening is the crowning of the day, not merely the ending of the day. The dawn of the morning may be inspiring, but it is the inspiration of promises, not the golden fruitage of fulfillment. There is nothing to mar the beauty of the morning promises, but they are mere promises, like the colors in the rainbow.

The evening may bring forth its record of achievement, as well as the tale of broken promises, show the stains of labor on its hands, may wish that much of the day had been otherwise, and yet, through it all, if the purpose was straight, its look was upward and onward, if failure only stirs to greater endeavor, and if the evening brought forth a day's work that was worth while, something added to life, something on which to base greater attempts, something to cheer the soul and make it more ready for another evening to come, then the satisfaction of the evening will outlast all the rainbow promises of the morning.

EAS

No heat with this summer meal

A DISH of crisp, delicious Grape-Nuts, with cream or milk (some berries or fresh fruit, too, if you like) is cooling to serve, cooling to eat and cooling to digest—with a charm of flavor and goodness that rouses appetite enthusiasm. No preparation, no cooking—no heating of the body afterward, as heavy, starchy meals do—but well-rounded nourishment for every bodily need.

There's a noticeable feeling of lightness and comfort after such a meal.

Try this way out of the heat, bother and uncertainty that usually goes with the midsummer food problem.

Order Grape-Nuts from your grocer today

"There's a Reason"

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

What does the human body need in order to be healthy?

First, the body must have fresh air. Therefore, every room you occupy should be adequately ventilated. Fresh air never hurts any one.

Dr. Copeland.

The reason persons unaccustomed to drafts catch colds is because the regulatory apparatus, that is, the skin, has lost its natural protective power. The result is their bodies become chilled, and as a consequence, the resistance is lowered. This permits the germs they have harbored in their noses and throats to become active. Become accustomed to cool temperature and fresh air. Wear only a moderate amount of clothing, and have it fit loosely, and your body will soon learn to react to changes in temperature, and in this way to protect itself.

Of course, when overheated, you should not sit in a draft or in the cold without some additional covering. When your body is in vigorous action it must get rid of the excessive heat produced. Just as an engine in operation becomes overheated, so does the body become overheated. The body gets rid of this excessive heat by dilating the bloodvessels in the skin and by pumping the blood from the internal organs into the skin to cool. Then it is pumped back into the internal organs to perform its usual function. The more violent the exercise the greater the dilation of the bloodvessels in the skin and the more forceful the heart action. If you cease vigorous exercise and sit in a cool or drafty place before your body can readjust itself, your blood will be too quickly cooled in the dilated bloodvessels and you will become chilled and your resistance will be lowered.

You would not think of putting cold water into an overheated engine, because it would crack the cylinders or do some other harm. Be as considerate of your body.

You should get ample rest and sleep. Eight hours out of 24 is a safe average. We should get sufficient recreation, but we must not sacrifice our sleeping time to gain it.

Do not overeat. Overeating is absolutely injurious. Eat slowly and enjoy your food. Meat once a day is usually sufficient. Let your diet be a mixed diet—that is, a diet consisting of vegetables, cereals, milk and its products, as well as meat. Prefer the coarse foods, such as whole wheat and rye bread, unpolished rice, whole corn flour, etc. Do not eat heavily when overtired or when mentally overwrought.

Wash your face and hands before each meal. When possible, rinse your mouth before and after meals. Bathe frequently. Keep your teeth, gums and tongue clean.

ANOTHER USE FOR LEMONS.

Sometimes, when water is allowed to stand in a glass for several days, we find it has left a mineral deposit on the inside of the glass, which is very difficult to remove by ordinary method. Try a piece of lemon for scouring off this rough, gritty film.

RETAIN THE BERRY FLAVOR.

Practice washing the cherries before pitting, strawberries before hulling, etc., thereby retaining the flavor and juices that would be lost if the fruit were washed after pitting or hulling.

KODAK Enlargements

Special for August

Most of your kodak negatives will make excellent enlargements—the kind you'd like to keep.

During August we will make our exclusive Art Proof Enlargements, 7"x11" size, with handsome dekkle edge, beautiful embossed center panels at these

SHEET MUSIC WRITE US

Invest $1.00 in Instruction and Entertainment for Your Family

When you send $1.00 for a five-year subscription to The Washington Farmer, you spend the money, not for yourself alone, but for the good of the entire family.

This home and farm weekly keeps the entire family informed about the farm life of the state, and brings new light to bear on every phase of agricultural progress. The interests of boys and girls are given plenty of space. There is a constant interchange of experiences, ideas, opinions and methods of strong appeal to the housewife. The stories, illustrations, and special features appeal to all.

A dollar seems a small sum to pay when you consider how many receive pleasure from its expenditure.

This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

If your subscription is already paid in advance it will be extended from the date to which it is paid. Aug. 24, 1922.

High Points in News of the Week

The two outstanding features in the strike situation last week were the intervention of the five big brotherhoods of railway employees in an attempt to end the strike of the 400,000 railroad shop workers and the appearance of President Harding before a joint session of congress with a message reviewing the entire strike situation and suggesting certain legislation with a view to improved industrial relations.

Probably the action of the railway brotherhoods is more important from the standpoint of its immediate effect than is the address by the president. These brotherhoods include organizations such as those of the engineers, firemen, conductors, and so on, which are not on strike, but which have been threatened with being drawn into it if settlement is delayed much longer.

At this writing the terms of the proposed settlement as drawn up by the five brotherhoods have not been made public. They have, however, been presented to the officials of the striking shopmen and to the railroad executives. It is understood that the terms are acceptable to the strikers. The railroad executives are holding sessions discussing the proposals and have promised to give a definite answer early this week.

There is little information available upon which to base a prediction as to the likelihood of the success of the plan, but the continuation of negotiations after several near breaks, with the threat of complete railroad tieups, strengthens the hope that an agreement will yet be reached to avoid complete paralysis of transportation.

Numerous organizations and massmeetings of producers and shippers have been held during the last week, resulting in a flood of telegrams to the president and others in positions of authority to do everything possible to bring about an early settlement to avoid losses of perishable products that can not be shipped even with the partial tieup now existing. Fruit growers of the Pacific northwest and of Pacific coast as a whole have held numerous meetings and have sent urgent appeals to the president.

President Harding in his message to congress took up not only the railroad strike, but the coal strike as well. Probably one of the most important recommendations that he made was that a government agency be established with sufficient federal capital to buy and sell enough coal to stablize the coal market by insuring equitable distribution of the supply and prevent extortionate prices. The president emphasized the basic principle of the right of any man to work unmolested. He declared in favor of such modifications of the present law as to enable the government to compel both railroad operators and railroad workmen to abide by findings of the railroad labor board in such cases as the present one. He, however, made no recommendations for speedy action on any of these points with a view to settlement of the present industrial disturbances, but looked rather to the future, apparently in the belief and hope that the present strikes would be ended through existing means.

* * *

Much improvement was seen last week in the coal situation. Settlement of the strike was effected in a large percentage of the coal mining regions, with prospects for settlement in others. Negotiations for a complete reopening of all the mines that have been idle or operated only partially since last April are under way. Some are already operating. Indications are that operation will be restored sufficiently to avoid the coal famine that has been threatened since the strike was called. Continuation of a possible extension of the railroad strike, however, would render the settlement of the coal strike only partially effective in bringing relief.

* * *

After several months of debate the senate last Saturday passed the administration tariff bill by a large majority vote. The measure now goes to a joint conference committee made up of five senators and five members of the house of representatives. This committee will endeavor to harmonize the differences between the tariff rates adopted by the lower house and those included in the senate bill just passed. The senate fixed much higher rates on many articles than did the house. One important feature of the bill is a provision that the president shall have authority to increase rates from time to time as occasion seems to warrant. It has been estimated that this tariff bill, if allowed to stand as passed by the senate, will raise $400,000,000 in revenue the first of the year. This is said to be $500,000 more than that raised by any other tariff bill in the country's history.

With the tariff bill now out of its way until the conference committee reports, the senate is expected to take up next the soldier's bonus bill. While it is expected that the bonus bill will cause long debate, it is freely predicted that the measure will be passed. It has already been passed by the lower house of congress, but with no provision for raising the money. President Harding has repeatedly made it known that he will not sign any bonus measure which does not include within itself provision for raising the necessary funds with which to pay the soldiers. He has designated the sales tax as the method which he favors for raising the money. As it seems hardly probable that the senate and house will adopt this method, it seems correspondingly improbable that the president will sign the bill. If he fails to do so, the question arises whether or not both houses will be able to pass it over his veto. Ability to do so seems unlikely.

* * *

One million boxes of apples are scheduled to go by ocean steamers to American and foreign markets this season, according to an agreement which has been made between northwestern apple growers and the port of Seattle. Recently an intercoastal steamship with refrigeration left for the Atlantic seaboard with fruit, reindeer meat from Alaska, frozen fish, eggs and poultry. En route south the vessel picked up California citrus fruits and other perishable products. Formerly all this tonnage moved to New York and other eastern centers by train.

Last year when the railroads were hard pressed to furnish refrigerated space for the movement of 32,541 carloads of apples the growers took advantage of the cold storage space, enough for 2000 tons, and this seems to have been a leader for the rapid increase in the movement of this fruit in refrigerated ocean vessels.

Farm Business and Markets Outlook

(Continued from page five.)

September, October, $28.

SEATTLE, Aug. 19.—Cash wheat—Hard white, soft white, western white, hard red winter, soft red winter, northern spring, $1.05; western red, $1.03; Big Bend Bluestem, $1.20. Hay and grain, unchanged.

MINNEAPOLIS, Aug. 19.—Wheat—Cash, No. 1 northern, $1.07 1-4@1.13 1-4; September, $1.02 1-4; December, $1.01 7-8; May, $1.06 3-4.

Corn—No. 3 yellow, 56@56 1-2c.

Oats—No. 3 white, 46 5-8@49 1-2c.

Barley—38@48c.

Flax—No. 1, $2.38 1-2@2.39 1-2.

DAVENPORT, Wash., Aug. 19.—Bluestem, $1.10; Marquis, $1.05; Gold Coin, 93c.

POMEROY, Wash., Aug. 19.—Turkey red, 93c; hybrid, 88c.

DAYTON, Wash., Aug. 19.—Club wheat, 94c; red, 91c.

RITZVILLE, Wash., Aug. 19.—Bart, $1.10; red, 96c; fife, 90c.

ODESSA, Wash., Aug. 19.—Marquis, Bluestem and Bart, $1.09; Turkey red, 96c; Jones fife, 92c.

WALLA WALLA, Aug. 19.—Bluestem, Turkey red, Bart and Club, 89c.

Hay and Feed Grain.

PORTLAND, Ore., Aug. 19.—Millfeed—Prices f. o. b. mill; mill run, ton lots, $31; middlings, $43; rolled barley, $36@38; rolled oats, $44; scratch feed, $48 per ton.

SEATTLE, Aug. 19.—Eggs—Select local ranch, white shells, cases included, 24c per doz.; mixed colors, 23c per doz.; pullets, 19@20c per doz. Cases returned to shipper 1c less.

Butterfat—F. o. b. Seattle: A grade, 45c per lb.; raw milk, $1.90 per cwt.

Poultry—Hens, 4 1-2 lbs. and up, 22c per lb.; over 3 1-2 lbs and under 4 1-2 lbs., 15c per lb.; 3 to 3 1-2 lbas., 10c per lb.; 1922 broilers, 1 lb. and heavier, 20c per lb.; old roosters, 10c per lb.; geese, fat, live, 16c per lb.; do fancy dressed, 22c per lb.; ducks, 3 lbs. and heavier, live, 12c per lb.; spring ducklings, 3 lbs. and heavier, 18c lb.; turkeys, fat, dry picked, 12 to 15 lbs., 40c per lb.; do live, fat, 7 to 10 lbs,. 35c per lb.; squabs, large, $3 per doz..

SPOKANE, Aug. 19.—Poultry—fat hens, 17c lb.; light hens, 14c lb.; roosters, 8c lb.

Fresh ranch eggs—$6.50@8 case; no storage.

Butterfat—40c a pound.

Wheat Market Outlook

(Continued from page six.)

tralia, which is larger than most estimates, so that the total carryover or surplus of old wheat, after all, may be only 130,000,000 to 140,000,000 bushels. If it develops that a further reduction is to be made in the coming year it means a strong statistical situation, which should maintain a fairly satisfactory price level.

Trend Seems Upward.

So far as the local influences go, a severe car shortage, which is certain to occur this fall, will help to sustain the market to the extent that it prevents farmers from selling. Furthermore, the general trend of prices seems to be toward a higher rather than a lower level. This factor can't be counted upon for much help, however.

It must be understood that this analysis is tentative, which is the best that ever can be done at this time of the year. The crop estimates for Canada and the United States are most dependable, but even they are subject to change and the amount needed for home use is another variable. Crops in the southern hemisphere may exceed or fall below the average and the world outlook will be changed accordingly.

A still longer view is not so hopeful for the wheat grower. Russia was formerly the chief exporter, but her place has been taken by expanded production in other countries. Last year even India sent practically no wheat abroad and the Balkan states shipped only about one-tenth of the amount they exported annually before the war. But North America, Argentina and Australia were able to meet the import needs of the world. Eventually Russia will come back, the Balkans will return to normal production and India will be in the exporting game at least in a small way. When these conditions arrive, either a lower world price level or decreased production in North America and the southern hemisphere is in prospect.

WIND DAMAGES FRUIT.

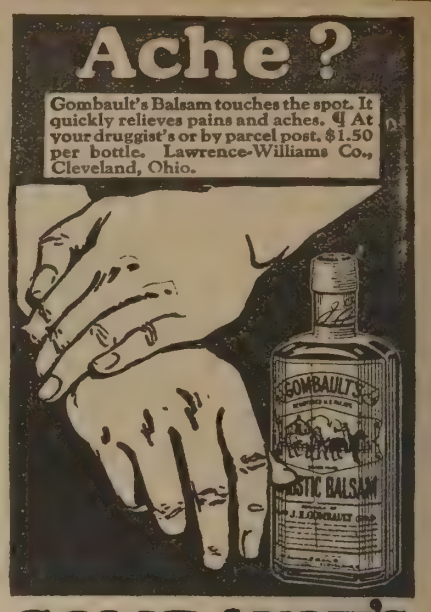
A report from Kennewick says that the high windstorm of August 19 did much damage to the fruit crop of that section, especially to the Bartlett pears. A large percentage of the pears were blown from the trees, suffering damage which makes them of comparatively little value for shipping. Damage to apples is reported to be much less.

Skagit County Fair

(Continued from page three.)

that is being done by the county agricultural agent, C. H. Bergstrom, showing such work as seed treatment, potato spraying and fertilizer demonstrations. The extension service of the state college had two booths in which they showed many phases of farm problems and their suggested solution, including a model bull pen and a wooden hoop silo. The White Bonanza and Victory oats were shown as a result of a five-year trial on the J. H. Hulbert farm at Laconner. Three varieties made an increase of 8.8 bushels per acre over Swedish Select oats.

The woman's department brought out a large variety of articles made and used in the home, the exhibits coming from all parts of the county. The largest division was the culinary section, which is the biggest display of this kind that has ever been shown in the history of the fair. "It goes to show that the women are taking a greater interest in the products of the kitchen and in showing other women what they can do," said Mrs. Jackson, secretary of the department, "than they have ever done before. The collection of canned goods shows that there is a larger variety of canned fruits and meats being put up and that the tables of the people are being better supplied."

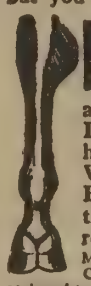


One of the new features of the show this year was the rest room, where the Federated Women's Clubs served tea and wafers to the ladies and milk to the babies every afternoon. Miss Mary Sutherland gave talks on nutrition and told how the state college could help them in such work. Many women and a few men went to her for advice and to secure bulletins on different subjects.

The varieties of flowers seemed to be more varied than in the past and the competition was very keen.

The educational exhibit was far superior to anything ever shown in Skagit county before.

The needlework compared very favorably with all departments and included classes of articles made by women over 60 years and some of the ages were as high as 90. The Northern State hospital entered a practical exhibit of work that was done by the inmates. It covered a large variety of household articles.



The art division included hand-painted pictures and painted china, all of which was new work and none that had been carried over from last year.

Farm Lands for Sale
Read our "Want Ad" Page for good offers this week.

Fifteen miles from town, up in the mountains to Okanogan county, Washington, lives Coral Randall Meyer. This is the first time she has written to the Corner. Her birthday was July 25, when she was 11 years old. She has one sister and one brother, named Helen and Tom. She has three cats, named Polly, Babe and Bird. She also has a saddle pony. Her name is Croppy because she has real short ears. She is white. They have a 200-acre farm.

Mildred Sherrod writes in behalf of her friend who wishes to join the Corner. Your friend would be a graduate member if she joined, Mildred, as she is over 12 years old. She is welcome. We should like to hear from her, too. Mildred lives in Whitman county, Wash. They have 17 horses, two cows and about 200 chickens.

Johnny Timm wishes to join the Corner. He is 11 years old, his birthday is February 6. He has two cats, one black and one yellow, and four cows, a black one, a yellow one and white one, and the other one is red. Quite a combination, Johnny! He has a pony that is black and white, with a white star on his forehead. The pony is named Blacky. They have seven pigs, a big red one, one little black one, and the rest are red and black, all on their farm in Lincoln county, Wash.

We are glad to hear from our little cousin, Beth, who lives in Okanogan county, Washington. (What is your last name, Beth?) The last day of school Beth attended a picnic which was held in a big grove. The high school boys played against the grades. Beth will be a fifth grade student next year.

We have an interesting letter from a cousin who signs her name as "Dorothy." (What is your last name, Dorothy?) This cousin says she has been reading the Children's Corner in THE FARMER with interest and finally decided to write. She is visiting with her auntie and grandma in Yakima county, Washington. She also has an Aunt Nell in Yakima county. Recently she went to a circus and saw the biggest elephant in the world, a great, big one. Dorothy likes to help get supper.

A cousin who lives in Malaga, Washington, near the Columbia river, writes the following: "I was 9 years old June 29, 1922. I go to the Stewart Hill school. I am in the fourth grade. My school is out now." (In some way we have loss track of your name, little cousin. Will you write and tell Aunt Nellie what it is?)

Zoe Ludwig writes to correct a mistake that was made in publishing her birthday. The paper said her birthday was July 11, but it is July 29 and she was 11 years old this last birthday. Zoe's home is in Yakima county, Washington.

In Sunday school Marie Wyatt belongs to the Tulip circle. This is our first letter from Marie and in it she says: "I am 7 years old. My birthday is October 26. I have brown eyes and brown hair. I have three little kittens, Muff, Tabby and Beauty. I shall be in the third grade next year. Laura Brand let me see her Junior Farmer. There are many mosquitoes down here. I put salt water on the mosquito bites. This town is not very big. All it has is a schoolhouse, church, a store and about 20 houses. There is a depot, a pump house and a big water tank." Marie's home is in eastern Washington.

We are glad to hear from Mildred Miller, who was 11 years old March 16, 1922. Her home is a 40-acre farm in southwestern Washington, Clarke county. They have 2 horses, 7 cows, 20 chickens and 4 cats. Mildred's pets are a cat and a kitten. She missed a year of school on account of her eyes. She is in the third grade.

Birthday Greetings

FRIDAY, August 25—Naomi Dodge, 11 years old; Marguerite Duffy, 10; Pearl Hink, 11; Etta Jane Pickle, 11; Edwin Pietila, 4; Helen Wayne, 10.

SATURDAY, August 26—Ruth Brown, 9 years old; Dortha Malone, 8; Wilma Pittman, 11; Kenneth Sieveke, 7.

SUNDAY, August 27—Evelyn Cannon, 11 years old; Emma Webb, 11.

MONDAY, August 28—Claire Hemstead, 9 years old; Thelma Melger, 10; Dale Early, 6; Graham Spencer, 11.

TUESDAY, August 29—Esther Wick, 11 years old; Gladys Wigen, 11.

WEDNESDAY, August 30—Maxine Chiles, 11 years old; Ernest Farrell Critfield, 11; Cora Turner, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Ruby Terrell, Esther Simila, Mildred Miller, Lucille Worth, Frances Worth, Grace Gockley, Inez Brown, Mildred Sly, Leona Hagerty, Muriel Washburn, Reuben Scheller, Anna Gesler, Evelyn Holmes, Bertha Holmes, Ida May Riley, Merle Phillips, Geneva Phillips, Dorthy Malone, Margaret Irwin, Theodore Olson, Genevieve Warren, Dorothy Loomis, Theodore Paul, Irene Swegle, Maude A. Yates, Gladys Main, Hannah Carlson, Grace Carlson, Ida Hanstad, Lillian Cochran, Lillian Carlson, Clara H. Breitmeier, Eunice Knight, Lauretta La Follette, Violet Sherwood, Myrtle Nelson, Ellen Keranen, Clara Hyrkas, Florence Arneberg.

SEWING AND MANUAL TRAINING.

By Ida Paul.

In our school the sixth, seventh and eighth grade girls all have to take sewing, and the boys in those grades have manual training. I am in the seventh grade.

Who likes riddles? I have nearly 90 or 100 riddles here at home.

Why don't they collect fare from the policemen on the electrics? You can't collect nickels from coppers.

When does a man look like a cannon ball? When he looks 'round.

Street car conductor—How old are you, little girl?

Little girl—I'm paying full fare, so it isn't necessary for you to ask impertinent questions.

BEDTIME STORIES

By THORNTON W. BURGESS.

BOBBY COON HAS A GOOD TIME.

Sing a little, dance a little, have a little fun;
Stars are all awinking, for the night has just begun.

Bobby Coon looked up and winked back at the stars as he sang. His stomach was full, for he had just filled it down at the Smiling Pool with fish that Billy Mink and Little Joe Otter had invited him to share with them. Bobby strolled along lazily through the Green Meadows. What should he do next? He didn't need or want anything more to eat. Presently he met Jimmy Skunk.

"Hello, Jimmy! Come on have some fun," said Bobby Coon.

But Jimmy had had no invitation out to dine, and he was hungry, so he kept right on his way looking for beetles.

Pretty soon along came Reddy Fox. But Reddy was hungry, too, and he wouldn't

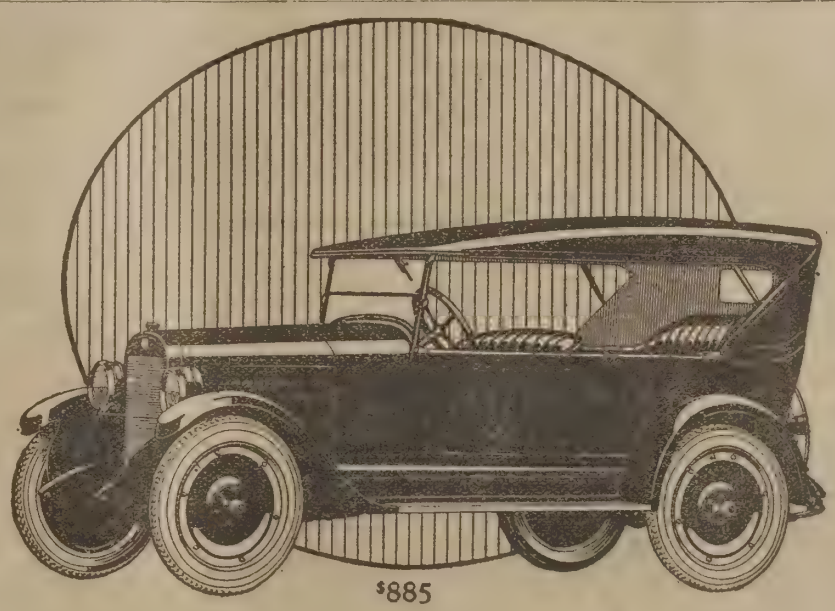
Bobby Coon shoved his hands in his pockets and strolled up the Lone Little Path.

stop to play. Then Hooty the Owl flew over as softly as a shadow, but Hooty also was hunting for something to fill his stomach. It was of no use; no one had time to play so early in the night.

Bobby Coon shoved his hands in his pockets and strolled up the Lone Little Path. Presently he came to Johnny Chuck's house. There was the yellow mound on which Johnny Chuck used to sit each day and watch the world go by. Bobby stopped to listen at the open door. He could hear Johnny Chuck snoring in his bedroom way down below.

A twinkle of mischief came into Bobby Coon's eyes. Not far away stood a stack of Farmer Brown's hay. Bobby went over and got an armful. He came back and dropped it over Johnny Chuck's doorway. Then he brought another and another. After that he hunted until he found Johnny Chuck's back door. He covered that up in the same way.

"Now," said Bobby Coon, and his eyes twinkled more than ever, "Johnny Chuck won't know when to wake up, and perhaps he'll sleep all day tomorrow."



Then Bobby Coon shoved his hands in his pockets once more and started on up the Lone Little Path, and from there he went up the Crooked Little Path to the top of the hill. On the way he passed Jimmy Skunk's house. He knew that Jimmy was out hunting for something to eat. His eyes began to twinkle again, and he chuckled as he saw a stone just big enough to fill the doorway of Jimmy Skunk's house. Bobby Coon tugged and pulled and pushed until he got the stone in place. Then he packed sand all around it and over it.

"When Jimmy Skunk comes home he'll think his house has run away," chuckled Bobby Coon as once more he started on his way.

So he wandered on all the bright moonlit night, getting into more and more mischief, and when the little stars began to wink out one after another Bobby Coon turned his steps toward the old hollow tree where his home is, so tired and sleepy that he could hardly get there.

Sing a little, dance a little, have a little fun;
Stars are—

Bobby Coon was fast asleep before he could finish.

$885

Outstanding in beauty, outstanding in the rugged reliability which is the farmer's first need in his motor car.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor driven electric horn; unusually long springs; deep, wide, roomy seats; real leather upholstery in open cars, broadcloth in closed cars; open car side-curtains open with doors; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight windshield.

MAXWELL

Horse Heaven Project

Approval of a $32,000,000 bond issue for the Horse Heaven irrigation project by the superior court at Prosser, Wash., is announced by John L. Etheridge, manager of the Morris Brothers corporation, which has underwritten the issue. Sale of $28,000,000 of the bonds to defray construction cost was also authorized, and Howard S. Amon, local contractor, has agreed to take bonds in this amount as payment for handling the work.

Sale of the bonds would begin simultaneously on September 15 by 56 bond houses in eastern cities and by Morris Brothers corporation in Portland, Etheridge stated. The bonds bear interest at the rate of six per cent per annum and mature serially from 1923 to 1951. They will be offered to investors at par.

Construction work on the irrigation project would begin in less than 60 days, Amon stated, and would be completed by 1925. The Horse Heaven district comprises 340,000 acres lying between the Columbia and Yakima rivers in Eastern Washington. Water will be brought to the land from the eastern slope of Mt. Adams through more than 100 miles of open canal, five miles of tunnel and eight miles of dual wood pipe syphon.

Seed Crops on Dairy Farms

The Youngquist Brothers of Mount Vernon are raising a few seed crops in addition to their dairy business, a few miles west of town. Silage and hay crops are, of course, necessary and it is but little extra work to put attention on special crops and they usually bring a better price.

Ten acres of Red Rock cabbage is under cultivation and will be sold on a special market. Two and a half acres of table beets will be ready to harvest this fall and three and a half acres of Bloomsdale spinach have also been grown. In addition to the above crops there are 10 acres of Sweedish Select oats, which will probably be harvested for seed oats.

Washington Eggs in New York

Significant is the report of sales of eggs in New York a few days ago, when Washington eggs sold at 12 cents to 14 cents per dozen higher than eggs from the middle west, A. S. Brown, branch manager of the Washington Cooperative Egg and Poultry association at Yakima, points out. On August 10 50 cases of northern Indiana firsts sold in New York at 28 cents per dozen. Middle western extras sold at 29 cents and 31 cents, while Pacific coast white extras were selling at 40 cents and 42 cents.

Thus, northwestern eggs, like northwestern apples, are bringing a premium on the far eastern market, due to the ideal climatic conditions under which they are produced and to the careful handling and grading, says Mr. Brown.

In the Repair Shop

By PROFESSOR L. J. SMITH, W. S. C.

Few people realize the value of kerosene in removing rust or loosening rusted parts of machines. If parts have rusted solidly together, puts rags soaked in kerosene over the parts so that the kerosene can follow the joints; or, better, put the parts into a pan of kerosene, and the next morning the parts will be loose. Many good mechanics keep a pan of kerosene in the shop for this express purpose.

No farm repair shop is complete without a hack saw. It is one of the cheapest and most useful of tools. Scarcely a month goes by on a busy farm where it does not pay for itself many times over. The 10-inch blade is the most common size. It is best to buy fine and coarse toothed blades, the coarse for cutting cast-iron and the fine for steel and piping.

Mix wood ashes and salt; add water to form a paste and plug the crack. The mixture will harden and plug the crack effectively.

Pike's Peak or Bust

(Continued from page seventeen.)

The long journey was wearing her hoofs thin. After that he inspected all the strings of sunning meat, to learn how fast it was drying. Finally he seated himself on the ground, with his back against Brindle's packsaddle, and sat gazing across the river at the hills beyond.

"Where are all the rest of our bunch?" he now demanded of Esau, the only other person in camp.

"Well, four of 'em shouldered their guns and went huntin' not long ago. Wanted to shoot some more buffaloes, they said. Sanders didn't go with 'em. 'Lowed he'd take a stroll. He tramped away over the hills to the north."

"How happens it that you didn't join the hunters?"

I ain't much given to huntin' jest for the fun of huntin'. It ain't any pleasure to me to shoot some pore, dumb creecher and watch it struggle and die. I've killed one buffalo, and that satisfies me; at least till we're in need of meat ag'in."

"Just how I feel about the matter, Esau. The way some of these fellows treat those poor, stupid animals seems almost a crime to me. They shoot 'em down just as if it were fun to watch something gasp and die."

"They shorely do, Lando. It's a crime, as you say. A crime they'll have to answer fur in the Jedgment Day, I'm thinkin'."

"Yes. And more than that, they'll have to suffer for it before the Judgment Day, in my opinion. Cruel things happen to cruel people. But I'm going to have to kill one more buffalo, I believe. If I do, though, it will be the biggest, toughest old bull I can single out."

"Old bull! What do you want to kill a bull fur?"

"To peel off his hide to make some boots for Brindle. She's still a little tender-footed. You notice how Mr. Cooper had some of his oxen shod?"

"Yes; and other teamsters the same way. Dippin' their hoofs in hot taller is said to toughen their feet."

"I've heard of that. And I may use it first. That will be easier on her than wearing heavy boots, if it will work. We've got some buffalo tallow here. And I might as well try the experiment right now, I'd guess."

A few minutes later he had the tallow in their camp pot and on the fire. When it had melted and was hot enough, he carried it out to where the cow was grazing. There he lifted up one of her feet and let it down in the pot till her hoof was about half submerged in the grease. After that one had soaked till the cow seemed uncomfortable, he treated the other hoofs in the same manner.

"I'm thinkin' I'd better lay in some bull hide anyway, while I'm where it's plentiful. Don't s'pose I'll have to shoot a bull. I can find one that other people have already shot," he told Esau on returning to camp.

"Don't you 'low that hot taller you've been usin' will cyore her tender-footedness?"

"It will help a little, I guess. But I don't see how it can cure it, Esau. When an animal travels every day, its hoofs wear faster than they grow, till they wear to the quick. That's what's the matter with Brindle. I examined her feet carefully. If we could let her rest for a week or two, she'd get all right. But we can't take that time now. So the only other thing to do is to stop the wear by shoeing her."

"Reckon that's about so," said Esau, turning away.

(To be continued.)

R. W. M'KENNA RESIGNS.

Announcement is made at Yakima that R. W. McKenna, manager of the Yakima Dairyman's association, the cooperative marketing organization there, has tendered his resignation. Difference of opinion between Mr. McKenna and the board of directors on vital policy matters are given as reasons for the resignations.

YOUR THRESHING—AND GOODYEAR BELTS

Goodyear Klingtite Belt in threshing service on the farm of Jalmer Herre, Halstad, Minnesota

At the height of his threshing, Jalmer Herre, of Halstad, Minnesota, took time last season to tell many of his neighbors how much better his new Goodyear Klingtite Belt was performing than any belt he had ever had in twenty years of farming.

"There isn't a sign of slippage," he said. "No matter how heavy the straw, the belt delivers the full engine power, and there is no jamming of the feeder. Where I used to have daily troubles with ordinary belts—slippage, jamming, re-setting and overheating—the job is pushed through now at top speed."

Goodyear Klingtite Belts are the pulleys in a slipless grip. They work the same in all weather, do not shrink, are subject to a minimum of stretch, require no belt dressing, need no breaking in, and wear with the lasting strength of their special ply construction.

Goodyear Dealers everywhere, and many progressive hardware merchants besides, sell Goodyear Klingtite Belts, in endless type and in suitable lengths. For further information, write to Goodyear, Akron, Ohio, or Los Angeles, California.

GOODYEAR

"OILINESS"~what it means to trucks & tractors

"'Oiliness' is the ability of a lubricating oil to cling evenly to bearing surfaces, at the same time offering in itself a minimum of frictional resistance."

— Board of Lubrication Engineers.

"Oiliness" in engine oil can't be seen — but is *felt* when your tractor steps into full-rated draw-bar pull — is *heard* when your truck engine hums along with heavy loads.

Zerolene has "oiliness." It clings to bearing surfaces evenly, and at the same time splashes freely — you get *all* the power the engine is rated to deliver.

Stability — Purity

The ideal truck or tractor oil must penetrate easily the smallest bearing clearances at all operating temperatures — and it must have stability. Zerolene penetrates, and has the stability to resist engine heat.

The unexcelled purity of Zerolene results in a harmless deposit of carbon of a soft, flaky nature, most of which is blown out with the exhaust. Zerolene minimizes engine troubles and assures longer useful service for your equipment.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your truck, tractor or automobile.

Visit Shorthorn Herds

(Continued from page two.)

Cumberland, was voted a typy lot by the visitors. A senior bull calf, by the above sire, is especially pleasing. J. E. Forsell of Grandview, is another breeder with good calves by Bean Cumberland.

The next two stops were at the homes of Hercules Baby Beef club members, near Sunnyside. Young Homes showed the visitors an especially attractive grade steer, in nice condition, well balanced and smooth. The Turner lad also led out one nice steer. It will be recalled that the Hercules Baby Beef club, initiated through the cooperation of F. M. Rothrock of the Shorthorn association, was formed with the ideas in mind of increasing interest in cattle feeding in the Yakima valley; in order to demonstrate more fully the value of the purebred sire in the production of market cattle, and with the additional thought in mind that a certain few of the club members would become sufficiently interested in good cattle as to purchase a registered bred heifer for next year's club work.

After enjoying the picnic dinner, served by the breeders' wives, a speaking program was given. County Agent Lovett called on Duncan Dunn, who gave an interesting talk on live stock conditions and the future of the Shorthorn cattle industry. A. E. Lawson, Shorthorn fieldman, dwelt on the value to the breeders of each showing a few head of breeding stock at the state fair in order to advertise their stock.

C. M. Hubbard, state college live stock specialist, pointed out the value to the breeders and visitors of the breed tour as a means of stimulating interest in the breed and developing team work among the breeders. He also emphasized the value to the Yakima valley farmers of seeding pastures which will not bloat. He suggested timothy, clovers and blue grass as a good type of mixed pasture which had been demonstrated to be successful and to have a large carrying capacity. He stated that the best land would give good returns from the proper type of pasture and that the extension service eypects to put on a number of demonstrations of the carrying capacity and returns possible from mixed pastures.

The next stop was at David Van Nostern's at Alfalfa. The bull in service, bred by Duncan Dunn, is siring some nice young stock.

William Mulhall of Toppenish is using a double standard polled Durham bull on his herd and again the visitors' eyes were pleased with a nice string of likely calves.

The last place visited on the tour was the well-known Dunn ranch at Wapato, where the breeding herd with calves by Cupbearer of Millhills and Escana Clipper were inspected. Three especially good young bulls were led out for the club judging contest, with the breeders participating in the placing. The winning bull was exceptionally pleasing in stylish carriage, masculinity, depth of body, mellowness of flesh, smoothness and quality.

The outstanding features of the tour were the excellent 2-year-old heifers at Ethan Taylor's; the good calves seen in the herds visited; the good young bulls at Duncan Dunn's, and the interest taken by the breeders and visitors who voted it a most pleasant and profitable day. Over 40 people were out for the tour.

IS FOUR-YEAR-OLD CHAMPION.

G. T. Morocco Duchess, owned by Jay P. Graves, Waikiki farm, is the new junior 4-year-old register of merit champion Jersey of Washington. Her record exceeds that of her stablemate, Meysie's Fern Lassie, by 10.04 pounds of fat. Duchess started test at 4 years and 4 months of age and in 365 days produced 16,125 pounds of milk and 813.10 pounds of butterfat. She made the 50-pound list every month.

HEIFERS BEAT THEIR DAMS.

All of the seven Holstein heifers from the herd bull on the Methow Valley Live Stock company farm, near Tolt, show uniformity and the characteristics of their sire. They will average 500 pounds of fat and over, accordingto C. A. Cushing, the farm manager, and all have made better records than their dams, which are grade animals. The entire herd made the highest record in the Snoqualmie testing association last year.

BUYS NEW HERD SIRE.

John Ellingsen of East Stanwood, Snohomish county, has purchased a new herd bull for his herd of 25 grade Holstein and Ayrshire cows. He is a son of the herd bull at the state college, Segis Pontiac Acme. Mr. Ellingsen expects to increase the production of the herd by the use of the new sire and the present indications are that some good heifers will be the result.

All Steel and All Plow

Furnished in either two- or three-bottom size, 12-, 14- or 16-inch bottoms.

No Matter How Many Horses Are Used nor How Hard the Soil Is

—the John Deere Steel Gang stands the strain. It is the simple, compact, all-steel plow—the strongest plow of its type—built especially for difficult plowing conditions of Pacific-Coast states. No castings to break; no pipes to bend; no unnecessary parts to get out of order; beams guaranteed not to bend or break—there are extra years of good service in this plow.

It's a handy plow — you can turn square corners without raising the plows from the ground. Easy to raise or lower bottoms — powerful springs have almost the effect of power lift. Even width of cut can be maintained on hillsides or around curves by means of landing lever.

Bottoms to suit your soil — genuine John Deere steel or chilled; quick detachable shares — loosen one nut to remove share; tighten the same nut, and share is on tight. Great clearance at all vital points to prevent clogging in trashy conditions.

See the John Deere Steel Gang at your John Deere dealer's, and write today for free booklet on this plow. Address John Deere Plow Company at Portland, Ore.; Seattle or Spokane, Wash., or Boise, Idaho. Ask for Booklet JS847

NOW OFFERING

BRED FALL GILTS FOR SEPTEMBER AND OCTOBER FARROW.

Sired by Model Defender, grand champion boar Pacific coast, 1921.

CHEROKEE LAD AND GEN. TIPTON BREEDING.

HAYS & HARTER

Grants Pass, Ore.

Ruby Dell Guernsey Farm

Our herd has been in the winning wherever shown.

Senior herd sire, Francis May King (A. R.) he by Langwater Hambro (A. R.)

Junior herd sire, Rex of Willow Brook, he by Langwater Sunderland (A. R.)

Our herd matrons are cows with A. R. records from such noted sires as Langwater Hambro, Langwater Emigrant and first 5 daughters of Francis May King, to freshen with average records of 480.14 butterfat, at average age of two years and ten months; most of them double letter class.

Some splendid bull calves for sale of above breeding.

H. E. ANGEL, Mabton, Wash.

St. Mawes Trio

2 months' old bull from R of M. dam.
1 heifer, 3 months.
1 heifer, 2 months.

SHADILANE FARM, North Powder, Ore.
W. O. CHRISTENSEN.

Milking Shorthorn Bull

Dropped August 27, 1921. A show bull of much quality. Sired by Foothills Corporal, grand champion Pacific International stock show, 1919. His weight, 2400, and is of richest milking strain, being by Corporal Clay, dam Glenrose Pearl. Calf's dam a good producer. $125 for quick sale.

KIRTLAND FARMS, Central Point, Ore.

Jersey--Gold and Silver Medal Sire

Ashnook Farm offers a few heifers and young bulls, sired by the gold and silver medal sire, Silver Chimes, of S. B., sire of ex-world champion heifer, Silver Chimes Gwendola, and 20 register of merit daughters, and more qualifying.

DEL PERKINS, Carlton, Ore.

MILKING SHORTHORNS

A few cows, also young bulls, by the great sire, Peerless Knight, carrying 93¾ per cent blood of the champion milch cow, Rose of Glenside.

J. E. DANILLS, Murphy, Ore.

TWO JERSEY BULL CALVES

From high producing registered stock; very choice breeding. $25 each f. o. b. McMinnville. First dropped June 20, 1922; second July 29. EDWIN WAGNER, McMinnville, Ore.

Guernseys

Two excellently bred May Rose registered sires from high producing dams; one seven months and one thirteen; old enough for service. Priced so farmers can afford to own.

NOBLES BROS., Bow, Wash.

Young Holstein Bulls

Bessie and other best blood lines. Priced for quick sale.

JOHN BOGART, Woodland, Wash.

Indian City Berkshires

Big type, superior quality.

DR. W. J. KEYES, 202 Fernwell Bldg., SPOKANE, WASH.

B. F. WATSON, Herdsman, Rockford, Wash.

Holstein Bulls at Farmer Prices

Sired by son of former world's champion and out of cows that make good at the pail.

S. D. CORNELL, Grandview, Wash.

River Banks Better Berkshires

Won four grand championships, nine championships and twenty-eight first prizes at five leading fairs last fall. Let us quote you on spring pigs.

RIVER BANKS FARMS, Grants Pass, Ore.
CLYDE E. NILES, MGR.

LET THE LITTLE FELLOWS PAY OFF YOUR MORTGAGE.

Silver Fox Ranches Make Big Profits.

Finest Quality Imported Prince Edward Island Stock.

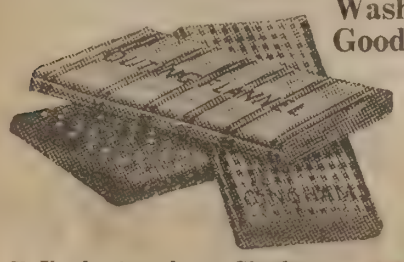
Lowest Prices in America Guaranteed



EXTRA VALUE for Every Penny You Spend

Send No Money Pay On Arrival

We mean every word of this. When you buy from Sharood, every penny you spend goes farther than it would anywhere else in America. Don't send one cent now. Just letter or postcard brings any of these sensational bargains.

Merely give us number and size of each article you want. Pay nothing till goods arrive. Then only smashed bargain price and postage. If not satisfied, we instantly and cheerfully refund your money.

Wash Goods

5 Yards Amoskeag Gingham, 32 inch 99c

An almost unheard of price for this famous gingham. Latest plaid, check and striped patterns in all desired colors, all fast and yarn-dyed. **Order by No. 54F3414. Send no money. Pay 99c and postage on arrival.**

10 Yards Fancy Outing Flannel $1.25

Ideal weight for nightgowns and undergarments. Comes in all colors, 26-inch width. State pattern and color. **Order by No. 54F3425. Send no money. Pay $1.25 and postage.**

10 Yards 36-inch Percale, only $1.49

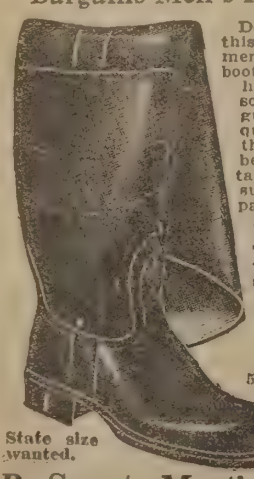
Very choice patterns in fast colors. In white, gray, Calcutta and indigo blue with neat stripes or dots. State color and pattern. **Order by No. 54F3406. Send no money. Pay $1.49 and postage on arrival.**

WOMEN'S OXFORDS
Unbelievably Low Priced Here

$1.98

Women's oxfords in gun metal or calf-finished leather. Made with imitation shield tip and medallion perforated stay and circular foxing. Has medium pointed toe. Sizes 2½ to 8, wide widths. **Order gun metal by No. 54A69. Brown calf, No. 54A70. Send no money. Pay $1.98 and postage on arrival.**

Brown Leather Work Shoe for Men



$1.99

State Size

Splendid brown ooze leather work shoes. Heavy, durable uppers; extra strong solid oak leather soles; leather insoles; low broad leather heels; leather loop pull-strap and reinforced leather back stay. Roomy last. Sizes 6 to 12. **Order by No. 54A758. Send no money. Pay $1.98 and postage on arrival. Order boys' sizes, 1 to 5½, by No. 54A554. Price $1.89. Order little boys' sizes, 9 to 13½, by No. 54A555. Price $1.79 and postage on arrival. Mention size.**

Bargains Men's Hip Boots

Don't fail to make this big saving on men's pure gum hip boots: friction lined; heavy corrugated sole and heel; guaranteed first quality. Made of the very best rubber. Usually retailed at $5. Be sure to order your pair while this great saving offer lasts. Sizes 7 to 12. Wide widths. No half sizes.

$2.79

Order by No. 54A949. Send no money. Pay $2.79 and postage on arrival.

State size wanted.

Rich Black Sateen Apron

This apron represents not only a neat saving but a charming style for house wear. Send for your size today — quick!

$1.79

The material is an excellent soft, lustrous black sateen with collar, cuffs and pockets of good grade fancy cretonne. Pockets are a novelty basket design with applique flower trimming. The same effect is carried out on one side of waist. Designed with wide self material sash belt all around. Big value. **Order by No. 54E5098. Send no money. Pay $1.79 and postage on arrival. Money back if not satisfied.**

Durable Outing Bal

Men's and boys' scout shoe of soft, pliable brown leather. Absolutely guaranteed barnyard proof; reliable, sturdy soles; low, broad leather heels; leather insoles; reinforced leather back stay. Guaranteed to stand hardest wear. Wide widths. Sizes 6 to 12.

What Can We Do to Reduce Our Tax Burden?---Page 3

Improve Poultry

Breeders Lay Plans for Upbuildiny

Fifty representative poultrymen of the state, the majority from western Washington, met at Seattle last week at the call of Superintendent W. A. Linklater of the western Washington experiment station to work out plans for the improvement of the poultry industry of the state. The meeting was called at the suggestion of Director S. B. Nelson of the state college extension service and W. D. Buchanan, poultry specialist.

Accredited Hatcheries.

One of the most important committees appointed was the one that dealt with the establishment of accredited hatcheries. This idea has been tried out in other states and is welcomed by both the poultrymen and hatchery owners of Washington. Recommendations returned by the committee were:

First, that all fowls to be used as breeders be found healthy by an inspector appointed by the state college.

Second, that all eggs used for hatching shall average 24 ounces to the dozen and have a minimum weight of 22 ounces. All eggs shall be from well-developed and fully matured females.

Third, that all males to be used as breeders be approved as to vigor and size, be free from foreign color, be at least 8 months of age, and for the 1924 season all males be from trapnested hens that have records not less than 225 eggs for a year.

Fourth, no artificial morning light shall be permitted earlier than 6 o'clock prior to December 15 and no lighting during the breeding season that will tend to make more than a 12-hour day.

Fifth, all eggs set shall be of a standard size, shape and color and are to have the proper shell texture.

Sixth, green feed shall be fed in abundance to birds in the breeding pens.

Seventh, grain shall comprise 50 per cent of all concentrates fed.

The reports as read aroused considerable discussion by those attending the convention, but they were all adopted and the committee authorized to continue and have power to take any action deemed necessary to carry out the plan.

The committee on trapnested records recommended that if some way could be found to finance the cost of inspection, the state college would be asked to do the clerical work and records be made on different flocks, which would then be classed as accredited. Definite plans, however, were not drawn up, but the committee was given the power to draw up plans for financing the movement.

Increased Production.

With the above committee was combined another committee on increased production. The reported returned indorsed several movements that tended toward increased production and suggested that an increase of five eggs per hen per year be set as a standard if the entire state was included, while an increase of 20 eggs be called for in case of limited areas, which would include a large number of commercial flocks.

The committee favored the use of cockerels from trapnested dams as being the quickest means of obtaining such an increase. Sanitation in the rearing of chicks was suggested, as well as proper feeding and management. The culling of young stock before they went into the laying house and continuous culling of the laying flock during the laying season were recommended. It was also suggested that the hatchability of eggs should be raised and the percentage of pullets increased to at least 40 per cent of all chicks hatched.

Dr. Nelson suggested that before any definite plan for the accrediting of trapnest records be tried for the entire state that one or two counties take up the work as a demonstration in order to show the value of the plan for other counties to follow.

The committee on trapnested records was invited to meet with the conference of agricultural agents at Puyallup on September 12 to discuss their plans with those present.

Advertising.

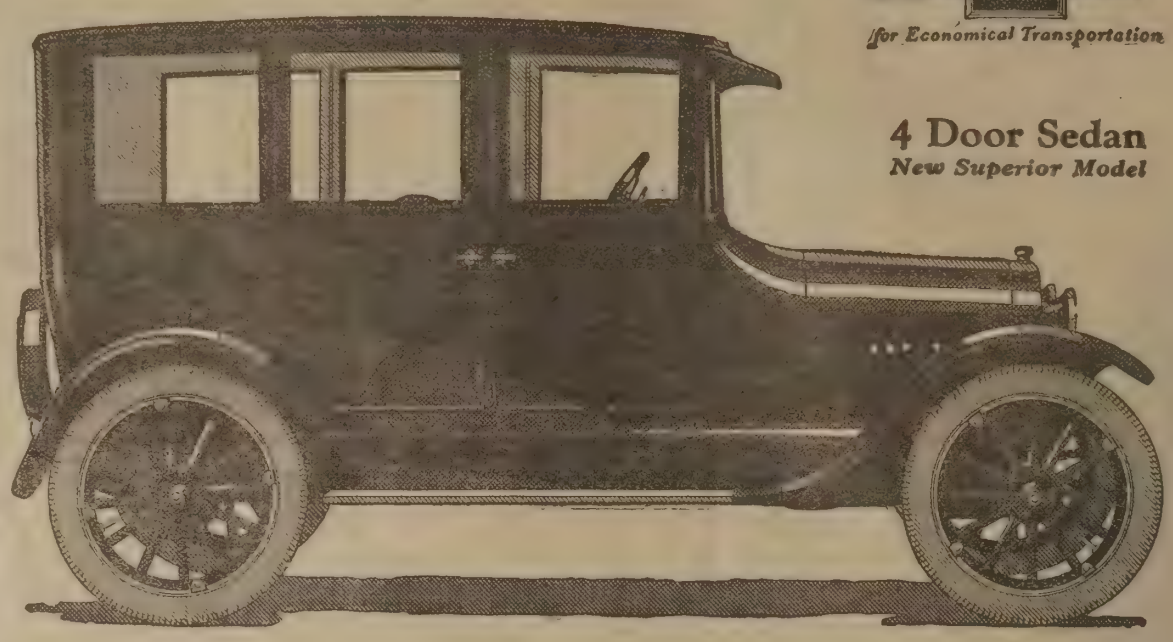
The committee on increased consumption and advertising reported the following suggestions, which were adopted:

First, that in order to increase the consumption of surplus eggs at home the pullet egg be spoken of as a 20-ounce egg, thus dropping the word, "pullet," entirely.

Second, that the pullet egg be advertised as the 20-ounce egg to let the public know of its real value and its superior flavor.

Third, that the state college be asked to help in the advertising campaign.

Fourth, that all poultrymen in the state be asked to contribute $1 each to the general fund.



Sanitation of Yards.

The committee on sanitation of yards and the control of infection among growing stock reported as follows:

First, that new ground be used every

4 Door Sedan
New Superior Model

The World's Lowest Priced High-Grade All-Year Sedan

The Ideal Family Car

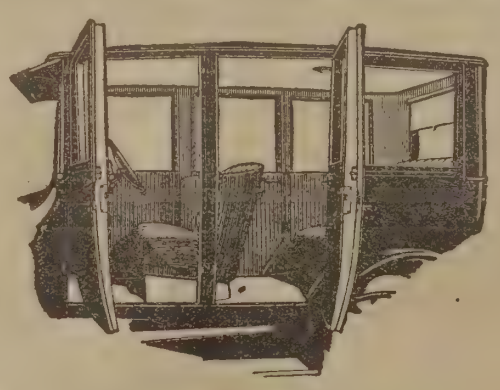
$860

F. O. B. FLINT, MICH.

The Comfort and Weather Protection of a Limousine for Less Than the Cost of Most Open Cars

Never before has a Fisher Body Sedan of this quality been offered at a price so low. The beautiful lines, superb finish, luxurious upholstery and refined appointments that have made Fisher Bodies the standard of excellence in closed cars, are all here in full measure. Its four doors fit perfectly and cannot rattle.

The heavy plate glass windows can be instantly lowered to any desired point, or as quickly raised, and the plate glass windshields are both movable, permitting instant conversion of the Sedan into either a closed or an open car.



Mounted on the famous New Superior Model Chassis, this car is fully equipped mechanically, and combines ample power and speed with steadiness and ease of handling.

No matter what car you now use, or think of buying, investigate this Sedan. Its power, speed, appearance and appointments please discriminating motorists accustomed to paying higher prices for closed cars.

Its low price and low maintenance appeal to all who find it desirable to economize.

In no other car on the market can you find this unusual combination of Style, Quality, Economy, and Year-'Round Service.

Dairymen Menaced by "Filled Milk"

Wisconsin Supreme Court So Finds in Its Decision Sustaining State Law Prohibiting Manufacture and Sale of Milk Compounds

Evidently the Carnation Milk company is not at all assured that the federal courts will reverse the decision of the Wisconsin supreme court in its recent decision sustaining the state law which prohibits the manufacture and sale of "filled milk." Should the federal court sustain the Wisconsin decision it would further establish the validity of the Wisconsin law, as well as the validity of similar laws in other states, and in addition would give important aid in the enactment of a national law like the Voigt bill, which already has been passed by the national house of representatives.

Here is a news item that will be of marked interest to our dairy producers:

MADISON, Wis., Aug. 23.—A long court battle by the Carnation Milk company against the state filled milk bill ended today in the withdrawal by the company's attorneys of their petition for rehearing of the case as recently decided by the Wisconsin supreme court.

The company is understood to have agreed to refrain from further distribution of filled milk in the state.

Following the recent decision of the state supreme court it was announced that the company would carry the case to the federal high court. Steps in this direction were retracted today in the withdrawal of the petition for rehearing. Assurance was given R. M. Hoyt, assistant attorney general, that the case would not be appealed.

The state commissioner of markets is preparing to enforce the decision, which prohibits within the state the manufacture and distribution of milk compounds of skimmed milk and vegetable oils.

The supreme court based the right of Wisconsin to prohibit the sale of these milk compounds on the police power of the state and declared the law valid for three reasons:

1. Because the law is intended to prevent fraud and deception.
2. Because it protects public health and welfare.
3. Because it promotes the general prosperity by preserving a great industry of the state.

Justice Charles H. Crownhart, who wrote the Wisconsin decision and the accompanying statement of fact, said: "It will be seen that the compounds have been considered inimical to public welfare by a large portion of the people of this country."

He pointed out that 35 states had adopted standards for condensed or evaporated milk; that the manufacture and sale of filled milk had been absolutely prohibited in New Jersey, New York and Wisconsin; that five other states had prescribed standards for condensed or evaporated milk that in effect prohibit filled milk, and that three states had passed laws which permit filled milk to be sold as "imitation milk."

"The compounds," he said, "are in exact imitation of the genuine evaporated milk. They are produced and sold by the manufacturer cheaper than the genuine. They are susceptible of being sold to the public for the genuine at the same price. They are, therefore, capable of being used for fraudulent purposes and to deceive purchasers."

"If used as a substitute for milk, the public health may be impaired, not because the compounds are in themselves deleterious, but because they lack in certain food elements essential to a well-balanced dietary."

The justice quoted the advertisements of coconut oil compounds which spoke of a "delicious and nutritious new milk product," "Prepared in the rich dairying districts of Indiana and Wisconsin," "Animal fats extracted and then enriched with sweet edible, highly refined coconut oil."

"Other advertisements," Justice Crownhart declared, "are equally well balanced to convey the idea to the public that pure, fresh cow's milk from Wisconsin has been enriched and improved by the injection of sweet, edible, highly refined coconut fat."

Justice Crownhart maintained that the power of the state could be exercised for the prosperity and for the "preservation of a great industry of the state against injury in markets outside." He referred to Florida's winning fight to defend her great orange industry.

In regard to Wisconsin's right to protect her dairy industry he said: "The principle of allowing these compounds to be manufactured and sold followed to its logical conclusion will lead from 'filled' milk to 'filled' butter, from 'filled' butter to 'filled' cheese, and finally we have the 'synthetic' cow taking the place of the domestic animal of the farm. A great industry of a state will decline, a victim of national advertising of cheap and deceptive substitutes."

Justice Crownhart also referred to the Voigt filled milk bill now before congress, which had passed the house, 250 to 40.

On the reopening of the hearings by the senate subagricultural committee on the Voight bill, J. D. Miller, vice president of the Dairymen's League Cooperative association and member of the executive committee of the Milk Producers' federation, discussed the claim of the filled-milk manufacturers, that these compounds would afford a way of marketing large quantities of skimmed milk which now goes to waste.

"The great volume of skimmed milk produced in this country is on farms where the whole milk is hand separated and the butterfat shipped away," said Mr. Miller. "Such skimmed milk," he declared, "could not be utilized by condenseries owing to distance, but serves a very useful function by feeding to calves, hogs and chickens. Another part of the skimmed milk supply is created by local creameries who make up a large percentage of the skimmed milk into cottage cheese and sell back to the farmers great volumes of this for home feeding.

"The waste in skimmed milk," said Mr. Miller, "occurs in those factories close to metropolitan consuming centers and so far away from the farmers that freight rates would absorb the value of the skimmed milk if returned to the farms. But an increasing amount of skimmed milk in such case is being used to make casein and cottage cheese."

Mr. Miller also showed that there is an amount of skimmed milk in every can of condensed whole evaporated milk equal to that in every can of the same size of filled milk, and no possible additional market can be afforded farmers for skimmed milk that is not already provided by the condensed and evaporated milk. He also directed attention to the testimony of the filled milk manufacturers that only an inconsiderable amount of skimmed milk is bought as such by them, their practice being to purchase the whole milk and separate it, emulsifying the skim with the foreign vegetable fat within an hour after commercial separation takes place. He then showed that the filled milk serves as a vehicle to market the coconut fat rather than the whole milk and referred to the evidence of the opposition to prove that filled milk can be wholesaled at 3 cents a can cheaper than the wholesaling price of evaporated milk. He then cited the profit incentive to retailer as one of the reasons why the compounds are pushed into consumption in preference to the whole evaporated milk.

Emphasizing the possibilities of fraud, Mr. Miller read into the record a statement from Commissioner Berne A. Pyrke of the New York bureau of farms and markets, stating that coconut oil in large quantities was being shipped into New York state presumably to be manufactured into filled milk. The statement said that investigations by the New York authorities and the analyses of more than 50 samples had showed that products consisting of coconut oil and skimmed milk were being sold for genuine evaporated milk. Already more than $3000 in fines had been collected and other prosecutions were pending in that state. Mr. Miller declared that in 1920 a market for approximately 6,000,000 pounds of butterfat in the form of evaporated milk had been lost to the farmers of the United States by the blending of coconut oil with skimmed milk in the production of compounds sold in the semblance of milk.

Do You Want Taxes Lowered?

By LESTER M. LIVENGOOD, Attorney and Manager Spokane County Taxpayers' Economy League

About 75 per cent of the total taxes levied in the state of Washington for collection this year are local taxes—not state taxes. That is, they are taxes to pay the costs of government in cities, counties and local districts. Therefore, tax reduction, like charity, should begin at home.

The days from now until sundown on the first Monday in October are days in which the farmer and all other taxpayers must do some hard work if relief is to be felt from the high-tax burden now being carried. Just why the first Monday in October is a vital day in this tax reduction movement will be explained in another article, which will discuss a second method of securing reduction in taxes. In the meantime, another date should be borne in mind, namely, September 12, the date of the primary election, when the voters will weed out most of the aspirants for public offices. There remains yet a little more than one week during which the farmers who want their taxes reduced may question candidates for office to find out just what they intend to do to reduce taxes.

The Spokane County Taxpayers Economy league some time ago submitted to all candidates for offices in that county a list of questions that may well be applied by any taxpayer to any candidate for office in any county in the state. These questions are as follows:

To County Candidates.

"What experience have you had that in your opinion especially qualifies you for the office which you are seeking?

"On what classes of property do you pay taxes?

"Do you think it possible to reduce the tax burden?

"Do you think it necessary to reduce the tax burden?

"If your answer to the last two questions above are in the affirmative, have you a specific program for the reduction of taxation? What is it?

"Do you believe that public employees should receive higher or lower pay for the same kind of work than private employees?

"If elected to the office you seek will you endeavor to secure the cooperation of, and actively cooperate with, the officials associated with you in reducing public expenditures?

"If elected do you feel that your obligation as a servant of the public will be discharged because you keep within your budget, or do you believe that you are obligated to the people to save as much of your budget as possible for return to the current expense fund?

"Would you, if elected, consider yourself morally obligated to the public to keep within the confines of your yearly budgets, providing unforseen emergencies do not occur during your tenure of office?

"Are you in favor of a budget system for city, county and school governments?

"Because your predessor employed a certain number of people in the office to which your aspire will you consider this justification to continue the same number, or will you, if elected, go over in detail the actual needs of the office for the purpose of eliminating unnecessary employees, if there be any, and choose your employees because of their special fitness for the work, as would be done in a private business?

"Do you believe that the expense of your office and the number of employees should contract with the slowing-up of the business of the office as quickly and responsively as the expense of a private business would respond to a like condition?

"Do you regard it an evil practice to promise jobs to political supporters to secure election to the office to which you aspire, the needs of which office it is impossible to know until one is actually in the office?"

To Legislative Candidates.

"Will it be your purpose, if elected to the legislature, to stand determinedly for reduction of taxation?

"If you are in favor of reducing taxes would you insist that this be done by a general reduction of expenditures or would you endeavor to accomplish tax reduction by shifting the tax burden from one kind of property to another or from one class of citizens to another?

"Have you a definite plan or argument to bring before the legislature to effect a reduction of the tax burden? If so, please state what it is.

"Will you stand firm in the determination to reduce taxes in spite of all demands of the log-rollers?

"Are you in favor of an executive budget system for this state?

"If you are, will you do everything you can to have the legislature amend its rules and pass such legislation as may be necessary to provide an executive budget system for this state?"

Prospects for Fairs Are Excellent

Secretary H. P. Vermilye of the Washington state fair is enthusiastic over the outlook for this event, which will occur at Yakima, September 18 to 23. Not only are the prospects excellent for a live stock show even superior to the great display of a year ago, but indications are that the exhibits of other farm products will equal, if not surpass, those those of any previous year.

Secretary Vermilye expects about 12 county exhibits of produce to be on hand when the doors open. Among those expected to have exhibits are: Benton, Kitsap, Lewis, Mason, Klickitat, Grays Harbor, Pierce, Walla Walla, Skagit, Jefferson, Kittitas, Snohomish and Clarke.

Those who attended the fair last year will remember the overflow in the live stock department, especially in the dairy sections, where tents had to be pressed into service to accommodate a number of herds. This year, notwithstanding the prospects of a greater show, there will be room for all, since a new barn, 40x224 feet, has been erected. It is the same size as the other barns and completes the set, until future developments demand additional increase in space.

An additional 200 feet of unloading platform has been erected, doubling the capacity for handling the live stock at the cars.

Miscellaneous features of the fair will be equal to anything heretofore shown, including the women's department, the club work, the poultry show, machinery and farm equipment, the government display and the entertainment program on the race track and before the grandstand.

Spokane Interstate Fair

President T. S. Griffith announces a preliminary sale of 56,000 tickets to the Spokane Interstate fair, which holds forth the week of September 4-9. He announces also prospects for one of the best fairs in the history of the organization. Especially is there promise of a high-class live stock show. Entries in nearly all divisions are satisfactory. This is especially so in the cattle department. There will be strong shows of both dairy stock and beef breeds. The strongest Hereford show for several years is promised, with three or four of the most widely known herds of the Pacific northwest entered.

The fair this year will be notable for the exclusion of the game of chance and kewpie doll attractions. So much dissatisfaction has been expressed in recent years over the methods followed by these concessions that the management this year has ruled them out entirely. A higher class of entertainment and midway program has been prepared. Taken as a whole, the outlook for the 1922 fair is excellent.

THE WASHINGTON FARMER

VOL. XLVII. NO. 9.

Trade Mark Registered U. S. Patent Office.

Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Can Rural Schools Be Improved Without More Money?

Before the people of Washington state vote on the 30-10 plan for helping struggling rural schools, it will be well to consider experiments conducted for the last year in an isolated school in Warren county, New Jersey. The 30-10 plan, which will be passed upon by the voters of this state in November, would increase to $30 the sum appropriated by the state for the education of each child in the common schools, whether that child is in a city school, a town school, a prosperous rural school or a remote and poor country school. The state now appropriates $20 and the county $10, which latter would remain unchanged.

This difficult problem of rural education has been under intensive study by educational experts of Columbia university, the greatest teachers' college in the world. As a result of these studies, Dr. Dunn, of Teachers' college, Columbia, believes that the problem of the country school can be solved by the same methods that have brought progress in teaching in the cities and towns.

Forty-four pupils attended the experimental schoolhouse in Warren county, which was seven miles from a trunk line railroad, two miles from a postoffice and out in the open country. A single teacher was required to instruct eight grades. There are still 200,000 similar rural schools in the United States, but Columbia educators hope to cut that number to 40,000.

New and startling methods were introduced in this experimental country school. Many of our readers still have depressing memories of the rigid discipline that was maintained in their childhood in the rural schools, and even in the schools of the towns and cities. A large part of the time, thought and labor of the teacher was concentrated on the impossible task of trying to keep little, restless bodies still. It was counted a grave misdemeanor for a child to follow its natural bent and draw a picture on a slate or a piece of paper.

In the experimental school in New Jersey, unrestricted movement about the room is permitted, and the problem of getting results with a single teacher in a school of forty or forty-five pupils seems to have been solved by the installation of pupil-helpers for the teacher and the application of the "automat" idea of teaching the children to gain a large part of the education themselves from the school library.

These experiments and other studies seem to prove that the long cherished belief that the country children are more healthy than city children is a delusion. Professor Thomas W. Wood of the Eyesight Conservation Council of America, who is interested in the experiment, says that 87 per cent of the pupils in rural schools in New York state have health defects as opposed to 72 per cent of unhealthy city children. "In the United States," Dr. Wood says, "15,000,000 of the 24,000,000 school children have bodily defects."

So oppressing are the faults of country schools, the experts say, that much of the congestion of the city is due to the inability of the rural schools to make country life attractive. Efforts are now being made through meetings at Columbia university of such educators as Miss Charl C. Williams, recent president of the National Education association; Mrs. Katherine Cook of the federal bureau of education, and Dr. Kenyon L. Butterfield, president of the Massachusetts Agricultural college, to bring about reform and settlements in rural education.

Before jumping at hasty conclusions it will be well for the educators of Washington and other states of the northwest to follow closely these interesting and up-to-date investigations by the leading educators of the nation. It is an easy way to call for more money, but is that the best way at this juncture? President S. B. L. Penrose of Whitman college, Walla Walla, says that in 1921 only California and Nevada slightly surpassed Washington in expenditure per school child. Washington was ahead of all the other states and far ahead of most of them. Dr. Penrose says: "We spent $97.85 last year per school child, twice what we spent in 1912, while Massachusetts spent $82.54, Minnesota $88, Virginia $33.83, and the average for the United States in 1918 was $49.12 per child."

The Washington Farmer wants to see better rural schools. It wants the children of the remote districts to have the best opportunities that can be afforded. It is deeply interested in this important and difficult problem, but it wants the fullest results with the means that are available. Would it not be wiser to get in closer touch with the progressive movements in other states, to study the new methods of getting better results with the same expenditure, apply those improved methods, and then consider the advisability of raising still more money?

Testing Pays Coin of the Realm

Again the public sale demonstrates, in two different sections of western Washington, the value of cow-testing association records of production to the owner of a dairy herd. William Wyatt of the White River Valley association obtained an average of $154 each for 24 cows with records, at public sale, and $126 per head for 26 equally good looking cows without records. Wyatt's herd was one of grade Holsteins, as was that of J. B. Ebinger of Ford's Prairie, whose dispersal sale at Elma July 26 average $123. The average grade Holstein in this section of the state brings from $50 to $75, but the fact that these cows of Ebinger's had been tested for a year in the Grays Harbor County association and showed average annual production of 350 pounds of fat each, made them worth $50 to $75 more per head to the dairymen who attended the sale. There was not one of the hard-headed farmers who crowded the ring-side but knew a cow's certified ability to produce 300 to 450 pounds of butterfat in a year was worth dollars and cents to him—and was willing to pay for the certification. The method of grading cows by owner's estimate is rapidly falling into the discard.

LOOKING INTO OTHER FARM FIELDS

Farm women enrolled in agriculaural extension poultry clubs last year raised 2,083,127 standard-bred chickens. They received for chickens and poultry products sold $1,617,047.83, in addition to the supply produced for home use.

* * *

The total crop of cranberries of the country last year was close to 400,000 barrels. It looks now as if it would be over 450,000 barrels this year.

* * *

Addressing 5000 farmers at East Lansing, President David Friday of the Michigan Agricultural college announced that he would ask an appropriation of $2,000,000 from the next legislature with which to carry on experimental and extension work in agricultural lines. He said that through this channel he hopes to increase the annual income of Michigan agriculture $50,000,000 within five years.

State Farm News

Plans for an ambitious potato and corn show in Yakima in November or December are under way, according to A. E. Lovett, county agent. "We expect to make this show one of the largest and one of the most valuable from an educational standpoint ever held in the northwest," said Mr. Lovett.

"It is hoped that arrangements may be made for sufficient prizes to encourage one exhibition of commercial potatoes and seed potatoes from an exceptionally large area of the northwest. A large number of comparative displays for educational value will be arranged and potato erperts will be present to give information on all phases of potato growing and seed selection."

* * *

The Grant Orchards Unit of the Wenatchee District Cooperative assocication has been organized among growers who formerly dealt through Spokane Fruit Growers. There are about 15 orchards represented and they will produce approximately 50 cars of apples this year.

* * *

Naches valley residents are planning to put on a community fair. The date has not been set, but it is thought it will be held the last of October. At a meeting held recently by the Naches Community club an organization was completed to take charge of the preliminaries. A. M. Otto has been made chairman of the executive committee and will be assisted by J. R. Reynolds, Earl Bailey and William McCullough.

It is planned to divide Naches valley into three districts and to award prizes for displays on the point system. The district receiving the most points will be awarded a special trophy cup.

* * *

That there is money in the culture of raspberries has been demonstrated by Jacob Gushwa at Prosser, who owns a seven-acre tract across from the Riverview school grounds. From one-fifth of an acre Mr. Gushwa has taken 99 crates and estimates that he will pick at least 40 crates more.

* * *

During the fiscal year ended June 30 state inspectors in the Yakima valley of Washington inspected nearly 3400 cars of fruit and vegetables, divided as follows: Potatoes, 1556 cars; apples, 1583 cars; pears, 159 cars; onions, 74 cars; peaches, 14 cars; strawberries and cherries, each three cars, and asparagus, one car. The United States department of agriculture cooperated in this inspection service.

* * *

The Pierce County Guernsey Cattle club has been organized, with a membership of 35. The officers include president, William Morris of Buckley; vice president, A. O. Johnson, Buckley; secretary-treasurer, John Vernhardson, Gig Harbor.

* * *

F. J. Sievers of Pullman, head of the soils department of the Washington State college, is a member of the party of government and state officials studying alkali and drainage conditions in the Yakima valley. There is a mass of data on irrigation and drainage which if analyzed might be placed in such shape that the farmers might make use of it. This is one of the things which his department is arranging to do. Drainage and irrigation studies have in the past concerned themselves too much with the surface, he says, and the need is to know what is going on below in the soil.

* * *

Provision of a combination drinking foundation for dogs and bath for birds was made in the will of Mrs. Lizzie Swetland, filed at probate and designating $300 for the foundation, which is to be located at a central position in Vancouver, Wash.

* * *

Charles H. Greely, president of the Ridgefield State bank, has the largest potato ranch in that section of the state. It is about four miles east of Ridgefield, in the Pioneer locality, along the Pacific highway, a paved road. He has 187 acres in potatoes, half of the acreage being certified seed stock.

* * *

Harry H. Collier of Tacoma has been secured to judge the poultry exhibit at the Grays Harbor county fair to be held at Elma the first week of September.

* * *

Members of the Walla Walla farm bureau have announced that they will open a public market this fall. J. D. Tuke, secretary, said the bureau is negotiating for a site at Second and Poplar streets. The market has been incorporated under the name of the Producers' Public Market. It is capitalized for $30,000.

* * *

Fruit Inspector Mills states his estimate of the 1922 apple crop for the White Salmon district is 500 cars, against 750 for last year.

* * *

Agreements have been made between the apple growers and the port of Seattle whereby 1,000,000 boxes of this year's apple crop will move to American and foreign markets by steamers. Of the 1921 crop 375,000 boxes were shipped by boat and in 1919 only 2000 boxes were handled over Seattle docks.

* * *

L. M. Rowe, prune grower of the Wapato district, has completed the harvesting of his Tragedy prune crop. His yield this year was 4400 boxes, which is slightly less than last year.

* * *

The railroads report a total of 950 cars in fruit shipments from the Yakima valley since July 1.

* * *

The fourth annual orchard excursion will be held at Wenatchee September 8. This is known by many as the "Orchardist day" and it is held annually as a general get-together meeting of all orchardists of north central Washington, with outside districts invited as guests.

* * *

Trout lake farmers interested in the dairy industry and the breeding of better stock are making efforts to interest dairy owners in the White Salmon valley in the movement. The Klickitat Holstein-Friesian Breeders' association at Trout Lake recently entertained dairy farmers from the White Salmon valley. Farmers belonging to the association have purchased a number of purebred Holstein-Friesian cows and other young stock which were inspected. Officials of the association predict that in a few years only purebred stock will be found in the Trout lake valley. Officers of the stock association are: W. A. Elmer president; Sanford Peterson, vice president, and F. A. Schnike, secretary-treasurer.

FARM BUSINESS AND MARKETS OUTLOOK

The agricultural balance was badly disturbed during the period from early 1919 to the middle of 1920 in which grain prices ruled relatively high compared with live stock values. The reduction of flocks and herds and of feedlot operations was accelerated by the conditions incident to deflation.

Eventually the pendulum swung to the other side of the perpendicular. Grain and forage prices dropped to a point which made the production of meat, dairy products, eggs and poultry more profitable than the sale of feeds as such. The recovery in hog, cattle and lamb prices in the last year made the ratio still more attractive to the stockman.

Now the pendulum appears to be swinging in the other direction. Generous crops assure a continuance of relatively low feed costs during the coming year. But live stock production shows evidence of stimulation in every form. Greatest expansion has occurred in hogs and poultry, taking the country as a whole. It takes longer to breed the increase in cattle for either beef or dairy. Sheep population estimates show more severe reduction than any other class, making overproduction of cattle and sheep more remote. The feeding industry is more or less distinct, however, and the number of thin steers and lambs which may be taken out for feeding is more elastic than the total population of those classes. Overproduction of feed cattle and lambs may occur ahead of the increase due to more extensive breeding operations. Because of excessive zeal to get into the feeding game, prices paid for raw material may be higher than succeeding markets for finished animals would justify.

The live stock industry may always be characterized by alternate periods of expansion and contraction, but if each individual producer watches for signs that his field is being overworked or underworked, a greater measure of stabilization can be attained. While Pacific northwestern markets have to import meat, especially pork, from the middle west, it is doubtful if any curtailment of production is advisable.

Cattle Prices Up Again.

The railroad strike was responsible for a lighter run of cattle last week which advanced top steers at Chicago to a new high for the year of $10.95 and caused a small upturn all along the line with the exception of common steers and butcher stock. There is a generous percentage of shortfeds and steers that have had a good deal of corn grass and, so that strictly grassers are hardest to move. An advance in dressed beef prices in the east in spite of large receipts in the week previous helped the market along. Veal calf prices advanced toward their usual pinnacle at the end of August and early September.

Seven leading packing points received 1,269,000 head of cattle in the last six weeks compared with average receipts of the preceding eight years. The supply does not indicate shortage. Ordinarily from the middle of August to the middle of October weekly receipts at these points increase more than 50 per cent. If cattle have been held back by the strike, as reported, a big increase later on is indicated. Feeder buyers will take a big fraction of the increment, but the supply for slaughter has not attained the high mark of the year.

The flood of grassers at southwestern markets is steadily rising in spite of rail obstructions. Few good western rangers have appeared as yet. The cause of the delay is in doubt.

Large Feeder Shipments.

Shipments of stocker and feeder cattle from the 12 leading markets in the week ending August 12 were the largest since the close of last November. Rail conditions were said to be discouraging, but there is no sign of it in the movement. Prices advanced slightly with fat classes. A slightly lower market may develop when interruptions to rail traffic cease, but with an abundance of feed and other conditions fairly favorable, no serious decline is in prospect. Thin cattle prices are on a more reasonable basis than prices for lambs.

Hog Supply Remains Heavy.

Notwithstanding interference with rail shipments receipts of hogs at the 11 leading markets last week were the largest in three weeks, and again were the largest for the corresponding week as far back as the records go. In the last eight weeks arrivals at these markets totaled 4,162,000 head compared with a 10-year average of 3,498,000 head in the corresponding period. At the same time weights are running about 4 per cent above normal for this season.

Within a month new crop hogs will begin to show up. It is too late to expect much of an advance in the meantime and the rail situation is too uncertain to be sure of the immediate trend. The probable winter level is now the center of attention. Packers are predicting $6 hogs at Chicago. This figure may not be reached, but prices probably will go at least $1.50 lower than they now are before the winter level is reached and in view of the increase in production, occasional dips may go close to the packer guess.

Fresh pork prices were higher last week and the lard supply is moving out steadily. In the first three weeks of August over 55,000,000 pounds of lard and 48,000,000 pounds of hog meats were cleared for export. Stocks in storage are decreasing more rapidly than the average at the corresponding period in the past. Continental exchange rates appear to be on a basis making purchases impossible, but packers report a fairly satisfactory demand although at low prices.

Lamb Receipts Falling Behind.

Receipts of sheep and lambs at the seven leading markets in the last six weeks totaled 1,162,000 head compared with average receipts of 1,227,000 head in the same period of the preceding eight years. Under present conditions the cause of the loss remains uncertain. The railroad situation is a factor, but the small range lamb crop reported last spring and severe liquidation of cornbelt flocks a year ago may be even more important. Most of the range lambs thus far have been below standard finish, thus helping the market for fat native lambs. Feeder lambs are still being sought actively at high prices. Shipments from the 12 leading markets in the week ending August 12 were the largest since last December.

Uncertain railroad conditions injured the horse market last week. The supply was not heavy, but buyers for all classes were cautious, the interest of loggers subsided and even the prospect of reopening coal mines failed to bring new orders. Chicago prices follow:

Good and choice drafters, $200@300; common and medium drafters, $100@200; 1350 to 1550 pound chunks, $110@175; good and choice wagon horses, $100@165; farm chunks, $75@150.

Wool Dull but Firm.

Demand for wool is rather slow as this is normally a dull period of the year, but dealers are not sacrificing holdings and prices if anything are stiffening. cast Indian wools which are now coming in free will be dutiable under the proposed permanent tariff and an effort is being made to rush them in ahead of its passage.

Wheat Sales Exceed Average.

In spite of apparent obstacles receipts of wheat at primary markets last week were the largest for the corresponding week with but two exceptions in a dozen years and about 40 per cent above the average. Cars were stored in the southwest before threshing started otherwise the movement would not have been so heavy. Most of these cars have not been used so that lighter receipts from that section are probable, but spring wheat is beginning to move freely and the total supply promises to continue generous.

Canadian wheat will be a factor in the market in a few weeks. That country is the principal competitor of the United States for the export trade and Canada's surplus is even larger than our own. The plan of a national compulsory pool of the Canadian crop to be handled by a wheat board has been abandoned so that the crop will not be held back except as individual producers decide to do so.

What Will Europe Do?

European buying revived suddenly at the low point last week but has tapered off again. Every sign indicates a need for more wheat than last year but the persistent purchases of large amounts from day to day which featured the market last year when August exports set a record of 67,000,000 bushels are not in evidence. Central European countries are in bad shape financially with German marks down to 1330 to a dollar and Austrian kronen at around 60,000 to a dollar and both fluctuating at a rate which makes business next to impossible. France, Italy and Belgium are affected by this situation, but sterling exchange is within 1 cent of the highest point in several years.

The delay in buying at present means a more concentrated demand later, but Europe apparently is acting on the theory that their own import needs for wheat are no more urgent than the necessity of exporting countries to find a market for their surpluses. There is also a hint in their recent attitude toward wheat that Europeans are fearful of a crash of some sort and do not wish to be caught with heavy commitments when it comes.

Statistically, the position of wheat is stronger than usual. It will be made still stronger or weakened depending upon whether the yields of the harvest in the southern hemisphere which will occur in December and January are below or above the average. Broomhall estimates the Argentine acreage at 12 per cent larger than last year which will make it about equal to the average.

Drought Scare in Corn.

Hot, dry weather over the cornbelt caused more or less damage during the past week, but scattered rains have occurred in the last day or two and the loss may not amount to more than the normal deterioration during August.

Oats Movement Below Normal.

In the first three weeks of the new oats crop year receipts at primary markets fell nearly 20 per cent below the 10-year average for the corresponding period. The extremely low prices is anything but attractive and there are reports of replacing oats with wheat in the rotation.

Cash Grain Prices.

The range of cash grain prices for the week ending August 23 follows: Chicago—Wheat: No. 2 red, $1.00½@1.05; No. 3 red, 99¼c@$1.03¾; No. 2 hard, $1.01½@1.07. Corn—No. 2 mixed, 60¾@63¾c; No. 3 mixed, 61½@63½c No. 2 yellow, 61¼@64½c; No. 3 yellow, 60¾@64c; No. 2 white, 60¾@63¾c; No. 3 white, 60½@63c. Oats—No. 2 white, 31¼@35c; No. 3 white, 30@34*c No. 4 white, 30@33¼c. Rye—No. 3, 69@71½c. Barley—50@@58c.

Clover Seed Market Declines.

No forecast has been made of clover and timothy seed production for this year, but the estimate of a large acreage and high yield of hay seems to justify expectation of a heavy seed crop. The weather until the last week has been favorable and progress reports have been optimistic. Harvest is about to begin. Since speculators and dealers must carry the seed sold in the next few months until the big consuming demand develops next spring, trade sentiment which is now mostly bearish is an important factor in making the fall market. The price has dropped $3 or more below the early summer level for prime red clover. The timothy seed crop is estimated at 5 to 15 per cent less than last year.

Feed Markets Steady.

Prices on most feeds are steady. The northeast is buying wheat feeds as recent price levels at milling centers seem to be attractive, bran being cheaper than coarse grains on a pound basis. Oil meals are quiet at unchanged prices.

Prices per ton (100-pound bags) in car lots: Chicago—Bran, $17; standard middlings, $19; flour middlings, $24.50; cottonseed meal, 36 per cent, $39; 43 per cent, $43; hominy feed, $25; gluten feed, $29.85; old process oil meal, $46; tankage, $55.

Wide Spread in Hay Prices.

Light receipts of good quality hay are sustaining the market for the good grades, but poor hay is in excess of the demand, even at a heavy discount. No. 2 timothy is quoted $1 to $4 below No. 1 prices. Clover and heavy clover mixed are hardest to move.

Prices per ton in car lots: Chicago—No. 1 timothy, $22@23; No. 2, 17@19; No. 3, $14@16; No. 1 light clover mixed, $19@21; No. 1 clover, $15@17; No. 1 clover mixed, $16@18; upland prairie, $14@18; midland prairie, $12@16; rye straw, $10.50@11.50; oat and wheat straw, $8@10.

Egg Market Gains Strength.

The egg market is showing more strength than at any time in several weeks. Receipts have dropped off rapidly recently, although rail conditions may have been a factor, which will mean an increase later on. Storage holdings are now being fed upon the market. The trend of prices is likely to be upward from this time on, but any advance will be gradual, owing to excessive storage stocks which must be absorbed.

Receipts of dressed poultry at the five leading markets in the first 31 weeks of this year, together with receipts in the same period of the three preceding year, are as follows: 1922, 110,290,145 pounds; 1921, 85,532,570 pounds; 1920, 82,779,199 pounds; 1919, 104,660,270 pounds.

Poultry handlers are expecting a big run this fall. Prices have declined recently and a further loss is probable in the next month or six weeks, by which time the storing season will begin. Receipts will more than treble in the next three months if the usual course is followed.

Since those who stored butter and eggs this year and poultry last winter have been in a losing game, they will probably be very cautious when the poultry storing season begins this fall and will wait for a low price level.

Quotations: Chicago—Fresh firsts, 22 1-2@23c; ordinary firsts, 20@21c. Live poultry: Hens, 22 1-2c; broilers, 24c; springers, 24c; roosters, 13 1-2c; ducks, 22c; geese, 18c; turkeys, 25c.

Butter Prices Boosted.

Light receipts were the primary cause of a gain of 1 to 2 cents in butter prices last week. This is the normal period for an advance to begin, as the storing season generally ends by the middle of September and the daily additions to storage stocks are relatively small. Hot, dry weather has damaged pastures and reduced production as well as lowered the average quality, while the rail situation is blamed for retarding shipments to markets. Export inquiries helped the upturn along.

Prices for 92 score fresh butter on August 23 were: Chicago, 34c; New York, 36c; Boston, 36 1-2c; Philadelphia, 36 1-2c.

Lower Prices for Cheese.

Cheese prices declined at country markets and distributing points last week, but at the lower level confidence returned and buying broadened, although hot weather reduced the consuming demand. Receipts in the leading cities showed a marked decline. The improved tone in the butter and egg markets was a factor in restoring the market to health.

LIVESTOCK AND DAIRY

Fatten Calves

Best on Farms Where Born

"Weaning, shipping, dehorning, castrating, and suddenly changing your calves from grass to dry feed is very hard on them and checks gains completely for three to six weeks," said W. H. Peters, chief of the animal husbandry division, Minnesota University farm, before an audience of live stock men attracted to the farm by the Cattle Feeders' day.

"This problem plus the problem of securing good calves at a reasonable price," he added, "would seem to warrant the statement that baby beef production is best adapted to the method whereby the calves are grown on the same farm on which they are to be fattened. They can be castrated when young, and if they are dehorned at all they can be dehorned with caustic also when young, then started on grain in the fall before they are weaned and can be fattened with less risk and a good deal less feed than when they are purchased on the open market in the fall.

"However, when the calves brought to University farm got settled down and started to feeding well they made gains almost as fast as the older cattle and required only two-thirds as much feed to make 100 pounds gain as is usually required by two or three year old cattle.

"The calves appeared to be growing rather than fattening until they had been on feed about 130 days and weighed from 700 to 800 pounds. From then on they seemed to fatten rapidly and at the close of 106 days showed a good deal of finish. We believe that the average feeder of baby beef should figure on about a 200-day feeding period in order to make certain of a satisfactory finish on the calves."

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES, ARTICLE SIX.

Small Intestines.

This part of the digestive tract is not so often the seat of trouble as several other portions, largely because the food materials do not stay in this portion very long, but pass rather quickly from the stomach to the large intestines. It is true that a great deal of the absorbtion takes place here, but even so the foods pass through in a relatively short time. This is especially true of water, which passes almost directly to the caecum from the stomach, a distance of about 75 feet, through the small intestines.

Because the foods pass so rapidly there is seldom gas formation, as this occurs usually where the foods lie for a while in one spot. There is seldom constipation noted here, as the foods are of semi-fluid mass and unlikely to be come impacted. Occasionally, however, the small intestines are the seat of cramps or spasms in the muscular walls and this, of course, is the cause of violent pains that come and go at intervals. Animals suffering from this trouble may appear quite well and suddenly manifest evidence of very acute pains which causes them to draw up the abdomen, bring the feet together, bend the knees and then drop to the ground, rolling in pain. They may get temporary relief as suddenly as the attack appeared and seem to feel quite well again, only to have the attack renewed in a few minutes. This may continue for some time and is one of the very painful kinds of digestive troubles, though the deaths from this alone are not great.

The causes are allowing an animal to drink great quantities of cold water when the animal is warm or sometimes giving foods to which the animal is unaccustomed. All of these things should be avoided.

Knots or Twists.

Another cause of grief in the small intestines are knots or twists that occur. The small intestines are very loosely arranged in the left side of the abdomen and there is no arrangement for keeping them in their proper place as rigidly as most other portions are accustomed to being kept. For this reason they move about quite freely and at times become looped about another portion in such a way that the part can not become freed. This knot or twist interferes with the blood supply and with the passage of food material and is always fatal unless the knot slips out and frees the trapped portion. Treatment of this condition is very difficult and a diagnosis is also very hard, as it is so hard to locate the part that is in trouble. An operation is the only hope and abdominal operations on the horse are not practical in most cases.

Other conditions that are serious are a telescoping of the bowel when one portion passes into the part just ahead of it, like a telescope that is being shortened up. This, too, is almost impossible of diagnose, since a manipulation of the entire bowel is impossible and it may be very easily overlooked. When it is diagnosed it can only be corrected by an operation, and then if it has been present for any great length of time the damage done is very likely to result in a fatality.

Troubles of the great bowel will be the subject of the next article and it is probably most important of any portion of the digestive tract.

Prices for Reactors

In the campaign for the eradication of tuberculosis in cattle being carried on by the United States department of agriculture, the states and counties, one of the most important economic considerations is the salvage, at a fair price, of the animals that react to the test. Up to a year and a half ago a large percentage of the reactors that were passed by the inspectors is perfectly fit for food did not bring a fair price, because some buyers took an unfair advantage of the seller and profited unreasonably.

The department of agriculture through the bureau of animal industry and the packers and stockyards' administration has been looking into this matter for a year or more, taking it up with packing concerns, commission men and organizations interested in the marketing of live stock. As a result much better prices are now being paid. Reports to the department show that the prices being paid for such cattle in various parts of the country are getting very close to the prices paid for the same class of cattle on the regular market. A special traveling inspector now spends all his time visiting live stock markets, noting prices that are being paid for reactors and insisting that buyers who are discriminating against them pay a fair price.

Carcasses of reactors that have been passed by the federal inspectors are worth as much and are as wholesome as any other carcasses. There is no warrant for price discrimination against them. Many of the leading packers at the big markets and a large number of the smaller concerns on many markets now see the justice of this view, with the result that reactors are now selling at more nearly fair prices.

The department has compiled figures on the prices received for reactors in a number of states for 1921 and 1922, and in several of them the increase in average price has been considerable, in a few instances reaching more than 100 per cent. In Kansas the average price paid for these cattle rose from $16.52 to $34.26; in Minnesota from $17.74 to $24.48; in Missouri from $15.60 to $31.93; in Wisconsin from $16.09 to $26.25, and in Vermont, where only one firm had been handling them previously, from $5.61 to $16.29. In 18 states, including the live stock and dairy states of the middle west and a number of eastern states, the average price paid increased about $3 a head. The department expects that continued efforts on the part of the bureau and the packers and stockyards' administration will result in still better prices for reactors.

Packers, commission men and live stock exchanges are getting behind the movement for better prices since they have been impressed with the fact that the encouragement of the work of tuberculosis eradication means more and better business in the future. The Institute of American Meat Packers passed a resolution calling upon the members to pay as much for reactors as for untested cattle of the same quality.

In connection with this discussion of prices, it is well to keep in mind, according to department officials, that the area method of eradicating the disease has an additional advantage in that more reactors are available from one place at one time and, consequently, can be shipped at less expense and can be handled more economically at the yards and in the packing house.

VETERINARY

By DR. S. B. NELSON.

Sow Unable to Stand.—My 2-year-old sow took sick about a week ago and is now unable to stand. She eats and drinks well and does not seem to be in pain. We have been feeding her fresh alfalfa and bran. The young pigs took sick after the sow. They are 8 weeks old. Can you suggest a cure for these? W. K.

I would suggest that you give the sow two or three ounces of castor oil, following this with 10 grains of potassium iodine in her feed once daily.

Since you only state that your pigs took sick, without giving any symptom, I can not be of any service to you there.

Warts on Teats—I have a cow whose teats are just covered with warts. There are so many of them it is hard to milk her. Is there a remedy? B. R.

Wart treatment: Chloral hydrate, 1 1-2 dram; acetic acid, absolute, 1 1-2 dram; salicylic acid, 1 dram; spirits of ether, 1 dram; collodion, 4 drams.

Hair Comes Off—I have a 2-year-old female dog that had pups last January. About the time she weaned them an irritation started inside her hind legs and the hair came off. It spread over her stomach and sides and she scratches continually. J. H. C.

I would suggest that you try an application of sulphur and coal oil. Make it about as thick as a cream soup and apply to the affected part. Put a bandage around the dog's mouth for a while so that she can not lick it off.

Needs Careful Examination—I have a 6-year-old horse that seems to be troubled with colic and it comes on every once in a while. She rolls up on her back, then on her chest and puts her front feet out in front of her, then sticks out her nose and rolls her lip up and looks around at her sides. C. B.

There are possibly three things that your horse needs. First, to have her teeth examined and cared for, if necessary. Second, she is probably affected with a catarrh of the stomach. She should be examined to determine if this is the case. Third, she should be put on a definite system of feeding and tonic treatments. This will depend upon what the veterinarian finds upon examination. I think you can get fine service in this respect at the College of Veterinary Science at Pullman.

Goiter.—I have a 2 weeks' old calf that was born with a goiter, but it is not so very large. Is there anything I can do to remove it? T. A. D.

Omak, Wash.

Paint the goiter once daily with tincture of iodine.

Its Yielding Lock Coupling

Makes It Do Better Disking.

JOHN DEERE

Model "L" Tractor Disc Harrow

WITH YIELDING LOCK

The rear discs of the John Deere Model "L" penetrate, pulverize and pack better than on any other harrow because the yielding lock coupling forces them always to cut down the ridges left by the front discs. This is an *exclusive John Deere feature.* It locks the rear section in proper position when traveling straight ahead. When turning, this lock yields—there is no skidding of harrow around corners. The front discs penetrate, pulverize and pack the soil better because of the independent gangs and pivoted yoke which hold the discs down to their job when harrow is passing over obstructions.

The entire harrow is flexible—front and rear sections work independent of each other and adjust themselves to uneven ground surfaces. Two convenient cranks, controlled from the tractor, for angling either or both sections without stopping or backing the harrow.

Ask your John Deere dealer about the *exclusive* aligning device on the Model "L"—another John Deere feature; adjustable hitch; adjustable scrapers; convenient grease cups and slotted gang couplings.

FREE BOOKLET: Write today, address John Deere, Moline, Ill., and ask for free booklet describing the John Deere Model "L" Tractor Disc Harrow with yielding lock. Ask for Booklet DL847

THE TRADE MARK OF QUALITY MADE FAMOUS BY GOOD IMPLEMENTS

POULTRY AND RABBITS

Breeding, Not Breed

A great many persons probably for the first time are considering buying a few fowls, and they are studying the breeds. They are writing to the poultry departments of the experiment stations and they are asking extension lecturers and poultry breeders the question, what is the best breed? Some of them will go to the fall fairs, look over the exhibits and propound the query to the owners of the birds and they will go home with a good deal of information as to the general characteristics of the breeds on exhibit—their shape and size, color, etc.

The breed question worries the beginner considerably, and some who are more than beginners are often confused at the mass of conflicting testimony.

Technically there are not so many breeds, but there are some 121 varieties, the number of breeds being 38, as recognized by the Standard of Perfection, and there are others not in the Standard. For instance, the Plymouth Rocks, as follows: Barred, White, Buff, Silver, Penciled, Partridge and Columbian. They are all the same in shape. If their feathers were all taken off they would look alike. The color makes the variety. It is the same with other breeds. There are eight varieties of Wyandottes.

The beginners, or a large proportion of them, want to begin in the producing business; they want to produce eggs, and they honestly seek the breed or variety that will produce the most eggs, and they don't care much as to color of feather.

The truth is the breed counts for comparatively little. There are good and poor layers in all breeds. It is the breeding that counts.

This needs to be iterated and reiterated. The beginner should go to the man who has been breeding for eggs and buy his stock from him. He should select his stock on the basis of trapnest records rather than show records and fancy points. There are plenty of breeders now who are trapnesting and using as breeding stock only those fowls that have high records. The purchaser should satisfy himself that the breeder he buys from has been following this system of breeding. This is the best way to begin.

Don't be continually changing the breed; change the breeding or the breeder. In other words, choose stock that has been bred to lay rather than bred for color of feather. Keep at it along this line year after year, and if it is not possible to trapnest, purchase males from trapnested, high-producing stock.

Avoid Early Laying

Early maturity, not early egg production, is desirable. The first business of the poultryman is to bring his pullets to maturity at 5 1-2 to 6 months, when they may properly begin to lay. Put them in the laying house at 5 1-2 months of age, but if they are not mature, carry them until they have reached 6 months before allowing them to lay. Otherwise they will molt later on. If their combs begin to get too red as they near maturity cut down the amount of protein in the feed. In doing so feed more carbohydrates, for they can use lots of energizing food, and putting on a little fat before they begin to lay might prove advantageous.

"After a pullet has started to lay it is too late," says W. D. Buchanan, poultry specialist, "but if you start in time you can keep her from it until she is at least 5 1-2 months old, provided you have her under control in a limited run. The way to do it is to watch her comb, and to keep reducing the protein if necessary until there is none in her feed except that in the grain and its byproducts. A Leghorn pullet should weigh 3 1-2 pounds before she lays an egg. Early eggs (peewees) are hard to market; they lead to an early molt, and to such reduction of vigor that you never get a consistent lay. An early layer is never as rugged as she would have been if held to maturity. The pullet approaching the laying period naturally slows down in activity, just as does any adult. Hence the poultryman must double his efforts to keep her active, and this means double the depth of the litter, which makes her work and hence turns all the protein to body building."

Destroying the Chicken Louse

The chicken louse seldom causes trouble where the poultry is given the right kind of care. Lice thrive on the negligence of the keeper of the birds. Just a little well-directed care will make it impossible for the pests to operate. The same is true of mites. But woe to the flock whose owner is careless and who thereby allows conditions to prevail that are suitable for the breeding and operation of these pests.

The natural remedy for the chicken louse is dust. The louse breathes through the pores of the skin and the closing up of these pores with dust kills the louse. If the fowls do not have access to a dusting place in the yard or fields, a box of dry earth must be provided. On account of their irritating nature sulphur, pyrethrum or lime added to the dust will make it more effective. Sometimes it may be necessary to dust the fowls by hand, but this is usually considered impracticable. Sulphur and slaked lime make a good dust powder. A good powder may be made by mixing crude carbolic acid, 90 to 95 per cent strength, with enough plaster of paris to make a dry powder that will work thoroughly into and among the feathers. Sodium fluoride is a good powder. It suffocates the louse.

How to Avoid Colds and Roup

The cold nights will soon be here. With them will come colds and roup in the poultry flock, unless prompt measures are taken to prevent them. In about nine cases out of 10 these troubles come from a lack of fresh air in the poultry house or coop. The chickens will not take cold just because the weather is cold. They are more likely to take it when they are too closely crowded together in a small coop with little ventilation. They become overheated at night and when the cold air strikes them in the morning they catch cold. Give them an open shed to roost in and spread the perches not less than 18 inches apart. With plenty of fresh air, which is only secured in an open-front house with wide-apart roosts, the flock will suffer little or none from colds and roup. The fresh air treatment is the only sure preventive or cure.

LILLY'S

How did your neighbor's last bargain tire turn out

PROBABLY you know at least one car-owner who is always on the look-out for the cheapest tires he can find. He likes to get them by mail or at a sale or at some place where they have big red bargain signs over the door.

It would be fine if he could get "the edge" in every tire trade.

But the dealer can't afford to let him have it.

* * *

Even if a man saw any slight percentage in tire shopping at all—it disappeared when the "Usco" brought the price down.

A *standard* product—and the dealer sells it with pride.

A *good* tire. The dealer has no desire to trade you into a larger profit for himself.

An out-in-the-open tire. The dealer sells you confidence, not price. He wants you satisfied with performance and value. The only way he knows to get your business is to deserve it.

This is the "Usco" idea.

* * *

Compared with the ten-minute thrill of the bargain appeal, the "Usco" is just plain common-sense.

No tax charged on this

ORCHARD AND GARDEN

Combating Blight

Many Precautions Must Be Taken

Pear and apple blight is caused by a bacterial organism, a parasite quite unlike insects and fungi. It attacks principally the apple, pear and quince. A very light infection that soon dies out may occasionally be found on stone fruits and on service berry, hawthorn and some other pomaceous shrubs. It never attacks willows, poplars and other wild plants that are not related to the apple.

The blight germs gain entrance to the trees in several ways, pointed out in a recent Montana experiment station bulletin as follows: (1) Through wounds made by pruning tools, cultivators, etc.; (2) through bites of insects, particularly the green aphis; (3) through the open flower, to which it is carried by bees, ants and other insects, and, as has recently been shown, by the wind. When once the germ gains entrance it multiplies rapidly and works downward through the bark, but may not cause any visible effect until weeks after the infection has taken place, so that the grower is badly deceived as to just when the disease was acquired.

The Symptoms.

The following symptoms are very characteristic, continues the bulletin. If the infection begins in a flower cluster or in the end of a shoot, as it usually does, the leaves first wilt and droop, then turn brown in the apple and nearly black in the pear. Soon they become dry, hard and brittle. The bark of the affected twig likewise becomes slightly darkened in the apple and nearly black in the pear. The line between the diseased and the healthy bark is not sharp and distinct during the growing season, so that it is often difficult to determine just how far the disease has progressed; and it is usually farther than an inexperienced person would suppose. On cutting into the diseased bark one finds the inside at first pinkish in color instead of a healthy green, but when it has been diseased for a few weeks it becomes darkened through to the wood, which remains nearly white and normal. This is essentially a bark disease and will continue, in susceptible varieties, to run down the limbs and trunk into the roots, sometimes killing the tree outright in a single season. It practically ceases to spread downward at the end of the growing season and becomes dormant during the winter, but with the opening of spring activity is renewed and another stretch of bark is killed. This continues until the tree is completely overcome. Sometimes the attack begins in the water-sprouts at the base of the tree. Under these circumstances it reaches the roots in a few weeks, where it can not well be treated, and the case becomes practically hopeless.

Vigorous Trees Affected.

There is a general impression that plants or animals that are very vigorous resist disease better than those that are generally unhealthy and stunted. This certainly is not the case with apple and pear blight. In slow-growing trees the disease makes but moderate progress downward through the bark and generally dies out without reaching the larger limbs, while in very rapidly growing, vigorous trees it progresses rapidly, sometimes running through the bark from the tips to the roots in a single season.

Often there may be seen on the blighted leaves and branches, and especially on the blighted fruits, a yellow exudate in tiny droplets, or even in larger quantities running down the tree. This contains enormous numbers of the germs of the disease and is freely visited and eaten by ants, wasps, bees and probably other insects, that carry it to other trees, especially to the flowers, where a fresh attack begins. A single bee may thus infect several hundred flowers during the season, and a swarm of bees could infect many thousands. This accounts in most cases for the very extensive and sudden attacks that many orchards have suffered.

When the healthy leaves have fallen in the autumn, those on the diseased twigs and branches still cling to the tree, where they are very conspicuous. At this time also the diseased bark has turned quite dark, especially in the pear, and the line between it and the healthy bark is more sharp and distinct than during the summer season. Here, in the deeper layers of the bark, in the line between the diseased and the sound tissues, the bacteria that causes the blight live over winter. On the assumption that they do not live over in the ground or anywhere else excepting the region just indicated, the following treatment is advocated by the United States department of agriculture and by many of the experiment stations, and is extensively practiced by orchardists with some measure of success.

Cut Out Affected Part.

In a single sentence we can say that the only known method of curing a blighted tree is to cut out and burn all affected parts. This seems simple enough, but there are important details that determine between success and failure. As a matter of fact, very few inexperienced men are successful, largely because they will not pay close enough attention to these important details. The following rules should, therefore, be thoroughly mastered and rigorously followed.

1. See that no blight is allowed to winter over in the trees. The best time of the year to cut it out is late fall or early winter.

2. In the dormant season the blighted branch should be cut off about a foot below any visible portion of the disease; in the summer two or three feet below. If this necessitates cutting off a larger limb, this should be done. It is this rule that is transgressed most often and with the most serious consequences.

3. After each cut the saw or shears must be disinfected. The disinfectant can best be carried in a milk bottle attached to the belt, and can be applied with a swab. Small corrosive sublimate tablets (four to a pint of water) make an excellent disinfectant. A 5 per cent solution of carbolic acid is also good.

4. Burn all diseased parts promptly after cutting. In summer this must be done the same day, otherwise insects crawling over them during the night may become carriers of the germs. In winter it is necessary to burn them before the first warm days of spring, but many have neglected this rule to their sorrow.

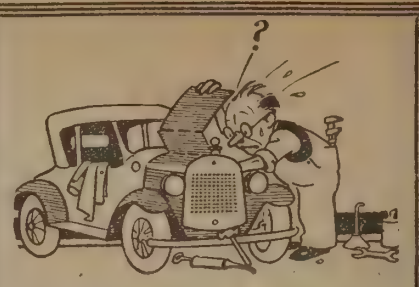
5. Inspect every tree carefully after the orchard has been gone over. Even an expert, when cutting out blight, has to do this two or three times to get every case, and a case or two left may ruin the whole campaign by starting the blight in the blossoms the next season.

6. Orchards in infested districts should be kept free from water-sprouts at the foot of the trees, and from suckers and fruit spurs on the main limbs; otherwise the bacteria, entering through these tender parts, will quickly reach the roots or the trunk.

7. Anything that favors a rapid, succulent growth of the tree makes it more susceptible to blight. It is, therefore, most important that blighted orchards should have no more tillage and water during the first half of the growing season than are absolutely necessary to the making of the crop. Barnyard manure should be applied only to the more resistant varieties.

8. Kill the green apple aphis. Observation and experience have convinced us that the winged adult of this insect is the most important carrier of the blight after the bees stop working in the flowers. Thorough spraying with tobacco extract for the green aphis should greatly reduce the spread of blight during the summer.

Why Did We Fail?



It does no good to lock the stable after the horse is stolen, but if you expect to have another horse later, now is a good time to get a lock and resolve to keep out the next horse thief. Just so, it does no good to spray the apple after the worm is safely inside the fruit, or to spray for any other pest that has done his damage and gone beyond the reach of your poison mist or dust. But it is a fine time to take stock of conditions, discover wherein you failed in your endeavors or lack of endeavors and resolve to put up a battle in the right way and at the right time the coming season.

A bulletin gives the following pointers with reference to combating pests:

There is no single remedy for all plant troubles. First determine what you must spray for and then use the formula that fits your case.

Distinguish between insect injury and

(Continued on page twelve.)

McQUAY-NORRIS
PISTON RINGS
PISTONS
PINS

Is your gas power machinery wasting money that could be saved by installing them?

Every motor—whether it is your automobile, tractor, truck, engine or pump—has three vital units. They are the piston rings, pistons and pins. It's the condition of these three units which determines the motor's power and economy.

If they are worn, full power and economical operation in that motor are impossible.

Wear in these three units many times causes farmers to sacrifice a good car or tractor or engine, when, if they had renewed them, the machine would have given satisfaction for a long time more.

When you realize the load these three units carry, it's easy to understand why they wear. They have to seal the combustion chamber, withstand the force of every explosion and the stopping and starting of the pistons as they shoot up and down their cylinders. It is not strange that they wear and when they do the motor gets noisy and wasteful. It frequently causes sacrifice of a good car or tractor that would have given much longer satisfactory service if these worn parts had been replaced.

Send for our Free Booklet, "To Have and to Hold Power," which explains the whole subject of motor wear and its correction.

ADDRESS DEPT. BD

McQUAY-NORRIS MANUFACTURING COMPANY, ST. LOUIS, U. S. A.

Pistons and Pins
McQuay-Norris *Wainwright* Pistons and Pins—gray iron pistons as light in weight as safety permits—specially designed for replacements—available in standard sizes and over-sizes—also in semi-finished form 75-thousandths over-size—pins of special hardened steel, ground to exceptional accuracy.

$1.25 Per ring — LEAK-PROOF — an exclusive two-piece design preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Supercyl. Each ring packed in a parchment container.

$1.00 Per ring — Supercyl—Keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container.

50c Per ring — *JIFFY-GRIP* ring. Non-butting joint, which can be fitted closer than ordinary step cut—velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope.

Snap Rings —of the highest grade. Raised above the average by McQuay-Norris manufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test, with the result that at no great depth they reach water. After a long rest, they fill their kegs and turn back for the old Santa Fe trail, some inclined to give up the journey to the gold fields, others determined to get to Pike's Peak or bust. Esau and Orlando, a little later, come upon a great wagon train of freighters out on the prairie and accompany them until they reach the Arkansas river. They continue alone, finally entering the open buffalo coutnry.

They pass through a tremendous herd of buffaloes, pitch camp on the bank of the Arkansas river, kill a buffalo each and spend a few days drying the meat for future use. While there a wagon train with which the Cooper family is traveling comes up and camps, giving Orlando a chance to get a little better acquainted with the daughter, Hazel. They part with the hope of meeting again in a few days somewhere along the trail.

CHAPTER NINE.

Rolling Back Toward the States.

Not very much later Orlando buckled on his six-shooter, shouldered his gun and set off down the river. After an hour or two he returned, dragging half of a bull hide by the tail.

"It was just as I thought," he told his partner. "I found a tough-looking old bull that somebody had killed this morning or yesterday, and all I had to do was to relieve 'im of part of his hide. It ought to make fine sole leather. Seems a full half an inch thick. Guess I'd better put the boots on Brindle and let 'em dry in that shape."

"That will be best, I've no doubt. I'll help you whenever you're ready to put 'em on, Lando."

A little later the two approached the cow, carrying four pieces of the bull hide. Having set the cow's foot in the middle of one piece, they turned up the edges, made holes in the folds with the little blade of a pocketknife, and passed a buckskin string through all the holes.

"Mr. Cooper has had a lot of experience with this kind of shoeing. He says the important thing is to draw your puckering string tight enough, but not too tight," Orlando remarked.

"Only common sense, that is. Tight enough not to slip down, and loose enough not to bind her laig."

When the first boot had been tied on as they thought it ought to be they proceeded to protect her other feet in the same way. Brindle went to grazing as soon as they turned her loose.

"They're not overly purty, them there bull-hide boots," commented Esau.

"No. And she seems a little awkward in 'em. But she'll get used to wearing boots, I've no doubt. And if they'll save her feet, it's little any of us care about looks out here. I've heard of puss in boots, and that was a fable. But here's Brindle in boots, and that's a fact."

Now, leaving the cow to get accustomed to her new foot covering, and the new foot covering to dry in shape to fit the cow's feet, the two returned to their camp under the cottonwoods.

"When are we going to move on from here, Esau? Tomorrow, or after dinner today?"

"Tomorr' mornin' is what we've been talkin' all the time."

"Our meat is so nearly dry, and Brindle is shod. It seems to me we could roll on a few miles further today just as well as not. A fellow grows pretty tired, hanging around the same old camp so long."

"Oho! What's your hurry now? You've never been in sech a fidge before, as I recollect."

"The sooner we get to the gold country the better chance we'll have to find some gold left to dig up. And besides, I'm anxious to see the Rocky mountains."

"Oh! And so it's the mountains, is it? Do you know, when you first mentioned the matter, I was a right smart s'picious it might be that little Cooper gal that was tollin' you along. But, of course, if it's the mountains, they'll be waitin' for us when we git there. Safe thing to figger on that. Funny mistake I made, though, wasn't it?"

"What mistake?"

"Why, thinkin' it was that little black-eyed miss that was draggin' you west by the hair of the head. But since you up and tell me it's the gold and the mountains you're dyin' to see, I know I was mistaken."

Orlando blushed a little. "Why couldn't it be all three pulling me along at the same time?"

"It could, Lando boy. To be shore it could! Why didn't I have gumption enough to think of that?"

"But I'm serious about wanting to reach the gold country as soon as possible. Every day we've been lying here 1000 to 2000 people have passed us. And just about all of 'em are headed for Pike's Peak. This is only one route, too. There's another road leading up the Republican river and a third road up the Platte. And, of course, there may be still other routes by this time that we've never even heard tell of."

"That's so, Lando. That's all so. And every route is alive with people tryin' hard to reach the gold diggin's. Yes, it does shorely stand us in hand to git to the Rockies the first minute we can. If our meat seems dry enough to pack away and our hunters show up from their huntin' in time, we may try to cover a few miles this evenin'."

The hunters failed to return till late, and not till the following morning did the foot travelers find it convenient to break camp. But they were all well rested by this time and were up before daylight. Orlando milked Brindle while his partner was putting on some bread to bake. Each man broiled his own meat. Immediately after eating they began to pack up. When the sun rose from behind some hills it discovered the wheelbarrow and the handcart rolling briskly westward along the great, dusty trail.

The weather was now wonderfully fine, with cool broozes most of the time, and sunshine from a cloudless sky. After a few days' rest the footmen tramped faster than usual. Brindle in boots, as Orlando called her, seemed a little awkward at first, but she soon became accustomed to the bull hide. Numbers of those slow-moving ox wagons, which had passed the party of seven in their meat camp, were overtaken and left behind by this day's march. Orlando looked often for one particular wagon, which he would recognize among many others. But he was both disappointed and relieved not to discover it. His relief grew out of the reflection that, if his party overtook the Coopers now, they would pass them at once and leave them behind again.

Heretofore all the wagons the foot party had seen, except an occasional string returning from Santa Fe, were headed toward the mountains. But about the middle of this forenoon they met a long train moving eastward. Having seen them in the distance, and having noticed that they were not freight wagons, all had been speculating as to what this meant. And now they stopped the first driver.

"Hey, there! How comes this? You're p'inted in the wrong direction!" Esau called out, gaily.

"Am I? You won't say so three or four weeks from now. By that time you'll have your eyes open, all you fellers that's headed west," was the growled-out answer.

"Did you dig up all the gold you wanted?" inquired Orlando.

"Gold!" The man laughed half scornfully, half bitterly. "You can find as much gold right out here on these bald plains as you can in the Rocky mountains! I'll eat all the gold you'll dig up there!"

"If there's no gold in the Rockies, how happens it that so many people believe there is?" demanded Sanders. "Where do all those reports of rich gold discoveries come from?"

"Where do all lyin' reports come from? The devil knows—I don't! But they're lyin' reports, jest the same."

"How about all the thousands of other people that have rolled on out there? Air they disapp'inted too?" questioned Esau.

"Disapp'inted ain't no name for it! They're out-and-out disgusted, most of 'em."

"But they're not comin' back?"

"Ain't they? You jest wait a few hours and see how many more you'll meet! This whole Santy Fe trail, and every other road to the states, will soon be black with 'em. You'll hear 'em howlin' before you come in sight of 'em, and they'll elbow you out of the road."

After not a little more talk of the same discouraging kind the east-bound party drove on toward the states, and the handcart and the wheelbarrow rolled on toward the mountains. But it might have been noticed that the foot travelers did not step quite so briskly as before.

"Well, that's a little bit disheart'nin'!" Esau called to the handcarters, soon after the tail of the wagon train had been passed.

"You're right. The kind of talk I don't like to hear, that is," admitted Sanders.

"But we mustn't let ourselves be put out of heart by it," Orlando hastened so say. "For my part, I've tramped all the way out here to see the Rocky mountains and to dig for some gold. And I don't want to go back home without doing both. I've never yet set eyes on any real mountains and I want to see those ahead of us, whether there's any gold in 'em or not."

"Well, can't say that I've hoofed it all these hundreds of miles just to look at the scenery," answered the unsentimental Sanders. "I'm on my way to the mountains in the hope of lugging a pocketful or two of the yellow metal back home with me. Of course, though, the mountains will be interesting to look at while we're there."

Not long after this conversation the party came to where the trail crossed a good-sized creek, with running water in it. There were no buffaloes here now—live ones. But evidently many had been here recently. For the creek, which had a quicksand bottom, was crowded, both above and below the wagon crossing, with dead buffaloes. They had bogged in the quicksand and been sucked down till they were drowned.

To Orlando, at least, that was an unpleasant sight and he was glad when they had left it behind. Some timber grew along the creek, and brush and logs had been chopped and thrown in, till there was now a safe crossing for wagons where the road crossed.

The east-bound teamster's prediction that other people would be met rolling east soon proved true. During this day's march the party on foot met many wagons, all returning from the scene of the gold excitement. Every driver seemed to wear a scowling face, and many of them were cursing the country. A few admitted that there was probably a little gold in the mountains, but not enough, they insisted, to pay for the digging. They declared that most of the miners were not washing out gold dust enough to purchase the food they ate.

By the time they had talked with a dozen or more of such disappointed gold seekers the little west-bound party were feeling gloomy and discouraged. They tramped ahead doggedly, in silence. But certainly they did not move with the same enthusiasm with which they had started out in the morning. However, their courage revived somewhat after a time, and they began to joke a little. Now they accused one another, banteringly, of looking "down in the mouth," or of dragging their feet.

Late in the day they parted company with the main Santa Fe trail, which here crossed the Arkansas, and then wound away through many sand hills toward the southwest. The road followed by the gold seekers kept on up the Arkansas, and on the same side. The stream changed its course here, and they were now traveling north of west instead of south of west, as heretofore. Even this branch road was old and well-beaten, however. For it led to Bent's Fort, an Indian trading post established higher up the Arkansas, perhaps 30 years before.

For two or three days the seven men tramped on, meeting all the time great numbers of disappointed gold seekers. Late one afternoon they camped near a good-sized creek, with cottonwood timber along the banks. At some recent time a big green tree had been blown down, perhaps 200 yards above the road. And it was near that big tree trunk that the foot party stopped their wheelbarrow and handcart. Many other travelers had camped here, as was indicated by the camp fire ashes. Also the big cottonwood log was pretty well covered over with rudely carved names and dates—messages, perhaps, that passing travelers had left for later-coming friends to read.

On the far side of the creek, as the party had discovered, was another camp—a big camp with many wagons in it. From this side it was concealed by the timber along the stream. But immediately after supper, which was eaten before sunset, Orlando crossed the creek and went for a stroll through that other camp. He was half hoping to find somebody there.

And he was not disappointed. For at one edge of the camp he came upon the Cooper wagon, with the Cooper family near it. All of them gave him a warm welcome, except the one he was interested in. She greeted him shyly, but with a smile that meant she was at least pleased to see him again.

The family were on the point of sitting down to supper, and they urged him to stay and eat with them. He declined, and started off for a stroll about the camp, after promising to return later. Before he had gone far Cooper called to him that he had some more acquaintances close by and pointed out their wagon. The young fellow turned toward it, and was soon greeting Holloway and his partners.

From these men he learned that while all the wagons in this particular camp were journeying toward the mountains there was another camp close by, with three or four times as many wagons in it. And all the people with those wagons were returning from the Pike's Peak country.

CHAPTER 10.

A Gloomy Prospect.

After chatting with Wallace and Holloway for a few minutes, Orlando strolled back to his own camp, to let his fellow campers know whom he had found. A little later he and his whole party, leaving Frisk and Brindle to look after their camp by the log, crossed the creek for a visit with the other travelers, known and unknown.

Many of the people there, they soon found, were silent and gloomy. But others were very noisy. The gloomy persons were those traveling toward the mountains. The noisy ones were on their way back to the states. Darkness had settled down, and some of the disappointed gold seekers were in almost every camp. Most of them were bitterly denouncing the country they had turned their backs on, and some were cursing it loudly.

"Biggest fraud that ever was perpetrated on a passle of gullible, thick-skulled folks like us!" declared a stalwart traveler whom Orlando found at the Cooper campfire, on returning there. This man was one of the leaders of the east-bound caravan. "Fact is," he went on, in the same resentful tones, "all the gold ever washed out in them Rocky mountains was brung from Californy and planted thar."

"It was!" exclaimed Orlando, incredulously. "But how—how do you know that?"

"How do I know it, young chap? Why, ever'body out thar knows it by this time! Sharpest, dirtest humbug I ever heared tell uv!"

"But who would play such a trick? And what was their object?" Cooper wanted to know.

"Why, a bunch of fellers that think

(Continued on page thirteen.)

Bits of Fun FOR Everyone

Baby Alarm Clock.

One day young aunty was left in charge of the small apartment and the two children.

"I'm going into the kitchen to prepare baby's milk, Bobby," she said importantly; "you be sure to call me when he wakes up."

"Oh, you'll hear him for yourself," flung Bobby; "that kid turns himself on the minute he wakes up—he's his own alarm clock!"

A Fast Journey.

An Irishman was handling dynamite in a quarry. He let a stick drop, and the whole box went up, taking Mike with it. The quarry boss came around later and said to another Irishman:

"Where is Mike?"

"He's gone," replied Pat.

"When will he be back?" asked the boss.

"Well," replied Pat, "if he comes back as fast as he went, he'll be back yesterday."

New Memory System.

"How is it you have such a good memory, Norah?" her mistress inquired.

"Well, mum, I'll tell ye. Since me childhood never a lie have I told, and when ye don't have to be taxin' yer memory to be rememberin' what ye told this one or that, or how ye explained this or that, shure ye don't overwork it, an' it lasts ye, good as new, till ye die."—Christian Advocate.

Equal to Anything.

"You are not alarmed by the flapper?"

"No," said Mr. Grumpson.

"And you even tolerate jazz?"

"Yes. This country survived sidewhiskers, hoop-skirts, bustles and free silver. I don't propose to lose confidence in its recuperative powers this late in the day."—Birmingham Age-Herald.

The Witch.

Conductor—Pardon me, madam, but your girl seems more than 12.

Her Mother—Conductor! Would you take me to be the mother of a girl that age?

Conductor—Lady, don't tell me you're her grandmother!—Sydney Bulletin.

"The Mercury Went Down."

Little Girl (rushing into doctor's office)—Please, doctor, come at once to father. Mother's taken 'is temperature an' it's gone down.

Doctor—That's all right, my dear—that's splendid.

"'Tain't all right, it's gone right down. He's swallered it.—Punch.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Mrs. Barland: I find the Circle letters so very interesting that I can not keep quiet any longer. I find so many helps in them every week. You must have a great store of patience, Mrs. Barland, to attend to the problems of so many women coming to you with their cares. We all have them to meet and overcome. It is so good of you to help us and you seem to understand.

I am wondering if the Family Circle women would like to write and tell what they are especially interested in, such as books, music, flowers or whatever it happens to be. I love music and the violin is my favorite instrument. It seems to me to be a thing of understanding and responds to one's feelings whether they be songs or tears. I love my violin as if it were human.

I love books, too. They are friends that are always welcome and never intrude. I love flowers, too, and often am impressed with the goodness of God, who gave us so many beautiful things. I wish you could see the beautiful bunch of roses that friend husband gave me last evening.

But I must not take any more space, only to say if any of the circle sisters care to write to me I shall be glad to answer.

Corvallis, Ore. MRS. DESSIE HOOVER.

Dear Mrs. Barland: Let me help you make butter. Perhaps I am as much of a crank on keeping things clean as your mother was, but she had the right idea. Instead of setting the butter away till the next day before working it over to pack or to be printed I let it stand only an hour or so, then print and wrap it and put it away in a cool place. I use a barrel churn and I wash the butter in the churn till there is no more milk in it, then I salt it and churn it 10 or 15 minutes, till it is formed into a solid, smooth mass, when I set it aside and let it rest for an hour or two, but not till the next day, as it gets so hard and is slow to work up again.

My butter used to be streaked before my neighbor taught me this way. If butter isn't salted too much it will keep better and be sweeter.

A drop of carbolic acid in little chicks' drinking water will stop white diarrhea.

A lump of blue stone the size of hen's egg dissolved in a quart of water will remove warts from cow's teats, applied twice a day. We use this with good success. SUBSCRIBER.

Washington.

Dear Mrs. Barland: I have been a reader of THE FAIMER for three years and always turn first to the Circle.

We live on a dry ranch, 20 miles from Boise, and I like it very much out here. We raise wheat and corn, but our wheat was a failure this year. We have 16 acres of the finest kind of corn.

I put in my time with my poultry; I have 180 turkeys and 400 chickens, mostly Barred Rocks, though I did hatch 100 White Leghorns for winter layers.

We have no children of our own, but keep my nephew with us during the summer months.

I have many recipes which are good and I will send some in to the paper. Yours truly, MRS. B. S.

Idaho.

Dear Mrs. Barland: I have been reading the Family Circle with interest for some time and thought I would write today.

I am a young wife of 22 and I have two little boys and they are a great pleasure to me. I have been married four years and four months; we live on a farm seven miles from town and we have 480 acres, from which we have taken but two loads of wheat since we were married. We have found it hard to make a living. We have nine head of horses and six head of cattle and we have to buy feed for them.

I came from North Carolina, where they have lots of rain and it is very discouraging out here where there is no rain and where we can not raise fruit and where we must pay so much for wheat we buy.

Can some one tell me what to do to get rid of worms that are in my house; they get in the flour and rolled oats and they are in the chopped oats in the grannery and are so thick in the feed that my husband can not feed it to the horses.

They even get into my clothes' closet, though I have cleaned it thoroughly and disinfected it. They are a small brown worm, with short hair all over them.

Montana. A NEW SISTER.

NEVERFAIL INSECT POWDER.
Greatest destroyer known in powder form for roaches, ants and bedbugs.
Exterminating power of chemicals tested out and recommended by government experts in Washington, D. C.
Odorless, harmless to handle, easy to apply.
Two sizes, 25 and 50 cents. If not at your druggist send coin or stamps to

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

When a disease is due to a known germ and runs a definite course, we speak of it as an acute infectious disease. Examples of such diseases are the contagious diseases of childhood and pneumonia and influenza In the same category is rheumatic fever.

Dr. Copeland.

There are a lot of other factors which may have something to do with rheumatic fever. It may well be that exposure to cold and dampness lowers the resistance and leaves the body in condition to be attacked successfully by the germs of disease.

Unlike some doctors, I doubt if red meat and heridity have anything to do with the disease.

Excessive fatigue and lack of nourishing food may prepare the way. I have known several doctors who have worn themselves out during an epidemic and who have gone without proper food. The penalty they paid was rheumatic fever.

A sore throat may be the first symptom of trouble. Headache, lassitude and nosebleed may appear before oint pains are noticed.

Fever, definite pain in one or two joints and then redness, swelling and tenderness of several joints may come.

The victim of rheumatic fever should go to bed and keep absolutely quiet. Fresh air and frequent baths are desirable.

The sore joints are so painful that the weight of the bed clothes hurts. A support must be devised to keep the blankets from resting on the sore places.

Warm cotton wrapped about the joints and bound in place will promote the comfort. Immobilize the joint by firmly bandaging it.

Hot applications, rubbing the affected parts with oil of wintergreen, alcohol or chloroform liniment may help.

The family doctor will prescribe the remedies to control the disease, and relieve the pain.

Pickle Recipes

Dill pickles; to prepare commercially: Select cucumbers three to four inches long and pack them into a keg barrel, or large crock, about three or four inches deep. Over this place a handful each of peach and grape leaves, three or four horseradish leaves and a little piece of the root of the latter and a handful of dill, taking out the real coarse stems, using the rest just as it grows. Add another layer of the cucumbers, covering with leaves, etc., till the container is nearly full, having the last layer of the leaves and dill. Cover with a clean cloth and weight down with a heavy weight and cover with the following brine: With what is called the one-half granulated stock salt make a boiled brine strong enough to hold up an egg and float it easily. Allow this to cool, then mix with an equal amount of clear cold water, pour it over your pickles, tie a cloth carefully over the container to exclude dust and set the container out in the sun, the hotter the better.

In a few days the cucumbers will start to ferment and they will continue to do so till the pickles have turned clear in color and grown tender, when they will be ready for use, having made their own vinegar.

They can now be put away in the cellar, but they must be looked into from time to time and any mold or scum removed and the cloth under the weight must be taken off and washed or, better still, a new clean one put on. I have kept them till April without their being soft. If you do not have enough cucumbers to fill the container at one time you can add more as you pick them, covering with brine as at first. MRS. FRANK H. FINCH.

Leese, Wash.

Sweet pickles, easy to make: One gallon good vinegar, one cup sugar, one-half cup mustard, one-fourth ounce of saccharine, a little horseradish if desired, 5 cents' worth each of whole cloves, allspice, pepper and cinnamon.

Take the salt, sugar, mustard and enough of the vinegar to make a paste and put in a three-gallon jar, then add the rest of the vinegar and stir in the spices; wash cucumbers and put in the jar as you get them. All ingredients are used cold and if you do not wish the mustard add white mustard seed instead. MRS. WM. T.

Weiser, Idaho.

A splendid meat pickle: For 100 pounds of meat take nine pounds of salt, three pounds of brown sugar, one pint molasses, two ounces saltpeter, two ounces soda, six gallons of water, mix, heat and skim. When cold pour over the meat. Leave the hams in this brine four weeks and the side meat one week. When smoked a few days it will be almost as good as that we buy at markets. MRS. J. SCHWARTZ.

Oregon City, Ore., Route 2.

Dill pickles No. 2; said to keep till used: Use fresh, crisp cucumbers, any size or all sizes, wash and pack in a crock or keg. To each gallon of pickles add one pint of salt. Put on dill, all but the root, two inches thick and weight well, so they will make their own brine. When ready for use freshen to taste. I use two fresh waters and give them two days' soaking. Pour over weak vinegar, hot or cold; if hot is used they will be ready for use sooner.—(A French recipe.)

Just Folks

Noise is largely a smoke screen.

There is a poverty that commands.

Thinking and dreaming are different.

Occupation is the largest word in life.

The more you see, the less you believe.

Compromise and the United States congress should not mean identically the same thing.

To do the right thing as near as you can see it, regardless of consequences, may be the surest way of getting out of a difficult situation.

The ambition of higher education is to develop leadership—leadership in law, medicine and theology; leadership in finance and statecraft; leadership in applied science and in applied sociology; leadership in education itself.

There must be leadership among men, and it is better to have trained than untrained leadership.

Many are being trained for leadership who are not to the manner born. Others are being trained for leadership who will misuse that training to the prejudice of the common folk with whom they come into contact. Power tends to despotism. Unchecked leadership ranges from snobbishness to downright despotism and oppression. Unhallowed leadership robs the widow and the orphan. Avaricious leadership, for its own profit, arouses special prejudices on the part of the many.

It is as necessary for the people to control the leaders as for the leaders to control the people.

The motives that actuate home-loving and home-keeping hearts are as essential to the stability of government as the high wisdom of the schools. It is necessary for the politician to put his ear to the ground to hear the murmuring of the common folk, but it is just as essential that those murmurings and whisperings and mutterings shall be respected as the basis upon which all government is established. The unexpressed desires of the good father and the good mother in the helpful home may be interpreted into the highest political wisdom.

Justice is not finally defined in the books; justice is defined in the hearts of the common people.

Dissect joy and you take the laughter out of it; dissect patience and it becomes unbearable; dissect ambition and it loses its power.

The higher schools do a lot of dissecting.

Some years ago I was walking through the administration buildings of one of our state educational institutions. Before we reached the campus the man who was with me said, "You see the tin cans and the rubbish on the vacant lot we are passing; you see signs of unattractive homes; you see the weeds along the walk:. We are about to enter upon the campus where the students are taught to look upon landscape gardening; where beauty, as well as utility, is impressed upon the students. If this institution, with its campus, has no influence 20 rods away from its boundary, how can we expect single students coming from the institution to have influence upon communities?"

It is by the neighborly spirit that people are made better, not by precept merely. The development of the neighborly spirit wells the fountain of truest wisdom; from that neighborly spirit are to be derived the arts of true government.

Yet, who ever heard of the University of the Neighborly Spirit? E. A. S.

GOOD THINGS TO EAT.

Farm housewives last year either sold or put on their pantry shelves 1,335,000 containers of jelly, 9,500,000 cans of fruit and vegetables and 715,000 pounds of poultry and meat, canned according to methods demonstrated to them by extension agents.

High Points in News of the Week

The outstnding developments in the railroad strike situation last week were, first, the apparent complete failure of the arbitration attempt of the five big railroad brotherhoods that are not on strike; second, the apparent determination of both the railroad executives and the striking shopmen to fight it out to a finish, and third, the preparation of a measure for quick passage by congress authorizing the president to take charge of and operate any or all railroad lines that were not able to render adequate service under private operation.

President Harding, while asking that such legislation be enacted, continued to express the belief that the successful operation of the roads would yet be brought about without the government actually taking charge and operating them.

The situation showed no improvement last week, notwithstanding the declaration of the railroad executives that they had increased the number of shop workers on western railroads by more than 30,000 during August, making a total of nearly 90,000 employed at the present time. These roads were employing approximately 160,000 men in these positions prior to the strike.

Leaders of the shopmen's organization declare that railroad equipment is rapidly becoming unserviceable, due to inadequate and inexperienced help in the shops, and their contention appears to be borne out by the facts that railroad accidents show an increase, that trains as a rule re running on irregular schedules, that inadequate cars are available in western territory for handling the crops and that additional trains are being cancelled from time to time.

The situation in the Pacific northwest with reference to handling the fruit crop, as well as the grain crop, is becoming alarming. It has been estimated that not more than 10 per cent of the refrigerator cars necessary for the adequate handling of the fruit crop of these states is available and that insufficient trains are being operated to utilize even the available supply efficiently. Fruit growers continue to bombard persons in authority with appeals that something be done to make the shipment of fruit possible.

Reports from many localities indicate that grain storage is already proving inadequate because of the inability to ship the usual amount.

* * *

Government operation of the hard coal mines is also a possibility with a measure being made for consideration by congress giving the president the power to operate them if he deems it wise. Legislation is also being considered giving the government power to control the distribution and price of coal with a view to the greatest possible efficiency in supplying the needs of industry and preventing profiteering on the part of coal mine owners and dealers. No definite action has yet been taken on President Harding's recommendation that a government coal distributing agency be created with capital sufficient to purchase and resell a large enough percentage of the available coal to guarantee price stability. Settlements in the soft coal fields have reached a point where many of the mines are able to resume operation with production of quantities of coal approaching normal output.

* * *

While considerable curtailment of industry has been in evidence, the most striking instance is that of the announcement by Henry Ford last week that on September 16 the Ford Motor company plants in Detroit and all the Ford assembling plants throughout the country would be closed because of inadequate coal supplies. Mr. Ford said that by that date all the company's reserves of fuel would be exhausted with only enough left to keep the furnaces and ovens in condition throughout the winter or until such time as adequate coal made reopening of the plants possible. The shutdown of these plants would lay off about 105,000 men, not including those indirectly affected, such as men working in other industries furnishing supplies to the Ford company.

* * *

Indications are that France will take individual action against Germany to insure receipts of adequate reparations payments. Germany's latest guarantees of payment have proved unsatisfactory to France, notwithstanding the urgent argument of England that they be accepted. France doubts the ability of the German government to deliver the specified amount of coal and timber products if the industrialists of Germany should refuse to do so. The action of France is a great disappointment to England, and is evidence of a wide split in the relationships of the two countries. If France clings to her present apparent determination her next step will be the occupation of the Ruhr coal producing region and the operation of the coal properties under her own military supervision. Such action may easily lead to international complications that in turn may easily prove the match setting off another war of greater or less dimensions. Russia, for example, is understood to look with great disfavor on further occupation of German territory by the French army.

* * *

Probably before this item reaches the readers the senate will have voted upon and in all probability have passed the soldier bonus bill, which is scheduled to be voted upon this week. As previously stated, the measure, if passed in the form approved by the house of representatives several months ago, will likely be vetoed by President Harding. The bill passed by the house contained no provision for raising the money with which to pay the bonus. President Harding has indicated that he can approve no bill without some provision for raising the funds, prefering the sales tax for this purpose. Whether or not the senate and house can pass the measure over his veto by the two-thirds majority remains a question to be answered.

* * *

The total national debt at the last report was a little under $23,000,000,000. It was almost $26,600,000,000 when it was at its peak. The reduction, aside from the sales of war materials and property, amounting to $1,400,000,000, has been accomplished by the application of about $1,000,000,000, which has been carried as a balance in the treasury, but became usable with lessened expenditures; the payment of about $200,000,000 by foreign governments on their accounts, and $1,000,000,000 by foreign governments on their accounts, and $1,000,000,000 derived from taxation, in three years, 1920-21-22.

Over $2,000,000,000 in Victory 4 3-4 per cent notes have been refunded at 4 1-2 and 4 1-4 per cent, and the policy has been to distribute these over a series of years from 1926. Treasury notes to the amount of $2,200,000,000, which make part of the refunding plan, to carry along debt that can not be repaid from current receipts, will be falling due in 1924, 1925 and 1926.

Farm Business and Markets Outlook

(Continued from page five.)

Prices for No. 1 American cheese on August 23 were: Chicago—Twins, 20@20 1-2c; single daisies, 20@20 1-2c; double daisies, 20c; Longhorns, 20@20 3-4c; young Americas, 20@20 1-2c.

Fruits and Vegetables.

Carlot shipments of potatoes up to August 21 totaled 58,594 cars, compared with 50,632 cars in the same period of 1921. The weekly movement is about 4000 cars in addition to large local supplies which are coming into consuming centers. New Jersey is the chief shipper at present, with Idaho, Minnesota, Colorado and New York following in order. Early Ohios No. 2s are quoted at 65 to 70 cents per 100 pounds f. o. b. Nebraska shipping points. Most Idaho shipments have been rolling unsold.

Apple shipments for the season up to August 21 were 6057 cars, compared with 3273 cars last year. New York, California and Michigan are the leading shippers. Prices are ranging from 40 cents to $1 a bushel in midwestern markets, compared with $2 to $3.50 at this time last year.

LATEST QUOTATIONS.

Why Did We Fail?

(Continued from page eight.)

fungous diseases and between the work of chewing insects and sucking insects.

Stick to the standard spray formulas.

Do not try to improve on standard formulas by mixing in other ingredients or by using the sprays stronger than recommended.

Arsenicals are stomach poisons and will not kill sap sucking insects.

Generally speaking, the older the insect the harder it is to kill.

Spray before the damage is done, but do not spray unless you know it is necessary.

Spray so as to cover every surface. Direct particular attention to the underside of the leaves.

Do not sacrifice efficiency by trying to economize on spray materials. Spraying is cheap insurance, but only when it is properly done.

Many sucking insects are greasy and hard to wet and often hide out of reach. If a few are missed so fast as to undo the effects of spraying.

High pressure creates a better mist and results in more thorough application of the spray.

Strain the spray materials to avoid clogging nozzles.

Mix Bordeaux in wooden buckets or barrels. It corrodes metal containers.

Do not depend on a spray pump too small for your work.

Wash out the pump and hose after each day's work. Some spray materials corrode metal and rot hose.

Improve Poultry Industry

(Continued from page two.)

year for the runways for the chicks.

Second, that the ground used one year should be turned under and cropped the following season with some kind of a cultivated crop.

Third, that land to be used for runways be allowed to lie idle for at least one year before being used again for chicks.

Fourth, that gravel should be used about the brooder to effect better drainage of the soil.

Fifth, that the movable brooder house is a useful part in a solution of the problem of sanitation of the runways.

The entire report was adopted unanimously.

A vote of thanks was issued to Dr. Nelson, W. A. Linklater, Mr. and Mrs. George Shoup and W. D. Buchanan for their effort in calling the meeting and assisting in putting the work over. A plan to call another convention to meet with the Washington Egg and Poultry association at their annual meeting next January was indorsed.

Approve Ford Offer

Following a visit last week from Chester H. Gray of the American Farm Bureau federation the Spokane county farm bureau adopted a resolution approving the Ford offer for the Muscle Shoals power and nitrate project in Alabama. The indorsement is based largely upon the fact that the state of Washington should use more fertilizer and upon the belief that the operation of the property as provided in the proposed contract would result in plentiful fertilizer at reasonable prices.

Mr. Gray is now touring the country in the interest of the bill introduced by Senator Ladd of North Dakota providing for the lease of the Muscle Shoals project to Mr. Ford. The American Farm Bureau federation is urging congress to adopt the measure.

Of such vital interest is this bill to the farmers of Washington that The Washington Farmer, in its next issue, will give a comprehensive discussion of the measure as presented by Mr. Gray, outlining the arguments of the farm bureau in favor of it.

JUDGES FOR NORTHWEST FRUIT.

Judges for the second annual Northwest Fruit exposition, to be held in the arena here from October 28 to November 5, inclusive, have been named as follows: Professor O. M. Morris, Washington State college, Pullman; J. D. Duke, Walla Walla; Professor W. S. Brown, Oregon Agricultural college, Corvallis; Sam Miller, Milton; Professor O. C. Vincent, University of Idaho, Moscow; M. L. Dean, Wenatchee, and J. L. Stahl of the western Washington experiment station, Puyallup.

FRUIT RATES REDUCED.

Rates on fresh fruit, apples and vegetables from Idaho, Washington, Montana, Oregon and Utah to Bisbee, Douglas and Nogales, Ariz., have been ordered reduced by the interstate commerce commission to the approximate levels of similar rates applying to El Pasco, Texas. The base rate fixed on apples moving from the northwest to the Arizona cities is $1.40 1-2 per hundredweight.

"THE HONOR OF WASHINGTON"

Judge Austin E. Griffiths

Candidate in republican primary for the United States senate.

Headquarters, 308-9 Hoge Annex, Seattle.

Date of primary, September 12, 1922.

Judge Griffiths says: "Rural prosperity is the bedrock of our national well being.

"The farmer's power, or the farm bloc, in congress is here to stay.

"Formerly farmers were, in general, political sheep led to slaughter. Today they feel and express in united action the effect of a generation of education from state agricultural schools and federal cooperation.

"This evolution is logical and right.

"By early training, natural sympathy and as farm owner, I may be relied upon to advocate the agricultural interests of our state and nation.

"Land redemption is a state and national duty and must have aid as a state and national policy."

Be sure to vote at the primaries.

Pike's Peak or Bust

(Continued from page ten.)

hey'll make their pile by havin' that God-forsaken rattlesnake patch up thar fill up with people, like Californy filled up. And they've made the thing go, too—you bet your breeches they have! They've got the people out thar by the tens of thousands a'ready, and thousands more air on every road. But that's all the good their shenanigan will do 'em, blast their tricky pickchers! Lots of the folks has already found out how they've been fooled, and are moseyin' back home. And what's left will soon find out. By winter time only fellers out thar will be them that cain't git away. And chances air they'll starve to death by spring if they don't freeze to death or eat their boots."

Long and loudly the stalwart visitor talked in the same strain. Indeed, he talked so long that Mrs. Cooper and Hazel left the campfire and disappeared back in the darkness. Orlando supposed they had gone off to bed and he was much disappointed. Not yet had he found an opportunity to say anything to the girl. Leaving the big man abusing the mountain country, Orlando wandered away to visit other campfires.

By those he heard the same kind of talk, and even worse. Or at least, there being no women present, it was more profanely expressed. Some of the disappointed gold seekers seemed to be in every camp of the west-bound travelers. And they were doing their utmost to keep anybody from going on. One man explained this by declaring his determination that others should not be fooled as he himself had been fooled.

Finally, much out of heart, Orlando started back to his own camp. But, while passing the Cooper wagon, he turned aside and stopped there. The big man was gone at last, but Cooper and his wife and Hazel were sitting by the fire. All appeared gloomy and much discouraged. They were silent now, but evidently they had been consulting, for Cooper said: "I'm mighty bad out of heart myself. And we're thinking a right smart about turning back. From what these folks tell us that have been there it's worse than useless to venture any further. And now's the best time to make the trip east, everybody says. By pushing through, we ought to reach the settled country before the worst heat of summer sets in. But if we wait till July or August, this whole region will be a desert, like you found the Smoky Hill road. In fact, after we leave the Arkansas we may have to travel a hundred miles without water, and without much grass, maybe. So it seems to me that, as we're on a wild-goose chase, anyhow, we'd better get back to the states while going's good."

"But couldn't we go back in the fall, after the weather turns cool, pappy? That is, if we have to go back," suggested Hazel.

"Yes. It seems to me that would be far better time," Orlando hastened to say.

"No, that wouldn't do at all," the man answered, slowly, thoughtfully. "It takes a long while for an ox team to cross these plains. And winter sets in almost immediately after the hot, dry weather ends. It must be something frightful to cross this high, bald region in cold weather. We've seen how even the spring winds can blow out here. The winter winds must sweep the whole country furiously. And the only thing we'd have to burn would be those tarnation buffalo chips."

"Yes. And they'd be a little worse than nothing in cold weather," his wife remarked.

"But why couldn't you stay at the mountains till spring, and then start back to the states? That is, if you didn't like the country," urged Orlando. "Worlds of tim-

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4082. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. To make the dress for a 38-inch size requires six yards of one material 32 inches wide. As illustrated it will take 2 1-2 yards of plain material for sleeves and front, and 3 3-4 yards of striped material. The width of the skirt at the foot is 2 1-4 yards, with plaits extended. Price 10 cents.

3866. Misses' dress. Cut in three sizes: 16, 18 and 20 years. An 18-year size requires 4 5-8 yards of 38-inch material. The width at the foot is two yards. Price 10 cents.

4074-4076. A smart suit, Coat 4074, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4076, cut in six sizes: 25, 27, 29, 31, 33 and 35 inches waist measure. A medium size requires 5 7-8 yards of 40-inch material. The width of the skirt at the foot is about 2 1-4 yards. Two separate patterns, 10 cents for each pattern.

4090. Child's play set. Cut in four sizes: 2, 3, 4 and 5 years. A 3-year size requires 1 7-8 yards of 32-inch material. For hat alone one yard is required. Price 10 cents.

4094. Child's play garment. Cut in four sizes: 2, 4, 6 and 8 years. A 4-year size requires two yards of 32-inch material. Price 10 cents.

3705. Ladies' house dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size will require 6 3-4 yards of 27-inch material. The width at the foot is 2 1-4 yards. Price 10 cents.

4099. Sleeveless "cover all" apron. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 4 1-2 yards of 32-inch material. Price 10 cents.

4085. Girl's dress. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size requires 4 1-4 yards of 32-inch material. Price 10 cents.

3813. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. An 8-year size requires 1 3-4 yards of 27-inch material for the guimpe and 2 1-2 yards for the dress. Price 10 cents.

3856. Girl's dress. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 1-2 yards of 32-inch material. Price 10 cents.

3824. Ladies' negligee. Cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3 1-2 yards of 36-inch material. Price 10 cents.

3100. Set of infant's clothes. Cut in one size: It will require 2 3-8 yards of 36-inch material for the dress, 2 1-4 yards of 27-inch material for the petticoat and two yards of embroidery for the ruffle. The slippers require three-eighths yard of 18-inch material and the Barrie coat three-eighths yard of 27-inch material for band and one yard 40 inches wide for skirt. Price 10 cents.

Fashion Book Notice.

Send 12 cents in silver or stamps for our up-to-date fall and winter 1922-1923 book of fashions, showing color plates and containing 500 designs of ladies', misses' and children's patterns, a concise and comprehensive article on dressmaking, also some points for the needle (illustrating 30 of the various, simple stitches), all valuable hints to the home dressmaker.

Please fill in this order and mail with remittance to:

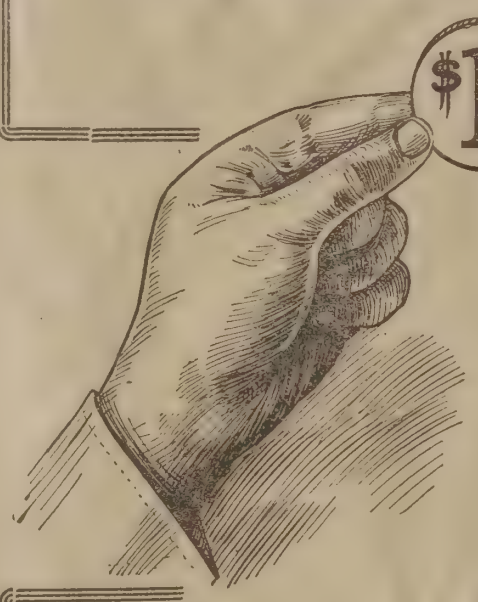
New Lamp Burns 94% Air

Beats Electric or Gas



A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Just What You Want

For $1 You Employ Scores of Workers for 5 Years

Rock Bottom Subscription Price Due to Cooperation

When you subscribe to The Washington Farmer you employ the services of a big, hardworking organization devoted to your interests alone.

These people get accurate, up-to-date market quotations from the principal centers, prepare careful crop and weather reports, or glean the news and views expressed at conventions, shows and farm gatherings.

Others in the organization conduct the departments, comb the state for farm facts, and answer your questions. They find out and report the experiences of hundreds of practical farmers whose problems are not those of some distant field, but of the same state in which you live. Then there are those whose pleasant task it is to find the stories which will give you the greatest enjoyment, to collect the household hints and helps which will prove most worth while, or to discuss for our great circle of thoughtful readers the many topics and issues of current interest.

For the expenditure of a dollar you secure the services of this great organization for five full years. This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

If your subscription is already paid in advance it will be extended from the date to which it is paid. Aug. 31, 1922.

Donald DeHart, who lives in Adams county, Washington, writes, "I would like to join the Cousin's Corner. I am nine years old. My birthday is September 2. I have six pets, two dogs, one cat and three pigeons.

Gladys Stone says it is so hot in Whitman county that she had to lie down a while before she finished writing to us. Gladys' birthday is September 12, 1922. She will be 11 years old.

Watermelons, muskmelons, beans, corn, lettuce and peas are the things that James Aubrey Randolph planted in his garden this year. His pets are four rabbits and a little White Leghorn chicken. Almost every afternoon James goes swimming in the creek. This cousin's home is in Spokane county, Washington. (If, when you send your picture, you request that it be returned we shall try to see that you get it.—Aunt Nellie.)

Five-year-old Raymond Larson lives in Douglas county, Washington. His father has 800 acres of wheat in this year. Raymond says they have a great many horses, cattle and pigs, but not very many chickens. When is your birthday, Raymond?

Margaret Hunter writes from Spokane county, Washington, that she has a bunny named Polly, a cat, three calves, two horses, named Frank and Snuke, and a whole lot more. Margaret is in the sixth grade; she is 11 years old, and her birthday is April 21.

In Lewis county, Washington, they have every kind of bird and animal we've ever hear of there being around here. Esther Simila sent us the names of all of them. She has a black and white cat. Her cousin is visiting her now. Don't all the cousins love to be out in the woods in the summertime!

Esther Simila of Lewis county, Washington, writes to the Corner. Esther's school starts September 5 and she says she is glad that it is going to. It rained all day where Esther lives the day she wrote to us. Here is a joke: A merchant came to call on a farmer and the farmer's little son answered his knock at the door. "Dad's down to the pig pen doctoring a sick shoat," said the boy. The merchant started toward the pig pen, but was halted by the boy, who called after him: "Pa's the one with the hat on." (Many thanks for the sweet peas, Esther. They were very pretty.—Aunt Nellie.)

Birthday Greetings

THURSDAY, August 31—Elna Early, 9 years old; Myrtle Matre, 10; Emma Rennick, 9; Carl Sieveke, 9; Inez Smelcer; Patricia Stuhr, 7; Edith Unwin, 11; Zetha Faye Wheeler, 10; Laila Paavola, 8.

FRIDAY, September 1—Matilda Arnold, 11 years old; Evelyn Hilding, 10; Emma Jeske, 11; Jenny Johnson, 10; Annie Schilbeff, 10.

SATURDAY, September 2—Ethel Boawn, 11 years old; Gudveig Hammervold, 10; Peggie Morrison, 8; Donald De Hart, 10.

SUNDAY, September 3—Thelma Lough, 11 years old; Anna Smith; Raymond Smith, 10; Genevieve Gooby, 11.

MONDAY, September 4—Ruth M. Carlin, 11 years old.

TUESDAY, September 5—Alvin Healy, 11 years old; Alice Hutsell, 11; Mildred Naught, 11.

WEDNESDAY, September 6—Beulah Arrand, 11 years old; Thelma Baker, 10; Wilma Grace Cross, 9.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Frances Flanik, Lena Bailey, George Knapp, Kirstine Hansen, Paul Gribbin, Grace Middleton, Dorothy Peterson, Roberta Carter, Nina Hoikka, Lillie Puffert, Ethel Boawn, Wanda Scoggin, Gladys McFall, Iva Easterling, Peter E. Kragt, James Patterson, Hilda Patterson, Viola Waggoner, Ethel Stiltner, Dorothy Lowe.

BEDTIME STORIES

By THORNTON W. BURGESS.

WHO'S A COWARD?

Unc' Billy Possum had made a lot of friends in the Green Forest and on the Green Meadows. It was getting so that most of his neighbors smiled whenever they saw the rough-coated little fellow coming their way. This was partly because he had learned politeness in his old home way down in "ol' Virginny" and partly because he attended to his own affairs. He never interferred with other people. Sammy Jay, wh ois quite a danday, used to make fun of Unc' Billy because he never brushed his hair or kept his coat smooth, and Reddy Fox always sneered at Unc Billy if he had a chance. But Reddy Fox hasn't any friends, anyway, so this really didn't matter. Nobody paid any attention to him until one day he said that Unc' Billy was a coward.

Jimmy Skunk heard him and Jimmy walked right up in front of Reddy, for though Reddy is much bigger, Jimmy isn't the least bit afraid of him.

"What do you know about it?" demanded Jimmy.

"I—I—well, what does he hide so all day for?" asked Reddy weakly.

"Because he sleeps days and hunts nights," replied Jimmy. Then he shook his fist in Reddy's face. "If he was half as much a coward as you are, Reddy Fox, I wouldn't have him for a partner."

"Pooh!" said Reddy. "It's easy enough for you to say that he isn't a coward, but he's got to prove it before I'll believe it."

"Who's a coward?" demanded Unc' Billy.

Unc' Billy Possum grinning down at him.

"He probably doesn't care whether you believe it or not," said a voice from a little way up the hill. Reddy looked up to see Peter Rabbit grinning at him. Now Reddy is quick-tempered and he sprang at Peter, but Peter wasn't there. He had ducked into a hole between the roots of a tree and the entrance was too small for Reddy to get in.

Reddy Fox is fine to see;
Bright his coat is as can be!
But his heart is black, I fear,
So watch out when Reddy's near.

Peter certainly was saucy, and it made Reddy all the madder to have Jimmy Skunk laugh. But when he heard a cracked little "Tee-he-he" and looked up to see Reddy was so mad that he fairly danced up and down.

"Come on down here, you coward!" he shouted, shaking his fist at Unc' Billy.

"Who's a coward?" demanded Unc' Billy.

"You are!" shouted Reddy.

Just then there was the patter of feet up the hill, and all looked up to see Bowser the Hound coming in that direction. Unc' Billy grinned.

"Now, sah, we'll see who's the coward. Yo'alls can run faster than Ah can, but Ah'm goin' to come down out of this tree right smart, and we'll see who dares wait longest for Bowser the Hound," and suiting the action to the word Unc' Billy dropped out of the tree right beside Reddy Fox.

Pike's Peak or Bust

(Contniued from the preceding page.)

ber out there, I'm told, for fuel or anything else."

Cooper answered: "Yes, no end of timber up in the mountains, I guess, if we could get it out. But what could we live on? Our supply of provisions would be used up before spring, and we'd stand a good chance to starve. They say that's a desert country up there most of the year. There'd be little or no grass for our stock. And when winter set in they'd die of starvation. You men with your wheelbarrow and your pushcart might be able in the spring to work your way back to God's country. But what could I do, with this big wagon of mine and no oxen to pull it?"

Much more talk of the same kind the young visitor listened to. Indeed, he heard little else. It was late when he returned, silent and gloomy, to his own camp.

There he found Esau and the five handcarters, all sitting by their fire. They, too, had been listening to the same kind of discouraging talk, and all were feeling and showing the effects of it.

"Looks to me like we've been sold—mighty bad sold, every mother's son of us," a handcarter was grumbling.

"Not much doubt of that, I guess," Sanders admitted wearily. "And to me it looks now like we'd better swing round and strike back for home while we can."

No conclusion had been reached when the party of seven crawled into their beds.

When morning dawned, the situation looked brighter to Orlando. But not so to the others. All the handcarters went aside and held a consultation.

When they had returned, Sanders expressed their decision: "Well, boys, it's the back track for us. We've started out on a fool's errand, it seems, and the sooner we acknowledge the corn and get headed for home the better for all of us. It's not what I like to do—not by a jugful. But there are times when a fellow can't do what he wants to and this seems to be one of the times. What you boys got in mind to do?"

"Seems to me like we'd jest as well turn back, too," Esau answered. But he looked worried. "What's yo'r notion, Lando?"

"The fact is, I don't want to go back at all. I started out to see the Rocky mountains, and I'd like to see 'em before I return home. But of course!——"

"What's a few rough, bare, rocky old hills?" exclaimed a handcarter. "They're mighty good for a feller to leave his pore bones on, and that's all. Better save yourselves while you can, you two fellows, and save yourselves the rest of a long, hard trip."

But Sanders spoke: "You two boys decide the matter for yourselves. I'm not going to try to persuade you, one way or the other. If you make up your minds to turn back, though, let's travel back together, I say. We've all got along swimmingly coming, and I'm sure we will going home."

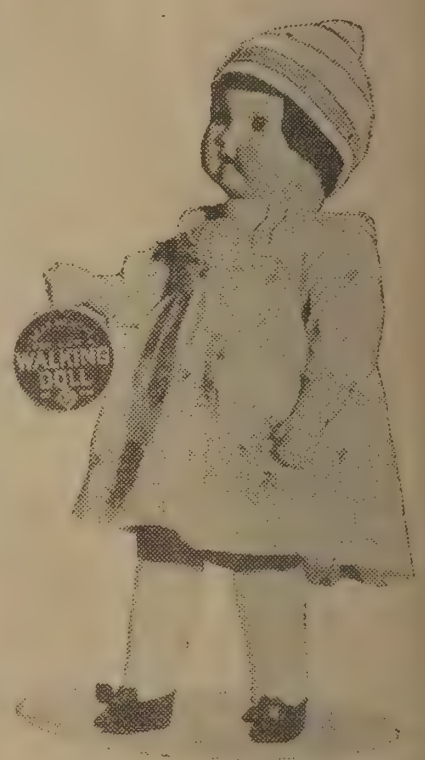
"Yes. If me and Lando strikes back at all we want to go as you handcarters goes," Esau assured him. "For my part, I'm thinkin' we'd jest as well p'int our noses t'wards sun up. But I'm goin' to leave the whole matter to Lando. If he says roll straight ahead, straight ahead we'll roll, even if we have to mosey on by our two lonesome selves. And if he says turn back, why, we'll turn back. But let's make up our minds here and now, and once for all. What says you, Lando boy? Blurt it out quick!"

"If I said what I want to say it would be to drive ahead. But—"

"If you keep on west you'll have only the two of you for comp'ny," a handcarter, who had just come up the creek bank, now told him. "I walked out to where I could see. Nearly 60 wagons in that string that was headed t'wards the mountains last night. But they all seem to be travelin' t'other way this mornin'."

Orlando stood gazing at that noisy, rumbling train. Wagon after wagon toiled up the creek bank, then crawled away eastward across the plain. Already a long string of them was stretching out in that direction. Presently he caught sight of a three-yoke team and a wagon he had been watching for, but in his heart had hoped not to see. It was Cooper's.

Now he spoke: "As I said, I don't want to back track at all. I hate to think of such a thing. But, as matters stand now, and as everybody else seems to be going back, I—I guess we might as well—go with the crowd." The words seemed almost to choke him, and he turned away.



"All right, boys!" sang out Esau. "That settlers the matters, and we're with you! It's back, back, back to old Illinois for us!"

Their camp things were soon packed away. And a few minutes later the handcart, the brindled cow and the wheelbarrow were all following the dusty trail behind the wagon train, and all crawling along toward the rising sun and civilization.

A gloomy little party of trail trampers it was, the party that trudged along behind that far-strung-out wagon train during the forenoon of the day they turned their

You Can Win a Walking Doll

Nothing will make any girl happier than one of our UNBREAKABLE WALKING DOLLS. The walking feature intensifies the attractiveness of the doll 100 per cent. Moreover, it is light in weight, has a soft body, and is well made from top to toe. It stands 13 inches high.

There are no springs or sharp edges in our walking dolls—the mechanism is all concealed in the body. OUR UNBREAKABLE WALKING DOLLS sleep, sit, stand, and when led by the hand they REALLY WALK WITH YOU.

A walking doll with sleeping eyes and real hair will be awarded to YOU in return for your services in securing nine 3-year subscription orders to your State Farm Magazine at the regular rate of 50 cents each, or $4.50 for the nine subscriptions. A little time spent securing subscription orders and one of these wonderful walking dolls will be your very own for keeps. Get busy now before some one else starts to harvest the orders in your neighborhood.

The Washington Farmer

Review Building,
Spokane, Wash.

steps eastward. Seldom did any of them speak, and then only a few words. While journeying toward Pike's Peak, they had overtaken and passed every big wagon train they had seen. Now those wagons ahead moved fully as fast as any of the seven men cared to march.

"Well, boys, no use to look so blue about it!" Sanders finally called out, in what was intended to be jovial tones. He was between the cart's shafts. "We've had a bully good trip—no denying that! Of course we all hoped we'd be carrying back some of the yellow metal when we traveled home. But that wasn't to be; that's never to be. It's something, though, to be able to say that we've crossed the great plains, and seen a million head of buffaloes, and killed a few—"

"But we haven't crossed the plains! We never even came in sight of the far edge!" Orlando spoke up, half resentfully.

"Well, no. We can't say we've crossed all of 'em. Several hundred miles in fact," Sanders answered. "We've seen the Santa Fe trail and the big wagon trains that travel it; seen 'em and traveled with 'em and camped with 'em. Yes, we've seen enough and learnt enough to be well paid for leaving home."

In spite of his bitter disappointment over having to turn back without seeing the Rocky mountains, Orlando found himself feeling rather cheerful. Indeed, though he talked as little as any of them he was doubtless the most cheerful member of his party.

The reason was not far to seek. He knew just where to locate it. The ninth wagon in that wagon train ahead, counting from the rear end, was Cooper's. And in that wagon's capacious depths rode, he was well aware, a certain shy little maid who already largely monopolized his interest. Only the fact that the Coopers were now traveling eastward had induced him to turn his back on the Pike's Peak country and its gold diggings.

Not till the afternoon drive did he find an opportunity to get near the interesting part of the train. Then, by gradually pushing Brindle ahead of the wheelbarrow and the handcart, he finally brought her up alongside of Cooper's wagon. Seeing the head of the family tramping by his three-yoke team the young man had in mind to drive on and talk to him. But now the wagon cover was raised at the near side, and Hazel peeped shyly out from under it. She nodded and smiled, but waited for Orlando to speak. And she had not long to wait.

"Are you glad to be on your way back to Missouri?" he inquired, after greeting her.

"Indeed I'm not! Indeed I'm not, Mr. Medford! I think it's a shame to tear up and leave home for a trip to the Rocky mountains; and then, just because a lot of somebodies we never heard tell of have soured on the country out there, we have to turn round and go traipsing back! I don't like it at all!"

Orlando was delighted. "No more do I!" he assured her, with much emphasis. "When we were setting out from home I told everybody that I was off to dig for gold, but that if I got to cross the great plains and view the mountains I wouldn't complain if I didn't make more than ordinary wages. And here, now, just look at what I'm doing! I haven't glimpsed either a grain of gold dust or the tiptop of Pike's Peak, or any other peak! And I'm tramping back to Illinois without actually crossing the plains. Makes me feel like a gump, such as this does!"

"Then why on earth are you going back?" the girl exclaimed, in great surprise. "I wouldn't if I didn't have to. But I can't travel on. A girl can't travel on by herself. You could, though, it seems to me. But I suppose your partner, Mr. Haggerty, insisted upon turning back."

"No. He rather thought it would be better, but he left the whole matter to me to decide."

"He did! Then I can't understand why you said turn back. I wouldn't if I'd been a man and had such a chance. Indeed I wouldn't! But maybe you were afraid of starving or freezing to death out there."

"Not for a minute! I never once doubted that we could take care of ourselves in the mountains, Esau and I. There would be game a plenty and—"

"Then—then it puzzles me why you didn't decide to drive on."

"But—but"—the young man was blushing now—"but you folks had turned back. You were not driving on," he blurted out, desperately.

Now it was the girl's turn to blush. And she did it prettily, her eyes going down at the same time. At last she understood that this young trail-tramper had turned his back on the gold diggings just because she was traveling east. And it was easy to see that she was well pleased.

When at length, after an embarrassing silence, she spoke again, it was to say: "Seems to me we all ought to wheel round and roll on toward the mountains, even yet."

(To be continued.)

MAKE TEN A. R. RECORDS.

During the year 1921 10 A. R. records were made by Guernseys at Chicona farm, owned by A. L. Gile of Chinook, which averaged 11,192.95 pounds of milk and 558.35 pounds of fat. Six 2-year-old records averaged 10,721.03 pounds of milk and 529.98 pounds of fat and two 4-year-old an dtwo mature records averaged 600.89 pounds of fat. Beauty of Chicona, with a record of 742.69 pounds, became second cow in class BB and state champion in class B. Derinna of Chicona, with a record of 630.73 pounds, became state champion senior 2-year-old, and Hermosa of Chicona, with 607.75 pounds, became state champion in class AA. The first four daughters of Langwater Traveler to complete A. R. work averaged 551.73 pounds of fat as 2-year-olds, and two of these records were made in double letter classes. All but one of the 10 A. R. records mentioned were made by Guernseys bred at Chicona farm.

A Hampshire County

By C. M. HUBBARD, W. S. C.

Kittitas county is admirably adapted to the raising of high-class live stock, be it horses, cattle, sheep or swine. This is so not only from the standpoint of its splendid pastures, hay and grain crops, but also from the standpoint of cool summers, which are always ideal for the proper development of young stock. Consequently, as time passes, this valley becomes more prominent as one of the potential breeding grounds for registered live stock.

The Hampshire sheep breeders of the Kittitas valley are working in harmony for the interests of their breed and their second annual tour recently, the only one of its kind in the northwest, was a complete success. It was well attended and the interest ran high for a more growthy lot of lambs of better breed type would be hard to find. An exceptionally growthy lot of 60 range ram lambs are consigned to the second annual Hampshire ram sale to be held at Ellensburg September 2, among them several splendid stud ram lambs.

The tour started at Roland Newman's, a club member, at Thorp. Roland showed the visitors triplets, two rams and a ewe, half brothers and sister to last year's Washington and Oregon state fairs champion ram lamb raised on his place. The two lambs are typy and weigh 160 pounds each. They promise to look mighty good at the Yakima fair. The next stop was at W. L. Coburn's, whose lambs were typy. Verbal Hall, last year's winning sheep club member, showed the crowd a splendid growthy ewe lamb.

S. P. Wippel, the veteran breeder of the valley, swears by the Hampshire. The visitors were especially pleased with the size and development of his most forward lambs. Harold Wippel, his son, has developed the largest ram lamb in the valley and he looks good for the state fair. Paul Wippel, another club member, has some especially typy ewe lambs out of the Blastock ewes.

Ernest Wilson's flock was next on the itinerary. Not only is Ernest interested in Hampshires and developing good ones, but Mrs. Wilson also can tell a good one and her interest in the flock is second only to her husband's. The lambs here were typy and husky, with several of the good ones rapidly rounding into state fair caliber. Wilson has around 20 ewes imported by Blastock in his flock.

Raymond Jeffries showed the crowd three even sets of twins from his three club ewes, one of the ewe lambs being the most forward of any in the valley, with a back that would do credit to a yearling.

The last stop of the day was at Carrol Robinson's where another good ewe lamb was brought out. This is Carrol's first year in club work.

Each year the Kittitas valley Hampshire breeders and club members take a nice bunch of lambs to the state fair. Last year their typy, growthy lambs were the feature of the sheep show. Competition will be still keener this year and they will have to show against expert fitters of life-time experience, but wherever the ribbons are placed they will not need to be ashamed of their showing. Several near 200-pound lambs will again be in evidence.

Ernest Wilson was again elected president and S. P. Wippel secretary-treasurer of the local Hampshire association. The state college extension service is cooperating with the breeders and club members in every possible way in order to build up a strong Hampshire interest in this valley so admirably adapted to the work. The breeders, club members and County Agent W. L. Davis are to be congratulated on the rapid progress being made.

THE VALUE OF PUREBREDS.

W. J. Orton of Renton, King county, in the spring of 1921 purchased five Guernsey heifers sired by Yorick of the Willows. When these heifers freshened they produced an average of 8277 pounds of milk a year and 393.8 pounds of fat. The entire herd averaged 317.2 pounds of fat. At this rate a gain of from $30 to $45 a month was made on each cow, according to the price of butterfat, over a grade herd.

The price of these five heifers was approximately $100 more than the value of the average cow in the herd. Mr. Orton pointed out that it should take but two or three years for such cows to pay for themselves by their increased production.

Drains Land

Was Under Water Three Years

The value of draining a piece of land is well demonstrated in the case of G. C. Towne of the Thrift community, Pierce county. Some of his best land has been under water for the last three years, due to the clogging up of an old blind ditch, which has been in operation for nearly 40 years.

By opening up the ditch early this spring the land was drained, and a crop of oats seeded about June 20. The crop is not making a very good showing this year, due to the effects of the standing water on the soil, and the late planting. By next year Mr. Towne expects a better return from all crops on this soil.

An acre of Gold Coin potatoes was also planted in this soil, which are making a fair showing under the conditions. They were planted May 17, and since the tubers had already started to sprout, Mr. Towne did not think best to treat the seed, under the conditions Careful selection, however, was given the seed before planting, and as a result there is very little disease in the patch.

Tieton Growers Organize

Clifford Kail is president and general manager and R. C. Sherman is secretary-treasurer of a new cooperative marketing organization at Yakima, the Tieton Fruit Growers, which is in active operation this season and the members of which represent 300 acres of orchard property, producing 55,000 boxes of apples and pears. In addition to the two officers mentioned, Clyde Shelton, H. L. Hull, E. F. Linse and J. C. Hayner are directors. Warehouse facilities have been secured and a warehouse superintendent will be hired. The organization will pack fruit, assist in selling it and handle supplies for members, who, however, have the option this year of selling through other channels. It is on a stock-sharing basis.

GOVERNMENT FAIR EXHIBITS.

The southwest Washington and western Washington fairs have been added to the exhibit list of the United States department of agriculture and will have exhibits this year intended to inform the public of the work that is being accomplished by the department in the interest of agriculture. As heretofore, exhbits will be shown also at the Washington and Oregon state fairs and at the Pacific International. The department has been a fair exhibitor for years, but beginning in 1921, a new plan was begun of having local departmental officials take charge of all work in connection with exhibits at state and regional fairs in the western states, instead of having it handled from Washington, D. C. The department committee for the states of Oregon and Washington consists of John D. Guthrie, United States forest service, chairman; A. C. Rose, bureau of public roads, and Stanley G. Jewett, biological survey, all of Portland.

SALE OF CANNERIES.

The Puyallup and Sumner Growers' Cannery company properties have been sold at public auction by Receiver William N. May to G. H. Bradt of San Francisco for $270,000.

Mr. Bradt is vice president of the Pacific Northwest Cannery company, which is this year operating the local plants under lease from the receiver.

The sale includes the cannery at Sumner, the new and old canneries at Puyallup and the plant at Loveland, Col.

The Pacific Northwest Cannery company, which becomes owner of the properties, is now operating plants at Albany and McMinnville, Ore.

"This purchase by us will insure the continuation of the plants at Sumner and Puyallup and the development of the fruit industry in this section," Mr. Bradt said.

SOME CUCUMBER!

Charles Brooks, living in Ferry county across the river from Jerome, Stevens county, recently sent to The Washington Farmer a cucumber measuring within an inch of four feet in length. At the stem end it was about one inch in diameter and tapered to about three inches at the thickest part. It resembled a snake in shape, being coiled about once and a half and having a slightly striped appearance. While Mr. Brooks did not indicate the variety of cucumber, it is probable that it is a rather uncommon kind known as the Snake or Serpent variety because of its peculiar shape and appearance. Mr. Brooks grows a patch of them every year, using what are needed for the table and feeding the others to the hogs. A four-foot one is said to be not unusual in his patch.

SPOKANE DISTRICT APPLES.

Approximately 2500 freight cars will be needed during October and November to ship apples grown in the Spokane district to eastern markets, according to figures compiled by the Spokane Chamber of Commerce.

Montgomery Ward & Co.

The Oldest Mail Order House is Today the Most Progressive

Don't You Miss this Money Saving Opportunity

This Catalogue is Yours FREE

This Golden Jubilee Catalogue Celebrates Our Fiftieth Anniversary by Offering You Everything for the Home, the Farm and the Family at the Lowest Prices of the Day

TO write today for your free copy of this big Golden Jubilee Catalogue will mean a saving of many dollars to YOU this Fall.

It answers every question about price, establishes for you the right price to pay for everything you buy.

Fifty years' experience in manufacturing—in right buying—has gone into this book. Fifty years' experience in low price making is here at your service.

Write for this Catalogue. Know the right price to pay for everything you buy. Take advantage of the many big bargains it offers—the many, many things offered at less than market prices.

This advertisement is printed to tell you of the saving this book offers you, and to tell you that one copy of this Catalogue is yours—FREE. You need merely write us a postal, or fill in the coupon below, and one copy of our big Golden Jubilee Catalogue will be mailed you FREE.

TO THE WOMAN: This free catalogue offers you the newest styles, selected by our own Fashion Experts And all the usual extra "style profit" has been eliminated from our prices.

It offers you everything for the home at a big saving: Rugs, Carpets, Curtains, Furniture, Home Furnishings of all kinds of standard quality at money saving prices.

TO THE MAN: Think of an all wool—virgin wool suit for less than $15.00. This is an example of our Golden Jubilee Bargains. Everything a man needs, to wear or to use, is offered at prices that mean many dollars saved.

FOR THE FARM: For fifty years the American Farmer and Montgomery Ward & Co. have helped each other. This book outdoes all our past achievement in making low prices for you.

Fencing, roofing, tools, paint, hardware—everything the farmer needs is offered at a saving.

Your Orders Shipped Within 48 Hours

We announce a new perfected service for you.

After a year's work and study, originating and testing new systems, and employing experts, we have perfected a new system that makes certain a very quick and satisfactory service to you.

Practically every order that comes to Montgomery Ward & Co. this season will actually be shipped and on its way to you in less than 48 hours.

Lower prices, better merchandise, and now a new service. True it is indeed that: "Montgomery Ward & Co., the oldest Mail Order House, is Today the Most Progressive."

For Good Farming, Attractive Country Homes and Happy Country People

Southwest Washington Fair Wins Over Rain

By HORACE ADDIS and GEORGE N. ANGELL

With the biggest and best balanced live stock and poultry shows in recent history and with every other department crowded to its utmost capacity the Southwest Washington Fair association last week staged its most successful exposition, from the exposition standpoint. The weather man, however, was most unkind, for while Monday and Tuesday, the opening days, proved unusually "brite an' fare," rain fell on Wednesday, Thursday and Friday, the three biggest days of the week, and the total attendance for the week was far below what Secretary George R. Walker had every reason for expecting. And the worst of it was that the showers came in the late afternoon or at night, outside of the required hours for collection of rain insurance.

Except for one or two breeds of live stock, the fair was more than usually representative of the farming resources of the big district from which it draws both displays and attendance. From Canada to the valleys of Oregon, and from Pacific county to eastern Lewis the exhibits poured in, necessitating last moment accommodations which merely emphasized the need for more buildings. Their quality was perhaps better than ever, but early reports of the excellence of the show could not overcome the constant threat of rain. Even the races were called off on Thursday, and after the heavy shower of late Friday afternoon, Chehalis-Centralia Day, the concession men and racetrack followers were a disgruntled lot.

Many special features were provided. Governor Louis F. Hart appeared in the grandstand on Thursday, though he had already become a familiar figure at the live stock barns, for his interest in the state Holstein herd. Other officials and prominent men of the state were there in numbers.

THE AGRICULTURAL DISPLAY.

Agricultural hall again housed a big variety of interesting exhibits. Occupying one end was a large showing of articles made by patients at the Western State hospital and of flowers and plants grown by them. In another corner were the grains and grasses which grow to perfection in Lewis county and tray fruit exhibits more than double those of last year, arranged by Superintendent Theo Albert, and in still another, under the care of Mrs. J. W. Watson, cut flowers and potted plants alluring in their beauty. There were at least one-third more individual exhibits here than a year ago, and one came all the way from Randle, in eastern Lewis county. The honey display, in charge of Elzy Fifer, was twice its usual size, due largely to the participation of J. J. Mahoney's Superb apiary of Elma. Fifer and Mahoney are both United States veterans' bureau "trainees" and the later took all but one first in the division. The St. Urban grange booth was the only one prepared this year. The many exhibits of feminine skill in the culinary, art, photography and fancy work departments attracted its admirers, and the better babies contest was as popular as ever.

THE POULTRY SHOW.

The poultry show was not only the largest ever seen at this fair, but also one of the biggest ever held in the state. More than 1000 birds were on display from Alberta, Canada, to the Willamette valley, Oregon, and the balance between the breeds was well preserved. Every coop was filled, and with the feed manufacturers' exhibits housed in the new addition connecting the poultry building with that for manufacturers, the exhibit presented a greatly improved appearance. Superintendent Thomas P. Horn was assisted by Fred A. Johnson of Tacoma, who was also one of the largest exhibitors, with 80 birds. He won on several breeds, but his best showing was in White Leghorns, where he "whipped the class." On dark Plymouth Rocks Jacobsen's poultry yard of Tacoma lost only one first in the classes entered. H. H. Collier of Tacoma took every first on Buff Rocks and the St. Helens Incubator company did well with White Rocks. The Boyce Seed company of Seattle showed several varieties, but their outstanding fowls were Buff Orpingtons. A. W. Wade of Marysville ranked with Johnson in the number exhibited and beat the Rhode Island Red class. Altogether, it was a well-mixed show. Barred Rock classes, with 106 birds, were strongest, but several others were very well filled. W. M. Coates judged.

Among other exhibitors than those mentioned were Charles Bylsma and El Retiro farm, Seattle; Mrs. Stenna O. Bach, Olympia; Jack Bertram, Lents, Ore.; H. H. Collier, H. K. Carter, J. M. Harris, A. L. King, Ray Leftwick, Miller Brothers, J. H. Nichols, C. C. Page, E. A. Randall and Trutype farm, Tacoma; Cowherd's duckery, Ferndale; Harold R. Demmon, Portland; Wilbur Hosmer, E. D. Hosmer and Hugh Hosmer, Sherwood, Ore.; Mrs. H. C. and Margaret Kleinsmith, Hoff, Ore.; Harry Silton, Beaverton, Ore.; Robert Johnson and John O. Badger, Toledo; Edward H. Knickerbocker, Mrs. H. F. Seale, Rochester; T. F. Shay, Willapa; James J. Scanlon, Lakeview; Mildred Tucker, Klaber; F. H. Torrey, Edmonds; B. J. Burton, Curtis; C. E. Mayhew, Winlock; John Kinder and James Horne, Galvin; A. M. Starr, Coaldale, Alberta; Kenneth Kilbourne, Nellie B. Sturdevant and W. H. Hurd, Chehalis; Lawrence Ward, F. L. Thornbury, J. H. Coffer, A. J. Goelitzer and Ella M. Lammers, Centralia; Harold Badger, Mrs. A. J. Long, C. M. Le Baron, Dave Mathis and R. C. Simpson.

THE COMMERCIAL SHOW.

A liberal education was to be had for the seeking in the big building under the grandstand, where commercial exhibits vied with educational in attractiveness. From bachelors' buttons to grand pianos and from soup to coffee, all the manufactured articles were there, and the range of educational exhibits was much larger than in previous years. Boys' and girls' club exhibits and contests held the visitor's interest at the north end, the Sunshine Sewing club of Ethel and the combined clubs of Dryad and of Boisfort occupying most of the space. The latter club had the outstanding display, though the Dryad clubs won many prizes and the splendid garden exhibit of Frank Knizek, a Dryad boy, won much comment. Outside clubs participating were those from Cowlitz, Grays Harbor, Thurston and Clarke counties. F. L. Audrain, state club leader, was in charge.

THE SCHOOL DISPLAY.

Interesting displays of the work of Lewis county school boys and girls, from primary to high schools, were in charge of Miss May Meighen, county superintendent. The work of the lower grades was best represented in the Pe Ell, McCormick, Wallville and Union school exhibits, while that of older pupils, particularly in manual training, was surpassingly well shown by the general exhibit of the Doty schools. The latter won first prize, with Pe Ell second, and McCormick received honorable mention. Others participating were Brim, Crawford and Napavine, Crawford winning first among one-room rural schools and Union second. The state school for girls maintained a home-cooking lunch counter and sold many articles from their big booth. Boys of the state training school school showed garden and dairy products and flowers from their garden, pastry from their kitchen and shoes from their shop; the Campfire Girls' articles made at Camp Sealth, and the Lewis-Pacific Dairymen's association Darigold products. The Red Cross maintained a rest room and the Lewis County Anti-Tuberculosis league attracted much attention with its "birds-eye view of Healthland and the Child Health railroad," running a daily train schedule from "Bathtubville" at 7 a. m. The entire south end of the building was occupied by the United States government exhibit, seen at Chehalis for the first time in its entirety under the combined management of the biological survey, forest service and bureau of public roads. Never has the state college more interestingly illustrated its work than in the six large booths in charge of W. W. Underwood, assistant county agent leader. Each booth taught many lessons and attracted much attention, but perhaps the most popular was that which showed the layout of a model 40-acre farm for western Washington, with rotation of crops clearly pictured. Twelve of these booths were prepared by the college in cooperation with the extension service and will cover 20 fairs in Washington this season.

THE LIVE STOCK SHOW.

The live stock show was not only far the largest, but decidedly the best in average quality that this excellent fair has ever had. Among the dairy breeds there was scarcely a poor animal and nearly all were well fitted as well as good individuals. A few of the beef animals were not in show condition, but most of these had been brought to put in the Shorthorn sale and were not shown. There were plenty of Shorthorns, Angus and Herefords fitted to show in the greatest live stock shows anywhere. County Agent Fowler ably superintended the show.

The actual figures tell the story in language more eloquent than any other form. They show that there were 97 Jerseys, 66 Holsteins, 55 Guernseys, seven Ayrshires and two Brown Swiss. In the beef breeds the Shorthorns led, with 79 of the beef strain and 45 milking Shorthorns. There were 29 Aberdeen Angus, 20 Herefords and 38 Red Polled. Only eight head of horses were shown and part of these were grades. The 268 sheep made up a show such as this fair never tried to care for before. These figures include about 30 head of Angora goats, shown by William Riddell & Son of Monmouth, Ore. Hogs totaled 107, among which O. I. C.'s or Chester Whites predominated. Hog pens were once more filled as in the old days. The grand total reached 835, which is fully 250 more than a year ago, and that was considered a big show. More barn room seems absolutely necessary, and, if finances will admit, a new beef barn, on practically the same plan as the well-lighted and convenient new dairy barn, will be built.

THE DAIRY CATTLE

Professor E. B. Fitts, extension specialist of Oregon Agricultural college, judged all dairy breeds, while Howard Hackedorn, head of the animal husbandry department of Washington State college, performed the same task for the beef breeds. A. E. Lawson, northwest representative of the American Shorthorn association, placed the ribbons on Red Polls.

Jerseys.

The Jersey show was not only a little larger than any previous one, but local breeders were especially proud of the fact that it was made up mostly of Lewis county cattle. Erickson Brothers of Yakima showed here for the first time with a well-fitted herd of excellent type, and A. M. Starr of Coaldale, Alberta, showed

(Continued on page eleven.)

Where Hope Springs Eternal

"It just can't last. Give us just one year of the kind of crops we used to grow and we can pull out. If we can only have the moisture we have as fine a country as there is in the world."

In some such words as these Mrs. Rhoda E. Davie of Bailey, 21 miles southwest of Ephrata, in Grant county, expresses some of the hope that springs eternal in the human breast and enables farmers to endure year after year of drought and crop failure.

Mrs. Davie lives in one of the sections of Washington that have endured several years of drought, following upon several years of excellent crops. She homesteaded in 1908, where she now lives, being induced to settle there by the enormous crops of corn, rye, hay and other products that she saw when she visited that neighborhood. For several years she and her neighbors were successful, but about 1916 an evil jinx began a crusade that has lasted up to the present time. One of her mistakes, as she puts it herself, was the plowing up of 100 acres of her place. Since the native bunch grass sod was broken the evil spirit got in his work and the 100 acres began to blow, rendering the growth of useful plants almost impracticable, not only on the 100 acres, but on the adjoining lands as well.

Live stock is the thing that appealed and continues to appeal to Mrs. Davie and her son. They have, in addition to her home place of 320 acres, about 7000 acres of pasture land under lease. At the present time they have allowed their herds to decrease in numbers until they have only about 36 head of cattle and 20 head of Percheron horses They declare there is no profit in either cattle or horses at the present time, and they are making no effort to increase their stock.

A well 211 feet deep, dug part way and drilled the rest, furnishes a supply of excellent water which, by means of a 20,000-gallon reservoir and a pump, operated by a gasoline engine, permits a limited amount of irrigation for orchard, shade trees, garden and flower yard.

Naturally Mrs. Davie is enthusiastic for the Columbia basin. It would be the salvation of her country in times of short precipitation like the last few years.

The pictures herewith do not indicate a striken country. Mrs. Davie is shown in her dooryard surrounded by flowers and vines, the result of the native soil and sunshine, with the artificial application of water from the 211-foot well. But note the gunnysacks that fence out the soil that blows from that 100 acres that she broke. She is a rancher of pioneer type. She hauls Russian thistles with a four-horse team, strung out, as skilfully as her hired hands will haul alfalfa when she gets her land watered. In one of the pictures she is shown mowing one of the good crops of rye that she grew prior to the coming of the jinx, about 1916. She was thinking of those days of bountiful yields of feedstuff when she declared that the present cropless period "just can't last." No hoodoo can long hold out against her courage.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Orchards Have No Appeal

Railroad employees from Tacoma who had been laid off by the railroad because of the strike came to Yakima a few days ago to get work picking fruit. They met with a fruit grower on the street and, as he needed pickers, he took them to his ranch. Here they bethought themselves to inquire about the wages and learned that the pay was $3 a day. "That is with board, is it not?" said one. "No, you board yourself," was the grower's reply.

This very much amused them and they nearly split their sides laughing over what they thought ridiculously low wages which the growers had the nerve to offer. Their merriment having somewhat subsided, they inquired if it were eight hours, and were told that fruit pickers work 10 hours. "Work 10 hours, and for $3? I should say not!"

And with that they were off to town, declaring they would take the night train to Seattle. "They don't know what work is, anyway," commented the grower.—News item, Yakima Herald.

Comment on the foregoing is superfluous.

Weak Defense for "Filled Milk"

Manufacturers of "filled milk" honestly admit that this product is deficient in certain nutrients, particularly as a diet for babies and children, but say they are not selling filled milk as diet for children, but as a wholesome product for adults, chiefly to be used as a cooking material.

Advocates of the Voigt bill, now pending in congress, to prohibit interstate commerce in this new product make the effective reply that there are several million illiterate and foreign mothers who can not read English, who are therefore unable to read the labels on the filled milk can, and who would feed it to their infants if its sale is legalized.

The New York Journal of Commerce grants that there "seems to be warrant for this criticism and that every effort should be made to guard against any such danger as it indicates." That newspaper, however, opposes the Voigt bill, and says that "proper labeling, if that is not now employed, and education of the consuming classes on the subject suggest themselves as remedies," and that "there are many food products on the market that are not suitable for infants, yet are regularly given them."

It strikes THE FARMER that that is a weak defense. It would take tremendous effort and years of education to bring these illiterate and foreign mothers up to the point where they would understand that filled milk is not proper food for their children.

If, as the New York paper suggests, there are many food products on the market that are not suitable for infants, yet are regularly given them, effort should be made to reduce their number rather than to increase it by the addition of another such product.

Should Keep Faith on the Question of Japanese Immigration

The Washington Farmer, as our readers know, has long been convinced that Japanese immigration and increasing possession of the best agricultural lands of the Pacific coast states is a grave menace to the nation, and particularly to the farm producers of the Pacific northwest.

As one of the leading influences for more effective laws to curb that danger, THE FARMER confesses its disappointment with the record and attitude of one of the candidates for United States senator, George B. Lamping of Seattle.

Mr. Lamping is port commissioner of Seattle, and when running for the office was emphatic in his professions for restriction of the Japanese danger. His campaign slogan then was "Save the Port of Seattle from the Japs."

But it is now recalled that at the last session of the legislature he appeared before the house committee that had charge of the anti-alien land bill, the measure designed to save the soil of this state from Asiatic possession, and spoke in opposition to it. He said that he was speaking for the Seattle port commission and protested that if the legislature passed the anti-alien land bill the Japanese steamship lines would remove their trade from Seattle to Vancouver, B. C.

"I know whereof I speak," said Mr. Lamping. "If this bill goes through the Japanese will immediately take their business away from Seattle."

It now transpires, though, that Mr. Lamping is again soliciting votes on the Japanese issue. In a recent speech near Olympia he attacked the four-power treaty of the Washington disarmament conference, terming it a Japanese victory, declaring that it would prevent legislation for the exclusion of Asiatics, and further said that as a member of the Seattle port commission he had seen the evil of Japanese "peaceful penetration" of western Washington.

The Washington Farmer is disappointed with Mr. Lamping's flopping back and forth on this important issue. It recognizes the right of any one to change his mind on public questions, but when a politician is first for one side and then the other, and then back to his first position when he is seeking votes, his course is not calculated to inspire confidence in his dependability.

LOOKING INTO OTHER FARM FIELDS

Although a greater part of the inhabitants of the Red Sea district of Arabia are herdsmen and shepherds, deriving a constant supply of milk from the flocks and herds, condensed milk is always in demand, particularly in the larger cities, Consul C. M. P. Cross, Aden, reports to the department of commerce.

* * *

The ancient Damascus oasis of Syria still bears abundantly, and now modern commercial methods are employed in cultivatinng the fruit trees which have been blooming there for centries. Apricots constitute the most important fruit crop, Consul Charles E. Allen, at Damascus, informs the department of commerce.

* * *

The Canadian apple crop this year will be approximately 3,573 barrels, or slightly over 88 per cent of last year's yield, which was 4,046,813 barrels. This estimate shows an increase over the 1920 yield, which was 3,382,540 barrels.

* * *

Poor wheat crops in France and an estimated shortage in the next wheat harvest of about 2,000,000 tons have resulted in the passage of a law authorizing the baking and sale of "war bread," says Consul Sample B. Forbus, Paris. The law specifying the use of substitutes for wheat flour in bread making was passed July 15.

* * *

The soy bean is rapidly taking a place as a major crop in the farming systems of the corn belt, replacing oats to a considerable extent and taking part of the corn acreage, says the department of agriculture.

* * *

In June 4,816,770 pounds of condensed milk were exported, less than half of the June, 1921, movement, which was 8,060,056 pounds. The movement from January 1 to July 1 was 35,005,074 pounds, compared to 49,376,657 pounds in 1921.

State Farm News

Diversified farming is more profitable than wheat raising, according to Lincoln Huot, an old-time wheat farmer in the Klickitat valley.

Huot has 10 acres of watermelons and cantaloupes, which are of large size and have a quality and flavor much better than were formerly shipped to the local market. He also has several acres given over to the cultivation of berries, tomatoes, corn and other field crops, and reports a yield of four tons of oat hay per acre.

Huot also maintains 11 cows, ships cream to Portland, besides having a number of head of cattle to be turned off for beef. He expects to market 50 tons of melons this year, which will bring him a gross return of $2000.

* * *

Prune picking, packing and shipping started August 21 in the Walla Walla valley. Three carloads of prunes were shipped from Freewater to New York and Chicago. This is a week behind last year's fruit harvest. The crop this season is estimated at between 300 and 500 carloads.

* * *

Kentucky Wonder beans increased in yield about 100 per cent as the result of recent rains, say officials at the Ferndale Canning company, where the beans are now being received in large quantities. The Burpee bean crop, because of the lack of rain, fell short of expectations, but the present yield is doing a lot to make up for the deficit.

Ninety persons are busy putting the beans through the cannery. This force and possibly more is considered necessary for another 60 days.

* * *

Approximately $10,350 represents the value in pork consumed by the inmates of the state penitentiary at Walla Walla since the first of the year. Between 350 and 400 hogs are kept at the prison farm at all times, where the pork is produced.

* * *

Columbus O. Barnes, engaged in truck farming and gardening for 40 years on the Little Klickitat river, near Goldendale, says the soil on the creek bottom is especially adapted for raising cabbage. He raises his crop with very little irrigation and in spite of the last dry season a good many heads of cabbages in his patch will weigh 15 pounds and several thousand heads will be obtained off each acre of ground. Barnes has also made a success of growing the ever-bearing strawberries and will supply the Goldendale market with fresh strawberries until the late fall frosts.

* * *

The Yakima Meat company has announced that they will enlarge their packing plant at a cost of $125,000. They will also increase their capital stock from $200,000 to $500,000. The Guaranty Trust company of Yakima has underwritten first mortgage bonds of $150,000 for the improvement work, the securities to be 15-year bonds drawing 7 per cent interest.

* * *

County Engineer Schwarz of Clarke county has started a survey on the Washougal drainage project for the purpose of enlarging the original project.

* * *

Indications that the peach crop of the Wenatchee valley this season will bring a lower price than last year are seen in replies to inquiries sent out by dealers to ascertain the state of the market. The opening price last year was 75 to 90 cents. The opening prices this year will be about 45 to 55 cents, in the opinion of dealers. Heavy crops in nearly all the eastern sections are cited as one reason.

* * *

But few horses in Walla Walla county are kept to other than work purposes, according to a census of the horse population made by County Assessor A. H. Johnson. There are 9250 horses in the county and of this number 7783 are work horses.

* * *

J. H. Kelly, manager of the newly organized Grays Harbor Pig company, has announced the lease of 400 acres of logged land between Montesano and Brady for hog ranch purposes. Another tract of 600 acres adjoining, belonging to the Grays Harbor Lumber company, has been obtained in case of need.

The company will start fencing and erection of the necessary buildings at once, Mr. Kelly announced. The old Morgan-Ninemire packing plant in Aberdeen has been obtained for the purpose of slaughter and curing.

* * *

The Oroville cannery started the season's run August 11.

* * *

The Yakima Dairymen's association has voted an increase in capitalization from $30,000 to $50,000 and a change in the bylaws whereby the shares of stock are to be $10 instead of $50. Guy C. Findley is the newly elected manager.

* * *

The people of the Tieton View community have organized for the community fair to be held in September. The date set was September 15, the Friday preceding the Washington state fair.

* * *

Work has begun on the first four miles of the Toppenish-Fort Simcoe road, covering the distance between Toppenish and the McKinley school. It is expected the work will be completed before the beginning of bad weather in the fall.

* * *

According to published figures last year the railroads carried 1,034,315,000 passengers, while automobiles are estimated to have carried 6,990,862,000. The railroads carried 1,642,251,000 tons of freight and the motor trucks 1,430,000,000 tons.

* * *

The department of agriculture will need the assistance of county commissioners in cherry-growing districts to successfully combat the cherry maggot invasion, Director E. L. French says. The department has begun enforcing rigid quarantine against infected cherries sent to state canneries and has checked the importation of maggots. But the pests were brought into the state without warning and escaped to orchards near the canneries and then to adjoining lands.

Serious efforts should be made next spring to spray all infected or threatened areas, Director French says. The department will do what it can, but the cooperation of counties where the maggots have appeared is urgently requested. Fruit growers have been asked to see that county commissioners, in making up their budgets, provide for this work.

FARM BUSINESS AND MARKETS OUTLOOK

Receipts of cattle at the seven leading markets last week were approximately 275,000 head, the largest with one exception in the corresponding week in at least eight years. The eight-year average for that week is 216,000 head. While prime and choice grades are scarce, there is a high percentage of shortfeds in the run and the number of grassers is steadily increasing. Marked expansion in the western range movement has occurred in the last few days. Dry weather in Kansas, Nebraska and Oklahoma is hastening shipments from that section and many are being forwarded to Chicago.

Prime steers reached a new high mark of $11 at Chicago, but everything grading good or less is 25 to 50 cents lower. With the exception of a few grain fed cows and heifers all grades of butcher she stock declined fully as much as steers. Attracted by the high price level of the previous week large receipts of calves arrived and the market lost some of its recent bloom.

How much further increase in the supply of cattle arriving weekly is to take place before the autumn maximum is reached is the important question in the trend of the market. Usually the peak of the movement arrives in October. The eight-year average for the largest week is 311,880 head.

Keen Demand for Feeder Cattle.

The combined movement of stocker and feeder cattle from the 12 leading markets each week indicates a keen demand from all the feeding sections. The abundance of Kansas grassers is making it easy to satisfy this demand although prices show relatviely greater trength than the lower grades of beef steers. Until the last few days most of the western rangers as well as Canadians arriving in middle western markets have gone into feedlots. Bulk of the purchases are being made at a range of $6.25 to $7.25 at Chicago and Kansas City with a few choice fleshy steers quoted considerably higher.

Hog Market a Contrary Affair.

The hog market is maintaining its record of the past year in running contrary to general expectancy. Instead of a bulge in prices in August and early September, due to extremely light receipts, prices have declined over $1 in the last month and receipts are as large as 30 days ago. Low grades of heavy hogs are practically the cheapest in 10 years.

The total supply at the 11 markets continues to set new records for the corresponding season right along and average weights are running about as high as ever known since records have been maintained. In addition to thi supply of pork, packers are vending last winter and spring's accumulation of hog product ahead of the arrival of the new crop of hogs.

It is too late for much of an upturn in prices even if a brief bare spot should develop of which there is no evidence at present. The last crop of hogs has lasted much longer than expected and in view of the decline in prices which has been taking place and the abundance of feed on farms new crop hogs are expected to show up early.

Stocks of lard on August 1 were 144,000,000 pounds compared with 194,000,000 pounds. The decrease in holdings during July was nearly 11,000,000 pounds compared with an average decrease of 1,700,000 pounds in the same month in the past five years. Stocks of frozen pork, pickled pork and dry salt pork in storage on August 1 totaled 684,000,000 pounds compared with a five-year average on that date of 648,000,000 pounds. The decrease during July was practically the same as the five-year average.

These facts in connection with the unusually heavy slaughter for that month points to a rate of consumption materially above the average.

Lamb Run Falling Behind.

Receipts of lambs have shown but little change in the last five weeks. Normally at this season there is a rapid increase. Arrivals last week at the seven leading markets totaled about 185,000 head compared with an eight-year average for the correponding week of 308,000 head. These things seems to verify early season estimates of a small crop. Dressed lamb trade was not robust last week, but the light supply, together with a keen demand for feeder lambs and breeding ewes, maintained the price level on the hoof. Choice fat lambs at Chicago are quoted up to $13.15 while choice western feeder lambs are being bought as high as $13.

Horse Market Stagnant.

The supply of horses at Chicago was a slim affair last week, but outside of orders for a few choice drafters priced as high as $300 per head and choice wagon horses, demand was at low ebb and a clearance could only be affected at reduced prices. Combined receipts of horses at public stockyards in July amounted to only 17,000 head compared with 11,000 last year and an average of 81,000 head in the same month during the six preceding years.

Wool Market Moderately Active.

Seaboard wool markets are reported to be moderately active with prices firm with the exception of fine combing wools which have eased slightly. The dull season in wool manufacturing generally lasts until after Labor day, and the wool tariff still is a matter of conjecture. Foreign markets have been strong and the impression is widespread that an eventual shortage impends.

The Boston market is quoted as follows: Scoured basis—Oregon, eastern No. 1 staple, $1.25@1.28; fine and fine medium combing, $1.15@1.20; eastern clothing, $1.05@1.12; valley No. 1, $1.07@1.10 Territory—Fine staple, choice, $1.27@1.32; ½ blood combing, $1.10@1.15; 3-8 blood combing, 88@89c; 1-4 blood combing, 75@78c.

Wheat Market Still Lagging.

Wheat prices have been moving over a narrow range in the past week. Exporters and millers have been making purchases on the breaks, but do not follow the market on upturns as receipts which have declined about 25 per cent from the high point of the season remain considerably above the corresponding period in previous years.

A 10-year average shows that the peak of the movement to primary markets has been reached around the last week in September or the first week in October when winter wheat is still moving freely and the spring wheat movement is at its height. In addition to the big run of spring wheat the market must still bear the brunt of the Canadian movement. Harvest is progressing in that country, but the receipts at Canadian terminals are only about half as large as they will be during the fall months.

Export buying of wheat remains below the volume expected, although clearances have practically trebled in the last month. Shipments from the Argentine and Australia have dropped to the smallest since the first of the year. European buyers are working on a hand to mouth basis, presumably in the belief that this will enable them to fill their needs at a lower average price than through the accumulation of a surplus at European ports. They are taking mostly Canadian wheat which is about 6 cents cheaper than United States wheat.

It is possible that India will release wheat for export before long, but the ban on export is still in effect and prices are above an exporting basis. The surplus of that country is variously estimated at from 20,000,000 to 50,000,000 bushels.

Keen Demand for Cash Corn.

Damage reports were numerous from Nebraska, Kansas and Oklahoma and parts of other states, but the total reduction in the corn crop prospects compared with the government's August 1 estimate is not much over 100,000,000 bushels. The greatest source of strength in the market is the excellent demand for cash corn which has been absorbing receipts above the average right along

There is nothing urgent in the demand for oats. Receipts since the new crop started to move have been falling behind the average for the corresponding season, but stocks at terminals are large and are gradually increasing, although much less rapidly than at this time last year.

Cash Grain Prices.

The range of cash grain prices for the week ending August 30 is as follows: Chicago—Wheat: No. 3 red, $1.04@1.06; No. 2 hard, $1.01½@1.07¼; No. 3, $1.03¾@1.06; No. 2 northern, $1.05@1.19; No. 3, $1.21½@1.25. Corn—No. 2 mixed, 60¾@63c; No. 3, 60½@62¼c; No. 2 yellow, 61¼@63½c; No. 3, 61@63c; No. 2 white, 60¾@63¼c; No. 3, 60 3-4@62 3-4c. Oats—No. 2 white, 33 3-4@36c; No. 3, 33 1-2@34 1-2c. Rye—No. 3, 68 1-2@70 1-2c. Barley—52@58c. Clover—$12@16. Timothy—$4@5.

Timothy Seed Crop Shows Decline

The timothy seed crop is estimated by the department of agriculture to be 5 to 15 per cent less than that of last year. Both the acreage and the yield per acre are smaller than a year ago. Clover seed markets have been stronger in the last week, although the outlook for a good crop is favorable. Since July 1 receipts of timothy seed at Chicago have been 3,704,000 pounds compared with 5,466,000 pounds in the same period a year ago and 1,590,000 pounds two years ago. Receipts of clover seed this year total 1,375,000 pounds against 3,504,000 pounds last year and 1,430,000 pounds two years ago.

Feed Demand Sluggish.

The southwest is showing interest in the bran market, but otherwise the demand for feedstuffs is negligible, although prices are practically the lowest of the season. Flour mills are said to be storing feeds instead of selling at the prices offered. Cottonseed meal stocks at mills are about twice as large as at this time last year. The high price for flaxseed compared with other grains is expected to bring an early movement after harvest. With the demand full, prices for linseed oil meal are weak.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $17@17.50; standard middlings, $18.50@19; flour middlings, $23@25; cottonseed meal, 36 per cent, $39; 43 per cent, $43; hominy feed, $25; gluten feed, $29.85; old process oil meal, $45; tankage, $55.

Receipts Rule Hay Market.

Hay markets are irregular, some being strong and others weak, depending upon the volume of receipts. Demand at all points is dull. Some hay is going into storage, but dealers avoid all but the low grades which are selling at big discounts in consequence.

Prices per ton in carlots—Chicago— No. 1 timothy, $18@19; No. 2, $14@17; No. 3, $12@14; No. 1 light clover mixed, $15@18; No. 1 clover mixed, $13@15; upland prairie, $16@18; midland prairie, $12@17; rye straw, $10.50@11.50; oat and wheat straw, $8@10.

Egg Markets Advance.

Egg prices have advanced about 30 per cent from the low day of the year. Dry, hot weather and the moulting season have reduced production so that the supply of fresh eggs is inadequate to consumptive needs and 10,000 to 12,000 cases are being withdrawn from storage daily at the four leading markets. The poultry market is working lower. A rather large carryover of storage poultry is expected when the new storing season starts and in addition it is generally believed that receipts this fall and winter will be 25 per cent larger than a year ago. Spring chickens held until later in the fall will gain in weight, but the increase may be more than offset by a decline in the price obtained.

Latest quotations—Chicago—Eggs: Miscellaneous, 23½@24½c; dirties, 18@19½c; checks, 17@18½c; fresh firsts, 25@25½c; ordinary firsts, 22@22½c; hens, 17@21½c; springers, 23½c; roosters, 14c; ducks, 19@21c; geese, 18c; turkeys, 25c.

Butter Market Is Firm.

Delayed shipments of butter arrived on distributing markets early last week, but the increase was absorbed with only a small decline in price and the market was firm at the close. Production is believed to be falling off rather steadily, although there is some irregularity in the changes in arrivals at the leading markets from week to week. Owing to hot weather the percentage of undergrades is excessive. Consumptive demand is highly satisfactory on the whole and the position of the market is strong.

Prices on 92 score fresh butter on August 30 were: Chicago, 35½c; New York, 38c; Boston, 37½c; Philadelphia, 38½c; San Francisco, 44c.

Cheese Market Steady.

Country cheese markets changed but little last week and prices at distributing points are comparatively steady with more confidence shown. Slight accumulations are being made from week to week in cold storage holdings, but production is steadily shrinking and these will soon cease. No decline of consequence in values is in prospect.

Prices on No. 1 American cheese on August 30 were: Chicago—Twins, 19 1-2@20c; S. Daisies, 20@20 1-2c; D. Daisies, 20@20 1-4c; Y. Americas, 20@20 1-2c; Longhorns, 20@20 3-4c; Square Prints, 21@21 1-4c.

Fruits and Vegetables.

Potato markets have shown a little more strength in the last week. The total carlot movement remains large and consuming centers report large arrivals of near-by stock. northern round whites are beginning to show up. New Jersey is the principal shipper with Idaho, Minnesota, Colorado and Utah following in order.

Apple markets continue weak with the carlot movement about 60 per cent larger than a year ago, New York, California and Michigan leading. Good apples are quoted at 50 cents to $1 per bushel in midwest consuming markets.

The August forecast of onion production for 14 late states places the total at 26,602 cars of 500 bushels each compared with 16,879 cars in 1921.

Indians Will Hold Fair

Spokane Tribe Will Offer Proof of Their Advancement

After the Whitman massacre near Walla Walla in 1847, Cushing Eells and Elkanah Walker and their heroic wives abandoned the mission among the Spokane Indians and fled for safety to the Willamette valley. They were despondent and felt that their seed had fallen on stony ground and that nearly nine years of mission labors had gone for naught. But they had taught the Spokanes how to grow wheat and oats and vegetables, and a smattering of that knowledge of agriculture remained with the tribe through all the succeeding years.

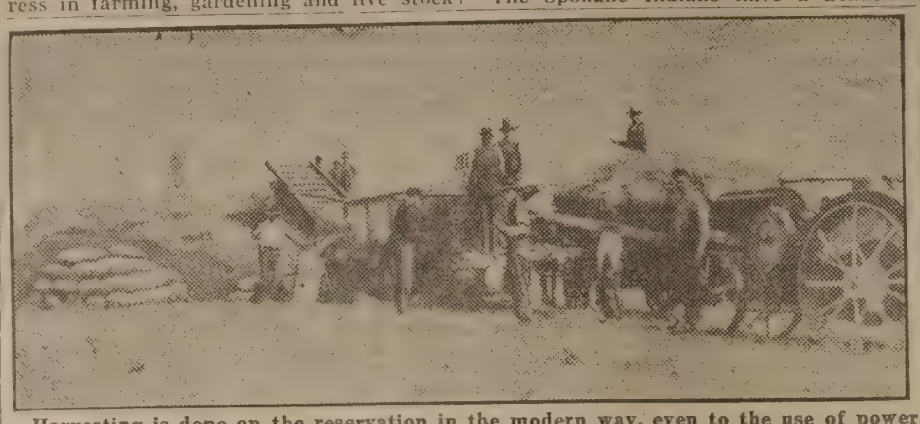
Six hundred and sixty-eight Spokane Indians are now gathered on the Spokane reservation and will hold their ninth annual Indian fair at Wellpinit, September 14, 15 and 16. Willpinit is the seat of the Indian agency and is about 45 miles from the city of Spokane. The Indians have their own fair grounds and buildings and the fair is managed by an association of officers and directed as any other county or local fair. It has committees on agricultural exhibits, domestic art and science, horse racing, athletic sports and baseball, dance pavilion and entertainments, and grandstand and parking of autos.

The premium list offers prizes for the best peck of wheat, of oats, of barley and of corn; the best sheaf of wheat hay, oat hay, alfalfa, and timothy; the best peck of potatoes, carrots, beets, turnips and rutabagas; the best cabbage, cauliflower, pumpkin, squash, watermelon, muskmelon, cucumbers; the best plate of one-half dozen peaches, of one-half dozen apples, of one-half dozen plums, of one-half dozen pears. Then there are prizes for chickens, geese, ducks and turkeys; for the best mare and colt; for the best colt under six months; for the best cow and calf; for the best calf; for the best sow and pigs; for the best shoat; for the best work team and wagon; for the best driving team, buggy or hack; for the best driving team, wagon or hack; and for the best saddle horse.

The Indian women are not ignored. Prizes are offered for the best collection of canned fruits, of canned vegetables, for bread and cake, for beadwork, for the best pair of hand-made gloves, the best pair of moccasins, the best piece of needlework on buckskin, the best hand-made quilt, the best made lady's waist, the best crocheted yoke, the best piece of tatting, the best collection of house plants and the best collection of cut flowers.

Every afternoon at 2 p. m. an interesting program of races and other attractions is started in front of the grandstand. These comprise Indian pony races, foot races of various kinds, including races by boys and girls under 14, basketball games, exhibition of bucking broncho riding, etc.

This is followed at 4 p. m. by dancing at the auditorium, and historical Indian dances at the Indian village. These late afternoon programs are varied from day to day with historical Indian sports and historical reproduction of Indian customs.



The Spokane Indian agency organization is under the direction of Superintendent O. L. Babcock, who has an administration force of about 20, including an instructor in farming. There are two Indian day schools on the reservation and several public schools, the latter taking care of the children of white settlers, of Indians who have acquired citizenship, and of agency employees. The Indian schools have about 20 pupils each. One teacher and one housekeeper, man and wife, direct each school. One-half of the school day is devoted to book learning and one-half to industrial training. The school year runs from September to June.

The government also maintains a hospital with 30 beds and an agency physician. The Indians are very nearly self-supporting, as the agency is issuing only 35 rations and that number is being steadily cut down.

On the reservation are two Presbyterian churches and one Catholic church. The Indians are well civilized and there is little tepee life. They live for the large part in small box houses, but there are a number of very good dwellings on the reservation.

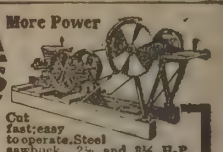
The officers of the fair association will welcome white visitors and the Indian exhibitors are justly proud of their progress in farming, gardening and live stock production. Three Indian policemen are on duty, but their labors are said to be very light, as the crowds are well behaved and good-natured, and the superintendent and other agency officials are resolute in preventing sales of liquor.

The Spokane Indians have a beautiful and diversified reservation of 82,000 acres, drained by the Spokane and Columbia rivers. It is largely forest land, and the government has a sawmill to supply its Indian wards with lumber. Sixty-five thousand acres are allotted to individual Indians, of which about 45,000 acres will eventually be put under cultivation.

Harvesting is done on the reservation in the modern way, even to the use of power machinery, as shown in the above picture. This snapshot and that shown on the cover page this week were taken by Frank W. Guilbert of the Spokane County Good Roads association. The cover page picture shows Mr. Obad Williams and family in their grain field.

BIG GRAIN FIRMS UNITE.

The Northern Grain & Warehouse company, one of the leading grain exporting concerns of Portland, has been amalgamated with E. A. Strauss & Co. of London, New York and San Francisco. It was announced that as a result of the new arrangement the two concerns would retain their identity as separate corporations, but that the Portland company would secure the advantage of having the backing of Strauss & Co., a $3,500,000 concern, in its operations in the northwest. The local corporation will also have the advantage of direct representation in Europe, New York and San Francisco through the offices of Strauss & Co.



THE SMALL BEGINNING.

Grass grows from the roots upward.

SCOLLARD REELECTED PRESIDENT.

At a meeting of the directors of the United Dairy association in Seattle, J. A. Scollard of Chehalis, president of the Lewis-Pacific Dairymen's association, was reelected president of the state body. This is his fourth successive year as head of the organization.

OTTAWA BUZZ SAWS More Power

$69.50 2½ H-P F.O.B. Factory

Cut fast; easy to operate. Steel sawbuck. 2½ and 3½ H-P. ready to mount on skids or wagon. Small additional cost for built-in magneto. Shipped direct from Factory and Nine Branch Houses.

CHEVROLET

UTILITY COUPÉ

The Lowest Priced
High Grade Closed Car

$680

f. o. b. Flint, Michigan

This is the car for the country.

No new model Chevrolet has ever met with such quick success with farmers. It is just what they have long wanted—a high-grade closed car at a surprisingly low price.

Like every other Chevrolet model it offers unmatchable VALUE.

The high-grade Fisher Body is practical as well as handsome. The extra large, heavy plate-glass windows afford clear vision on all four sides.

The mammoth rear compartment with locking cover contains 14 cu. ft. of space for luggage, packages, produce and merchandise of all kinds.

The upholstery is in gray whipcord—wide, comfortable, well-sprung seat and back—easily kept clean. Equipment includes standard three speed transmission, vacuum feed, cord tires.

The chassis is the Superior Chevrolet with that celebrated valve-in-head motor, which has been an important factor in giving us first place in sales of standard equipped automobiles.

No matter what car you own or think of buying, you owe it to yourself to see this all-weather Utility Coupé and COMPARE IT for value and low mileage costs.

Farmers know car value. That is why they are buying this model by the thousands.

LIVESTOCK AND DAIRY

Pasture and Grain

Recent reports from Minnesota cow testing associations show that it is profitable to feed dairy cows some grain in addition to pasture during the summer months. Many dairymen contend that the pasture should furnish sufficient feed. Cows producing a pound of fat or less daily are usually able to obtain enough food on pasture, provided the pasture is not overstocked or dried up. Dr. C. H. Eckles, chief of the dairy division of the University of Minnesota, recommends the following schedule for summer feeding, when pastures are abundant:

Jersey or Guernsey producing—
20 pounds milk daily, 3 pounds grain
25 pounds milk daily, 4 pounds grain
30 pounds milk daily, 5½ pounds grain
35 pounds milk daily, 7 pounds grain
40 pounds milk daily, 8 pounds grain

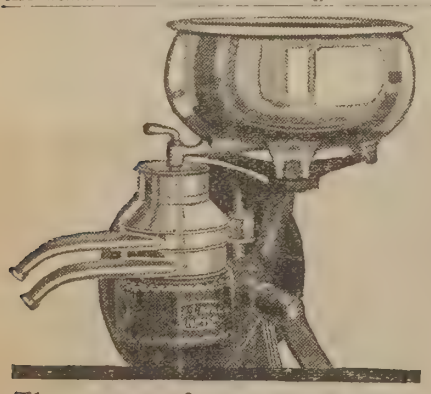
Holstein or Ayrshire producing—
25 pounds milk daily, 3 pounds grain
30 pounds milk daily, 4 pounds grain
35 pounds milk daily, 5½ pounds grain
40 pounds milk daily, 7 pounds grain
50 pounds milk daily, 8 pounds grain

E. A. Hanson, dairy specialist with the agricultural extension division, reports that 300 cows fed grain while on pasture averaged 301.9 pounds of butterfat in a year, the average yearly feed cost being $49.35. Seven hundred cows fed pasture only averaged only 237.6 pounds of butterfat, the average yearly cost being $41.87.

Conclusions to be drawn from this report:

Gain in annual fat production, lbs...	64.3
Value of fat at 40 cents a pound.....	$24.71
Increase in yearly feed cost with summer grain	7.28
Net gain	$17.43

Mr. Hanson summarizes the advantages of summer feeding as follows:



Tends to maintain production during slack pasture season.

Increases total yearly production.

Cows fed grain plus pasture will be in higher condition of flesh, giving them an advantage over cows poor in flesh, for fall freshening and winter production.

Ensilage the Year Around

Oats and vetch for August feeding when the grass gets short, and sunflowers "canned" in October—this is the silo program of the Bues Brothers of Menlo, Pacific county, who thus have ensilage for their cows the whole year around. Sunflower silage has given them the least trouble of any they ever handled, and their "secret" of success is a plug at the bottom of the silo which permits draining off the excess "juice." Usually this is left open about two and one-half days. Sunflower heads ought to be a good 50 per cent mature, they believe, before cutting, and the stalks should lie on the ground for a week or 10 days before ensiling. In Pacific county sunflowers have matured satisfactorily in 1921 and 1922 when planted on May 31 and May 24, respectively, but earlier in May is regarded as a better date, if possible. "Cows will eat twice as many sunflowers, in weight, as oats and vetch, and I think there is as much nourishment in them," one of the brothers testified. "I never had a cow get sick on them, and in fact, I have used it as a tonic for sick cows. My stock do not like to change from sunflowers to oat silage." Mr. Bues took 42 loads—about 42 tons—of sunflowers from two acres, but he manured heavily (24 loads) to get that production.

The cream of cream separator prosperity goes to De Laval users

There was never greater need than right now for the best separator, one which skims cleanest, has greatest capacity, turns easiest, requires the least care, and produces the most perfect product. In all these respects the De Laval has no equal. Take nothing for granted, simply let it be demonstrated to you. See the local De Laval agent or address the nearest general office.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES. ARTICLE VII.

Large Bowel.

This portion of the digestive tract is noted for the troubles that may arise within its confines, and of these many are of a very serious nature. It is the seat of these grave troubles because the materials in the digestive tube remain here for a considerable length of time and when such a condition occurs there is always a chance for trouble to develop. The exact nature of these troubles and the location must be ascertained early if the greatest good is to be done in treatment.

The first part of this portion is the caecum, a blind pouch about three or four feet long and approximately 10 inches in diameter, with both the entrance and exit openings at the base, or upper posterior end. Food entering here is supposed to pass downward from the base to the apex and back again to the base to get out. This arrangement is a dangerous one, as there is always danger of a stoppage occurring, or a stagnation in the blind end. This is not always apparent, either, and may not be attended by symptoms of impaction or stoppage of the bowels, since food materials may pass into the base of the caecum and out again without going into the blind anterior end. Food materials may stay there for many days and the bowels appear to operate properly, when at the same time there is a serious condition present. Animals may appear to suffer from an unnatural looseness of the bowels and the owner may feel sure that that is the principal trouble, when in reality the opposite is the case. That is, the animal is seriously ill with impaction of the caecum and the owner, thinking that it is suffering from diarrhoea, because some fluid materials are discharged from the rectum. Only a careful manipulation through the rectum will serve to show what the actual condition is and this must be done by one who is well acquainted with the position and consistency of the various organs.

Animals suffering as above may have been ill for several days eating very sparingly, lying down most of the time, drinking very little water, pawing at times and altogether acting as though they were suffering from a serious case of indigestion. As the time goes on the symptoms become more pronounced as the animal becomes more uncomfortable as inflammations develop, and if relief is not given the animals die after a lingering illness.

Purgatives may be administered and these appear to operate properly, but all this material is passing by the real trouble and leaving the animal no better than before the treatment was given. The treatment of these cases offers very considerable difficulty to any one and unless the treatment is commenced early and followed up consistently there is poor chance of success. Your veterinarian would probably prefer a course of stimulation rather than a course of strong and drastic purgation, since the latter course weakens the animal very quickly, while the stimulation, with fluids to help soften the mass, is most likely to prove successful.

The feeding of the patients during and after attacks of indigestion is a very important part of the care and treatment, since there is great danger of doing fatal harm. There is always a tendency for owners to try to get their animals to eat at the earliest possible moment of convalescence, and, while this may be an indication of humane sentiments on the part of the owner, it is not good nursing, as a small amount of food given too soon may be the cause of an early funeral. Keep the feed away from the patient until it is distinctly hungry and then give food in small amounts and of a kind that the animal is accustomed to. Overfeeding and constantly suggesting feed to an animal that is just getting over an attack of indigestion is a serious mistake.

WOLVERINE!
The 1000 Mile Shoe
Wears Longer—Stays Soft

We purchased a shipment of Wolverine Shoes about two years ago and they gave us the best wear of any shoes we have ever handled. In fact two of our customers are just discarding shoes purchased from that lot and are demanding the same shoe again.
R. L. Fuller & Co.
Barto, Miss.

The Only Shoe That—
—will always stay soft and pliable after wetting.
—has leather that is doubly tanned—both vegetable and mineral tannage—our secret process.
—is made wholly of special horse hide leather that will outwear any other known shoe material.

The Plowboy
Made by Specialists

We are specialists. We make workshoes *only*. And no other shoe is made like the Wolverine. After every soaking it always dries out soft as new buckskin, and as comfortable.

No other shoe we know of will do this. It is due to our own exclusive, secret, double-tanning process.

We take selected horse hide, the toughest, longest-wearing leather known. This is the leather that formerly went to Europe to make expensive Cordovan shoes and Cossack saddles. The Wolverine is the only workshoe we know that is made of this quality leather.

We tan it in our own tannery by our secret process. We give it the pliable softness of buckskin. Yet by this process we retain all the toughness of the horse hide and even increase its extreme durability. It wears and wears and wears.

Such a shoe is amazing. Yet by the operation of our own tannery we effect economies that bring you the Wolverine at a very modest price.

WOLVERINE
Comfort Shoe

This Wolverine is so pliable and soft you can double it up like a moccasin. It wears like iron but you'll hardly know you have a shoe on, it is so soft and easy.

For tender feet, or where you do not encounter wet weather, wear this Comfort Shoe. A blessing to the feet.

A Wolverine for All Work

There is a Wolverine shoe for every kind of work. Soft, flexible shoes for field and shop; heavy, hi-cut, leg-protecting shoes for teamsters, lumbermen, oil men; every one made wholly of our double-tanned, soft horse hide that always outwears other leather and always stays soft.

The Plowboy model shown is designed especially for plowing. It is high enough to keep out dirt, low enough for coolness. Like all Wolverine shoes it is so soft and comfortable you can walk in it all day without tiring. Wherever comfort and long, long wear are wanted Wolverine are the shoes to wear.

If your dealer cannot supply you, write direct to us. Send the coupon for catalog.

Shall Ford Develop Muscle Shoals?

American Farm Bureau Federation Urges Congress to Accept His Offer

IMPORTANT PROVISSIONS OF FORD OFFER.

Period of lease, 100 years.
Payment for plants, $5,000,000.
Objects, the utilization of water power for generation of electrical energy and manufacture of fertilizers or explosives.
Maximum water power available, 600,000 horsepower.
Minimum nitrogen production guaranteed, 40,000 tons annually.
Maximum profit allowed on fertilizer manufactured, 8 per cent of cost.
Cost of production to be ascertained by committee representing the government, the Ford company, the farm bureau, the grange and the farmers' union.
Entire project to be turned over to the government within five days if needed for war purposes.

In the opinion of Chester H. Gray, a director of the American Farm Bureau federation and connected with the federation's legislative department, there are three possible courses of action that may be taken in the matter of the Muscle Shoals power and nitrogen project:

(1) The government might develop and operate the project; (2) the government might accept the offer of Henry Ford for its development and operation; (3) the plants already built there might be junked and the development of the project indefinitely or permanently postponed.

The American Farm Bureau federation is making a nation-wide campaign in favor of the acceptance of the Ford offer for the purchase of the nitrate plants and a 100-year lease on the water power available. Mr. Gray is now in the Pacific northwest, representing the farm bureau and urging the people of this section to recommend to their senators and congressmen the acceptance of the Ford proposition.

Farm bureau leaders give as their reasons for supporting the Ford plan that there is no other plan under contemplation and no other offer made that offers any reasonable assurance of development of the project; that if developed under the Ford plan the project would afford a large supply of fertilizers for the agriculture of the country at reasonable prices; that it would furnish much electrical energy for the operation of industries throughout all the southeastern and many of the Atlantic coast states, and that the successful development of the project would prove an excellent demonstration of the possibilities of similar development in the Pacific northwest and other sections of the country where waterpower is available but not yet utilized.

History of the Project.

After many months of consideration the senate committee having before it all propositions for the development of Muscle Shoals, declined to recommend any of them. The result was that Senator Norris of Nebraska introduced a bill providing for government development of the project and that Senator Ladd of North Dakota introduced another bill providing for the acceptance of the Ford offer.

Muscle Shoals consists of a long rapids in the Tennessee river, in the northern part of Alabama, possessing enormous water power possibilities. The two-fold object of its development is the generation of electrical energy for industrial uses and operation of plants for the fixation of nitrogen for use in fertilizers or explosives.

During the war the government began development of the project for the purpose of supplying explosives for war purposes. The two plants so built and temporarily operated are wholly inadequate, additional plants and dams across the river being necessary if the project is to be developed. One part of the government's development consists of what is called the Gorgas steam power plant 80 miles away from the Muscle Shoals power site, built to operate the plants pending the completion of the necessary dams, which were never completed.

Opposition to the Plan.

Opponents of the Ford plan base their opposition on three principal points, says Mr. Gray:

(1) That the 100 years that the lease would run is too long;

(2) That the $5,000,000 which would be paid for the plants as they now stand is not enough, and

(3) That the Gorgas plant, being so far away from the site of the development, should not be included in the deal.

In discussing these points of opposition Mr. Gray declares that a shorter period than 100 years is not adequate to permit the development of the project on on the scale proposed. Early costs and early overhead expenses would be so great as to constitute a great risk on the part of the Ford company, unless a long period of time followed, during which profitable operations were possible, he says, and points out that since the present water power act limiting leases to 50 years was enacted there has not been a single water power dam of consequence built, but that most such development occurred under the old law, which permitted 99-years leases. Provision is made in the bill whereby, should the Ford company fail in any respect to carry out its contract with the government, the contract could be declared void and the property revert back to the government.

The Cost of the Property.

Regarding the charge that $5,000,000 is not enough for the property, Mr. Gray declares that it is not so much the amount received for the plants that interests the American people as it is the possibility of cheap electrical power and a plentiful supply of fertilizers at reasonable cost. The cost of plants built by the government during the war period of exhorbitant expenditures approximated $80,000,000, which means that the $5,000,000 offered by Mr. Ford is but about 6 per cent of the original percentage of the present value of the plant. Mr. Ford's offer requires the government to complete the present partially constructed dam and to build a second dam farther up the river, and requires the Ford company to build a third dam still farther up stream for the impounding of flood season water, so as to enable the company to operate the entire system throughout the entire year at peak capacity. Mr. Ford guarantees to produce 40,000 tons or more of fixed nitrogen every year to be put upon the open market and sold for fertilizer at prices not to exceed 8 per cent of the cost of production. This amount of nitrogen is sufficient to manufacture about 1,600,000 tons of fertilizers as used on the soils of this country. It is an amount equal to about one-fifth of all the fertilizers now being used.

A bill creates a commission of nine members, whose duty it will be to ascertain the costs of production of this nitrogen, the costs so ascertained to be the basis on which the profit of not to exceed 8 per cent shall be calculated. This commission shall consist of one member of the bureau of markets, two of the American farm bureau, two of the national grange, two of the farmers' union and two representing the Ford company. Each of these organizations, with the exception of the Ford company, shall nominate several candidates for membership on the commission. The president of the United States shall select from these the mem-

The Safety Razor of the Fields!

You need never again have trouble, and lose your time and temper with a riveted-up mower knife. You can now have

A-M-F SICKLE BAR

It has instantly renewable blades. Just remove a small key and the blade drops out. Put in the new blade and replace the key and the blade is in, tighter than if it were riveted. It is double-locked and must stay rigidly fixed until you unlock it. And a dozen blades can easily be carried in the tool-box, right on the machine.

You replace a broken blade right in the field—in a minute's time—and go on with your mowing. You don't have to take the A-M-F Sickle Bar out of the machine.

You save time—time that's worth more than money—when you are hurrying to finish before the weather changes. You can't afford to keep on having to change knives, or to go back to the barn to rivet up a new blade.

You save money too—because you don't have to keep two or three complete knives on hand. All you need is a box of a dozen A-M-F Blades.

Guaranteed against breakage—Any bar or head which breaks within a year from date of purchase will be replaced

Now Is the Time to Kick on Taxes

By LESTER M. LIVENGOOD, Attorney and Manager, Spokane County Taxpayers' Economy League

As stated in last week's article, about 75 per cent of all the tax money collected in Washington is for local purposes, not for state purposes. Therefore, how to go about reducing local taxes is the subject of this article.

The average taxpayer does his kicking against high taxes when he receives his tax statement, six months too late to be of any use.

The law provides a fixed time of the year when the expenditures for the coming year must be determined and the levies fixed to raise the funds. Orderly procedure requires such a course. If the taxpayer is too busy with his own affairs to take an interest in tax reduction at the time of year that the law provides for that very purpose, he should pay his taxes with a smile, no matter how confiscatory they may be.

Act Now or Hold Your Peace.

Now is the time of year when the taxpayer can work with the hope of accomplishing something. The public officials all over the state are making up their estimates of expenditures for next year and will publish them early this month. After they are published the total amount can not thereafter be raised, but it can be reduced.

The law provides that public hearings, at which any taxpayer may object to any of the proposed expenditures, shall be held the first Monday in October and that immediately thereafter the tax levies be fixed by the proper officials.

What Can Be Cut Out?

It is the duty of the taxpayers to scrutinize these estimates in detail to see whether they are padded, whether exorbitant salaries and wages are being paid, and whether, considering the results attained, the people are getting a dollar's worth of service for every dollar spent. That is considering the operation of the local governments from an efficiency standpoint. The next point involves the taxpayers themselves, and that is a survey of the proposed expenditures to see what services, in whole or in part, can be dispensed with as luxuries in times of stress. This is where the rub comes. We have become accustomed to our local governments performing service after service for us that we would not have dreamed of expecting 10 years ago. Taxes have kept on going up because every year the taxpayers demand new services of their governments. Now we have reached the point where nobody will invest capital here or bring in new industries until taxes go down enough for them to earn a fair return for their labors. But while we realize that taxes must come down we childishly try to cling to the luxuries we have become accustomed to and which have brought up the tax burden.

To get down to brass tacks, if the taxpayers want results they must study their local tax budgets as published and see to it that they are reduced by every possible dollar that can be saved without serious reduction in government efficiency.

How to Study a Budget.

How to study local budgets is a question often received. I will outline the most simple procedure consistent with securing results.

In order to learn whether the taxpayer's money is being wasted the public records must be carefully studied. The expenses of the various taxing districts are required by law to be classified under a standard classification. A table that will be useful in every county for studying these costs can be made by any one familiar with figures and bookkeeping. Each county office or institution or department of expenditure should be analyzed separately, the expenses listed as to salaries, printing, etc., down one side of the table and column headings for the following at the top: (1) The 1921 expenditures, (2) the 1922 appropriations, (3) the 1923 estimates, and (4) the expenditures for the same items 10 years ago. A comparative table such as this will show how costs are increasing within the last three years and also what services we are buying that we did not think we needed 10 years ago. A study should also be made of the efficiency with which the various offices are handled to supplement the proposed expenditures. Schools and roads consume the greater part of the tax money and, therefore, will demand the most careful study to see what can be curtailed without doing any serious harm. We have become so used to demanding everything that other communities of many times our wealth have that desirability of the expenditure must no longer be the deciding factor, but rather the ability to pay.

When the taxpayers have gone over the local budgets during the early part of September and have found expenditures they believe that can be reduced or cut out entirely they should arrange meetings with the public officials and endeavor to get the latter to make the reductions. The average public official is as much interested in the taxpayer as the taxeater if he is convinced that the taxpayer is aroused and demanding economy and efficiency.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

MAXWELL

$885

Light in weight but sturdy in build—economical of gasoline, tires, and oil—rugged and reliable in all the service of the farm.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor driven electric horn; unusually long springs; deep, wide, roomy seats; real leather upholstery in open cars, broadcloth in closed cars; open car side-curtains open with doors; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight windshield.

Southwest Washington Fair Wins

(Continued from page three.)

12. N. C. Sears was the largest winner, with junior champion bull and heifer and first young herd, calf herd and get of sire. Senior and grand champion bull went to N. C. Sorensen on Firwood Noble, a bull of his own breeding, now 3 years old, that has got better each year he has been shown. Erickson's senior and grand champion cow is about as typy as possible, and she had to be to defeat the splendid cows in the same class and on down the line. The awards:

Bulls, 3 years or over—1, N. C. Sorensen, Chehalis, on Firwood Noble (senior and grand champion); 2, Grant Gleason, Chehalis, on Julia Winkle Lad; 3, Erickson Bros., Yakima, on Sultan Olga Boy; 4, A. Adolphsen, Chehalis, on Mauna Loa of Waikiki; A. M. Starr, Coaldale, Alta., on Mr. Hornblow, Two-year-old—1, Erickson Bros. on Raleigh's Fancy Lad; 2, Sears on Champion of Midfield; 3, Gleason on Goldie's Dexter Pogis; 4, Starr on Ferncliff Pogis. Yarling—1, Sears on Fussy's Fern Noble 35th (junior champion); 2, Erickson Bros., on Sultan's Bonnie Lad; 3, Starr, on Blow Knight; 4, Sorenson' on Firwood Rosaire's St. Mawes; 5, Morton, on Firwood St. Mawes Lad. Senior calf—1, Starr on Pretty Jim Starr; 2, Floyd Morton, Winlock, on St. Mawes King's Pogis; 3, William Rinta, Chehalis, on Jersey's King William; 4, Eino Laakso, Winlock, on Grand Dale's King George; 5, Sears on Midfield's Manilla. Junior calf—1, Sears on unnamed; 2, Erickson Bros. on Sultan's Lad of J. H.; 3, Starr on Mr. Starr's Pogis; 4, Morton on St. Mawes King Oronoko; 5, Dan Bush, Chehalis, on Firwood Diploma's St. Mawes.

Females, cow 4 years or over—1 and 2, Erickson Bros. on Sultan's Violet Rose (senior and grand champion), and Sultan's Figgis of J. H.; 3, Adolphsen on Cowslip's Pretty Maid; 4, Sorensen on Gwendola Rosaire; 5, Sears on Curtis Rose. Three-year-old—1, Adolphsen on Flossy Massey Polo; 2, Sears on Star of Yewloa; 3, Morton on St. Mawes Fussy's Rozella; 4, Starr on Mildred Starr. Two-Year-old—1, Sorensen on Firwood Poppy; 2, Erickson Bros., on Olga's Pet; 3, Sears on Cicely's Golden Dawn; 4, Adolphsen on St. Mawes of Oak Springs Lily; 5, Sorensen on Firwood St. Mawes Chimes. Senior yearling—1, Erickson Bros. on Sultan's Vesta Lass; 2 and 3, Sears on St. Mawes Mary Olga and St. Mawes Flora Oonan; 4, Starr on Hornblow's Starr; 5, Adolphsen on St. Mawes of Oak Springs Lydia. Junior yearling—1 and 4, Erickson Bros. on Flower's Lassie and Miss Olga's Figgis; 2 and 3, Morton on St. Mawes King's Countess, and St. Mawes Golden Pogis Wyona; 5, Sorensen on unnamed. Senior calf—1, Sears on unnamed; 2 and 4, Adolphsen on unnamed; 3, Morton on St. Mawes Combination Maid; 5, Gleason on unnamed. Junior calf—1 and 3, Sears on St. Mawes Cicely Winkle (junior champion) and unnamed; 2, Erickson Bros. on Raleigh's Maid of J. H. 2d; 4, Sorensen on unnamed; 5, Starr on Coaldale Golden Starr.

Aged herd—1, Erickson Bros.; 2, Sorensen; 3, Sears. Young herd—1, Sears; 2, Erickson Bros.; 3, Starr. Calf herd—1, Sears; 2, Ericksen Bros.; 3, Starr, Calf herd—1, Sears; 2, Erickson Bros.; Bros.; 3, Starr. Produce of dam—1, Sorensen; 2, Erickson Bros.; 3, Sears.

Holsteins.

But for the fact that Carnation stock farms sent 24 head and the Western State hospital at Steilacoom 13, the Holstein exhibit would have been a small one. The industry in Lewis county was not adequately represented, W. A. Hamilton & Sons of Chehalis, with 11 head, being the largest local exhibitors. Competition between Carnation and the state herd was extremely lively, the final score being eight blues for the former and seven for the latter. The best tussle of the entire show was that for first aged cow, won by Tom Nisbet's great entry, which then went on to senior and grand champion, with the state's junior champion a real contender. Matador Segis Walker 6th won handily highest honors on bulls, and the state's son of the $106,000 bull was a satisfactory junior champion. The awards:

Bulls, 3 years or over—1, Carnation Stock Farms, Seattle, on Matador Segis Walker 6th (senior and grand champion); 2, Tom Nisbet, Chehalis, on Glencoe Perfection; 3, St. Urban Holstein association, Winlock on Sir Clothilde Chimacum; 4, W. A. Hamilton & Sons, Chehalis, on The King of Chimacum; 5, S. L. Beck, Chehalis, on Sir Mercedes Wayne Sarcastic. Two-year-old—1, State hospital on Sir Pietertje Ormsby Blossom; 2, Hamilton on The King of Chimacum 2d. Yearling—1, Western State hospital, Steilacoom, on Carnation King Matador Mutual (junior champion); 2, Carnation Stock Farms on Colantha Walker Matador. Senior calf—1 and 4, Western State Hospital on Stellacoom Sir Ormsby Veeman and Steilacoom Cascade Molly De Kol; 2, 3 and 5, Carnation Stock Farms on Ensign Matador Model Abbekirk, Caranation King Topsy De Kol and Carnation Segis Walker Veeman. Junior calf—1, 2 and 4, Carnation Stock Farms on unnamed; 2, State hospital on unnamed; 5, Mat Kohtala, Centralia, on unnamed.

Females, cow 4 years or over—1, Nisbet on Inka Grace of Wayne (senior and grand champion); 2, Carnation Stock Farms on May Walker Skylark; 3, Hamilton, on C. K. K. S. V. Burke De Kol; 4, Chris Hendrichsen, Onalaska, on Nisqually Olga Johanna; 5, State hospital on Bessie Pearl Tritomia. Three-year-old—1 and 2, Carnation Stock Farms on Queen Bonheur Pontiac De Kol and Carnation Matador Queen. Two-year-old—1 and 2, Carnation Stock Farms on Matador Oregon Mechthilde and Carnation Matador Ada Segis; 3, State hospital on Steilacoom De Kol Colantha; 4, Hamilton on Newaukum Burke Segis; 5, Nisbet on Newaukum Lunde Segis. Senior yearlings—1, 2 and 3, Carnation Stock Farms on Carnation Matador Coquette, Carnation Matador Nena and Carnation Matador Wietske; 4, Hamilton on Newaukum Jessie Jelkje; 5, Nisbet on Kitsap Molly Segis Walker. Junior yearling—1, State hospital on Steilcoom Bonnie Ormsby Lass (junior champion); 2 and 4, Carnation Stock Farms on Carnation Matador Christmas and Carnation Matador Sylvia Lizzie; 3 and 5, Hamilton on Newaukum De Kol Segis and unnamed. Senior calf—1 and 3, State hospital on Steilacoom Molly Ormsby Hengerveld and Steilacoom Blossom Zanke Mercedes; 2, Nisbet on Olympic Greenbank Queen; 4, Carnation Stock Farms on Carnation Sylvia Perfect Johanna; 5, Hendrichsen on unnamed. Junior calf—1, Hamilton on unnamed; 2, State hospital on Steilacoom Jewel Pontiac Korndyke; 3, Hendrichsen on unnamed; 4 and 5, Carnation Stock Farms on Carnation Matador Newman and unnamed.

Aged herd—1, Carnation Stock Farms; 2, State hospital; 3, Nisbet. Young herd—1, State hospital; 2, Carnation Stock Farms. Calf herd—1, State hospital; 2, Carnation Stock Farms. Get of sire—1 and 3, Carnation Stock Farms; 2, State hospital. Produce of dam—1, Carnation Stock Farms; 2, State hospital; 3, E. A. Donaldson, Adna.

Guernseys.

The splendid size and quality of the Guernsey show reflected the remarkable development of this breed in this territory. In 1920 there was one lonesome Guernsey on the grounds; this year there were four herds, totaling 55 head—all, however, from outside the county. A. L. Gile of Chinook was heaviest winner, taking

(Continued on page fourteen.)

The picture shows the boys of the Jersey bull calf club as they were lined up in the show ring. Floyd Morton is at the head; William Rinka, second; Eino Laakso, third; Charles Rinta, fourth, and Archie Laakso, fifth. The boys judged Jersey cows, and the one having made the most improvement in his calf since the organization of the club was presented with a Jersey heifer by the Lewis County Jersey club, besides the prizes won in the club calf class and the open Jersey class. The picture was taken by Demonbrun.

Why Mr. Curtis has Lee Puncture-proofs on his new Pierce-Arrow

LEES Smile at Miles

LEE Puncture Proof Tires

"I cannot pass this opportunity to tell you of the wonderful service and mileage received from Lee Puncture-proof Cords put on my 5500 pound FIAT touring car, over a year ago. I drive this car all over the Kansas Oil Fields, in all kinds of weather and over all kinds of roads and have ye to be delayed by any kind of tire trouble, and the speedometer shows that they have been driven 11,298 miles. So, you can see why I equipped my new Pierce-Arrow with P. P. Cords."

IN this letter, Mr. Ed. T. Curtis, of Curtis & Wells, Kansas City Live Stock Commission Merchants, sums up the feeling of security enjoyed by Lee Puncture-proof tire users, everywhere.

Lee Puncture-proofs are the only pneumatics especially adapted to automotive equipment on the farm. Every farm vehicle, including passenger car and truck, is used for business, and it has long ago been proven that every business car gains efficiency from Puncture-proof tire equipment.

Even the regular Fabric and the Cord tires of Lee manufacture are of exceptional quality—equal to the best the market affords.

The Lee Dealer will demonstrate the safety and saving advantage of this different type of pneumatic—show you why it carries a cash refund guarantee against puncture.

POULTRY AND RABBITS

Efficient Producer

Investigations lead the farmer to consider which is the most efficient producer—the cow, the hog, the sheep, the beef animal or the hen. In other words, which animal produces the most human food for every pound of feed eaten?

If we take the total product, the cow will, of course, produce more food than any other animal. The product of the milch cow is measured by several thousand pounds in a year. But a pound of milk can not be compared with a pound of meat or of eggs, either in food value or in market value. The reason is that the cow is thrifty and adds considerable water to the milk. In 100 pounds of milk there are only 14 pounds of solids. There is more or less moisture in all animal products. In eggs, for instance, there is some 66 per cent of moisture and in meats there is considerable moisture. The total product, therefore, is not a good basis on which to figure. The solids in the food, or that which remains after the moisture is extracted, is a better basis.

Dr. Jordan of the New York experiment station some years ago, in comparing a Leghorn hen, weighing 3 1-2 pounds and laying 200 eggs in a year, with a cow that weighs 1000 pounds and produces 7000 pounds of milk, said:

"If you take the dry matter of the hen and compare it with the dry matter of the eggs she lays in a year there will be 5 1-2 times as much dry matter in the eggs as in her whole body. The weight of the dry matter in a cow's body will be to the weight of the dry matter in the milk as 1 to 2.9. In other words, based upon the dry matter, the hen does nearly twice as well as the cow. I suspect that the hen is the most efficient transformer of raw material into the finished product that there is on the farm. Her physiological activity is something remarkable, so in that particular the hen stands in a class by herself."

It is another question, of course, as to what kind of live stock or fowls eat the most feed to produce a given amount of product. This varies with different classes of stock and also with different individuals of the same kind of stock. A flock of fowls at one of the experiment stations produced in a year an average of 180 eggs per hen weighing 22 pounds. In this case it required four pounds of feed to produce a pound of eggs, not counting the green feed. This means, roughly, that a pound of feed costing about 3 1-2 cents produced 5 cents' worth of eggs, with eggs at 30 cents a dozen.

Good laying hens, therefore, are efficient and profitable transformers of raw material into finished food product, and they should be given every consideration when the question of supplying foods is being discussed.

As to the relative value of different kinds of food, the campaign literature is not always to the point. Many writers and speakers refer to calories and compare different foods on the basis of heat units. That is one function of foods, to produce heat in the body. But foods must furnish materials for building and repairing bodily tissue. They must furnish bone and flesh to cover the bone. The material for building up and keeping up the body is more important than the material for furnishing the heat, because it is more costly. The heat-producing elements, which are the starches, come from such foods as corn, which has a high percentage of heat-producing elements. The flesh-forming elements are not so abundant. They comprise about 10 per cent of the corn, while there is some 80 per cent of the heat-producing compounds. The feeder must purchase meat foods and other high-priced foods that are rich in protein or flesh formers to make the balanced ration.

So it is not a question altogether or primarily of heat units or calories; it is more a question of protein and protein compounds, and also of mineral matter. If we want heat units we eat corn and fats; if we want flesh formers we eat lean meats and eggs.

There are many things in foods that chemistry does not tell us about. They tell us, for instance, that there is a certain amount of protein in certain foods, but then what is protein? It is made up of other compounds the functions of which have not been clearly defined. Why, for instance, does protein from grains give a certain result, and the protein from meat give another result in egg production? When the chemists can tell us all about the different compounds of protein and their functions in human food we will be better able to decide on the comparative merits of different kinds of food.

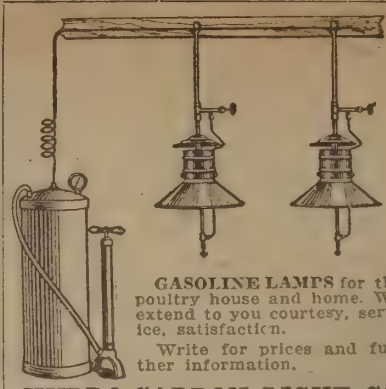
Meantime the high nutritive value of the egg is properly appreciated. They constitute the only nourishment in certain hospital cases, and the egg has not a high caloric value. It nourishes the body; the heat units can be secured from cheaper foods.

Young Turkeys Die

By W. D. BUCHANAN, Poultry Extension Specialist, Washington State College.

Can you tell me what the matter is with half-grown turkeys that droop around for from 12 to 24 hours and then die? No other sign of ill health.

Mount Vernon, Wash. MRS. C. B. M.



Young turkeys sometimes droop and die from mites if closely housed, and from lice if the mother happens to be badly infested. There is a disease known as blackhead which causes them to droop in this way, but they usually last a week or two. This disease is usually accompanied by a greenish-white or yellowish-green diarrhea. There is said to be no cure for it, but feeding lightly dry grain and giving plenty of range certainly tends to prevent it. The trouble might be due to spoiled or putrid milk. If so, a dose of epsom salts would help. Use one ounce to a gallon of water. If lice are present, powder with sodium fluoride.

Keep Only Vigorous Pullets

Whether we can pick out the pullets that are the best layers or not is a question, but any poultryman can do a little culling that will eliminate some poor layers. There are always some pullets in every flock at this season of the year that show marked lack of vigor, and they should be mercilessly culled. It does not require an expert to do culling of this kind. Those showing decided lack of development, or the runts, as they are called, should be given short shift. Cull for vigor or apparent vigor. Don't feed high-priced feed to the runts.

FEED THE MITES OIL.

Round roosts are all right for young chicks—the round roost is the natural one. But round or square, and no matter how clean you keep them, mites will gather unless they are regularly sprayed. A good shingle oil applied twice a year, has been found to be one of the best mite preventatives on the market, according to the state college authorities.

Endurance

There's only one Caterpillar Holt builds it

"Caterpillar" T35 Tractor conclusively proves that neither power nor endurance need be sacrificed to produce a tractor of small size and light weight. The T35 weighs but 4000 pounds and measures only 48 inches wide, yet it has 15 drawbar horsepower and maintains the same high standard of economy, dependability and endurance that have always marked Holt products. Better qualities of steel, improved methods of heat-treatment, advanced design, enabled Holt to make this achievement—the supreme small tractor.

Other factors contributing to T35 endurance are the exacting standards of accuracy in workmanship; the perfect system of lubrication—full force-feed for the motor, oil baths for gears, Alemite fittings in place of grease cups; complete enclosure of all working parts from dust and dirt; simplicity; easy accessibility; numerous other features.

Don't let the small size of "Caterpillar" T35 Tractor mislead you. It delivers more power at the drawbar than many tractors much larger in size. Write at once for full information about the T35 and advice as to where you can see it on display or at work. Or, let us tell you about larger "Caterpillar" Tractors—5-Ton, Western 10-Ton or the big-power 75.

ORCHARD AND GARDEN

Makes Orchard Pay

West Side Man Prunes Carefully

The fact that a West Side orchard can be made a paying undertaking is being demonstrated by G. S. Ford of Gig Harbor, who has 10 acres of Italian prunes and practically the same acreage of apples. Careful pruning methods have been carried on in this orchard ever since it has been producing a crop.

Mr. Ford believes in the use of spray to keep out insect pests and fruit diseases. He has a large power spray machine and sprays for codling moth, brown rot and other diseases.

The entire 10 acres of prunes are the Italian variety, and are planted on the hexigon plan, the trees being 16 feet apart, thus making 195 trees to the acre. The trees are 30 years old and the orchard has received clean cultivation, which is done with the tractor in order to conserve moisture. Cultivation is stopped, however, when the fruit has formed. This allows the wood to harden and food material to go to fruit instead of being used for twig growth, according to Mr. Ford.

Mr. Ford has about 500 White Plymouth Rock hens, which are housed in the orchard to furnish fertility to the soil. This method has, however, resulted in the supply of a large amount of nitrogen, which has furnished a good growth of foliage on all prune trees. There seems to be something lacking in the growth of the fruit itself, according to Mr. Ford, and he intends to move the hens and plant the entire orchard to vetch, which will be plowed under in the early spring to supply humus.

In addition, Mr. Ford intends to prune the trees heavily this winter, which will result in larger sized fruit the following year. There is a disadvantage to heavy pruning, however, inasmuch as the wood growth continues until late in the fall and sometimes winter-kills badly. This can be partly checked by stopping cultivation in midsummer.

Practically all the prune crop is handled on the farm by means of a prune drier, which dries 6000 pounds a day.

At one corner of the apple orchard Mr. Ford is erecting a storage house, which will measure 24x40 feet. This house is built after government specifications, having double walls covered with tar paper to keep out moisture and extreme temperatures. Ventilation is furnished by means of large cracks in the floor, and ventilators at the roof. The house will have a capacity of 3000 boxes.

The packing room is being built at one end of the building and will measure 12x24 feet. All of the fruit will be brought in to this part of the building, sorted and packed before being stored in the main house.

Mr. Ford expects to handle his entire crop in this building, part of which will be stored until midwinter.

Cutting the Vines

There has been some discussion among growers of strawberries as to whether the cutting of the vines after the crop is off will make a marked difference in the successful crop. J. W. Peterson of Edgewood, Pierce county, is trying out an experiment to determine if there is any difference in the yield the following year when the vines are cut at different times during the summer.

"It is the custom to cut the vines immediately after the crop is taken off," said Mr. Peterson, "but some growers argue that it makes little difference and that it is just as well to wait until a month later. I am making the test on a patch of one-half acre of Marshlls, five rows of which were cut immediately after the crop had been harvested and the remaining three rows were cut a month later with the exception of one row, which was left for a check row."

The demonstration is being carried out under the direction of M. D. Armstrong, the extension horticulturist of the state college, who told Mr. Peterson that the question of the check row made very little difference with the trial. The fact is well known that cutting the vines has a great influence on the plants and puts them in better shape for the following season.

Mr. Peterson reports the strawberry crop as being as good as any in that section of the county this year, which was approximately 200 crates to the acre. This is considered about half a crop and is due largely to the dry weather.

INCREASES BERRY PRODUCTION.

Speaking of the benefits of the complete commercial fertilizer for berry crops, J. A. Buckley of Rochester, Thurston county, Washington, says that by the use of a fertilizer testing 3-10-4 (nitrogen, phosphorus and potash) he produced 250 crates to the acre during the short season. Similar crops on nonirrigated, untreated land in the section are reported as producing from 150 to 200 crates to the acre.

Constant Cultivation

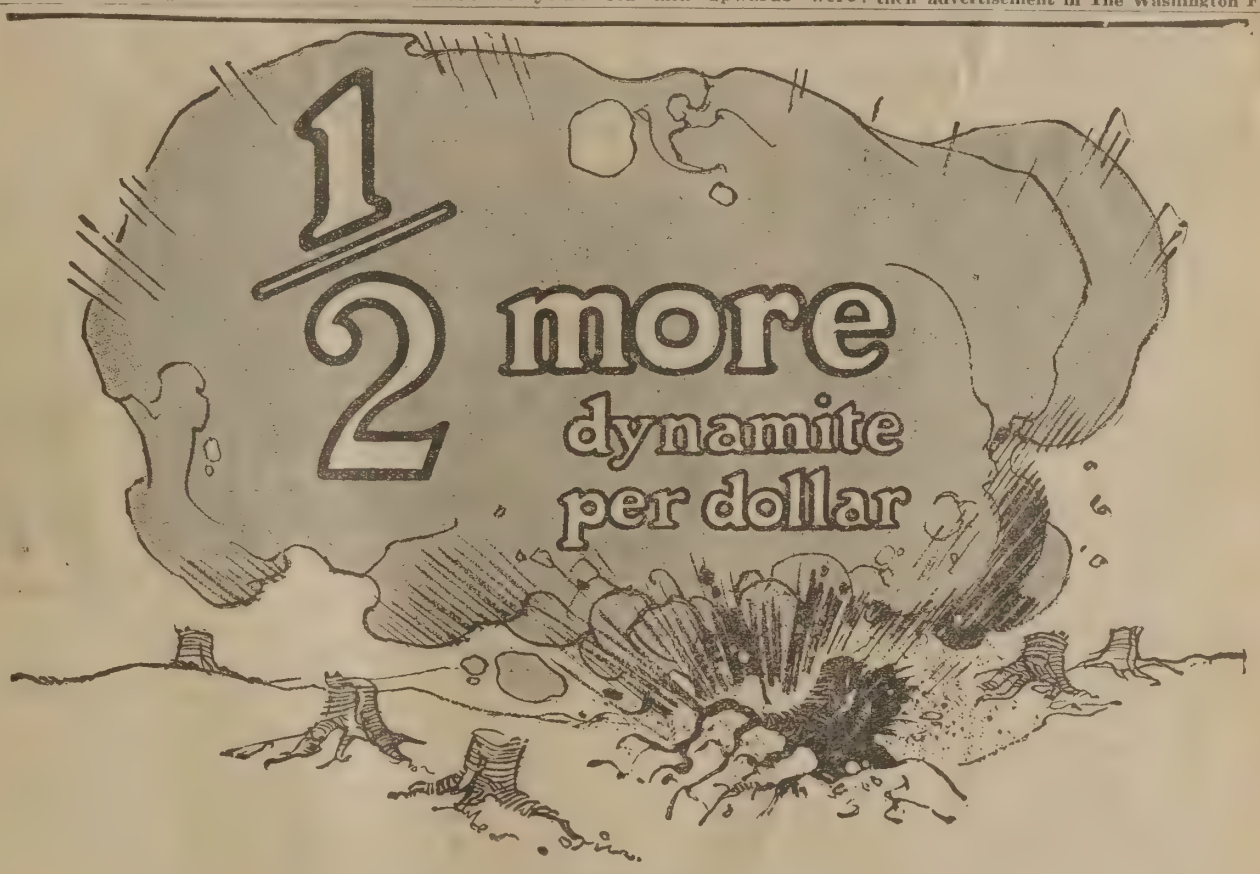
"It is the general opinion of the people in the lower valleys that we 'hill billies' can not raise berries," remarked G. C. Towne of the Thrift community in Pierce county. "We have, however, succeeded in raising an excellent crop of raspberries, and believe that with proper cultural methods we can produce as good yields as are obtained in the lower valleys."

"We already have one acre of red raspberries, the larger part of which are Cuthberts, but we intend putting in another acre next spring. We will also put in an acre each of logans and blackberries. We are using all of our own plants for setting, since they are all in good shape in spite of the dry weather.

"As for production, we estimate that the Cuthberts produce all the way from one to two tons to the acre, while the Antwerps will yield nearly four tons to the acre. All of the canes have grown to a great height, some of them being over eight feet tall.

"Both the cane growth and the berry yield has been due largely to the constant cultivation of the entire patch. We find that one cultivation will almost double the size of the berries in 24 hours," said Mr. Towne. "The soil is a sort of a clay loam with very little, if any, gravel spots. We have not fertilized heavily as yet, but have used some barnyard manure with excellent results."

Trees Are Often Crowded



Soil Expert Roy Larsen and County Agent William Meikle of Wenatchee, in following up the work of the recent state horticultural summer meeting, have been holding demonstrations to impress upon the growers the necessity for thinning out their orchards, either by severe pruning or by taking out some of the trees. Orchards 15 years old and upwards were visited where the trees are from 22 to 25 feet apart and the trouble from crowding was pointed out. On the other hand, the Dr. Ford orchard, on Red Apple road, was used as a demonstration of what can be done with trees 40 feet apart. This orchard is now yielding as much as the best average tract, though only containing about 40 trees per acre. They have spread sufficiently to cover the entire ground.

Figures prepared by County Agent Meikle show that over 2500 tons of fertilizer have been used on Wenatchee valley orchards, costing the growers $200,000. This is one of the best investments they have made, in Mr. Meikle's opinion.

OIL PAPER WRAPS.

Two cars of oil fruit wraps have just been sold to Yakima fruit growers. The two cars represent a total of 80,000 pounds and nearly every shipper in Yakima made a purchase to test the merits of this fruit wrap. It is claimed that these wraps offer a solution for many of the problems of fruit storage. It not only prevents scald, but it is claimed fruit with the oil wrap can be held in storage without deterioration for six months to a year longer than with the ordinary fruit wraps.

Save Money

on your land-clearing this fall!

DU PONT CHEMICAL ENGINEERS have cut your land-clearing costs by producing Pacific Stumping Powder, the cheapest and best farm dynamite yet made. Use it and save money.

Equal approximately in strength to any standard stumping powder, stick for stick. Non-headache. Non-freezing. And for 50 cents more than the cost of 85 sticks of a standard stumping powder you get 130 sticks of Pacific Stumping Powder—one-half more per dollar.

Go to your hardware dealer or general store and order your fall supply—and remember that you can blast stumps with Pacific Stumping Powder in any season of the year.

Write for free booklet "The Development of Logged-off Lands", a complete manual covering the latest blasting methods.

STUMPING POWDER

Southwest Fair Wins

(Continued from page eleven.)

eight blues. W. O. Reith of Astoria, Ore., won four, also senior and grand champion bull on a dandy 2-year-old. Three animals, all famous for both type and production—Jewel of Rose City, La France of Bralee and Sammamish Topsy—ranked one, two, three in the aged cow class, the first mentioned becoming grand champion. The junior female championship went to Gile also, while that on bulls was taken by a son of La France, owned by Dr. A. Macrae Smith of Bellingham. The awards:

Bulls, 3 years or over—1, A. L. Gile, Chinook, on Chicona Buster; 2, Dr. Park Weed Willis, Seattle, on Chicona Hero; 3, Dr. A. Macrae Smith, Bellingham, on Glendale May King. Two-year-old—1, W. O. Reith, Astoria, Ore., on Glenwood Sequel's Lad (senior and grand champion). Yearling—1 and 3, Willis on Chicona Victory and Glenwood's Jolly Tar of Orchard Hill; 2, Reith on Squire's Noble Lad of Willowood; 4, Gile on Chicona Pete. Senior calf—1 and 3, Smith on Fircrest of France Rival (junior champion) and Fircrest Leader; 2, Reith on Willowood Buttermaker; 4, Gile on Chicona Luke. Junior calf—1, Smith on Fircrest French Boy; 2, Reith on Willowood Bill Chene; 3 and 4, Gile on unnamed and Sir Frederick on Pleasant View; 5, Willis on Topsy's Captain Barlow of Orchard Hill.

Females, cow 4 years or over—1, Gile on Jewel of Rose City (senior and grand champion); 2, Smith on La France of Bralee; 3 and 4, Willis on Sammamish Topsy and Sammamish Roxy; 5, Reith on Elaine of Chicona. Three-year-old—1 and 3, Reith on Lily's Blossom of Willowood and Billy's France Lucy of Chicona; 2, Willis on Katydid of Orchard Hill. Two-year-old—1, Smith on Fircrest Prexy Maid; 2, Gile on Belladonna of Chicona; 3 and 4, Reith on Rose Girl of Oregon and Sequel's Lady of Willowood; 5, Willis on Glenwood's Fireply of Orchard Hill. Senior yearling—1, Gile on Doris of Chinook (junior champion); 2 and 3, Smith on Fircrest La France Pride and Fircrest May Blossom; 4, Reith on Billy's Alma Chene of Willowood; 5, Willis on Glenwood's Bright Light of Orchard Hill. Junior yearling—1, Gile on Sunlight of Chicona; 2 and 3, Smith on Wanda Topsy of Orchard Hill and Flossy Topsy of Orchard Hill; 4, Reith on Butter Girl of Willowood. Senior calf—1, Reith on Jewel Chene of Willowood; 2 and 4, Gile on Diana of Chicona and Lavinia of Chicona; 3, Willis on May King's Golden Glow of Orchard Hill. Junior calf—1, Reith on Billy's Alma Chene of Willowood; 5, 3, Gile on unnamed; 4 and 5, Smith on fircrest Merry Dame and Fircrest Little Jewel.

Aged herd—1, Gile; 2, Reith; 3, Smith. Young herd—1, Gile; 2, Smith; 3, Reith. Calf herd—1, Gile; 2, Willis. Get of sire—1, Gile; 2, Reith; 3, Smith. Produce of dam—1, Reith; 2, Gile; 3, Smith.

Ayrshires.

With the exception of one cow and a baby calf, E. W. VanTassell of Wenatchee was the only exhibitor. His herd was in charge of H. Howland and showed the result of careful fitting. They made a distinct addition to the great dairy show. Senior and grand championship on bull went to Queen's Scotland Cavelier and the same honor on cow went to the grand matron, White Muriel of South Farm. Both junior champions are of VanTassel's own breeding, the bull being Wenatchee Snow King and the heifer Wenatchee Cherry.

THE BEEF CATTLE SHOW.

With not only the largest beef cattle show, but with more quality than ever before, the necessity for a new barn was emphasized. The old horse barn was utilized and two tents were required to hold the overflow. Shorthorns had the largest numbers, and, while some of the sale cattle were hardly in condition, some of the best Shorthorns the fair has ever seen were shown. Most notable was J. D. McGuire's great young bull, Hercules Model, that was made junior and grand champion.

Shorthorns.

Bulls, 3 years or over—1, George Bertrand, Castle Rock, on Max Mill Criterion (senior champion); 2, W. W. Sharp, Stettler, Alta., on Lancaster Pride; 3, J. D. McGuire, Tenino, on Mayflower King. Two-year-old—1, Sharp on Royal Lancaster. Yearling—1, McGuire on Hercules Model (junior and grand champion); 2, Bertrand on Criterion 2d. Senior calf—1, Bertrand on Criterion 3d; 2 and 3, Sharp on Lancaster Earl and Beaufort Chief. Junior calf—1 and 2, McGuire on Oak Grove Perfectio and Oak Grove King; 3, Sharp on Lancaster Comet; 4, Bertrand on Criterion 4th.

Females, cow 4 years or over—1 and 2, McGuire on Hercules Rosalind and April Hopes; 3, C. B. Schmidt, Olympia, on Roselawn Pansy; 4 and 5, Bertrand on Roan Welcome 8th and Bessie Lass. Three-year-old—1 and 2, McGuire on Roan Lady and Escana Lady; 3 and 4, Bertrand on Cornerstone Mysie and Chief's Jewel. Two-year-old—1, Sharp on Craven Mysie (senior champion); 2, McGuire on Chief's Hope; 3, Bertrand on Daisy Velveteen. Senior yearling—1, Sharp on Beauty Anoka (junior and grand champion); 2, McGuire on Hercules Missie 3d; 3 and 4, Bertrand on Red Velveteen and Walsome Velveteen. Junior yearling—1 and 5, McGuire on Mayflower Rose and Mayflower Hope; 2, Bertrand on Erma Criterion; 3 and 4, Sharp on Wimple's Maid and Kilbane Beauty 12th. Senior calf—1 and 4, Sharp on Columbia's Pride and Kilbane Beauty 14th; 2, McGuire on King's Hope; 3, Bertrand on Roan Welcome 32d; 5, Schmidt on Roselawn Snowball. Junior calf—1 and 2, McGuire on Oak Grove Melba and Oak Grove Lady; 3, Bertrand on Daisy Criterion 2d.

Aged herd—1, Sharp; 2, McGuire; 3, Bertrand. Young herd—1, McGuire; 2, Sharp; 3, Bertrand. Calf herd—1, McGuire; 2, Sharp; 3, Bertrand. Produce of dam—1 and 2, McGuire; 3, Bertrand.

Herefords.

The Hereford show was a good one, with competition strong between a Canadian herd and one from Oregon. Alberta Panama 2d, belonging to Boggs & Sons of Daysland, Alberta, was a worthy senior and grand champion bull, while Bonny Lady Panama, senior and grand champion female from the same herd, could have competed creditably in a larger show.

Bulls, 3 years or over—1, O. A. Boggs & Sons, Daysland, Alta., on Alberta Panama; 2, Diamond B Ranch, Lowell, Ore., on Don Fairfax. Two-year-old—1 and 2, Boggs on Alberta Panama 2d (senior and grand champion) and Melrose Perfection. Yearling—1 and 2, Boggs on Dudley's Panama (junior champion) and Alberta Panama 3d. Junior calf—1 and 2, Diamond B Ranch on Oregon Gomez and Choice Gomez.

Females, cow 4 years or over—1, Boggs on Miss Panama; 2, Diamond B Ranch on Pearl Fairfax. Three-year-old—1 and 2, Boggs on Bonny Lady Panama (senior and grand champion) and Lady Panama 2d. Two-year-old—1, Diamond B Ranch on Betty Blanchard 35th; 2, Boggs on Miss Fairfax Panama. Senior yearling—1, Diamond B Ranch on Ilkah Fairfax. Junior yearling—1 and 2, Boggs on Miss Columbus Panama (junior champion) and Lady Panama 3d; 3, Diamond B Ranch on Lady Pesold. Junior calf—1, Boggs on Miss Panama Perfection; 2, Diamond B Ranch on Lady Gomez.

Aged herd—1, Boggs; 2, Diamond B Ranch. Get of sire—1 and 2, Boggs. Produce of dam—1 and 2, Boggs.

Aberdeen Angus.

Two herds of Aberdeen Angus, both extremely well fitted, gave a representation of the black breed to be proud of. That the local herd of J. A. Scollard could secure a fair share of the ribbons against the great McGreggor herd of Brandon, Manitoba, is greatly to its credit.

Bulls, 3 years or over—1, J. D. McGregor, Brandon, Man., Can., on Pride 2d of Page (senior and grand champion); 2, J. A. Scollard, Chehalis. Two-year-old—1, Scollard. Yearling—1, Scollard; 2, McGregor. Senior calf—1, McGregor; 2, Scollard. Junior calf—1, McGregor, on Blackbird McGregor (junior champion); 2, Scollard.

Females, cow 4 years or over—1, McGregor; 2, Scollard. Three-year-old—1, McGregor; 2, Scollard. Two-year-old—1, McGregor on Kamara of Glencarnoch (junior champion); 2, Scollard; 3, McGregor. Senior yearling—1, Scollard on Blackcap of Broadmeade (junior champion); 2, McGregor. Junior yearling—1, Scollard; 2, McGregor. Senior calf—1, McGregor; 2 and 3, Scollard. Junior calf—1, McGregor; 2, Scollard.

Aged herd, young herd, calf herd and get of sire—1, McGregor; 2, Scollard. Produce of dam—1, Scollard; 2, McGregor.

Milking Shorthorns.

Milking Shorthorns had no less than four exhibitors. The Northwood herd, from Redmond, Wash., was best fitted and won the lion's share of blues, but this dual purpose breed made a show to be proud of.

Bulls, 3 years or over—1, Northwood farm, Redmond, on Gretna Challenger (senior grand champion). Two-year-old—1, Northwood farm on Northwood Defender; 2, E. C. Truesdell Centralia, on Fancy Jeweler. Yearling—1, Northwood farm on Northwood Pride; 2,

"It's a Truck *All* Through"

Built entirely of truck parts, fast, staunch and enduring, the Model K-16 One Ton GMC truck is always ready to travel.

Every unit in it is of extra size and is designed for truck use only. That is why it lasts indefinitely under the hardest usage.

That is what makes it a "Jim Dandy" for the farm. It has the ruggedness, the power and the simplicity that makes it deliver more continuous haulage than other trucks over the roughest roads and under the severest hauling conditions.

This GMC has a number of exclusive improvements that both increase its operating efficiency and reduce the time and expense of maintenance. Such features as Removable Cylinder Walls, Pressure Lubrication, Removable Valve Lifter Assemblies and Instantaneous Governor Action help to produce a new and better kind of motor truck operation.

It has radius rods—recognized as essential to enduring truck construction—which take the driving thrust and absolutely keep the brake adjustment fixed whether the truck is loaded or empty. It has magneto ignition, recognized as the simplest, most reliable type.

It has both pump and thermo-syphon cooling. It has electric lights and starting equipment—separate from the ignition and wired in metal conduits. It has pressure chassis lubrication, demountable rims, cord tires and every other refinement essential to a high grade, dependable motor truck.

Write for an illustrated booklet "Motor Trucks On the Farm."

Shall Ford Develop Muscle Shoals?

(Continued from page nine.)

bers of the commission. Before such appointees can act they must be confirmed by the United States senate. Should any of these organizations cease to exist without legal successor during the lifetime of the lease or should such organizations fail to make nominations for membership to the commission, the secretary of agriculture shall make such nominations.

Regarding the Gorgas power plant, Mr. Gray justifies its inclusion in the deal on the ground that it is necessary to permit the Ford company to begin operation of the present plants at once without waiting for the completion of the dam that will later make water available.

Mr. Gray expressed the opinion that the senate probably will reach a vote on this measure early this fall.

HELP WANTED—MALE 3

PIKE'S PEAK OR BUST

By LEWIS B. MILLER

Copyright 1921

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow, Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness. 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test, with the result that at no great depth they reach water. After a long rest, they fill their kegs and turn back for the old Santa Fe trail, some inclined to give up the journey to the gold fields, others determined to get to Pike's Peak or bust. Esau and Orlando, a little later, come upon a great wagon train of freighters out on the prairie and accompany them until they reach the Arkansas river. They continue alone, finally entering the open buffalo coutnry.

They pass through a tremendous herd of buffaloes, pitch camp on the bank of the Arkansas river, kill a buffalo each and spend a few days drying the meat for future use. While there a wagon train with which the Cooper family is traveling comes up and camps, giving Orlando a chance to get a little better acquainted with the daughter, Hazel. They part with the hope of meeting again in a few days somewhere along the trail. They do meet again, and, meeting a large number of discouraged prospectors returning, the Coopers, the handcarters and the wheelbarrow pilgrims decide to turn back for home, too, though both Hazel and Orlando want to continue the journey. Hazel declares that she believes they ought to reconsider and go on to the Pike's Peak country.

CHAPTER TEN (Continued).

Headed for the Mountains Again.

"Exactly what I've been thinking!" Orlando exclaimed, with no little enthusiasm. "I can't well march back by myself, though. If you folks would drive west again, believe I could persuade Esau to do the same, and maybe the handcarter's crew."

Before the girl could reply her mother raised the wagon sheet, nearer the fore end, and glanced out. After greeting the young man tramping along by the wagon and commenting upon how healthy he was looking, she said: "It does seem too bad that all of us have bundled up and traveled hundreds of miles toward Pike's Peak, and are now on our way home without catching even a glimpse of the peak. It's—it's almost ridiculous."

"Then why, oh why, didn't you say so, ma, when pappy asked you?" demanded her daughter, in reproving tones.

"Well I—I don't just know. All a body could hear then was, 'Turn back, turn back, turn back, before it's everlastingly too late!' That big crowd of disappointed gold seekers must have stampeded us with their loud talk, so that we lost our heads."

"Just what happened! Yes, that's exactly what happened, Mrs. Cooper," agreed the young man. "We all made a tremendous mistake. Not a doubt of that in the world."

Here Hazel spoke again: "Guess pappy must be thinking the same thing. While we were rolling west he was cheerful and lively—joking with us most of the time. But since we've started home it's little he's had to say. Just look at 'im now! He keeps away up there by the middle oxen, like he was afraid some of us would speak to him."

Orlando glanced first at the girl and then ahead at her father. What she had said was plainly true. The man, far toward the front, was trudging along by his team in moody silence.

By this time the younger Cooper children—those that were in the wagon—all had their heads out from under the wagon cover, and all were declaring themselves much disappointed at having to turn back without seeing the mountains.

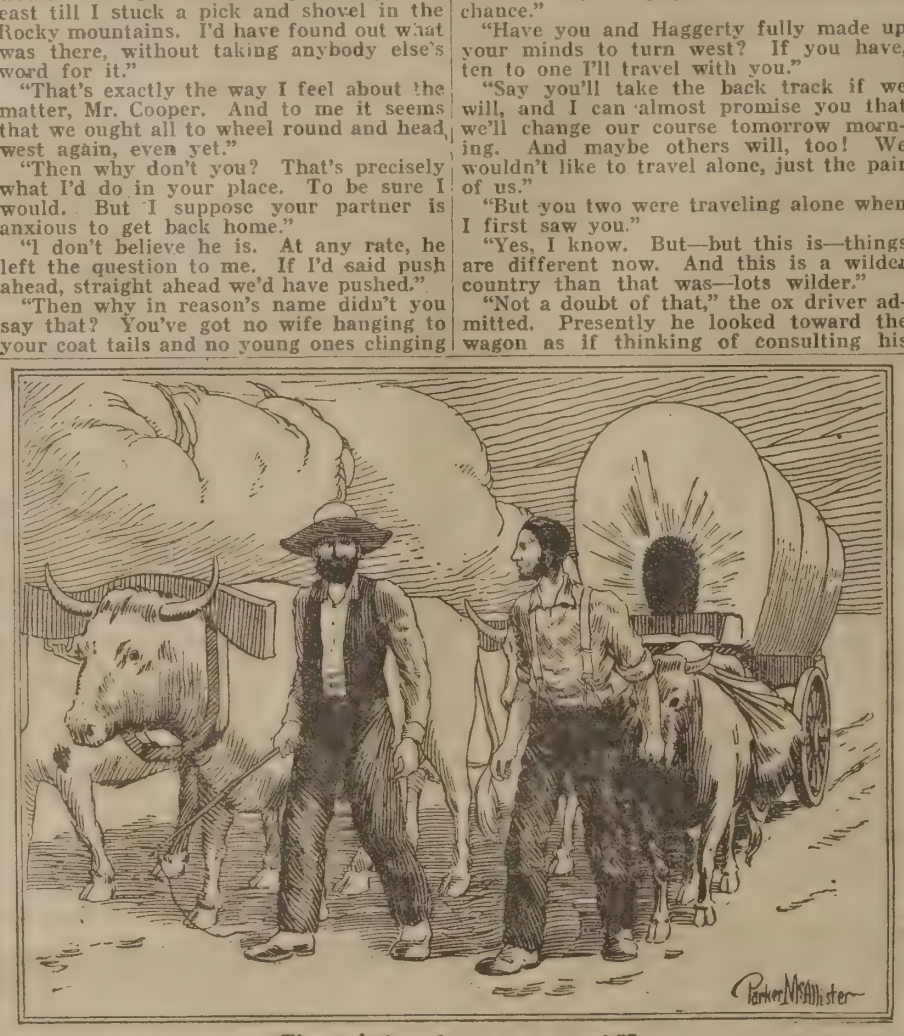
Soon the cow driver said: "I'm going to talk with your father a minute."

Urging Brindle to faster gait, he soon came up with the wagon driver.

"Well, Mr. Cooper, do you enjoy rolling east as well as you did rolling west?" was the way he opened the conversation.

The bearded ox driver started and turned quickly, in surprise. "Well, no; cain't truthfully say that I do. Fact is, I don't like this turning back at all—not I. And the further I travel in this direction the more disgusted I feel about it. Not my way to start into a thing, and then turn tail before I carry it through."

"Then what made you turn back?"



"Well, that seemed the only safe thing to do. When you've got a wife and half a dozen little shavers hanging to your coat tails, like I have, you cain't do just as you want to. You've got to look out for them first, last and all the time. I didn't care to take my family to where they'd be in danger of starving. If I'd been footloose, like you and your partner, nobody would ever have seen me point my nose east till I stuck a pick and shovel in the Rocky mountains. I'd have found out what was there, without taking anybody else's word for it."

"That's exactly the way I feel about the matter, Mr. Cooper. And to me it seems that we ought all to wheel round and head west again, even yet."

"Then why don't you? That's precisely what I'd do in your place. To be sure I would. But I suppose your partner is anxious to get back home."

"I don't believe he is. At any rate, he left the question to me. If I'd said push ahead, straight ahead we'd have pushed."

"Then why in reason's name didn't you say that? You've got no wife hanging to your coat tails and no young ones clinging

Then what made you turn back?"

to your breeches' legs. You could have seen all that's to be seen and made all that's to be made, and that without risk to anybody but yourselves. No danger of you two men starving out there, I reckon."

"Not a bit! Of course not! And there wouldn't be any danger that your family would starve, either. Every man I've talked with told me there's game everywhere in the mountains, as well as out on the plains. People can't well starve where they can get plenty of meat to eat."

"Hardly. Or at least my folks wouldn't. We've got a good supply of flour in the wagon there, as well as beans and peas and dried fruit and such like."

"Then I can't make out that there was any more real reason for you to turn east than there was for Esau Haggerty and me."

"Well, maybe not. But—but don't you s'pose the game all disappears in the winter while the mountains are buried deep in snow?"

"What if it does? Only one place for it to go, and that's to the valleys. And what would hinder us from killing it there? I'm told there are deer and elk out there, and mountain sheep and mountain goats and bears. One fat bear ought to supply a family with meat during the worst of the winter weather. And then I've been told there are buffaloes in the mountains—some that stay there all the time. With all that game to eat, we'd be sure of a living, even if we didn't dig up a penny's worth of gold."

"Does look that way, don't it? Wouldn't be surprised, after all, if I didn't make a mistake when I took the back track like I did."

"I'm pretty sure we all made a mistake. And for my part, I'm thinking we'd better correct our mistake by turning squarely around and marching west again. Chances are Esau and I will do that thing when morning comes."

"Just what I'd do if I was in your boots. Why don't you?"

Orlando blushed in spite of himself. It was embarrassing to tell this blunt, unsentimental immigrant that he, Orlando, was traveling east because the immigrant's daughter was traveling east.

"But—well, you see, the—the fact is, we've got acquainted with some—some nice people on the road; and—and it would be most everlastingly lonely for us to—to be traveling one direction while they're traveling another. If we could—could get up a party, now, I'd jump at the chance to turn back—turn toward the mountains any minute. Wouldn't I, though?"

Cooper glanced at the stammering, embarrassed young foot traveler. Whether he divined the truth would be hard to say. Presently he turned, cracked his whip over the oxen, then tramped on in silence for a little while. Now he was gazing ahead.

"As far as I'm concerned, it wouldn't take much to make me strike back toward the mountains again," he finally announced. "That is, if the folks there in the wagon"—and he jerked his head backwards—"will say yes to it."

"From the way they all expressed themselves to me a few minutes ago, my guess is that they'll say yes, and jump at the chance."

"Have you and Haggerty fully made up your minds to turn west? If you have, ten to one I'll travel with you."

"Say you'll take the back track if we will, and I can almost promise you that we'll change our course tomorrow morning. And maybe others will, too! We wouldn't like to travel alone, just the pair of us."

"But you two were traveling alone when I first saw you."

"Yes, I know. But—but this is—things are different now. And this is a wilder country than that was—lots wilder."

"Not a doubt of that," the ox driver admitted. Presently he looked toward the wagon as if thinking of consulting his family at once. But, instead of doing so, he glanced at the sun, then said:

"Soon be camping time now. We'll all talk things over tonight; and you needn't be surprised if you find us ready to travel the other way with you when morning comes. It does seem like a wild-goose chase for us to journey as far west as we've journeyed, and then turn east before we even catch a glimpse of a mountain."

"All right, Mr. Cooper. My partner and I will be with you when you're ready to right-about-face. I'm almost sure of that. Going to drop back now and talk to him a few minutes."

Pulling on Brindle's rope, he brought her to a standstill. Not till the wheelbarrow had overtaken him did he let her move on. They were now at the rear end of the wagon train.

"Drive this cow of mine a spell, Esau. I want to push the wheelbarrow till camping time. My arms need a little stretching."

"Just as you feel like, Lando, boy." And, without another word, Esau relinquished his burden.

Now the two tramped along side by side. After a good while the younger man broke the silence: "Esau, have you any iron—any kind of iron?"

"Cain't say as I have. What do you want with it?"

"I don't want it. You need it yourself. Need it right away, too. But your pick will do. That's the only use you'll ever have for a pick, anyhow."

"What you talkin' about?"

"I mean you want to heat the point your pick red hot in our campfire tonig and then make some change in what's the side of your wheelbarrow. Wo you've got there don't fit the way you traveling now."

Esau grinned a sickly grin. "Not overly well," he admitted "Guess may I'd better let the—the tent cloth ha down low enough to hide it hereafter.

"No, that's not what you need. T a hot iron and change what you've there."

"Change it—how? Don't know as I ca

"Then I'll change it for you. I'll burn line through 'Pike's Peak or—' so as cross it out. After that I'll add two lett to your other word and make it re B-u-s-t-e-d. That's all you need, the w you're headed now."

Esau grinned again. But there was amusement in his grinning. "That'd some trouble—a right smart trouble little good," was all he answered.

"Trouble or what not, we've just got change something. What's on your wh barrow or our course. I, for one, am favor of changing our course when we out from tonight's camp."

"I'd jest as lieve as not. The mor think about what we're doin' the mea I feel over it. Take us all the rest of lives to explain to the folks back at ho why we started to Pike's Peak and tram as fur as we did, only to turn our tails fore we got there. Don't seem right to sech as that don't. And I'm lowin' it wo seem right to the other folks."

"No, it won't seem right to others. Es and what's more, it's not right. No do about that now. We made a mistake w we didn't push right ahead. But it' mistake that won't be hard to correct. haven't traveled very far today. Not far as usual. And tomorrow will ca us back to where we started from t morning, or even beyond."

"You believe, then, that we'd ought take the back track again?"

"I do, Esau. I certainly do. We hav seen what we started out here to see, we haven't done what we started out h to do. I want to view the shining mo tains, as they used to call the Rockies. I'd like to dig up some gold before I t my back on the gold country. We w have to travel alone if we head west aga

"Oh, that's not much better. We go if we want to, even if we do have travel by ourselves. And we can company, too. People aplenty rollin' t direction, even yit."

"Yes, I know. But for company it wo be better to travel with somebody w acquainted with."

"Don't see as that makes any great s of difference. Folks can mighty soon acquainted out here."

"I know. But if our handcart pa should decide to go with us, that would better than strangers. And then the Mr. Cooper. He said his whole family just about disgusted with themselves turning toward the states. He as g as told me, a little while ago, that if traveled west again they'd travel with

A light broke over Esau's sunbu countenance, quickly followed by a br grin.

"Oh, I see now! Yes, I see mig plain. And I understand why we're ch in' our course, me and you, every t the wind changes."

Orlando blushed guiltily. "Never n about what you see, Esau." The yo fellow grinned a sheepish grin "You altogether too much, anyhow. Your n shouldn't have been Esau. It ought have been Isee."

"Yes, I do see! You bet I do, La boy! It's not a hot iron we need in outfit. Not by a long shot! It's s black paint. With that you could p on one side of your pack—or both si

'A Sweetheart or Bust!'

We thought we was comin' out here to up some gold, me and you. But no thing! What we railly come fur wa rustle up a gal for Lando Medford. we'll do it, you bet! We'll ketch l blackeyes if we have to chase her all the high plains! Yes, we'll—"

But the young fellow, blushing laughing, made haste to say: "Let's for our handcart and its crew. I wan find out how their pulses beat by this t They've been looking glum all day. from the way they drag along, my g is that they don't feel any better this back-track business than you I do."

When the handcart, which was not behind, had overtaken the wheelbarrow the cow, Orlando said: "Mr. Sanders, I and I have decided that we took the wr road this morning—the wrong end of road. And we're thinking—thinking strongly of turning back west tomor morning. How do you feel about the a ter by now?"

"Well, Lando, I don't know what the of our crew think. For my part, thoug wouldn't take any great sight to make turn back with you. The further I tr in this direction the more foolish I It does seem childish to go back h and tell all the neighbors we got sc and turned tail before we caught eve glimpse of the gold mountains."

(Continued on the following page.)

Pike's Peak or Bust

(Contniued from the preceding page.)

"Why, of course it does. That's exactly the way I feel about it. And the sooner we correct our mistake, the better it seems to me," urged Orlando. "We can't camp right here. We'll have to keep on to the regular camping place and to water now. But suppose we say we'll all travel west from tonight's camp."

"That suits me well enough—just now at least. But let's not make up our minds yet. The boys and I will talk things over tonight and see what we think about it. Chances are, though, that we'll conclude to turn back with you. We'll let you know by morning."

They did so conclude, and that before they had finished eating supper. With this information Orlando hurried over to the Cooper wagon. There it was quickly decided that the family would join the west-bound party.

When morning came, not only the foot travelers and the Coopers set their faces toward the mountains, but most of the wagons that had turned east the day before again changed their course and traveled with them.

All that day the west-bound wagon train, led now by the cow and the cart and the wheelbarrow, rumbled along the dusty trail. When night settled down the wagons went into camp near the same creek by which they had camped two nights before. And the foot travelers kindled their campfire against the same big cottonwood log.

Scarcely had the party by the log begun to cook supper, when a visitor from one of the nearest wagons strolled over to their camp.

"Hello, there, Holloway!" Sanders called out, jovially. "We thought you traveled on east this morning. How comes it you're still with us?"

"Yes, we got to talkin' about you at dinner t ime, and sever'l of us agreed that your wagon was still in camp when most of the others rolled out west," Esau remarked. "Guess we must ha' been mistaken."

"No. My wagon's on its way back to Missouri."

"Then how does it happen that you're here?" questioned a handcatrer.

"Well, ever since we had to right-about-face on that dried-up Smoky Hill route, Wallace and McKinley have been wanting to go home. They got disgusted with the whole business there, and didn't care to risk some more of the same kind. They'd have traveled straight on from Council Grove, after we got back there, but they could not. The wagon and the two yoke of steers belong to me. McKinley didn't own any part of the outfit; and Wallace owned only the yoke of cows that we were working in the lead. So I managed to keep 'em traveling west till yesterday morning, when we all listened to that disguntled bunch and turned back from here. But last night, when I let it be known that I wasn't going to travel east any further, they were both bitterly opposed to heading west again."

"What ailed 'em?" questioned a handcarter.

"Well, the fact is, they were homesick, both of 'em. Wallace had never been away from home before and he didn't like roughing it. The hardships didn't trouble McKinley. He's been in California. Spent two years there. That was three or four years ago. Because of his mining experience I let 'im come along, though he didn't furnish anything—didn't have anything to furnish. But he has a girl back there in Barton county, and he must have got suspicious that somebody was trying to steal her while he was gone. Anyhow, the longer he stayed away the more anxious he was to get back to her."

"And how did you settle the matter?" questioned Sanders.

"No telling what we would have done. But in our party that turned east from here yesterday morning was a man that I'd got acquainted with. He had a wagon and team, and was traveling like Collins' sheep—in a gang of his own. His name's Givens. Yonder he stands—that very tall man. He's from Missouri, too—from down near Springfield. He had a wagon and two yoke of oxen, and I arranged with him to let me put my things in his wagon and travel with him. Then I told Wallace and McKinley they could take my wagon back to Missouri. Things didn't look any too encouraging out yonder, and I decided I didn't want any big outfit there to be bothered with. My wagon was too heavy for Wallace's yoke of cows. So I let 'im use one yoke of my steers. He promised to take care of 'em for me till I get back to Missouri, whenever that may be. My other yoke of steers I put to Givens' wagon. We don't need 'em in this plains country, but we may when we get to where we're going, especially if we try to take his wagon up into the mountains."

"Yes. From all I've heard tell, it's mighty rough out there. Most mountainyous countries is that, though," Esau remarked.

Rather early next morning the wagon train broke camp and rumbled away westward. And half an hour later the seven trail trampers followed. On overtaking the wagons they did not pass, as they could have done, but jogged along behind them. The reason was that they had heard reports, rather vague, of Indians on the war-path somewhere ahead.

Whether there was any truth in the reports or not, Orlando was very thankful for them. He had now many opportunities to get on friendly terms with Hazel Cooper. And he was not slow to take advantage of them. Indeed, it was surprising how many excuses he could find to visit the Coopers when they were in camp, or to drive his pack cow by the side of their wagon while the wagon was in motion. His own party teased him not a little and accused him of deserting them.

On their first day after leaving the big cottonwood log the foot travelers saw something they had never seen before, though they had long heard of such things. A graveyard in the air was what some of them called it. The trail, which here kept near the river bank, passed along the edge of a cottonwood grove. And up in those trees, secured to limbs, were various strange-looking objects. The Indians of this plains country, when one of their number died, would roll the body in a buffalo robe, lift it up into a tree top and fasten it there with buffalo thongs. This particular grove appeared to have become a regular burying place, for nearly every tree had from one to three or four of those hide-coffined bodies in it. Probably this tree-top burial, if burial it could be called, was to keep wolves from devouring the bodies. For any graves which the Indians could dig, with their sorry tools, would necessarily be very shallow.

While the handcart and the wheelbarrow were passing that strange burial place they met a large party returning from the mountains. A number of these men were on horseback. Perhaps from sheer recklessness, but more probably because they were out of humor over returning home empty handed, some of the horsemen pulled out their six-shooters and fired at those rawhide coffins. From long exposure to sun and wind, both the hides and their contents were very dry, and every time a bullet passed through one a fog of dust would fly out of it.

"That seems to me like foolishness, or something worse," Holloway remarked. His wagon was not far ahead. After jumping out to look at the tree-top graveyard, he was now tramping by the wheelbarrow.

"It's worse than foolishness. It's sacrilege," declared Orlando. "People ought to have respect for the dead, no matter whether red or white. All dead people are alike."

"Some folks don't respect anything, not even their own selves, and lease of all a dead redskin," a handcarter remarked.

"They'd be apt to respect those rawhide graves if there were any live Indians around here," Sanders said. "I've heard of white men that got themselves into serious trouble, even with friendly Indians, by disturbing their dead."

"Oh, what differ'nce does it make, after all?" somebody else wanted to know. "Them buffalo hides and what's in 'em will soon crumble to pieces and fall down, anyhow."

"But it's better to let 'em take their natural course," was Sander's opinion.

"That's the second strange burying place I've seen since leaving home," Holloway told them. "Not long after setting out, my partners and I came through the Osage nation. Near a little place called Osage

Is it better to pay less in the beginning, or less in the end?

The Hupmobile is answering that question for farmers in its own way.

It is answering with *lower aftercosts, lesser need for repairs, and its own rare reliability* —as it does for scores of business houses which employ Hupmobile fleets.

It goes so far toward earning its keep by the savings it makes, that farmers are rapidly revising their ideas about motor car economy.

More and more, they are coming to see that it is better business to buy the fine qualities always associated with the Hupmobile, than to pay less in the first place and far more by the year.

The Hupmobile's beauty—its ease of handling make women its warm friends

Mission, where we crossed the Neosho, we saw an Osage gravegard. The people of that tribe lay a dead body on the ground, then build up a sod wall around it and roof it over with sod. But there was no fence around the burying ground and the cows had horned those sod graves down, and maybe the hogs had rooted 'em to pieces, and we could see human bones scattered around many of the graves. After once burying an Osage, the other Osages don't seem to trouble themselves any more about 'em."

The ox teams were slow, and most of the foot travelers were impatient to reach the gold country as soon as possible. After three or four days, when it became known that the reports of Indian hostilities were groundless, the party of seven decided to leaves the wagons and journey on alone.

Orlando, though he did not openly oppose it, regretted the decision very much. Not so much, however, as he would have regretted if his party and the Coopers had been traveling in opposite directions.

One morning he walked over to the Cooper wagon. By this time he and Hazel had become the best of friends.

"Well, little girl, our party have concluded that we must hurry on, now that there seems to be no more danger from redskins. I'm sorry, too. I wish we could have traveled together all the way to the gold diggings."

"So am I sorry, Lando, as sorry as can be," the girl answered, in her shy way.

"That's just what we would have done i ff'd had my say-so. As the matter stands, there's nothing for me and Brindle but to travel on with 'em. I'm expecting to see you again, though, after we arrive at the gold country."

"Maybe so. At least I hope so, Lando. But that must be a big country out there. We may not—may not drift together again. It's uncertain, of course."

"No, it's not uncertain—if we live. As you say, we may not 'drift' together again. But I'm not going to wait for any drifting together. I'll hunt you up."

"Oh, I wish you would—I do wish you would, Lando. hat would be nice of you. I'd appreciate that."

"Would you, little girl? All right. I'll find you. Yes, I'll hunt high and low and far and near till I discover you. Just as soon as I think you've had time to arrive there I'll begin to inquire for you."

"I'll be delighted if you will. Wish there was some way I could help you find—us. But I don't know how I could."

"Oh, I'll find you just the same. No doubt about that. Not many women and girls with these miners' wagons. I can soon hear of you when I begin to inquire. I'll keep things stirring till I locate you."

"I hope you will. I'll be glad to be found—the gladdest kind. You may be sure of that."

"I wish I could be altogether sure, Hazel. You won't forget me before I find you again, even if it takes a good while?"

"Of course I won't forget you! Do you think my memory is as sorry as that?" The girl laughed softly and a little reproachfully.

"I don't mean that you'll actually forget me. What I do mean is—Well, there'll be very few girls out there, and no end of young fellows—unmarried men. And they'll be swarming around you if you'll let 'em. I don't want you to like any of 'em better than you do me. You'll promise me that, won't you, Hazel?"

"Yes, if you want me to. I promise not to—to like anybody better than I like you."

"I don't—that's not just what I mean."

"That was what you said." The girl smiled prettily.

"Then I didn't say what I meant. I don't want you to like anybody as well—even half as well as you like me. Won't you promise me that, too, little girl?"

"I guess so, if you must have it that way. Now are you satisfied?"

"Don't know whether I am or not. What—"

"I mean I won't if you don't neglect me too long. But when you come to the mountains, those great mountains, and get excited over digging up gold, you'll forget there's such a girl in the world as little Hazel Cooper."

"No such thing! Not for a minute! The more gold I dig up the more I'll think of Hazel. What's the use of finding gold if it's only—only for yourself? So—so goodby till we meet again—meet in the gold country. And that won't be long."

They shook hands, and Orlando hurried back to his own camp. His party had already started, but were not yet out of sight. Brindle, saddled and packed, was grazing where he had left her. He was soon driving her toward the trail, and then along the trail in pursuit of his fellow travelers.

It was an hour later when he overtook the six men. As might have been expected, they received him with a shower of jokes. While those embarrassed him just a little, they displeased him not at all.

"'Lowed maybe you'd decided to swap us for better com'ny," Esau remarked, grinning broadly.

"Well, I didn't. But it wasn't because I wouldn't have liked to."

"Gals are most everlastingly skeerce in this part of the world. It's a wise idee to stick to one when you find her," commented a handcarter.

"Girls like that one back yonder are scarce in any part of the world," declared Orlando, with some heartiness. "At least they are in any part of the world where I've lived."

On the afternoon of this day the trail trampers came in sight of an Indian village. It was a rather large encampment, there being more than 200 wigwams in it. And the nearest was scarcely a hundred yards back from the road. Now the party halted till they could decide what to do.

"The fact that they've set up their lodges here by the big road seems to me pretty good evidence that they're entirely friendly," was Sanders' opinion.

"Jes how it looks to me," answered Esau.

The others agreed with them, and the travelers moved on. As they neared the village, numerous squaws and children came out to meet them. Most of the squaws had buckskins to trade. The white men stopped.

Among the redskinned crowd that surrounded the cart and the wheelbarrow was an old man, almost black, who could speak a few words of sorry English.

"What tribe?" Inquired Orlando.

(To be continued.)

Will Insure Grange Members

The national grange is planning to issue life insurance policies in connection with its regular membership. It will be handled on a flat rate and require only small additional fees for its members, according to A. S. Goss, master of the Washington state grange, who has just returned from a meeting of all state masters at Syracuse, N. Y.

"The death benefit policy will soon be ready for use by the grangers," said Mr. Goss, "but it will probably not be issued for more than $150 to start with. The policies will no doubt be enlarged as the conditions permit and it is the hopes of all that they will soon be managed on the same basis as any insurance company.

"There is also a plan to have a casualty department to cover automobile accidents. Since statistics show that the farmers as a whole are seldom envolved in mishaps of this kind, such insurance is estimated as costing only 25 per cent of the present rate charged the general public. The farmer is a careful driver as a general rule and he is less apt to take chances as will some of the other classes of drivers.

"Both of these movements are new, but the grange is anxious to develop a cooperative insurance," continued Mr. Goss, "and use its own funds for the benefits and as savings for its members. The sentiment at the recent meeting was unanimous in favor of a movement of this kind."

PUPILS TO PICK PRUNES.

That pupils may assist during prune picking time without loss of class work, two schools of Clark county opened early,

BIG POWER *for* BIG AUTOMOBILES

You selected your car carefully for quality. Select your motor fuel the same way. It's unfair to feed a good car an inferior gasoline.

"Red Crown" answers completely the automotive engineer's demand for a motor fuel that will vaporize rapidly and uniformly in the carburetor and explode cleanly in the cylinders. *All* the heat units it contains are converted into power at the drive wheels.

"Red Crown" is uniform in quality—every gallon is the same, wherever and whenever you buy it.

Fill at the Red Crown sign—at Service Stations, at garages, or other dealers.

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Experience Letters

From Our Family Circle Women

Dear Family Circle: Let us have a little change from discussions about bringing up children, canning fruit, making cake and all the rest of the things we all should know about, and turn our attention to the greatest ship now afloat in the world. She is called the Majestic. One definition of majestic is, "having the quality of inspiring awe," and this great achievement surely does that.

This great ship was built by the Germans and named the Bismark and after the war was taken over by the British and rechristened.

It is difficult to realize the size of this great vessel. She is 956 feet long. The height of this floating palace is 104 feet from the bridge to the keel and equals the height of a 10-story building. Her three smokestacks tower 144 feet above the water and two railroad trains abreast could pass into any one of them. She has 48 boilers, with 240 furnaces, which supply steam to four turbine engines and these drive screws with 100,000 horsepower. But even with all this power it is most wonderful that this great ship can make such speed as she did on her recent maiden trip across the ocean. Her average speed was 22 knots an hour—on shore we say miles—and her fastest speed was a little better than 25 knots an hour.

There are nine steel decks and seven of these are for passengers. There is no reason for lack of exercise while making the ocean voyage for by walking four times around the promenade deck, which is glass enclosed, one has covered a mile. A walk through the corridors and public rooms is nine miles. Electric elevators carry people from deck to deck and a complete telephone system connects all parts of the ship with a "central." The ship is electric lighted, 15,000 bulbs being used in the lightning.

When fully equipped for sailing it carries 2,000,000 pieces of linen and 75 tons of dishes. A good sized city could safely embark, for this floating wonder has accommodations for 41000 passengers and requires a crew of 1000. Some day I hope to be a passenger and then I will tell you more. Sincerely yours.

ALICE W. BARLAND.

Dear Mrs. Barland: I enjoy the Family Circle and especially the articles on the rearing of children. Ours are quite young, all in the grammar grades. When they were small they cried very little, as they soon found out that crying got them nowhere.

I had a box for their toys and they learned early to put them into it when through playing, though I often helped.

It saves time to put the child's initials on the inside of their rubbers with ink and is a good plan to stretch a wire under the coat rack near the floor and fasten the rubbers to it with snap clothes pins.

Each child should have his own work to do and never be allowed to leave it unfinished. It is a good plan to make a list of the tasks each is to perform and stimulate a little rivalry as to how soon lines can be drawn through the completed tasks.

Children should be taught to respect each other's rights and the older ones should not abuse the younger ones, nor the younger impose upon the older. When these things happen I send the offender away by himself until all is calm and a pleasant smile must be the proof.

Children should be trained to govern their tempers from the start, for the habit of giving way to temper strengthens with every indulgence and if they do not get the better of temper while young they will be a slave to it all their lives.

It is most important that parents should get and keep the confidence and respect of their children. Answer all their questions truthfully, especially those concerning the mystery of life. If you do not do so they will be certain to hear it from some source and almost surely in a way to make it seem to them sort of vile. If the child is too young tell him what he is able to comprehend and that you will tell him more when he is older.

We do not allow trading among our children, as they generally expect to get a little more than is given.

I discourage tale bearing, as tattling leads into gossiping.

Most children will be neat if given a chance. Be sure that they have a handkerchief and that their clothes have no holes or rips in them.

An allowance is better than wages, as they will grow to expect wages and become unwilling to work unless paid for every thing they do.

Expect good behavior and don't be afraid to praise. Why should we expect good conduct from a child who is constantly scolded and told he never does anything right? Insist that the work he is set to do is well done and if he needs to be shown how to do it the best way is to take time to show him.

It is unfair to punish a child for impatience and for a fit of temper, then excuse ourselves for the same thing because we were "nervous."

So much for the children; now I wonder if the Circle readers could suggest some novel ways for our organization to raise funds. We have had a measuring party, requiring a payment of 5 cents for each foot and 1 cent added for each odd inch. We have had a shadow party, where the men bid on the ladies' shadow, starting at 30 or 50 cents, so to be sure two suppers would be paid for. We posted bills for a pie social, asking the ladies to bring a pie. At 10 cents a cut and with coffee at 5 cents we cleared a neat little sum for a new hall. MRS. F. E. K.
Washington.

Home Recipes

Mixed Pickles.—One quart of very small white onions, one quart of very small cucumbers, two quarts of string beans, three quarts of green tomatoes, sliced and chopped very coarse; one head of hard white cauliflower, torn into small pieces; one medium-sized head of hard white cabbage, chopped coarse. After all this is ready, mix through all this one-half cup salt and set away for 24 hours.

Then mix together six red peppers, chopped coarsely, four tablespoons of mustard seed, two tablespoons of celery seed, two tablespoons of whole allspice, two of cloves, one large cup of sugar, two-thirds cup of best ground mustard. After 24 hours drain the chopped pickles and stir the spices and the chopped peppers all together, cover with best cider vinegar and cover and set on stove to simmer till tender. Stir to avoid sticking. A. W. B.

Tomato Catsup.—Very fine. Cook one gallon of ripe tomatoes tender, strain them and cook again until they are thick. About 15 minutes before taking off put into a muslin bag a small level teaspoon of cayenne pepper, one tablespoon of mustard seed, one tablespoon of whole allspice, one-half tablespoon of whole cloves, tie securely and allow to cook and at the same time add a heaping tablespoon of sugar, one teacup of vinegar and one level tablespoon of salt or a little more to taste. Bottle or put away in sealed jars. A. W. B.

Rabbit ears: Five cups flour, one teaspoon salt, one egg, one tablespoon lard, one cup sour milk or enough to make a stiff dough.

Cut the dough into several pieces, roll each piece out as thin as pie crust or about one-fifth of an inch thick, cut into fourths and fry in hot lard on both sides a light brown. Sour cream may be used in place of lard and milk. These are very good served with any fruit. MISS M. H.
Washington.

Sweet cucumber pickles: Wash and wipe dry 300 little cucumbers and put into a large dish, sprinkle all through them two-thirds cup of salt, then turn over them a kettle of boiling water, taking care that the cucumbers are well covered with it, and let stand till the water is cold. Remove from the brine and drain well, then put them in a crock. Add to one-half gallon of cold vinegar four tablespoons, heaping, of mustard and the same of salt and sugar and one-half cup of mixed spices for pickling and turn this over the cucumbers and weight down, so all will be under the vinegar, and set in a cool place. Next weigh out three pounds of sugar and each morning add a handful of sugar to the crock of pickles, stirring well, till the three pounds is used. If you follow this recipe, especially regarding the adding of the sugar each morning, you can not help but have fine pickles.

MRS. C. A. RATHBUN.

To dry prunes: Add one teaspoon of baking soda to one gallon of boiling water and put the prunes into this, leaving for two or three minutes; remove from the water and place to dry in a rather high temperature; after a few hours the temperature can be lowered. I do not remove the seed or use any sugar, as I think it mostly wasted when washing. When dried this way they are like those dried in the store. Plums can be dried the same way, only they have more juice and require more time to dry.

MRS. HATTIE M'CLURE.
St. Maries, Idaho.

Soda crackers: To 14 cups of flour add one cup of shortening, four teaspoons of cream of tartar, two teaspoons of soda; rub these well into the flour and add three cups of water, work thoroughly and beat with the rolling pin, roll thin and sprinkle with salt lightly, rolling it slightly into the dough, cut into squares and bake in a quick oven. One-half this recipe makes enough for an ordinary baking.

I am very thankful for the Family Circle. I am the mother of two little children and am interested in child training, and I am grateful to you, Mrs. Barland, for the interest you take in our welfare.
Your friend, MRS. G. G. M.
Lind, Wash.

Just Folks

"You have one of the best minds in the class, and yet you have the poorest lessons. You should be ashamed of yourself." So said the professor to a classmate of mine.

He was a bright young man; he came from a good family; he mingled in so-called good society. It was easy for him to learn. He was affable and had the manner of an aristocrat, without being especially a snob. He had the best ability to "put over" the poor lesson of any student that I have ever seen, and could do it with most of the teachers.

This young man after graduation studied law and opened an office in his native town. He did not get very far in his practice, but he was picked up and made a private secretary to a United States senator from the state. As far as I know, he fulfilled his office creditably, and later became a high officer in the United States senate itself. He was good at social functions. He could make arrangements for a junketing tour of a senatorial committee in fine fashion. He could escort a senator home from an evening party in a most unobstrusive way.

He had the ability to be a brilliant man; he became a well-known lackey.

Some one might call his life a failure, but he dressed well, had a good salary, mingled with the upper class and occupied a position probably envied by a large number of young men.

This classmate of mine died a number of years ago in the prime of his life. I know nothing of the particulars of his last days.

As a contrast, the valedictorian of my class was a brilliant student. He pored over his lessons. He was a pleasant and unassuming young man. He delved in books to the detriment of his health, and only a few years after his graduation his was an untimely grave. His days were unfulfilled. His overindulgence in books, his unchecked ambition as a student, prevented the realization of the fine manhood which was in him.

"You pays your money and you takes your choice."

I have sometimes thought that the school should impress upon its students more of the checks and balances of life, drill them better in the evils of underdoing and of overdoing as well. The obligation of the boy or the girl to the home is as important as his obligation to his teacher and to his school. The one balances the other.

Social responsibility, drilled into a young man or a young woman, is a wonderful flywheel to the human machine. Deprivations are just as important as privileges. Not to be able to take that high rank in studies, for reasons of health or finances, may mean more to the right kind of a boy or girl than to attain that high rank.

It is all as you look at the thing; it is all as it is drilled into you to look at it. The last word in education has not yet been said.

Many in One

THE EDWARDS MOTOR CO., 360 Main St., Springfield, O.

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

A year's supply of oil is sent with every Aermotor

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

High Points in News of the Week

The most drastic action in the present railroad strike since its beginning early in July was taken last Friday, when the federal court in Chicago issued an order forbidding the striking railroad shopmen and officers and sympathizers interfering in any way whatever with the operation of the railroads. The order is effective until September 11, when a hearing will be held to determine whether or not it shall be made permanent. The application for the order was made in person by United States Attorney General Daugherty, who declared that the underlying principle involved was the "survival and supremacy of the United States government" over any organization or group of persons interfering with a fundamental industry, the operation of which is essential to the welfare of the people at large.

The order apparently goes so far as to forbid the officers of the striking railroad shopmen to direct the strike and also forbid the use of funds of organized labor in promoting the strike.

In arguing for the order, Attorney General Daugherty declared that the strike was called and is being conducted in protest against an order of the United States railway labor board and that it is, therefore, to all intents and purposes, a violation of an order of the government itself. He declared that he was not bringing the action as an attack on the labor unions as such, but that the action of the strikers and their sympathizers required that they be "corrected and restrained." On this point the attorney general said:

"Never while the labor unions limit their activities to legitimate acts and lawful pursuits, not injurious to society, at least while I speak and to the extent that I can speak for the government of the United States, shall a blow be struck at them.

"But it may be understood that so long and to the extent that I can speak for the government of the United States I will use the power of the government of the United States within my control to prevent from destroying the open shop. When a man in this country is not permitted to engage in lawful toil, whether he belongs to a union or not, with full protection and without interruption, the deathknell to liberty will be sounded and anarchy will supersede organized government."

Emphasizing the duty of the government to take such action as will insure operation of the railroads, the attorney general said:

"Shall the American people suffer? "Shall property be destroyed; shall commerce be destroyed; shall laws be broken? Shall society be disorganized; shall prosperity and all labor cease and the poor be in want because employers and employees engaged in interstate commerce, obligated to the government and to the people of the United States by a greater obligation than that which rests upon any other set of men in the country, because of a dispute between them, refuse to obey the law? No! the answer is by the government, that if they can not agree others will be given the privilege and protection of performing this service who will agree with the government and obey the laws of government."

Unquestionably the court order has brought the strike situation to a crisis. From many sources come threats of a nation-wide strike of all organized labor as a protest against what labor leaders declare to be attempted coercion of the railroad strikers, as well as action denying to strikers certain of their fundamental rights. Leaders in the strike movement and in sympathetic labor organizations have at all times since the strike began, declared themselves opposed to violence of any kind, but have at all times stood upon the principle that the shop crafts unions were within their rights in striking. Following the issuance of the order the executive committee of the railway employees department of the American Federation of Labor issued a statement reading in part as follows:

"The officials of these organizations have done everything possible since the beginning of the strike to maintain a peaceful suspension of work," the statement said.

"Considering the difficulties of preserving perfect order in any group of 400,000 men engaged in a struggle for a decent livelihood, it must be admitted that the strike has been a remarkable demonstration of the lawabiding character of the workers involved.

"It is unfortunate that, in a suit for the announced purpose of preventing lawlessness, the attorney general's office has prepared and on hasty consideration has entered an order which, unless carefully interpreted, might be read as a flagrant violation of constitutional rights of American citizens, as repeatedly affirmed by the supreme court of the United States.

"Apparently either haste or failure to use the English language with precision has led to the drafting of an order which, read too literally, would deny the right of free speech by communication of any sort, or just lawful association, to men engaged in the peaceful legal conduct of their business."

President Gompers of the American Federation of Labor declared:

"This injunction is a most outrageous thing, a process of the manufacturer of radicalism and bolshevism in this country. I am sure the result of this injunction will only be so solidify the men (meaning the striking shopmen) and to strengthen the support of public opinion behind them. While the action amounts to a confession that the strike is to be successful, it is strange that all powers of the government should be brought to force before the surrender of rights by the men, when not one move has been made by the government to enforce decisions of the railroad labor board when 92 railroads in separate cases have violated its orders."

The executive council of the American Federation of Labor meets on September 9 and President Gompers said he would place before the council more than 200 communications from organized labor throughout the country, requesting the federation to sponsor a general strike in sympathy with the shopmen.

Up to this writing there has appeared no clear indication as to the lines to be followed by either side. General defiance of the injunction has been widely expressed in labor circles, while government authorities declare that every power of the government will be brought into play to maintain the orderly and efficient operation of the railroads.

The situation can hardly be termed a hopeful one, though some hope is still expressed that a settlement of the controversy may be reached without its being fought out to a point of collapse of one side or the other with the public distress that would inevitably follow a long drawn out paralysis of industry. While the hearing for a permanent order against the strikers does not occur until early next week, the present week is likely to see important developments in the matter.

The association of railway executives issued a statement last week that they now had employed in the railroad shops about 300,000 men, or only about 75,000 fewer than were employed before the strike was called. B. M. Jewell, head of the striking shopmen, declared that the strike was not only holding its own, but that the number of strikers was being increased every day. The court order issued in Chicago was based largely on the demand that men desiring to work in the shops be permitted to do so without interference and that railroad equipment be untampered with by strikers and their friends.

* * *

The soldiers' bonus bill was passed by the senate last week by a vote of 47 to 22. Considering the absent senators whose postiion on the bonus is known, it is stated that 35 senators are opposed to the bill, or a sufficient number to prevent its passage over the president's veto, should he veto it. Treasury officials expressed the opinion that the president would veto the bill on the ground that it did not make proper provision for raising the nearly $4,000,000,000 that will be required to pay the bonuses. The Smith-McNary reclamation bill was attached to the bonus bill as a rider, being incorporated as a land settlement provision. This is the measure creating a revolving fund of $350,000,000 for the reclamation of the arid and swamp land of the country. Should President Harding veto the bill it will kill the Smith-McNary bill as well for this session of congress.

SPOKANE, Sept. 2.—Wheat—Feed wheat, $40 per ton.

Oats—$40 per ton; steam rolled, $42.

Corn—$36 per ton; cracked corn, $38 ton.

Barley—$42; steam rolled, $44.

Bran and shorts—$32 per ton.

Alfalfa, $22 ton; timothy, $24 ton; mixed hay, $22 ton.

General Produce.

PORTLAND, Ore., Sept. 2.—Butter—Cubes, extras, 37@38c lb.; prints, parchment wrapped, box lots, 44c; cartons, 45c. Butterfat, 44c delivered station; buying price, A grade, 42c.

Eggs—Buying price: Current receipts, 26c per dozen; henneries, 29@30c per dozen. Jobbing prices: Case count, 27@28c; candled ranch, 32c; selects, 33@34c; association selects, 33c; association firsts, 31c; association pullets, 28c.

Cheese—Tillamook triplets, price to jobbers, f. o. b. Tillamook, 26c; Young Americas, 27c; longhorns, 27c pound.

Poultry—Hens, 13@22c lb.; springs, 21@23c; ducks, 15@22c; geese, nominal; turkeys, nominal.

SEATTLE, Sept. 2.—Eggs—Select local ranch, white shells, cases included, 30c per dozen; mixed colors, 29c per dozen; pullets, 18@20c per dozen. Cases returned to shipper 1c less.

Butterfat—F. o. b. Seattle: A grade, 45c per lb.; raw milk, $1.90 per cwt.

Poultry—Hens, 4½ lbs. and up, 22c per lb.; over 3½ lbs. and under 4½ lbs., 15c per lb.; 3 to 3½ lbs., 10c per lb.; 1922 broilers, 1 lb. and heavier, 20c per lb.; old roosters, 10c per lb.; geese, fat, live, 16c per lb.; do fancy dressed, 24c per lb.; ducks, 3 lbs. and heavier, live, 15c per lb.; turkeys, fat, dry picked, 12 to 15 lbs., 30c per lb.; do live, fat, 7 to 10 lbs., 25c per lb.; squabs, large, $3 per dozen; pigeons, $2; guineas, $9 per dozen.

SPOKANE, Sept. 2.—Poultry—Fat hens, 17c lb.; light hens, 24c lb.; roosters, 8c lb.; spring chickens, 18c lb.

Fresh ranch eggs—$6.50@8 case; no storage.

Butterfat—40c a pound.

Time-tried Drills

NO MATTER how cleverly a grain drill is designed, how beautifully it is finished, no matter what claims are made for it, the stand of grain that follows its use is a sure indication of its worth. A drill that has been marketed successfully year after year for generations *must have earned* a reputation for good work, lasting service and genuine value. It can be depended upon to sow evenly, accurately and at a uniform depth.

Hoosier, Empire Jr. and Kentucky

More than 50 years ago these names were introduced to grain farmers of the world. These were good drills then. Since that time the constant effort to improve them never has been relaxed. They stand today at the top of the list—light in draft and weight, convenient to use, and with a well-earned reputation for dependable, lasting service.

There is a style and size for every requirement—plain and fertilizer; wood or steel wheels; all standard types of furrow openers; for horse or tractor power.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

I used to have a teacher who was always
undering:
"Order is heaven's first law!"
We never knew what
meant by this com-
and, admonition or
rning—whatever it
as. Personally, I al-
ays thought it was
me kind of a threat
the impending wrath
outraged providence
It must be that the
portance of order is
mething particularly
served by teachers
cause the other day
teacher said to me:
"Have you ever writ-
n on the value of or-
Dr. Copeland.
rliness and system? Happiness depends
it."

Dr. Copeland.

I have been thinking about this conver-
tion. The more I think about it the more
believe the teacher is right.
A well-ordered life, systematic perform-
nce of duty, having your belongings in
rder, neatness of person and clothing, un-
iling devotion to duty—all these things
ave their effect on happiness and health.
Most of us live busy lives. Some of us
re overbusy attempting to do too much.
almost every such life a rearrangement
f the daily program will give abundance
f leisure. Indeed, it can not be said that
earrangement is needed, because this word
nplies there has been some sort of "ar-
ngement," when, as a matter of fact,
here has been no arrangement at all.
It is perfectly amazing what an amount
f completed work can be turned out by
ne who systematizes his undertakings. An
efficiency expert"—and I am not over-
keen about "efficiency experts"—would revolutionize the activities of many a man.
It makes me sad to see great men of affairs wearing themselves out needlessly. The world needs these men. But they are doomed to short careers unless they care for their bodies. Unless they can systematize their efforts, and get time for recreation in this way, they must do less work.
My old teacher is right—"Order is heaven's first law!"

Bits of Fun for Everyone

His Annual Bath.

Once a year the newsboys of London are given an outing some place on the Thames river, where they can swim to their heart's content. As one little boy was getting into the water his little friend said:
"Johnnie, you're pretty dirty!"
"Yes," replied Johnny, "I missed the train last year."—Exchange.

How Did He Know?

"How do you like your new car?" asked the small car driver.
"Great," replied the big six driver. "It runs so smoothly you can't feel it. Not a bit of noise, you can't hear it. Perfect ignition, you can't smell a thing. And speed—why it whizzes! You can't see it."
"Must be some car," ventured the S. C. D. "Can't feel it, can't smell it, can't hear it, can't see it! How do you know it is there?"

Starting Young.

A small boy who as sitting next to a very haughty old lady in a crowded train kept sniffling in a most annoying manner. At last the lady could bear it no longer and turned to the boy:
"Boy, have you got a handkerchief?" she demanded.
The small boy looked at her for a few seconds and then, in a dignified tone, came the answer:
"Yes, I have, but I don't lend it to strangers."—Los Angeles Times.

When the Storm Broke.

First gentleman—Did you get home last night before the storm?
Second gentleman—That was when it started.

Had Committed Something.

She—I'm afraid, Don, that I will never see you in heaven.
He—Great guns! What have you been doing now?—Sour Owl.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

Goldie Mae Green, who lives in Lincoln county, Washington, says she has a pony named Foxy, two cats and a dog named Shep. Goldie is 11 years old and her birthday is February 15.

Four little baby pigs are some of the pets belonging to Ruby Terrell, a central Washington girl. Ruby lives on a ranch and her father has 80 hogs. Besides the pigs, Ruby has other pets—two cats, a dog, a canary and two hens.

Frances Fishback, who lives in Lewis county, Washington, has a good line of jokes. "I hear George was operated on," said a friend. "What did he have?" "Money."

This is what Johnnie Swinger says in his letter: "I have moved down to the river. We are working for a lady this summer. The river surely came up this spring." Johnnie lives in Okanogan county, Washington.

Birthday Greetings

THURSDAY, September 7—Jennie Jensen, 11 years old.

FRIDAY, September 8—Delia Andersen, 11 years old; Muriel Hanson, 11; Mildred Medley, 10; Alice Smith, 11.

SATURDAY, September 9—Arlene Nehr, 11 years old; Goldie Richardson, 11; Francis Schreck, 11; Henry Wertemberger, 11.

SUNDAY, September 10—Thelma Ensley, 11 years old; Genevieve Isom, 11; Aune Joutsen; Harry Long, 11; Thelma Amon, 10; Dolly Gifford, 10.

MONDAY, September 11—Ferne Daugherty, 11 years old; Donna Farmer, 10; Viino Hanki, 9; Christina Otterson, 10; Marcus Ruth, 11.

TUESDAY, September 12—Gladys Irene Stone, 11 years old; Gladys Tuttle, 11.

WEDNESDAY, September 13—Olga Foster, 11 years old; Gerald Stover, 8.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Emrose Corbin, Annie Mae Wyatt, Ivan Schafer, John Thaden, Esther Viola Miller, Annie Thompson, Marie Albin, Margrit Norberg, Bessie Oswalt, Oren Cramar, Amy Dicken, Donald DeHart, Thelma Ashworth, Wilba McInturff, Lucille Harcing, Berniece Bahrs, Leda Harrell, LeRoy Miller, Joseph Halstead, Orson Ellithorpe, Joe Byrns Bishop, Ida Richardson, Pauline Brandt, Luella Jones, Edna Amend, Jeanette Olsen.

BEDTIME STORIES

By THORNTON W. BURGESS.

WHAT HAPPENED TO UNC' BILLY.

Reddy Fox had called Unc' Billy Possum a coward. Now that is a very dreadful thing to call any one, for no one likes a coward. But Unc' Billy Possum had just grinned and then he had dropped down from the trees beside Reddy Fox and had invited Reddy to wait for Bowser the Hound, who was coming down the hill. Reddy didn't know what to do. There was Bowser in plain sight, and Reddy was afraid, very much afraid. But if he should run before Unc' Billy Possum did he would prove that he was the coward. And, of course, all the little people of the Green Forest and the Green Meadows would know all about it, for Peter Rabbit and Jimmy Skunk had heard Unc' Billy, and at that very minute were watching from safe hiding places.

"Bow, wow, wow!" roared Bowser the Hound in his deepest voice.

Reddy shivered and began to back away. and I simply can not stay any longer. Unc' Billy just grinned. "What makes yo' all's so uneasy?" he asked.

"Bow, wow, wow!" roared Bowser again and began to run straight toward them, with his mouth wide open.

Reddy could stand it no longer. "I—I—I really would like to stay with you, Mr. Possum, but Granny Fox is waiting for me, Granny wouldn't like it." Reddy shouted the last words over his shoulder as he started for the Green Meadows at the top of his speed.

"Now who's a coward?" shouted Peter Rabbit and Jimmy Skunk together. Reddy Fox gritted his teeth, but he kept right on running. He didn't even turn to see what became of Unc' Possum.

Now when Reddy started to run Unc' Billy might have climbed a tree, but he didn't. What do you think he did? Why, he just fell over in a heap right in front of Bowser the Hound! Jimmy Skunk almost stopped breathing when he saw him fall and Peter Rabbit clapped both hands over his eyes as Bowser the Hound stopped right by Unc' Billy Possum. He didn't want to see what was going to happen to Unc' Billy.

Bowser the Hound stopped and sniffed at Unc' Billy.

"What's this? What's this?" said Bowser, for he had never seen Unc' Billy Possum before.

Unc' Billy lay there just as if he were dead. Yes, sir, there didn't seem to be any life in Unc' Billy at all. He lay there with his eyes closed and just as limp as a rag. Bowser rolled him over and pulled him this way and pushed him that way, but still Unc' Billy didn't move.

"Huh! Must have frightened him to death," said Bowser. "I'll go on and teach

Unc' Billy Possum lay there just as if he were dead.

Reddy Fox a lesson, and then I'll come back and take this fellow back home to show my master."

So with one more sniff Bowser the Hound started on after Reddy Fox. Peter Rabbit and Jummy Skunk came out of their hiding places and stood looking down at Unc' Billy.

"Don't drop salt water all over my nice clothes," said a voice as Peter wiped his eyes.

Peter was so startled that he almost knocked Jimmy Skunk over. There lay Unc' Billy grinning at him and slowly winking one eye.

"Did yo' see me fool him?" asked Unc' Billy as he scrambled to his feet. And to this day Bowser the Hound wonders what became of Unc' Billy Possum.

Southwest Washington Fair Wins

(Continued from page twenty.)

and Major. Two-year-old—1 and 2, Cogswell on Jerry Prince Rose. Yearling—1, 3 and 4, Cogswell on Romeo, Roscoe and Fancier; 2, Porter on Treston 6th. Senior calf—1 and 2, Porter on Salem (junior champion) and Hanon. Junior calf—1, Porter on Treston 7th; 2 and 3, Cogswell on George Washington and Sir Lewis.

Females, cow 4 years or over—1, Porter on Pansy (senior and grand champion); 2, 3 and 4, Cogswell on Rose May, Prim Rose and Hattie. Three-year-old—1, Porter on Violet; 2, Cogswell on Sweet Rose. Two-year-old—1 and 2, Porter on Rhoda and Pansy 7th; 3 and 4, Cogswell on Hortense and Orting Peach. Senior yearling—1, Porter on Peonia 3d; 2, Cogswell on Orting Phyllis. Junior yearling—1 and 2, Porter on Jennie and Novice; 3, Cogswell on unnamed. Senior calf—1, Porter on Pascola (junior champion); 2 and 3, Cogswell on Lady Verna and unnamed. Junior calf—1, Porter on Friette; 2 and 3, Cogswell on Narcissa and Moss Rose.

Aged herd—1, Porter; 2 and 3, Cogswell. Young herd—1, Porter; 2 and 3, Cogswell. Calf herd—1, Porter; 2, Cogswell. Get of sire—1 and 2, Porter; 3, Cogswell. Produce of dam—1 and 2, Porter; 3, Cogswell.

HORSES.

Percherons were the only breed shown. J. D. McGuire, Tenino, won first, and the Hannaford Percheron Horse company of Bucoda second on stallions, and L. P. Schumacher, Chehalis, first on mare.

THE SHEEP SHOW.

While this fair has had carloads of sheep in previous years, never before did half as many of the woolly coats invade the grounds. To take care of them taxed the capacity of the pens and the ingenuity of the management. Every sheep was cared for, but if they continue to come in such numbers a sheep barn or greatly enlarged and improved pens are necessary. Rambouillets, Shropshires, Hampshires, Orford Downs, Southdowns, Cotswolds, Lincolns and Romeys were all well represented. Most of them were well fitted and worthy specimens.

Rambouillets.

Yearling ram—1, Ed Schoel, Albany, Ore.; 2, S. E. Stewart, Aldergrove, B. C.

Ram lamb—1 and 2, Schoel; 3, Stewart.

Ewe, 2 years or over—1 and 3, Schoel; 2, Stewart. Yearling ewe—1 and 2, Schoel; 3, Stewart. Ewe lamb—1, Schoel; 2 and 3, Stewart.

Flock—1, Schoel; 2, Stewart. Flock bred by exhibitor—1, Schoel.

Pen of lambs—1, Schoel; 2, Stewart.

Champion ram and champion ewe—Schoel.

Shropshires.

Ram 2 years or over—1, F. T. Fox, Silverton, Ore.; 2, S. E. Stewart, Aldergrove, B. C.; 3, Felzer Bros., Tangent, Ore. Yearling ram—1 and 2, Felzer Bros.; 3, Stewart. Ram lamb—1, Felzer Bros.; 2, Fox; 3, Stewart.

Ewe 2 years or over—1 and 3, Fox; 2, Stewart. Yearling ewe—1, Felzer Bros.; 2, Stewart; 3, Fox. Ewe lamb—1 and 3, Fox; 2, Stewart.

Flock—1, Fox; 2, Stewart; 3, Felzer Bros. Flock bred by exhibitor—1, Felger Bros.; 2, Fox. Pen of lambs—1, and 2, Fox; 3, Felger Bros.

Champion ram and champion ewe—Fox.

Cotswolds.

William Riddell & Sons, Monmouth, Ore., the only exhibitors, filled all classes and received first in every class; second in all except 2-year-old and yearling ram and pen of lambs, and champion ram and ewe.

Lincolns.

Ram 2 years or over—1 and 2, Wm. Riddell, Monmouth, Ore.; 3, E. E. Stewart, Aldergrove, B. C. Yearling ram—1 and 3, Wm. Riddell; 2, Stewart. Ram lamb—1, Wm. Riddell Jr., Monmouth, Ore.; 2, Stewart; 3, Wm. Riddell.

Ewe 2 years or over—1 and 3, Wm. Riddell; 2, Stewart. Yearling ewe—1 and 3, Wm. Riddell; 2, Stewart. Ewe lamb—1 and 3, Wm. Riddell; 2, Stewart.

Flock—1 and 3, Wm. Riddell; 2, Stewart. Flock bred by exhibitor—1 and 3, Wm. Riddell; 2, Stewart. Pen of lambs—1, Wm. Riddell; 2, Stewart; 3, Wm. Riddell Jr.

Champion ram and champion ewe—Wm. Riddell.

Southdowns.

Ram 2 years or over—1 and 3, J. G. S. Hubbard Sons, Monroe, Ore.; 2, S. E. Stewart, Aldergrove, B. C. Yearling ram—1 and 3, Stewart; 2, Hubbard. Ram lamb—1 and 2, Stewart; 3, Hubbard.

Ewe 2 years or over—1 and 3, Stewart; 2, Hubbard. Yearling ewe—1 and 2, Hubbard; 3, Stewart. Ewe lamb—1 and 2, Hubbard; 3, Stewart.

Flock—1 and 3, Hubbard; 2, Stewart. Flock bred by exhibitor—1 and 2, Hubbard. Pen of lambs—1, Stewart; 2, Hubbard.

Champion ram—Hubbard. Champion ewe—Stewart.

Dorset Horns.

F. T. Fox, Silverton, Ore., the only exhibitor, filled all classes and received first in every class; second in every class except flock and pen of lambs; third in every class except yearling ram, flock and pen, and champion ram and ewe.

Hampshires.

J. G. S. Hubbard & Sons, Monroe, Ore., the only exhibitors, filled all classes and received first and second in every class and third in every class except pen of lambs; also champion ram and ewe.

Oxford Downs.

F. T. Fox, Silverton, Ore., the only exhibitor, filled all classes and received first in eve class; second in every class except flock and p of lambs; third in every class except yearli ram, flock and pn, and champion ram and ew

Romneys.

Ram 2 years or over—1 and 3, F. T. F Silverton, Ore.; 2, H. S. Currie, Steveston, B Yearling ram—1, Currie; 2 and 3, Fox. R lamb—1, Currie; 2 and 3, Fox.

Ewe 2 years or over—1, Currie; 2 and Fox. Yearling ewe—1 and 2, Fox; 3, Curr Ewe lamb—1 and 2, Fox; 3, Currie.

Flock—1 and 3, Fox; 2, Currie. Flock br by exhibitor—1 and 3, Fox; 2, Currie. Pen lambs—1, Fox; 2, Currie.

Champion ram and champion ewe—Fox.

THE HOG SHOW.

With the great show herd of Chest Whites of Ed Schoel of Albany, Ore., add to the local exhibit, the hog show was o of the real attractions of the fair. Wh the white hogs were much the most num ous and averaged a little higher in th fitting, there were good exhibits of Pola Chinas and one good little lot of Ber shires.

Chester Whites.

Boars, 1 year or over—1, O. O. Phelps, Drya 2 and 3, Ed Schoel, Albany, Ore.. Senior pig 1, Schoel; 2 and 3, J. H. West, Centralia. Jun pig—1, Schoel; 2 and 3, West.

Females, sow 1 year or over—1 and Schoel; 3, West. Senior pig—1, Schoel; West; 3, Phelps. Junior pig—1 and 2, Scho 3, West.

Champion boar—Phelps. Champion sow Schoel.

Poland Chinas.

Boars, 1 year or over—1 and 3, Foulger Bryant, Centralia; 2, J. F. Torgeson, Suv Ore. Senior pig—1 and 2, Foulger & Bryant; C. R. Foster, Chehalis. Junior pig—1, Fost 2, Foulger & Bryant.

Females, sow 1 year or over—1 and 2, Fo ger & Bryant. Senior pig—1 and 2, Foul & Bryant. Junior pig—1 and 2, Foulger Bryant; 3, Foster.

Champion boar and champion sow—Foul & Bryant.

Berkshires.

J. C. Lammers, Centralia, exhibited a sen sow pig and junior sow and boar pigs and w awarded all prizes in the classes in which exhibited.

LITTLE BY LITTLE.

Minutes make hours; pennies make d lars.

Maybe that hill is not there, after all—

VERY often the hill we seem to be climbing is made out of the common mistakes of diet which starve tissues and nerves and slow down energies.

How smooth and level the path seemed to be when we were younger.

Simple, natural food may level that hill to a smooth path again.

Why not try it?

Begin today with a dish of Grape-Nuts with cream or milk—and fresh or preserved fruit added if you like.

Keep on with this crisp, delicious, strengthening food in place of heavy, ill-assorted, starchy breakfasts and lunches—and see if the old-time zest and speed on the old-time level path doesn't come back again.

Grape-Nuts —THE BODY BUILDER

"There's a Reason"

News for Breeders

SHORTHORNS LEAD IN TEST.

Shorthorn men, who have always claimed that their breed was not only profitable as beef cattle, but profitable at the milk pail as well, are enthusiastic over figures from cow testing associations of Wisconsin, the premier dairy state of the country. In one particular testing association Shorthorn cows ranked first and second, respectively, in a recent test. One Shorthorn herd was the high herd of the entire association. The winning cow was a grade animal and in nine months had produced 431 pounds of butterfat. In her eighth month she produced 60 pounds. The second high cow is also a grade Shorthorn. Several of these cows have produced over 400 pounds of fat in 10 months, and several have made over 50 pounds of fat in single months.

RESULTS FROM PUREBRED BULL.

"Almost any kind of a dairyman can raise a fair herd from a registered bull, but no farmer today can afford to take chances with a grade bull," remarked C. S. Houpt of Castle Rock to a representative of THE FARMER. There are 18 head of grade cows and calves in the Houpt herd and the purebred herd bull is sired by Rinda Lad of S. B. and is from a cow with a record of 901 pounds of fat. One of the mature cows in this herd produced 44 pounds of fat for one month, while her daughter, with her second calf, produced 45 pounds. Other instances of this kind demonstrate the increased production which can be had by the use of a registered bull, and Mr. Houpt is well pleased with the first cross from this bull.

GO INTO SHORTHORN BUSINESS.

John Napier and Thomas Wills, better known among their friends in the live stock industry as Jack and Tom, respectively, have graduated from the class of herdsmen and have become breeders of Shorthorn cattle. For years Mr. Napier has been superintendent of the Hercules Shorthorn farm of F. M. Rothrock at Sprague, while Mr. Wills is equally well known as a Shorthorn herdsman, having been for several years with Duncan Dunn at Wapato. Together they have taken possession of a 3000-acre ranch north of Sprague and have stocked it with about 30 head of purebreds. Of this number, 12 are heifers from the herd of Albert Owes of Amber, all daughters of Superb Boy and bred to Hercules Imperial. The herd includes also 15 females from the ranch of Richard Newman, also of Amber.

A GOOD JERSEY HERD.

There are 18 cows, six of which are purebred Jerseys, on the E. W. Trezise farm at Tolt, King county. Emma Foxy Fern, a 7-year-old animal sired by Emminent Oxford's Majesty, has a record of 700 pounds. She took second in her class at the state fair last year. Another made 299.8 pounds of fat in nine and three-quarters months as a senior yearling. This is estimated to be equivalent to 500 pounds of fat as a mature cow. The herd bull, Foxy Fern's Olympia Lad, a 2-year-old, is a half brother to the other herd sire, that is out of Emma's Foxy Fern. All of the cows in the Trezise herd have been selected, and there are none that will not make 400 pounds of fat on a mature cow basis, milking two times a day.

AYRSHIRES ON ANNUAL TOUR.

Twenty head of the Ayrshire herd belonging to E. W. VanTassel of Wenatchee are now making their annual tour of the fairs of the Pacific northwest. The first two stops were the Skagit county fair and the British Columbia exposition at Vancouver. Others that are being made are the Spokane Interstate, the Montana state, the Washington state, Oregon state, the Western Royal and the Pacific International. Already a large number of prize ribbons have been won by this show herd, which is the most widely known herd of this breed in this territory.

WOULD BE A HERDSMAN.

After a successful season last year as a fitter and shower of Shorthorns for a lad of so few years, Ernest Cranke, son of Harry C. Cranke of Moscow, Idaho, is this year going onto the fair and show circuit as a Hereford herdsman. At the age of 13 years he last year fitted and showed four Shorthorns belonging to Cranke & Son. He is now a member of the A. B. Cook staff at Townsend, Mont., studying the art of fitting and showing under the leadership of James Campbell, one of the well-known herdsmen of the northwest.

WAIKIKI WINS IN CANADA.

Waikiki farm, Spokane, which sent its show herd of 28 Jersey cattle to Vancouver, B. C., to compete in the 1922 show there, duplicated its winnings of last year, capturing not only a large share of the top prizes, but the trophy cup for best Jersey herd. The herd won 16 firsts, 11 seconds and 5 thirds. It will return to Spokane in time for the Spokane Interstate, and from these will make the usual Pacific northwest fair circuit.

Warranted to Give Satisfaction.

Gombault's Caustic Balsam

Has Imitators But No Competitors

15 Head — GUERNSEY SALE — 15 HEAD

3 Cows, 5 Bred Yearling Heifers, 1 Yearling Bull, 1 Two-Year-Old Heifer, 4 Heifer Calves and 1 Bull Calf

Offering the yearling bull sired by Jolly Fermain, who two years ago was grand champion at Pacific International; also 2-year-old heifer sired by Alma's Glen of Mound City and a half-sister to Janis of Sequoia, who last year produced 846 pounds of butterfat.

Sale to be held Thursday, September 14, at 10 o'clock, Tillamook county fairgrounds, Tillamook, Oregon.

JUDGE HOMER MASON, Consignee. COL. HUGHES, Auctioneer.

HOLSTEINS AT AUCTION
Forest Grove, Oregon
Friday, September 15, 1922

20 head cows, herd bulls, bred heifers and young stock, both sexes, entire herd of registered Holsteins owned by W. Martin, including show winners, A. R. O. cows and show prospects, a very attractive lot. Some of the cows are fresh, others in various stages of lactation. They are large, have straight top lines, well balanced udders, nicely marked, and of popular breeding. The senior herd bull is Hollywood King Pontiac, a grandson of King of the Pontiac and Sir Johanna Ruth Fayne. The junior herd sire is Aaggie Colantha Gerben, winner in the show ring at Oregon state fair and Pacific international.

Sale will be held on the Martin and Forbes farm near Forest Grove, starting immediately after lunch at noon on the farm.

Terms of sale: Credit can be arranged with owner by responsible parties. If you want credit, arrange for same before bidding.

The catalog gives details and can be had upon request to owner or sale manager.

W. MARTIN, Owner, Forest Grove, Ore.
E. A. RHOTEN, Sale Manager, Salem, Ore.
COL. J. W. HUGHES, Auctioneer, Forest Grove, Ore.

Foundation Holstein Herd
at Extremely Low Price

Six cows, or four if preferred, and the great bull, Hollywood Lilith Phoebe Veeman, that has two world record sisters and great backing. He is four years old, gentle, easy to handle and a proven sire of show quality.

Thos. Carmichael
Gaston, Ore.

Young Holstein Bulls
Bessie and other best blood lines. Priced for quick sale.
JOHN BOGART, Woodland, Wash.

Holstein Bulls at Farmer Prices
Sired by son of former world's champion and out of cows that make good at the pail.
S. D. CORNELL, Grandview, Wash.

Ruby Dell Guernsey Farm

Our herd has been in the winning whereever shown.

Senior herd sire, Francis May King (A. R.) he by Langwater Hambro (A. R.)

Junior herd sire, Rex of Willow Brook, he by Langwater Sunderland (A. R.)

Our herd matrons are cows with A. R. records from such noted sires as Langwater Hambro, Langwater Emigrant and first 5 daughters of Francis May King, to freshen with average records of 480.14 butterfat, at average age of two years and ten months; most of them double letter class.

Some splendid bull calves for sale of above breeding.

H. E. ANGEL, Mabton, Wash.

Rose City Guernseys
Bull calf, old enough for light service, sired by Langwater Khedive 51925, whose 12 nearest dams average over 700 lbs. fat; a son of Langwater Steadfast, that sold for $25,000 and is the outstanding bull of the breed. Calf's dam, Oregon Queen, 67837, has record of 544.56 lbs. fat, class CC. A few other well bred young bulls.
W. A. GOODIN, Cornelius, Ore.

Orchard Hill Farm Guernseys
"Home of high class Guernseys."
DR. PARK WEED WILLIS, Owner.
REDMOND, Wash.

GUERNSEY BULL CALF
31 tested dams average over 600 lbs. fat. Dam now on test. $150, express prepaid to your express office.
FOSHAY FARM.
O. & M. L. VOGET, Hubbard, Ore.

Brown Swiss Stock Farm
Breeders of Brown Swiss cattle, the farmers' dairy cow. Young stock for sale.
THEO BRUGGER, Route 3, Gresham, Ore.

Reg. Shorthorn Cattle For Sale
Herd headed by Mina's Lord 89413, by Royal Edward 324529. This bull is a three-year-old, and stood first at the Boise state fair, 1921. Also have some young cows bred to this bull for sale. Write for terms.
W. E. MILLS, Wilder, Idaho.

MILKING SHORTHORNS.
A few cows, also young bulls by the great sire, Peerless Knight by Beau of Glenside, carrying 93¾ per cent blood of the champion milch cow, Rose of Glenside.
J. E. DANILLS, Murphy, Ore.

Jersey--Gold and Silver Medal Sire
Ashnook Farm offers a few heifers and young bulls, sired by the gold and silver medal sire, Silver Chimes, of S. B., sire of ex-world champion heifer, Silver Chimes Gwendola, and 20 register of merit daughters, and more qualifying.
DEL PERKINS, Carlton, Ore.

Jersey Bulls at Bargain Prices
Send today for our special sale list of registered Jersey bulls from R. of M. dams. Easy terms, liberal credit.
WARREN GRAY, Box T, Jefferson, Ore.

Silver Medal Jerseys
Young bulls out of heifers qualifying for silver medals with first calf, and will make their sire a silver medal bull.
JOHN KOPLIN, Gaston, Ore.

Foundation Ayrshire Herd
To start a herd, I will sell together 3 heifer calves and bull, all 6 months old; high class; excellent breeding.
J. U. SMITH, Rt. 1, Newberg, Ore.

HAMPSHIRES
Heart o' the Valley Ranch
NOW OFFERING
BRED FALL GILTS FOR SEPTEMBER AND OCTOBER FARROW.
Sired by Model Defender, grand champion boar Pacific coast, 1921.
CHEROKEE LAD AND GEN. TIPTON BREEDING.
HAYS & HARTER
Grants Pass, Ore.

Indian City Berkshires
Big type, superior quality.
DR. W. J. KEYES, 202 Fernwell Bldg., SPOKANE, WASH.
B. F. WATSON, Herdsman, Rockford, Wash.

River Banks Berkshires
Long, smooth, deep, grand champion kind. Strong in the blood of most popular families of nation.
RIVER BANKS FARMS, Grants Pass, Ore.
CLYDE E. NILES, MGR.

Pay for Berkshires in Pork
Improve your stock. You get the breeding hog now; pay when you get the pork. Write for plan.
F. M. CURTISS, Fruitland, Wash.

Pedigreed Poland China
pigs, large type; 100 to 140 pounds. Get fall breeders now, either sex, $20, and $25, f. o. b. Tonasket, Wash.
H. M. HALL, Tonasket, Wash.

BIG TYPE POLAND CHINAS.
Weaned pigs sired by state fair winner. Also young boars at express prepaid prices. My pigs make good from California to Alaska.
H. J. STILLINGS, Hermiston, Ore.

Hampshire Flock for Sale
About 20 registered ewes and ten lambs of excellent Hampshire blood lines, for sale at bargain prices, together or singly.
B. C. Altman, Gresham, Ore.

90 EGGS AND THE HEN IS JUST PAYING HER "KEEP"

120 EGGS AND THE HEN IS JUST PAYING A PROFIT—

but why stop with

30 EGGS

AUTHORITIES estimate it takes 90 eggs a year to cover the "keep" of a commercial hen—and 120 eggs to make just a profit. But—there's the rub! How are you going to get the extra eggs—the eggs that make the big bank-book difference between just a *profit* and a *just* profit?

The average hen under natural range conditions will produce only about 75 eggs a year. Yet *proper feeding and care* have developed commercial flocks that average 120 to 150 eggs a year per hen. Some flocks will range even higher.

It's all a matter of feed and care. The feed must be clean, tasty, varied. The elements of an egg are derived from many sources. Therefore, the greater the variety of feed ingredients the better. SURELAY contains a dozen tested ingredients balanced and blended according to the famous Sperry formula. It is made so good, so uniform, so tasty, that every time Mrs. Hen takes a peck at it she is eating something that goes into the making of an egg.

You know that Nature provides each hen with a certain number of embryonic ova. These are minute yolks which, under ordinary conditions, will take the hen a number of years to produce. But that isn't very profitable. So it is your job as a poultryman to secure the most eggs in the least time—and keep the hen in *good health* all the while.

SURELAY will give every hen in your flock an opportunity to pay not only her board bill but pay *you* a profit. This prime quality feed calls the "egg-making department" to order—makes it produce—and keeps the hen in "fine fettle" all the time.

Ask your dealer for Sperry SURELAY in the yellow-striped bag; and send for "Makes Hens Happy"—a practical guide to more eggs and more money. Simply clip the coupon and mail today.

Prospects for Reclamation Are Promising—Page 6

Best Crops

Adapted to Western Washington

Those who did not have an opportunity to visit the western Washington experiment station at Puyallup during the Farmers week will be interested in the following crops that were shown as being the best adapted to that part of the state.

A five-acre pasture has been maintained for nine years and will be kept in pasture continually without being plowed up. Each year the field is gone over with a spike-tooth harrow and a small amount of clover and grass seed scattered. The new grass seed keeps the weeds from growing and the harrowing puts the top soal in fine condition.

A number of trails of vetch and oats, which were sown in the spring brought out the fact that 50 pounds of vetch and 90 pounds of oats was the best mixture if to be used as a hay crop. It comes in later than a fall sown crop, yet the later is considered the best for a crop of green feed. The common vetch and the Sparrowbill oats were used in this trial.

A mixture of Rosen rye and common vetch sown in the fall, produced the highest silage yield to the acre, 11 tons, while Brown Squarehead and vetch came next with 10 tons. Hanchen barley is preferred because of its high yield and brittle beards, which break off when threshed. It often tests 52 pounds to the bushel. Mainstaff oats showed good results for forage while Sparrowbill is considered better for a grain crop.

The cereal nursery showed how new vaieties were tried out in small one-rod rows. Each variety that made a good showing is planted again the following year while the poor ones are discarded. Over 70 varieties of grasses and clovers are grown in rows to let any visitor see what some of the more uncommon crops will do in this climate. Tall oat grass made a very good showing and Mr. McCollam made the statement that it was not grown enough in western Washington. It makes an enormous hay crop, comes early, stays late and will improve both the hay and pasture meadows.

The fertilizer trial plots brought out the fact that cow manure and superphosphate made the most profitable yields, while the complete fertilizer produced slightly better crops, but at a greater cost. The plots were on upland soil and were planted to clover and grass, oats and field peas.

On the bottom soils cow manure was also found very beneficial because it furnished bacterial stimulation to the dead muck deposits. On the sandy loams the cabbage crops were increased by hen manure, the potatoes by sheep manure and the potato crops by superphosphate. Potash was not found to be needed on the sandy bottom soils. The addition of stable manure on the muck lands has been found to furnish a stimulating effect, which is thought to be due to the addition of bacteria which helps decompose the humus matter. Much soil is known to be a dead soil and that accounts for its ready response to bacteria.

Want Good Laws

N. H. Massie, secretary of the Yakima county farm bureau, is chairman of a committee for farm bureau officials to formulate a program of legislation desired by the organization for presentation to the next legislature. The committee proposes to raise a fund of $5000 to finance the fight for needed laws. The movement was launched at the recent Pierce county farm bureau picnic, which was attended by representatives of Pierce, Skagit, Whatcom, Mason and Yakima counties.

"Our plan is," said Mr. Massie, "to call on all farm bureau organizations in the state to work out, in their board meetings, some of the things that they think should be presented to the next legislature. Each county unit will present its recommendation to our committee, which will meet in Yakima September 19. A program of desired legislation will go out of this committee to the state farm bureau legislative committee and be acted upon early in November."

Taxation reform, legislation to allow municipalities with electric power developments to sell power to farmers along their transmission lines and a means of getting cheap power to settlers were among the measures discussed at the meeting. G. A. Mansfield, president of the Oregon state farm bureau, made an address at the meeting, in which he pointed out that the farmer must spend some money to get what he wants in the way of legislation.

Talks by R. M. Turner of the state college extension service and E. L. French, state director of agriculture, were also on the program.

The afternoon program consisted of short talks by political candidates. The whole program had to be carried on under cover, but the "million dollar" rain on that day did not dampen the spirit of the farm bureau.

In the evening, however, business men came out for the chicken dinner, which was served by the ladies of the farm bureau. The chickens were supplied by the Washington Egg and Poultry association, while the butter and cream were given by the Pierce County Dairymen's association. In spite of the rain, a large crowd heard the speakers.

Cement Monuments

By L. J. SMITH,

Head Department of Agricultural Engineering, Washington State College.

I would like to know the proportions used in making cement monuments, also what they put in to make them dark. Where, also, could I get the letters to put in the forms? Would also like to know if brick can be made successfully at home on a small scale.—H. C., Goldendale, Wash.

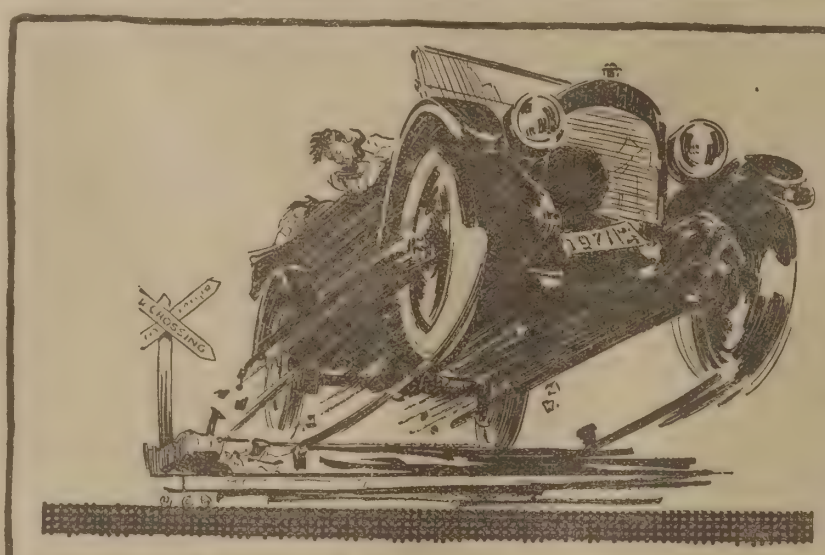
I presume you are referring to concrete monuments to mark corners on land, in which case a mixture of one part of cement to two and a half parts of sand and five parts of gravel would make a good strong mixture which would stand indefinitely.

If you are referring to monuments for gravestones, that is another matter. In that case I would make the mixture much finer, using one part of cement to three parts of sand and not using any gravel at all. If you wish to make them dark you can mix in with the cement dry before you add water any proportion of drying powders such as are used for painting, such as red ochre or burnt umber or lamp black or any of the dry powders that are used for those purposes. I would first try out a certain amount so that you can figure out just what you would want to use to get the most attractive results.

In regard to letters to put in the forms for monuments, you can procure any size and variety from any of the foundry equipment companies.

Bricks are made of concrete, but I would not advise any one making small concrete bricks of the ordinary size for house construction. It is far cheaper in every way to use the standard 8x8x16 concrete block. The face of this block can be made if one desires it so that it will have the appearance of making the wall of blocks smaller than 8x8x16.

Ships Berries East



Three cars of Cuthbert raspberries were shipped to the Atlantic coast from the Washington Berry Growers' association of Sumner. F. H. Krugg, sales manager of the organization, reports that the berries were well ripened when loaded in the cars, but that all three cars arrived in splendid condition. The shipments were made to Pittsburgh, Boston and New York and the association received a government report on the New York and Boston cars which showed that there was only an occasional trace of mold in some of the top layers of fruit.

"The fact that we can ship our fruits to these points and have them arrive in good condition shows that we have found a solution to the shipping problem and that our pre-cooling system is a decided success," said Mr. Krugg. In past years we have had to confine our shipments to such points as Montana, the Dakotas and other states within the same radius.

"All fruit shipped was in a riper condition than any of the fruit that was shipped last year and we are rather optimistic as to the results of such long distance shipments. We feel certain that with better market prices in the eastern states we can make a good profit from our fresh fruit and use only the surplus berries for canning.

GRANGERS AT STATE FAIR.

There will be a special booth at the Washington state fair at Yakima this fall operated in the interests of the grange. The committee in charge of the booth consists of I. L. Hoops, Andrew Slavin, L. J. Lebert, H. O. Aikin and E. T. Barnett. Those in charge will disseminate information concerning the valley and the booth will be a rest room for grange members and their families.

The Designer Expected This!

No one knows better than the car designer how destructive are the forces of *shock, vibration, heat, cold, moisture, dust, oil, sudden starts* and *jarring, crashing stops.* No one realizes more keenly the superlative importance of correct design as well as quality in all parts of a motor car.

So, when 200 builders of cars and trucks choose Willard Threaded Rubber Batteries as standard, original equipment, it means an overwhelming endorsement of Willard design as well as Willard quality.

Ever since you began driving a car you've been piling up in your mind evidence of Willard quality, Willard stamina, Willard ability to keep you out of battery trouble! You *know* that a Willard, with Threaded Rubber Insulation, will cost you less "in the long run"—and mighty little, if any more, at the start!

Now the point is: Have you nailed down your determination with spikes of steel? Do you *know* that, when the time comes, you're going to buy a Willard Battery on your own judgment—and not be led aside by somebody who isn't going to have to *live* with the battery as *you* will? In other words, CAN YOU MAKE YOUR DECISION STICK? *That's* the question.

THE WASHINGTON FARMER

SUCCESSOR TO

Vol. 47. No. 11 THE RANCH PACIFIC DAIRYMAN HORN AND HOOF September 14, 1922

For Good Farming, Attractive Country Homes and Happy Country People

Interstate Fair Is Interstate for Sure

Three States and Canada Compete in One of Association's Best Events

If the early fairs of the Pacific northwest circuit, including the Spokane Interstate fair, had been held during the month of July, they would have been worth millions of dollars to the farmers of this territory, for if there is any sure way to break a long dry spell it is to put on a fair. The first one in the northwest this year, an Oregon event, brought the first rain since spring; the Southwest Washington fair in August brought another good downpour; the Interstate fair last week showed a net result of a couple of days' good precipitation.

In spite of the rain of the second and third days of the fair at Spokane, the event was one of the best in the association's history and had an attendance well above that of a good many years, especially last year, reaching more than 100,000. Those who were scared out by the rain early in the week or who absented themselves for other reasons missed an excellent fair. Those who came looking for 10-cent kewpie dolls that they could secure for $2 or $3 no doubt were disappointed, for no classes were included in this year's catalogue for the kewpie. There was, however, a good entertainment program, including races, auto polo, Boy Scout drilling, features of many kinds and numerous side shows.

Entertainment features are, however, only the tail of the fair kite. They are essential, but a good kite would not get very far from friend earth without body and wings to catch the wind. The Spokane Interstate fair had a first-class set of wings in one of the best agricultural exhibits in recent years and a live stock show second to none in the last decade, if ever.

Both President T. S. Griffith and Manager W. G. Hannam express gratification over the success of the fair and are laying plans already for the 1923 event, which will be the 30th for the association.

The Agricultural Display.

There were approximately 30 excellent exhibits of counties, granges, communities and individual farms. Any one of them would have been a good miniature fair in itself. Taken all together, they were immense. Asotin county pinned on the blue ribbon for the best general agricultural display, being awarded first for the most artistic arrangement, first on vegetables and root crops and third on grasses and forage crops. Much of the credit for this winning belongs to County Horticulturist Isaman. Whitman county, the world's premier wheat-growing county, naturally took first place in grain, with Lewis county, Kootenai county and Idaho county all of Idaho, second, third and fourth. Kootenai, Lewis and Nez Perce counties of Idaho ranked first, second and fourth, respectively, in the division of grains and grasses, with Asotin county third. Benewah, Lewis and Idaho counties, in Idaho, were second, third and fourth to Asotin in vegetables and root crops.

There was perhaps less competition in individual exhibits of fruits and various vegetables and other crops this year than on previous occasions, though the show in this regard was good.

One of the striking exhibits of the agricultural building was that of the Kelly gardens, owned by A. A. Kelly, the superintendent of the agricultural division of the fair. It was not, however, entered in competition.

Future issues of THE FARMER will report other features of the agricultural show.

The Poultry Show.

Under the management of D. F. Mitchell, superintendent, and A. C. Dowd, secretary, the poultry division put on an excellent exhibition. Nearly all of the prominent breeds were entered and, together with a strong showing of rabbits and a liberal sprinkling of pigeons, bantams, geese, turkeys and so on, filled the poultry tent well to its limits. The average farmer would get his gun and go shooting if he found a fox in his poultry house, but no casualties resulted from the fact that two fox breeders had excellent displays of silver foxes housed in the poultry tent.

The Extension Tent.

One of the most popular stations on the fairgrounds was the tent housing well-arranged exhibits by the state college extension service. Poultry, pure foods (demonstrated by the state department of agriculture), home conveniences, dress forms, seed treatment, modern housing, farm mechanics, orchard methods, crop rotation and numerous additional features under the supervision of college experts, filled this tent. The state college also had a model poultry house on the fair grounds under charge of Professor R. V. Mitchell, head of the college poultry department. It was the mecca for hundreds of farmers and poultrymen.

Boys' and Girls' Clubs.

Total enrollments at the club camp were greater than any year previous. In all there were 130 boys and girls registered.

The first three days, Monday, Tuesday and Wednesday, were given over to contests between club members in Spokane county. One of the most interesting features of these was the active part which local leaders took in the work.

Spokane county members who, aside from winning county championships, were also awarded district championships, which include a trip to the state fair at Yakima this year to compete for state honors, include the Elk dairy team, the Rockford canning team, Selena Dena of the Sunset sewing club, Paul Cordill of the Cheney poultry club, and Lester Hartley of the Cheney pig club. Alfred Pease of Usk, Pend Oreille conty, won the district garden club contest.

The canning contest between the Oregon and Idaho teams, proved to be the most interesting of Intestate events. The Twin Falls county team composed of Leona Stoddard, Elizabeth Miller and Ruberta Siver, and chaperoned by A. I. O'Reilly, county club leader, represented Idaho and won over the Oregon champion team by a margin of four points. Audrie Weinkie, Elizabeth Dunning and Elizabeth Fehrnvacher, made up the Oregon team, which came from Portland. Mr. and Mrs. H. C. Seymour accompanied them. Mr. Seymour is Oregon state club leader.

Benton county has four interstate champions as a result of the fair. They, together with their projects are: Mert Lampson, poultry, made the highest score of any boy or girl in the club work, winning the silver loving cup, presented by The Washington Farmer. His score was 98. The others are: Kathryn Brand, bread baking; Everitt Terril, bee, and Lorain Engels, potato. Everitt made the second highest percentage of any one present, 95.

King county had a representative in the interstate contests in Helen Rosarre of O'Brien. She scored 94 in her garden work. Carl Rosenszweig of Spokane county won out in the beef cattle contest.

One group of boys, the Richland potato club of Spokane county, got together and made up an exhibit of grains, grasses, fruits, vegetables and other products which they grew themselves, and entered the open classes. They received first prize on fruits and fifth on vegetables, which totaled $47.50.

Chrissie Keuster of the Bear Creek dairy club of Spokane county, won the dairy cattle judging contest and was awarded a registered Holstein bull calf donated by John L. Smith of Spokane. Chrissie was a member of the dairy team which last year represented the state of Washington at the National dairy show at St. Paul.

I. C. Smouse, a club boy from Cheney, Wash., won first prize of $20 in the free-for-all judging contest.

Jack Adams, 11 years old, son of D. C. Adams, local club leader at Sunset, Spokane county, won more prize money than any other club member present. Jack showed his purebred Duroc Jersey hogs and in competition with many breeders and club boys as well, made a total of $69—$50 as a result of showing in the open classes and $19 in club work.

C. L. Chambers, field agent of extension methods, as they affect boys' and girls' club work, who is visiting from Washington, D. C., was in attendance at the club camp each day.

The Live Stock Show.

Every department of the live stock show was strong. The Interstate fair has never had a better dairy show nor a better hog show. Not for years has the horse show been up to the high standard of this year, and it is seldom that either the sheep or the beef cattle department has reached the standard in numbers and excellence of 1922. Perhaps the outstanding feature was the extent of the field from which the entries came. In no sense was the Spokane Interstate fair a local show. The Inland Empire contributed heavily, but Canada, Oregon, Idaho and western Washington were strongly represented. Especially was the West Side strong in the dairy division, several of the purple ribbons being won by champion Coast animals.

The Herefords.

In the beef barns the most admired herd was probably the Hereford string of O. A. Boggs & Sons of Daysland, Alberta. Their aged bull and cow that were made grand champions were outstanding, winning easily over good contenders in the Methow Valley and Diamond B. ranch herds.

Group of three bulls—1, O. A. Boggs & Sons, Daysland, Alberta, on Alberta Panama. Alberta Panama 2d and Dudley's Panama; 2, Methow Valley Live Stock Co., Winthrop, Wash., on Chewuch Panama 14th, Commander Jr. and Sir Radio; 3, Diamond D Ranch, Lowell, Ore., on Don Fairfax, Choice Gomez and Oregon Gomez. Group of two bulls—1, Boggs on Alberta Panama and Alberta Panama 2d; 2 and 3, Methow Valley Live Stock Co. on Chewuch Panama 14th and Commander Jr. and Beau Sunshine and Sir Radio.

Bulls: Three years or over—1, Boggs on Alberta Panama (senior and grand champion); 2, Diamond B Ranch on Don Fairfax. Two-year-olds—1 and 3, Boggs on Alberta Panama 2d and Melrose Perfection; 2, Methow Valley Live Stock Co. on Chewuch Panama 14th. Senior yearling—1, Methow Valley Live Stock Co. on Beau Stewart. Junior yearling—1 and 3, Boggs on Dudley's Panama and Alberta Panama 3d; 2, Methow Valley Live Stock Co. on Commander Jr. Senior calf—1, Methow Valley Live Stock Co. on Prince Perfect. Junior calf—1 and 3, Methow Valley Live Stock Co. on Beau Sunshine (junior champion) and Sir Radio; 2 and 4, Diamond B Ranch on Oregon Gomez and Choice Gomez.

Females: Three years or over—1 and 2, Boggs on Bonnie Lady Panama (senior and grand champion) and Miss Panama; 3, Methow Valley Live Stock Co. on Jeannette 2d; 4, Diamond B Ranch on Pearl Fairfax. Two-year-olds—1, Methow Valley Live Stock Co. on Florence Debonair; 2, Diamond B Ranch on Betty Blanchard 5th; 3, Boggs on Miss Fairfax Panama. Senior yearling—1, Diamond B Ranch on Illah Fairfax. Junior yearling—1 and 2, Boggs on Panama Lady 3d (junior champion) and Miss Columbus Panama; 3 and 4, Methow Valley Live Stock Co. on Princess Lilly and Blossom's Joy. Senior calf—1 and 3, Methow Valley Live Stock Co. on Lady Annabel and Miss Frances; 2, Boggs on Miss Panama Perfection; 4, Diamond B Ranch on Lady Gomez.

Groups: Aged herd—1, Boggs; 2, Methow Valley Live Stock Co.; 3, Diamond B Ranch. Yearling herd—1, Boggs; 2, Methow Valley Live Stock Co. Calf herd—1 and 2, Methow Valley Live Stock Co. Get of sire—1, Boggs; 2 and 3, Methow Valley Live Stock Co.

The Shorthorns.

The Shorthorn show was good. Day & Rothrock led in the winnings, though yielding many top points to G. N. DeLay of Hot Lake, Ore.; W. A. Heater of Sublimity, Ore., and C. H. Craig & Son of Lowden, Wash., including senior champion bull to Heater and senior and grand champion cow to DeLay. The Rothrock string was made up of all young animals, headed by Hercules Conqueror, a junior yearling that was made grand champion.

Group of three bulls—1, Day & Rothrock, Spokane, Wash., on Hercules Conqueror, Hercules Radiance and Hercules Bandmaster; 2, G. N. DeLay, Hot Lake Ore., on Village Reserve, Hercules Cornerstone and Linden Laddie; 3, W. A. Heater, Sublimity, Ore., on Gainford Modus, Gainford Silvertip and Little Gainford. Group of two bulls—1, Day & Rothrock on Hercules Conqueror and Hercules Bandmaster; 2, Heater on Gainford Silvertip and Little Gainford; 3, C. H. Craig & Son, Lowden, Wash., on White Sultan and Fancy Boy.

Bulls: Three years or over—1, Heater on Gainford Mocus (senior champion); 2, DeLay on Village Reserve. Two-year-olds—1, DeLay on Hercules Cornerstone. Junior yearling—1, Day & Rothrock on Hercules Conqueror (junior and grand champion); 2, DeLay on Linden Laddie. Senior calf—1 and 2, Day & Rothrock on Hercules Bandmaster and Hercules Radiance; 3, Heater on Gainford Silvertip; 4, Craig on Fancy Boy; 5, DeLay on Missie's Villager. Junior calf—1, Craig on White Sultan; 2 and 3, Heater on Little Gainford and Gainford Nugget; 4, DeLay on Royal Villager.

Females: Three years or over, with calf at side—1, DeLay on Dunbro Maid; 2, Heater on Signet's Memory 7th. Three years or over—1 and 2, DeLay on Scottish Jane 4th (senior and grand champion) and Ruberta's Missie. Two-year-olds—1, Heater on Memory's Roan Lady; 2, DeLay on English Lady 21st. Senior yearling—1 and 2, Day & Rothrock on Perfection's

(Continued on page ten.)

Seattle Milk Shippers Win

Violated No Law in Spirit or Fact in Milk Price Case

Members of cooperative organizations drawn up under the new cooperative marketing act have been watching with interest for the action of the Seattle court on the demurrer in the case, which has involved seven members of the executive committee of the Seattle Milk Shippers' association who were charged with conspiracy to fix milk prices in Seattle. Superior Judge Calvin S. Hall sustained the association's demurrer at the hearing in Seattle September 5 and 6. The case was brought early in the summer by Malcolm Douglas, prosecuting attorney.

In his memorandum decision Judge Hall says regarding the case, "The information charges the defendants were combining to fix the price of their own milk by threatening not to furnish their milk to any distributors who supplied such milk to dealers who sold it for less than 11 cents per quart. There is no charge that 11 cents a quart is an unreasonable or extortionate price, and in the absence of such charge it must be presumed that it is a reasonable price.

"Trade or commerce is exchange of commodities, and the fixing of a fair price is not only not injurious to trade or commerce, but is the greatest encouragement and aid thereto, and it is just as essential to trade and commerce that the producer receive a reasonable price for his milk as it is that the consumer be charged only a reasonable price for the same. Anything else is unfair to one or the other, and, therefore, injurious to trade or commerce. If the state should allege and prove that the price fixed, that is, 11 cents a quart, is extortionate or unreasonable and that the defendants combined to fix such a price generally in the city of Seattle, then, in my opinion, a crime would be charged both under the common law and under our statute. As the information does not contain these necessary allegations the demurrer is sustained."

This case, which can yet be appealed to higher court, is significant because it is thought to be the first case coming into courts regarding an organization founded under the new cooperation marketing act. The Seattle Milk Shippers' association has for more than a year been operating in the city of Seattle, taking the place of the former Seattle milk commission.

Prior to its organization, however, milk had sold on the Seattle market at almost any price as a result of price cutting among the small retail grocers of the city.

"If all dealers were allowed to continue the cutting of prices and selling their products indiscriminately a price cutting war would follow which would eventually result in decreasing the price of milk to the producer," said C. B. Scollard, secretary of the association. "The dairymen of King county feel that it is absolutely necessary to maintain a uniform price everywhere, and they have received the cooperation of the distributors as a general rule. Most of the dairymen are carrying on a losing business in the production of milk at present prices, and it behooves the city consumers to see that the farmer gets something near cost of production for his product."

The Cover Page

"Gosh, I felt funny," confessed Chester Murphy of Sunnyside upon descending from the auction block after disposing of one of his purebred Duroc Jersey sows for the highest price obtained in the sale of the Yakima Valley Duroc Jersey Breeders' association last spring. Chester is a member of the far-famed Sunnyside Pig club. He is shown on the cover page in the act of selling his sow.

And who wouldn't feel funny if he had a prized sow in the ring and she wasn't going very high and the auctioneer lay down on the job and made you get up there and sell her yourself? It was a case of "When a feller needs a friend" all right, but Chester, being Irish, is resourceful, and he "got away with it" in good shape, the sow bringing $80. His tongue limbered up after he got off the block, and it took him no time at all to offer I. F. Kneeland of Sunnyside, buyer of his sow, $25 for pick of the coming litter.

THE WASHINGTON FARMER

VOL. XLVII. NO. 11.

Trade Mark Registered U. S. Patent Office.
Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

Idle Lands Should Be Developed

We hope that Secretary Wallace has been misquoted or misunderstood by the Washington correspondent who reports that the secretary of agriculture is opposed to the reclamation of arid or swamp lands. This correspondent quotes him as saying that with the steady increase in population the day will come when cultivation of great areas now idle will be an economic necessity, but the secretary thinks that day is far distant. For the present, in his view, it would be wiser for the nation to make the most of what it already has instead of expanding to wider fields.

If Secretary Wallace said that, he is pitting himself against the long-standing policy of this nation. The homestead law was enacted to bring under cultivation great areas then idle. If Secretary Wallace's policy had prevailed in the past there would have been no homestead law; there would have been no opening of Indian reservations; there would have been no donation land act for the Pacific northwest, which brought about the settlement of this great region; President Jefferson would not have made the Louisiana purchase, nor would he have sent Lewis and Clark to explore the Pacific northwest; the United States would have stopped at the Mississippi river, and the vast region west of that great stream would now be possessed by Great Britain, Mexico and other foreign governments. If that narrow policy had prevailed 60 or 70 years ago the men and women who possess the farms, orchards and gardens of the Pacific northwest would never have been given access to them.

There seemed much greater reason for stopping the agricultural growth of the nation a hundred years ago or 50 years ago than is now in evidence. Then the population was small and the land areas were vast and largely unappropriated by settlers. But it is different today. The population has grown to 110,000,000; the homestead lands are practically gone, and it is entirely apparent that if the sons and daughters of American farmers are to have any part of the opportunity that was given to their fathers and mothers it must come from the irrigation of arid lands, the drainage of swamp areas and the clearing of logged-off regions.

THE FARMER repeats that it hopes Secretary Wallace has been misquoted. We do not like to think that the great agricultural department of this nation is headed by a man of the narrow vision and false understanding of national needs and aspirations that the interview under consideration would make him appear to be.

Coming Trade of the Pacific

It is high time that the Pacific Northwest should wake up to the possibilities of the Pacific ocean trade. To be posted on the developments and to do a lot of preparatory work in the way of ascertaining what kind of trade can be carried on profitably between the Pacific coast and the Orient, is a different matter from organizing trading companies at once. This preliminary educational work is important.

John A. Fowler, U. S. trade commissioner with headquarters in Manila, who was in Portland the other day, would go father, declaring: "Now is the time when the business men of the United States should reach out and obtain a share of the big business that is developing in the Philippines, Siam, Dutch East Indies, French Indo-China and other countries in that section of the globe."

Robert Dollar, the well-known business man of the Pacific coast, also declares: "I have always known there was a future for the United States in trade on the Pacific, and it is a marvel to me how that trade has grown already, although only the surface has been slightly scratched."

This whole question is one of vital interest to the farmers of the Pacific Northwest, for farm products must make up a large part of this future trade of the Pacific.

Tried Out Commercial Fertilizer

At least one King county farmer has found it pays to use commercial fertilizer on his clover field. T. A. Garrett was induced by County Agent A. B. Nystrom to put superphosphate on his clover field at the rate of 200 pounds per acre, at a cost of $5.25, allowing 75 cents for putting it on.

Mr. Garrett was somewhat skeptical at first, but he was finally induced to try the experiment. The fertilizer was placed on the field last year and a plot left without any to be used as a check plot.

The crop has just been harvested this season, and the results show that the yield of the test plot was 4060 pounds of cured hay per acre, while that of the phosphate plot yielded 8240 pounds to the acre. The difference in favor of the phosphate plot was slightly over two tons. At $10 a ton there is a gross increase of $20 per acre, or a net profit of $14 per acre in favor of putting superphosphate on that west-side soil.

Care and Feeding Pay

Care and feeding are important in successful dairying.

If you can increase the production of a cow 65 per cent by attending to these details, it would certainly seem worth while to do so. This is what C. J. Lawson of Alderton, Wash., reports that he did. In five years he increased the fat production of one cow from 150 pounds to 230 pounds.

The rest of the herd made practically the same increase, he says, and that this was due largely to the good feeding and care of the herd. All cows in the herd were grade Holsteins and Guernseys.

LOOKING INTO OTHER FARM FIELDS

Eggs, butter and poultry dealers in Kansas City have made formal complaint to the interstate commerce commission against the service given country shippers by the American Express company, and charges assessed for transporting goods, and asked relief from present existing conditions.

* * *

The Texas farm bureau has been successful in lining up more than 5000 acres to be planted in Bermuda onions this fall.

* * *

According to reports received by the United States department of agriculture, there have been 143,212 muskrat skins shipped from Alaska since December 1, 1921. This is almost as many as were shipped during the entire year of 1919.

* * *

It is estimated that the motor-driven vehicles in the United States have a power equal to that of more than 300,000,000 horses, while the total number of horses and mules in the country is less than one-tenth that figure.

* * *

Vegetables grown in the United States in 1921 had an estimated value of $1,104,000,000, according to the United States department of agriculture. The total value of truck vegetables produced for sale, often called the commercial crop, was estimated by the department at $227,000,000.

State Farm News

An excellent crop of Minnesota 13 corn is growing on the John Sinn farm near Duvall, King county. The entire patch was planted from home-grown seed, which Mr. Sinn selected in the field just before harvesting last year. The crop will in all probability produce 15 or more tons of silage to the acre. Mr. Sinn raises practically all of his cow feed on the farm, including an excellent grade of alfalfa hay. The only feed bought is mill run and oil meal. He milks 18 high grade Holstein cows, there being approximately 25 head of animals on the place.

* * *

Chris Unger, a dairyman located near Duvall, King county, is erecting a 60-ton wooden hoop silo, under the direction of A. B. Nystrom, county agent. Mr. Unger has four acres of wheat and vetch, which will be used to fill the silo when it is finished. He keeps 21 cows.

* * *

Farmers of eastern Klickitat county, who purchased a warehouse at Roosevelt 14 years ago, have found the investment profitable. The farmers' warehouse has paid for itself and last year a $2000 cash surplus was distributed to shareholders. Standard warehouse charges are collected and any profits accrued are paid to shareholders either in cash or stock in the concern.

* * *

Nearly 500 carloads of prunes had been shipped out of the Walla Walla district up to September 3.

* * *

The Oroville cannery has been putting up between 500 and 600 cases of tomatoes daily. The yield this year is good, 30 tons to the acre not being unusual, and the quality is superior to former years. The plant is giving employment to more than 50 men, women and boys.

* * *

Vancouver's big horticultural event, the annual prune harvest festival, will be held October 19, 20 and 21.

* * *

More rutabagas are being grown in the Granger, Outlook and Sunnyside districts this year than usual. Small fields, one or two acres or more in extent, may be seen through this section of the lower Yakima valley.

* * *

The new high school gymnasium and auditorium at Endicott, erected at a cost of $30,000, will be used this fall.

* * *

The Libby cannery at Yakima put up 350 tons of spinach this year, 50 per cent more than in 1921, and canned Royal Anne cherries from Yakima, Wenatchee, Lewiston and Hood River at the rate of 40 tons per day during July. The company brought cherries from Wenatchee by truck in nine hours, three tons to a load, for 50 cents per ton less than it would have cost to ship by rail. The prevailing price was 7 1-2 cents a pound, as compared with 6 cents last year.

* * *

The state capitol committee at Olympia accepted the bid of the Saginaw Timber company for the purchase of a quarter section of timber near Saginaw, in Grays Harbor county, for $40,000. The timber is part of the state capitol building grant.

* * *

The 1922 crop of sugar beets in Yakima will be unsurpassed, it is predicted from present indications, but even so, the product of 3500 acres will not run the Utah-Idaho Sugar company's plant at Toppenish more than 60 days, and this is only one of three expensive plants in the valley. Farmers were quite dissatisfied with the price offered—$6 per ton—and plantings not made by the company were extremely limited.

* * *

Five cars of poultry, valued at $30,000, have been shipped from Bellingham and Lynden this summer by the Washington Cooperative Egg and Poultry association.

* * *

Plans are being made by the San Juan county game commission to install a trout hatchery on the H. D. Pike farm, near East Sound, Orcas island. The location is considered ideal for the purpose. A special meeting of the commission at Grays Harbor was attended by B. M. Olmstead of East Sound and E. C. Bonn of Seattle, a representative of the state fish and game department.

* * *

The fruit movement for the Yakima valley for the week ended September 2 amounted to 714 cars, according to railroad officials. This brings the season's shipment to 2243 cars.

* * *

Based upon estimates returned by shippers of the California Fruit Growers' exchange, California will ship during the season, November 1, 1922, to October 31, 1923, approximately 51,340 carloads of oranges, lemons and grapefruit.

* * *

Interesting dairy club contests will take place at the Washington state fair, according to E. C. Scott, county club agent of Yakima, who is outlining the county contest. Five dairy clubs in Yakima county, of which three are Guernsey clubs and two are Holstein clubs, will compete in a county contest at the fair on Monday, September 18. The district contest is Wednesday, September 20, and the state contest on Thursday.

The two Holstein clubs of the Ahtanum and of Moxee will be in the county contest, as also will be the three Guernsey clubs of Granger, Sunnyside and Mabton. The Grandview and Mabton districts are combined in one club. Leaders of the Guernsey clubs are: D. H. Clement, Granger; A. L. Wallace, Sunnyside; H. E. Angel, Mabton M. W. Poynor is the leader of the Ahtanum club and W. R. Duffield of the Moxee club.

Besides the members of the standard clubs there are scattered over the county boys who are carrying on dairy work. In the Grandview district there is a group of unattached boys who have Holstein heifers. Three boys at Naches have Guernsey heifers, one at Terrace Heights and four in the McKinley district on the reservation.

Counties taking part in the district contest are: Yakima, Benton, Kittitas, Klickitat, Columbia, Walla Walla, Franklin and Chelan. The district beef club contest takes place on September 20 and the state contest on September 22. The district pig club contest is scheduled for September 19 and the state contest on September 21.

The special dairy judging by the club boys, one from each county, will take place on September 21. The winner in this contest will go to the National Dairy show at St. Paul in December.

FARM BUSINESS AND MARKETS OUTLOOK

Frequent predictions on the market page of higher prices on prime beeves have been verified right along. Values reached a new top of $11.25 at Chicago last week. On the midwestern markets baby beeves are more numerous than a few weeks ago so that heavy cattle are commanding a moderate premium.

Although there is a scarcity of finished steers, receipts of other grades are abundant enough to make the total supply above the average for the corresponding period of the year. Combined receipts at seven leading markets since January 1 are 6,034,000 head compared with a seven-year average during the same season of 5,897,000 head.

Although total supply figures do not suggest scarcity, the western range movement is running considerably behind that of last year. Present arrivals from that section show desirable finish and are increasing the competition which short-feds must encounter. Southwestern pastures are disgorging and shipments from Kansas, since the grass season started, have been larger than in the corresponding period of last year in line with the larger movement of thin cattle into that section last spring.

Dressed trade is holding up well on the better grades of beef, but the outlets for the product of common and medium steers will be filled to capacity most of the time in the next three months. Prime and choice steers are not believed to be numerous in feed lots, so that these grades will remain in a strong position, although the present price level appears to have largely discounted the situation.

Feeder Buyers Continue Active.

Combined shipments of stocker and feeder cattle from the 12 leading markets in the five weeks ending August 26 were 400,688 head compared with 303,110 head in the corresponding period a year ago and 215,004 head two years ago. Both of the latter years, however, were below normal so that the amount of increase shown this year is not as great as it first appears.

A few feeders are buying fleshing steers for a short turn before the present price level on prime and choice grades disappears. Bulk of the inquiry, however, is for steers in ordinary flesh. A moderate demand exists also for the light weights which cornbelt specialists in recent years have found profitable because of low initial cost.

Further Decline in Hog Prices on Horizon.

Receipts of hogs at the 11 leading markets last week were approximately 455,000 head, the largest on record for the corresponding week with a single exception, and 25 per cent above the 10-year average. During the same 10 years, the first week in September, which includes the Labor day holiday, has averaged the lightest of the season. A slight letup occurred again this year, but prices are still sagging. As soon as new crop hogs begin to show up in large numbers, as they will do in the next five or six weeks, prices upon bacon and butcher grades are due for a further decline.

With an abnormally heavy supply of hogs of above average weight coming to market each week and a fairly large stock of lard and cured meats in storage to be merchandised, consumptive demand has been fully satisfied. Storage stocks of lard at the seven leading packing points declined 18,000,000 pounds in August compared with an average decrease of 14,600,000 pounds in the same month in the preceding five years. Stocks of hog meats declined only 9,000,000 pounds compared with a five-year average decrease of 52,000,000 pounds. Clearances of lard and hog meats for export each week have been holding above the prewar average.

Receipts of Lambs Below Normal.

Receipts of sheep and lambs at the seven leading markets last week increased more than 15 per cent over the previous week. The total, however, was only 216,000 head compared with an eight-year average for the corresponding week of 344,000 head. The shortage is primarily in western range lambs which have the right of way at this season. From January 1 to August 26 combined receipts at the seven markets were 5,952,000 head compared with a seven-year average of 6,442,000 head in the corresponding period.

Western ranchers are having an inning this year and regaining some of the loss of a year ago when feeder lambs purchased around $8 or less lost money for the grower, but returned enormous profits. Selected lots of feeder lambs sold last week at Chicago as high as the top on the fat lamb market. In the last eight weeks total shipments countryward from the 12 leading markets were 354,088 head compared with 299,022 head in the same period last year and 690,335 head two years ago. It is too early to tell how large the total movement into cornbelt feed lots will be during the season as a whole although thus far it has not been excessive.

Strike Settlement Helps Horse Market.

Settlement of the coal strike finally gave aid and comfort to the horse market as demand has practically doubled in the last two weeks. Coal concerns are buying rugged workers. Up to $225 was paid at Chicago for such horses weighing around 1650 pounds and the demand for still heavier weights was greater than the supply. Prices were not altered materially, but a clearance of previous accumulations was effected.

Activity Expected in Wool Market.

Now that Labor day is past, more activity is expected in the wool market as some of the mills which have been operating on part time are expected to resume on a full time basis. Demand for wool has been somewhat irregular recently, but prices were firm last week even on fine staple, which weakened temporarily under competition from foreign wools. The new clip in Australia will be ready for market in a few weeks, the first auction sale being scheduled at Adelaide on September 22.

Wool consumption during May, according to the department of commerce, was 43,602,000 pounds compared with 36,048,000 pounds in April and 41,442,000 pounds in May, 1921. Wool has been moving from exporting to importing countries at unusual speed in the last eight months. The available records show an increase of over 100 per cent above a year ago.

Expansion Due in Wheat Movement.

Receipts of wheat at primary markets increased last week after a decline of several weeks' duration. The increase was primarily at spring wheat markets, the movement to which will rise to flood tide around the end of September. Although the tariff prevents Canadian wheat from coming into the United States, except in small dribbles, our own markets are feeling the pressure of Canadian wheat marketings through competition for the export trade. Receipts daily at Winnipeg have been running below 500 cars daily, thus far, but can be expected to increase to 1000 to 1500 cars within a few weeks.

Wheat Statistics Less Bullish.

The statistical position of wheat has been weakened recently. Unofficial estimates upon the crop in the United States are about 7,000,000 bushels more than a month ago and private surveys in Canada suggest that a yield in that country around 20 per cent higher than the last official figure and even larger than the 1915 crop. If these are verified they will practically fill the possible gap between export surpluses and import requirements. Crops above the average in Australia and the Argentine are in prospect although the weather in both countries is treacherous and disaster may occur before the harvest, due three or four months hence.

Europeans are displaying no anxiety over future supplies. Presumably they are drawing heavily upon home grown grain and will make up by increased purchases of foreign wheat later in the season. In spite of the absence of aggressive foreign buying clearances have more than doubled in the last five or six weeks. Last year, however, the United States alone exported about 135,000,000 bushels of wheat during July, August and September. This year, the total is not apt to erceed 75,000,000 bushels in the same interval.

Settlement of the troublesome German question would undoubtedly help the wheat market. Events now in the making may likewise improve the Italian situation, which country also needs more wheat than last year. Great Britain is in much better position financially to buy than a year ago.

Flour mill operations, according to latest reports, were above the average for the corresponding period in previous years. Around 12,000,000 bushels of wheat are being ground each week.

Recently the absence of aggressive demand has been the principal factor in the trend of the market. With a substantial increase in the supply, including both United States and Canadian wheat, not far distant, a slightly lower price level will not occasion surprise. It is believed, however, that the demand also is due for some expansion before long, and that present prices are not much above the level at which the bulk of the crop can be merchandised.

Corn Crop Loses Ground.

Dry, hot weather which has continued throughout August in some of the important corn growing sections caused a loss in the crop prospect of a little less than 200,000 bushels, according to comprehensive unofficial reports. The total yield on the basis of the present promise is about 7 per cent less than last year's harvest. Considering the size of the crop, the export demand, the rate of domestic distribution, the decline in farm stocks of old corn and the visible supply, the corn market is in a stronger position than any of the other coarse grains.

Receipts of corn at primary markets were heavy again last week, but were absorbed without a material decline in price.

Oats Movement Falling Behind.

Movement of oats from farms to primary markets in the last four weeks was the smallest for the corresponding season since 1911. The decline is too great to explain on the grounds of a small crop as the yield is considerably larger than last year, although below the average of recent years. Presumably the extremely low price is a factor. Because of light receipts and the strength in the corn market, oats prices have been comparatively stable in the last week or two and no decline of consequence is probable.

Cash Grain Markets.

The range of cash grain prices for the week ending September 6 is as follows:

Chicago—Wheat: No. 2 red, $1.02 3-4@1.05; No. 2 hard, $1.00 3-4@1.07. Corn: No. 2 mixed, 61 1-2@63c; No. 3, 61 1-2@62 1-4c; No. 2 yellow, 62@63 1-2c; No. 3, 63c; No. 2 white, 61 3-4@63c; No. 3, 61 1-4@62 1-2c. Oats: No. 2 white, 33 3-4@37 1-2c; No. 3, 32 1-2@36 1-2c; No. 4, 35 1-2c. Rye: No. 3, 69 1-4@69 1-2c. Barley: 51@60c.

Feed Market Stronger.

With flour mills storing wheat feeds instead of forcing them upon the market, prices show more strength than a week ago, although the upturn has been small. Dry weather in the southwest is providing a good market in that section at the present time. Corn feeds show little change recently, but both cottonseed meal and linseed meal seem to be feeling the effect of the new flax and cotton crop movement.

Prices per ton (100-pound bags) in carlots: Chicago—Bran, $17.50; standard middlings, $18.25; flour middlings, $24.50; cottonseed meal, 36 per cent, $37.50; 43 per cent, $51.50; hominy feed, $24.50; gluten feed, $29.85; old process oil meal, $42; tankage, $55.

Hay Markets Unchanged.

The hay market is a stereotyped affair with a fair demand for best grades and very limited demand for low grades even at big discounts.

Prices per ton in carlots—Chicago—No. 1 timothy, $18@19; No. 2, $14@17; No. 3, $12@14; No. 1 light clover mixed, $15@18; No. 1 clover, $14@16; No. 1 clover mixed, $13@15; upland prairie, $16@18; midland prairie, $12@17; rye straw, $10.50@11.50; oat and wheat straw, $8@10.

Sharp Rise in Egg Markets.

Although a moderate upward trend in the egg market was expected during the late summer months, the advance of 50 per cent in values in the last few weeks was distinctly surprising. Receipts have fallen off sharply and daily withdrawals from cold storage at the four leading markets are averaging about 25,000 cases.

Poultry prices have changed but little recently, but the demand does not look broad enough to absorb the heavy autumn run without a further decline.

Butter Market in Strong Position.

Dry, hot weather in some of the principal butter producing sections has reduced the market supply materially in the last two weeks and prices have shown a pronounced upward trend. Fancy butter particularly has been scarce. A small amount has been withdrawn from cold storage, although this movement is not of much consequence as yet. The statistical position of the butter market is fairly strong since the total supply in storage is not extremely heavy and consumptive demand is considerably above the average. Prices are about 15 per cent higher than at the low time of the season a few weeks ago.

Prices for 92 score creamery butter on September 6 were:

Chicago, 37 1-2c; New York, 39c; Boston, 38 1-2c; Philadelphia, 39 1-2c.

Cheese Market Unsettled.

Distributing markets for cheese opened steady last week as the result of strength at country points, but toward the close of the week sales declined to small volume and an uneasy, unsettled tone was in evidence. Only twins were quoted lower, however. There is no special surplus of cheese on the market, but dealers are anxious to effect a clean up. A few June twins and daisies were sold at Chicago last week at 20 1-2@21c. Eastern markets have been steady to firm recently with demand principally for New York state cheese. Philadelphia reports very light stocks on hand. With the butter and egg market strong and receipts of cheese falling off, the trend of the market is apt to be toward a higher level.

Prices for No. 1 American cheese on September 6 were:

Chicago—Twins, 20@20 1-4c; S. Daisies, 20@20 3-4c; D. Daisies, 20@20 1-4c; Young Americas, $20@20 1-2c; Longhorns, 20 1-2@21c; Square Prints, 21@21 1-2c.

Fruits and Vegetables.

Potato prices declined again last week. Total carlot shipments in the United States are running much above the average for the corresponding season. The movement in the week ending September 2 was 4100 cars compared with 2836 cars last year, 3445 cars two years ago and 2814 cars three years ago. Early Ohios are bringing 85c to $1.10 per 100 pounds with rurals at $1.15 on the Chicago market.

Extremely low prices have checked the move-

Hope Grows for Reclamation

Pacific Northwest Men Head Committees in Congress

With Congressman Smith of Idaho heading the house committee on irrigation and Senator McNary of Oregon heading the senate committee on irrigation of the senate, positions of great strategic importance, the outlook for the development of the arid lands of the west and the swamp lands of the south would seem to be bright. Of old, watchmen stood upon the towers of the city walls. The cry arose from the city darkness, "Watchman, what of the night," Fortunate to some if the response from the watch-tower floated down, "The dawn breaketh in the east."

To the older citizens of the Pacific northwest who have watched and waited for so many years, who have promoted conventions and publicity and experimentation to demonstrate the magic power of water upon the desert, whose hearts have sometimes grown sick with "a hope long deferred," this word of promise of the coming of a new and better day will bring renewed hope and courage. Both Smith and McNary know the problem; both are earnest and tireless and put achievement above office-holding. Both are devoted to the northwest, and while generously and conscientiously promoting reclamation by drainage in the south and elsewhere, and irrigation in the Pacific northwest, they can be depended on to protect the interests of the Pacific northwest.

It is strange that public opinion and congressional votes in New England and some other parts of the east should be so ill informed and so provincial in the matter of the development of the west. They seem to think of the matter as one calling for heavy eleemosynary contribution out of their pockets for the benefit of a few remote settlers from which they will receive no personal return. One is reminded of the colonial attitude of England in pre-revolutionary days, in which it was assumed that the colonies existed for the sake of the mother country and that they were the legitimate objects of exploitation. There is a woeful lack of the proverbial Yankee shrewdness in the policy of eastern opposition to western development. They should remember, first, that "swarming" comes periodically in the east and always has and will till the "jumping off place" has been reached, and that it is their children—the children of the east—that will be provided for by the opening up of new lands. Japan is on the outlook for her new swarms. Germany was grabbing every where for colonial outlets. Why should not the densely populated east, with eye cast ahead, be providing by every means, in our west and in our south, for the inevitable multitudes? Virgin lands can now come only from the reclamation of arid deserts and malarial swamps.

They should remember, second, that our pitifully diminishing white farming population warns us of a day not far distant, when pressure for a national food supply will be a serious problem to the manufacturing and commercial regions already congested and already menaced by high cost of living, strikes, lockouts, lack of housing facilities and unemployment.

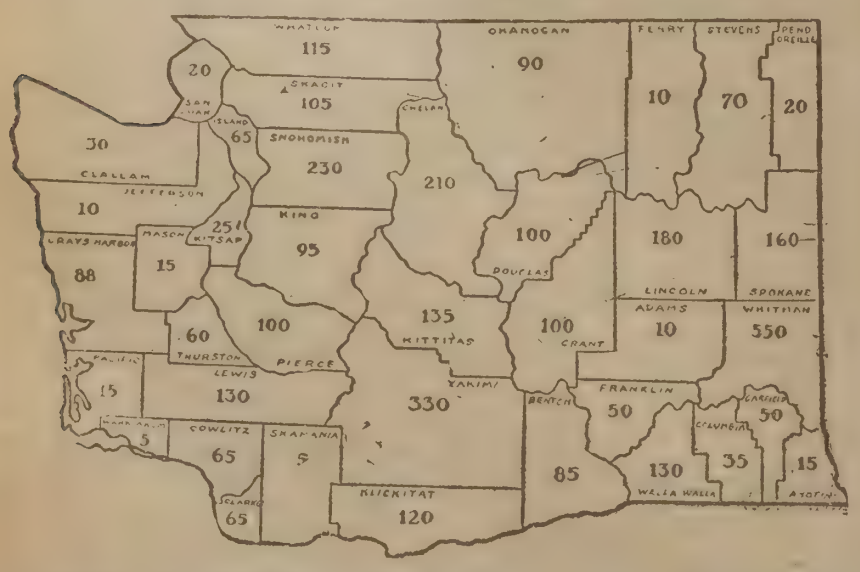
They should remember, third, that here in the west is a great present market and a greater potential market for the very things through which they earn their bread and butter. Michigan representatives foolishly opposing western expansion were brought slap up against the tremendous western demands for automobiles and trucks, their chief home products.

They should remember, fourth, that even in the case of the agriculturists of the east versus those of the west, they are not in violent competition but are rather supplementary. The intensive agriculture of the east does not rival the extensive agriculture of the west. Even in the case of fruits, in the main there is little competition.

They should remember, fifth, that it is not a gift but a loan that is sought, principal and interest both to be repaid, and in the development the taxpaying power of the west and south will develop far and away beyond any temporary financial loss (if there were any) caused by the advance of the nation's credit to the enterprise.

And they should remember, sixth, and last, that in no real way can the repayment of the soldier come about so usefully to the soldier boy and to the nation as through reclamation with preferential rights to the ex-service man.

McNary has been criticized for "tacking on" a reclamation amendment to the bonus bill, as though it were not germane. It is germane to the high purpose of the measure. There are those of short sight and weak purpose who think that a little ready cash, soon to be spent, is the aim and measure of the "bonus bill." It would be a poor solution of the problem if that were all. But could we, with any temporary relief which may be determined upon, make provision that tens of thousands of strong, ambitious young men who served in the war should enlist in the ranks of our farming population and should have the chance of reclaiming lands, of establishing homes thereon, of building up farm homes and a competence, the blessing would rest not only upon themselves and their families, but upon the nation, already blessed by their past service and sacrifice.



W. J. Bryan

YAKIMA IS PROSPERING.

Never since the war, in the opinion of local business men and impartial outside observers as well, has the Yakima valley generally been in better shape. Building of all kinds is active; the United States reclamation service will spend $1,500,000 on the dam at Rimrock within the next two years, when water will be available for 250,000 acres more land than is now irrigated; banks at the county seat hold $1,000,000 more deposits than a year ago—a total of nearly $9,000,000—and it is expected that 5000 carloads more freight will move out of the territory in 1922-23 than in 1921-22. Commercial travelers still point to Yakima as the best town in the territory, and it is predicted, in short, that unless strike conditions prevent the marketing of its crops, Yakima will experience a healthy boom this fall.

Tractors Are Widely Distributed

By L. J. SMITH, W. S. C.

The accompanying illustration is the first map ever published showing the number and location of tractors in the state of Washington. The figures given by counties are in round numbers. They were taken from data compiled early in the year 1922. The figures show that there are nearly 2500 tractors in this state. Whitman county, the great grain county of the state, has over one-fifth of all the tractors. Yakima comes second and may catch up with Whitman. A large number of tractors on the West Side are owned by lumbermen. By another year the state will likely own 3000 tractors.

THE MAXIMUM GOODYEAR VALUE

The purchase of a Goodyear Tire today is an investment in known quality.

What that quality is, has been proved by the public over a period of nearly a quarter of a century.

In that time, by uniformly fine performance, Goodyear Tires have attained unquestioned leadership.

More people ride on them than on any other kind.

Goodyear Tires never have been so good, never so serviceable, as they are now.

Veteran users say they give more than twice the mileage they did twelve years ago.

Yet Goodyear prices are at the lowest point in our history.

Never before has Goodyear value been so great.

Goodyear Means Good Wear

GOODYEAR

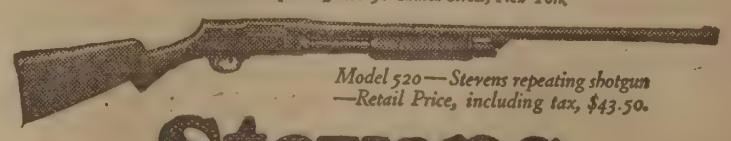
From grandfather to father—to son

FOR three generations Stevens has built shotguns and small bore rifles for the American sportsman. For three generations the accuracy and endurance of Stevens guns have remained unsurpassed.

You can buy a more expensive gun than a Stevens; but you cannot buy better shooting qualities. *Shotgun or rifle—a Stevens firearm is accurate.*

When a Stevens barrel is bored or drilled, the final reaming cuts away *less than one-half of a thousandth of an inch.*

For rifling Stevens uses a special process, slow scraping system removing *less than the thirtieth part of a thousandth of an inch* with each pass of the rifling cutter. A slow method—but when finished a Stevens barrel is *accurate.*



When you buy a Stevens you are buying unexcelled shooting qualities and you are paying a reasonable price.

Stevens manufactures a complete line of small bore rifles and shotguns of every description. Ask at your dealer's or write for the interesting catalog describing in detail our complete line. Address:

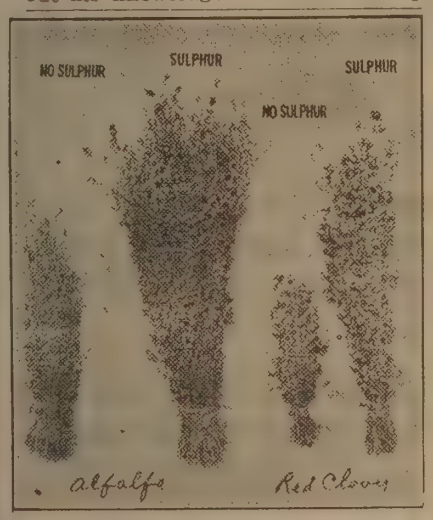
Sulphur the Wonder Worker on Alfalfa



Small Applications Give Enormous Increases on Many Western Soils

Like begets like to to a certain extent in breeding, but it was hardly to be expected that "yellow dust" from a sulphur mine would beget "yellow dust" in the bank. That's the way it appears to be working out for the alfalfa growers. The whys and wherefores aren't all worked out as yet, but the fact remains that increases of 1000 per cent have occurred and that those of 100 per cent are common where sulphur has been applied to alfalfa.

Sulphur has long been accepted as one of the so-called "essential" elements. Every one of them must be present in the soil in sufficient quantity if any crop is to make a normal growth. The trouble with sulphur was that every one thought there was plenty of it in practically all soils.

Almost over night chemists found out that their old methods of analysis were faulty, and that plants actually contained much larger amounts of sulphur than was previously supposed. It was just about as rude an awakening as a man with a joint bank account with his wife, finding out that she had been spending $100 a week when all along he thought it was only $25.

To carry the illustration further, our rudely awakened husband starts investigating and finds that his wife has been spending it all along without his knowledge. He checks it up

How sulphur increases yield of Alfalfa and Red Clover.

and finds that she can't get along on any less. He must either put more money in the bank or quit trying to support such a profligate wife.

Mr. Alfalfa Grower loved his crop like our friend of financial comparison loved his wife, and so he put a little sulphur in his soil bank, rather than give her up.

The results of the use of sulphur in many instances sound more like fiction than sound agriculture, but the fact remains that in few instances has any sort of material been added to the soil that has resulted in so large net gains. To think of 100 pounds of anything giving over 1000 pounds of something else makes you feel like claiming Missouri as your native state. And yet, just such results have come from the use of the "yellow dust" from Texas on alfalfa.

Sulphur as a plant food has a life history somewhat like ammonia. One has to be oxidized to a nitrate, the other to a sulphate. In both cases it is our unseen friends, the soil bacteria, that perform these specific tasks. How they do it is really another story, for it is the crop above ground that brings in the money, and in which the farmer is most interested.

What does sulphur actually do to the plant and to the soil? In the first place sulphur enters into the composition of the plant just the same as nitrogen or phosphoric acid do. If there is a lack of sulphur the whole plant is small in size, the leaves pale in color and the root system correspondingly ill developed.

In the soil it may operate directly or indirectly or as a soil conditioner, or all three combined. Where there is an actual poverty of sulphur in the soil or where the sulphur present is bound up in unavailable combinations the sulphur acts directly in supplying a definite need.

Again there may be no especial lack of available sulphur and the sulphuric acid formed in the soil through the oxidation of sulphur tends to liberate and render available other forms of plant food which cause increased growth.

Many western soils give a pronounced physical response to the application of sulphur. Heavy adobe and gumbo soils are rendered granular and open. The soil becomes better ventilated and the activities of the soil bacteria are greatly increased. The tilth of the soil and its moisture-absorbing capacities altered so that the beneficial results of its application may be due to a combination of causes.

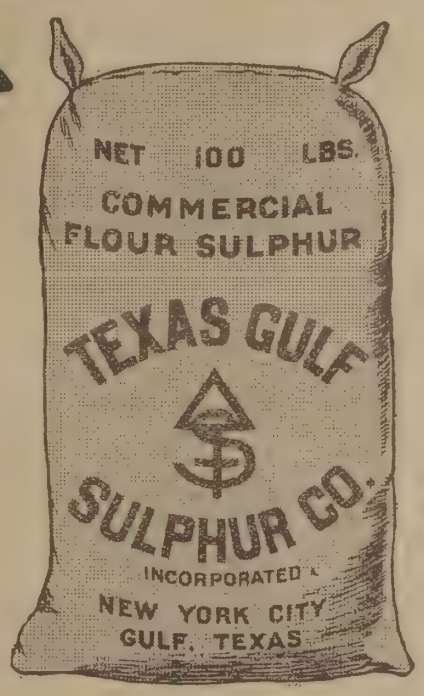
The source of the sulphur used in many of the tests has varied considerably. Acid phosphate, which contains its sulphur as calcium sulphate; gypsum, which likewise contains its sulphur as calcium sulphate; ammonium sulphate, iron sulphate and free sulphur have all been used. No doubt exists but that it is the sulphur in all of these materials that has given the uniformly good results. From the practical standpoint the use of free sulphur presents the greatest economies. Sulphur as obtained from the mines in Texas runs over 99½ per cent pure. One hundred pounds of free sulphur is the equivalent of about 600 pounds of gypsum, 800 pounds of acid phosphate or 350 pounds of sulphate of ammonia as far as the content of sulphur is concerned. In most cases any of these materials are carried a considerable distance from the point of manufacture to the consumer, so that from the standpoint of freight charges, the pure sulphur is without a competitor.

The residual effect, or the extent to which the influence is exerted over several years after the sulphur-carrying materials are applied, is greatly in favor of the pure sulphur. Ofttimes the pure sulphur makes its most pronounced increase the second year. In this connection it may be that the use of inoculated sulphur, rather than the crude will prove advantageous.

Sulphur applied to soils is changed over to sulphuric acid or sulphates before it becomes of benefit to the plant. Inoculated sulphur is richly impregnated with the bacteria necessary to perform this important work. Since many soils are not supplied with these organisms, it would appear the part of wisdom to supply them by using inoculated sulphur. Experiments have shown that even where soils had a pronounced natural capacity for oxidizing sulphur that the inoculated sulphur was much more quickly converted.

In the east where sulphur is used extensively against potato scab the inoculated form gives much more uniform results and better control. Inoculated sulphur is essentially an agricultural product, designed for action in the soil, and carrying soil bacteria. In view of its universal superiority for agricultural uses it would appear the part of sound wisdom to use the inoculated sulphur on alfalfa.

Loading sulphur at the Gulf, Texas, mines of the Texas Gulf Sulphur company, the world's largest producers of sulphur.



"Best for Alfalfa"

TEXAS GULF SULPHUR

(Identify the genuine by this trademark)

A better sulphur at a better price direct from the mines of the Texas Gulf Sulphur Co., the world's largest producers of sulphur. In order to fully serve the alfalfa growers in this territory we have established a warehouse in Portland, Oregon, from which we will make quick shipments of the genuine Texas Gulf Sulphur in any quantity. You will find the product, the price and the service right in every respect. No matter where you have been securing sulphur in the past you will find it greatly to your advantage to place your order with us this season.

Contains 99½% Pure Sulphur

Packed in 100 lb. Burlap Bags

Your Choice of Three Forms:—

Crude Sulphur—

Lump sulphur, 99½% pure, for those who prefer to do the grinding.
In bulk or 150 lb. bags

Flour Sulphur—

Ground to extreme fineness, ready for immediate application to the soil. This product is so finely ground that it is in every respect equal to special brands for which high prices are commonly charged.
In 100 lb. burlap bags

Inoculated Sulphur—

An exclusive Texas Gulf product. Specially ground flour sulphur inoculated with sure-acting oxidizing bacteria which make the sulphur quickly available for plant food. As commercial sulphur is apt to be inert in the soil and its full effects are usually not noted until the second season, we advise the use of Texas Gulf Inoculated Sulphur where quick action is needed, and especially for late applications. In any event, test it on an acre or two this season and compare results.
In 100 lb. burlap bags

Consult your County Agent

We will gladly cooperate with him and with you in handling club orders. Naturally, you can save money by joining with your neighbors and making up a carload order.

Wire us at our expense—now!

Send us a night letter, *charges collect*, tonight. Tell us your alfalfa acreage, the kind and amount of sulphur you will require, the name and address of your county agent or dealer. Address as below. We will promptly quote prices which will delight you.

Our Sulphur Booklet and other helpful literature mailed free on request

LIVESTOCK AND DAIRY

Nine Dairy Rules

To know a thing and practice it is far different from simply knowing it. Probably more or less of these dairy rules, perhaps all of them, are known by dairymen in general.

The question arises, how many of them do they practice?

These rules are laid down by Mark H. Keeney, the dairy specialist of the New Jersey College of Agriculture. Here are the nine rules laid down by Mr. Keeney. If they meet with your own experience perhaps it might be a good idea to paste them in your scrapbook and then not to forget the scrapbook entirely:

1. Feed all the roughage a cow will clean up. Part of it should be a legume, such as clover or alfalfa.
2. Feed some succulent feed, such as silage or roots.
3. Feed a balanced ration.
4. Feed grain in accordance to milk production; for a Holstein or Ayrshire, approximately one pound of grain for each four pounds of milk; for a Guernsey or Jersey, about one pound of grain for each three pounds of milk. A variety of grains in the mixture is desirable.
5. During short pastures supplement with silage or some green feed, together with some grain.
6. Feed and milk regularly.
7. Supply an abundance of pure, fresh water at all times.
8. Give access to salt daily.
9. Purchase grain feeds on the basis of their protein and energy content and not alone on just the cost per hundredweight.

Millions for Hogs

Four million dollars were paid out for live hogs that came from the Dakotas and Nebraska to the three markets of Portland, Spokane and Seattle during 1921. Mr. Pierson, president of the Portland Union stockyards, says even more than that will probably be paid to swine breeders of the middle west by Coast packers during 1922. For more than a year these markets have at almost all times paid a higher price for hogs than has been paid at Chicago, which is the great central market, where prices generally reach their peak and all the others get their cue as to prices.

At the present range of prices hogs can be fed at a profit. It is unlikely that the farmers of the northwest will supply all the hogs wanted by the packers of the region for many years. As long as they do not, prices are going to remain high; probably above those at Chicago. Even at a lower range, hogs can be "stubble fed" and grown as a byproduct on dairy ranches and still yield a nice margin of profit. But as long as this shortage keeps prices up there is no reason why the northwest wheat grower and dairyman should not have almost that entire $4,000,000 now annually going farther east for hogs. Bringing them from afar, at the present high freight rates, reduces the profits for both farmers and packers.

The Portland Union stockyards has C. M. McAllister in the field, with his contagious smile and his hog enthusiasm. He has an entire moving picture outfit, with views of some of the great sires and brood sows, and other films showing how cholera and other swine diseases are met and conquered. But Mack can only hit a few of the high spots. An evening with him is worth while. But farmers need not wait for him. A little thought shows the mistake that is being made in not raising more hogs. If the herd is not too large and at least a part of the hog's living is made on waste, it is easy to reduce the herd or go out of the business entirely, if prices go down. This is so because of the hog's prolificacy and early readiness for market, which makes it easy to build up or reduce a herd.

Nu-Way
STRECH
SUSPENDERS
A full year's wear or more guaranteed (75c and 50c). Men's Garters (50c) and Hose Supporters (all sizes, 25c). No rubber to rot from heat or sweat. Phosphor Bronze Rustless Springs give the stretch.
ASK YOUR DEALER. If he can't supply you, send direct, giving dealer's name. Accept no substitute. Get the genuine Nu-Way. Look for guarantee and name on buckle. Write for story of Nu-Way Spring Stretch.

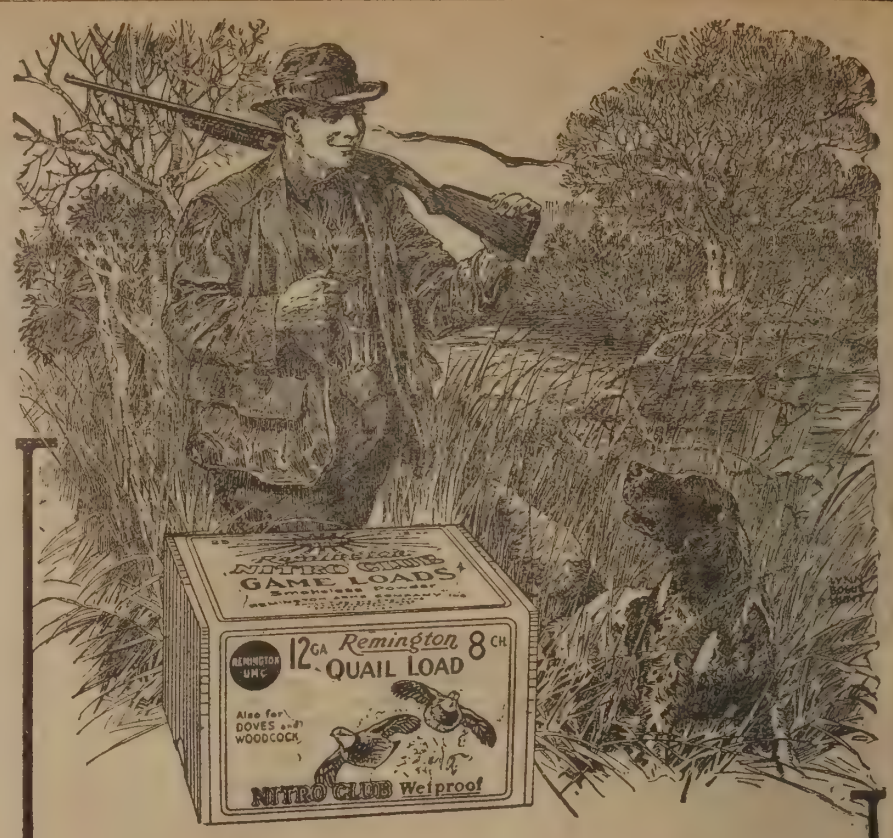
VETERINARY

By DR. S. B. NELSON.

Catarrh—What is the trouble with my mare? About two months ago she had the distemper and since has had a yellowish green discharge running from her nostrils and has an awful foul breath. She is fat and eats well. SUBSCRIBER.
Spokane.



Your horse is probably suffering from a catarrhal condition of the mucous membrane of the air passages in the head. A careful examination should be made of the animal to see whether this is just a local trouble in the air passages or whether there is an infection of the cavities of the head. In the latter case it would be necessary to determine which sinus or cavity is affected and that should be opened by taking out a part of the bone and keeping it constantly cleaned out until it heals. You need a surgeon's services in performing the operation for you. If it comes from the mucous membranes the injection of an astringent solution may be of value. A very good solution to use is zinc sulphate, one drachm; glycerin, one ounce; water, two quarts. You would need to use some kind of a container like a hot water bag or pail to which is attached a rubber tube and the rubber tube inserted in the nostril a little way and the other nostril open so that the solution may filter through the head and out the other nostril or the mouth. Will probably have to be treated daily or every other day for some time.

Infected Udder—I have an 8-year-old cow that gives six gallons of milk. I believe she caught cold about a week after freshening. One teat is all right, but the others give stringy milk which has a queer odor. What will clean out her udder?
Renton, Wash. SUBSCRIBER.

Wash the udder in hot salt water before milking. After milking inject the udder with a 2 per cent solution of boracic acid. Be sure to sterilize the teat by dipping it into iodine before the injection is made. Sterilize the injecting instrument by boiling or wash it out with a 10 per cent solution of carbolic acid. Later wash it with hot water. After the udder is injected, give it a gentle massage and then milk it clean. Once daily apply the following mixture to the udder: Soap liniment, six ounces; tincture of iodine, two ounces.

Wound Does Not Heal.—About 10 days ago one of my cows injured her teat at the end. Since then I have had to use a silver teat tube to get the milk. It seems that it is time for the wound to heal. The milk in that quarter is failing and apparently will dry up. I massage the udder at each milking and get all the milk. Is it probable that this quarter will be good when the cow freshens again?
Renton, Wash. A. C. T.

As soon as the wound is healed I would suggest that instead of using a dilator, that after you milk the cow, if it is possible to milk her, you insert a catgut string. Cut off a piece about two or three inches long and make a knot in one end; then place the string in a 10 per cent solution of carbolic acid for a while, after which take hold of it by the short end below the knot and dip it in boiling water. Dip the teat in tincture of iodine and then push the string into the teat until you reach the knot. Leave the string in the teat until the cow is milked the next morning, bathe the udder with hot water before milking, so as to stimulate the flow of milk. This will soften the udder and take out the soreness.

What Game Are You Going After

TELL any sportsman that there are 3000 different shotgun loads scattered about the country—and you are likely to get an amazed smile.

He knows that there are only about *twenty* different kinds of game to be *taken with shells.*

Evidently there is a lot of shell-making going on that doesn't serve anybody.

* * *

With the inspiration of *common-sense,* Remington announced last May the new

Remington Game Loads

Specific loads for *specific* game, in *12, 16* and *20* gauge.

Furnished exclusively in "Nitro Club" *Wetproof,* with the finest of American smokeless powder, and shot.

A contribution to ammunition service *for all time.*

The Game Laws for Washington

The department of agriculture has summarized the game laws with which hunters, trappers and fishermen in Washington should be familiar as follows. The summary is given in Farmers' Bulletin No. 1288:

Open Season.

West of Cascades—Deer, bear and upland game birds, open seasons fixed by county game commissions.

Ducks, goose, brant, coot, black-bellied and golden plovers, Wilson snipe or jacksnipe, yellowlegs—Oct. 1-Jan. 15.

Rail—Oct. 1-Nov. 30.

East of Cascades—Deer, bear and upland game birds, open seasons fixed by county game commissions.

Duck, goose, brant, coot, Wilson snipe or jacksnipe, black-bellied and golden plovers, yellowlegs—Oct. 1-Dec. 31.

Rail—Oct. 1-Nov. 30.

County game commission, with consent of director of fisheries and game, may shorten, close, or open season and fix bag limits on upland game. Communicate with county game commission at county seat, or supervisor of game and game and fish, Seattle.

No Open Season.

Moose, elk (1925); fawns, caribou, mountain sheep, mountain goat, squirrels (gray, black, fox), and dove; swans, wood duck, eider duck, auklets, auks, bitterns, little brown and sandhill cranes, fulmars, grebes, guillemots, gulls, herons, jaegers, loons, murres, petrels, band-tailed pigeon, puffins, shearwaters, terns, and all shore birds (except Wilson snipe or jacksnipe, black-bellied and golden plovers, and yellowlegs).

No open season on waterfowl on Columbia or Snake rivers or within one-fourth mile of their shores in counties of Benton, Columbia, Douglas, Franklin, Garfield, Grant, Kittitas, Klickitat, Walla Walla, Whitman and Yakima.

Hunting and Fishing Licenses.

Nonresident or alien: Hunting and fishing, state, $10; fishing, county, $2.50. Resident: state, $7.50; county $1.50 (issued by county auditors). Aliens must have permit to carry firearms. No license required of women and persons under 16 to fish, if residents.

Bag Limits and Possession.

For bag limits on deer, bear, and upland game birds, communicate with county game commission at county seat, or supervisor of game and game fish, Seattle. Twenty ducks, geese, brant, golden plovers, and yellowlegs, Wilson snipe a week (week ends at midnight Saturday), but not more than 8 geese, 8 brant, 15 in all of plovers and yellowlegs a day; 30 ducks, geese, brant in possession; 50 sora and 25 in all of other rails, coots and gallinules. Possession during close season permitted upon filing with county game commission description and number of each kind of game, which may be tagged or stamped by commission for identification, but migratory birds shall not be possessed longer than the first 10 days after close of open season.

Sale.

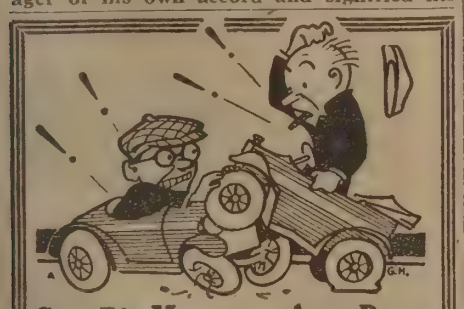
Sale of all protected game prohibited.

Export.

Export of all protected game prohibited except nonresident licensee may export one day's limit of game birds upon attaching an affidavit that they were lawfully killed by himself and are not being exported for sale.

Large Producers Take Notice

Summer receipts of the Yakima branch of the Washington Cooperative Egg and Poultry association are only about 250 cases per week, though 422 cases per week were received during the peak in mid-June and until recently a carload was sent out every 10 days. Some of the birds have been molting and the hot weather cut down production, but Manager A. S. Brown looks for a big increase in the fall after the low point has been passed about October 1. "For this reason," said he, "a large percentage of the members are small flock owners, keeping 50 to 150 hens. When they joined they indicated a determination to increase the size of their flocks several fold, otherwise they would not have been admitted, for it is not to the interest of the small producer to join. I expect an increase of 75 to 100 per cent in receipts, and we figure on signing up about 125,000 hens out of a possible 150,000. We now have about 55,000, owned by 225 members."



One encouraging feature of the association's growth is that the big producers of the valley are beginning to realize that the organization is doing valuable work in stabilizing the market and standardizing the output and are lending it their support. In fact, the biggest producer in the district, who until recently has not admitted that the association was of any value to him, recently sought out the manager of his own accord and signified his intention of affiliating with it. "I made no effort to convert this man," said Brown. "He has convinced himself, and he will be all the more valuable to us on that account. In fact, I have endeavored all the way through to make the organization sell itself. Ninety-five per cent of the members who come to me with romplaints of one kind or another go out of that door satisfied, after they have followed their own eggs through the warehouse. They believe we are trying to give them a square deal, and they treat me like a gentleman. Together, we have been up against two hard propositions, climatic conditions new to me (Brown is from Seattle) and ideas of grading new to them. I've been hammering hard on proper handling—on getting the eggs out from under the old hen and into the basements where milk and butter are kept, and on getting them to market in the afternoon. The results are beginning to show in the candling, which has improved 25 per cent in a month. In fact, poultrymen are beginning to realize that the egg is a perishable product, rather than one which can be held like potatoes or hay."

Local trade has been good this summer; in fact, the association is selling practically all of the high-grade eggs on the Yakima market. For a time sales were slow, due to difference of opinion as to value, but quotations are now close together and the trade really prefers a candled article.

Since the association's birth story was told in THE FARMER early this spring poultrymen of Kittitas county sent a large delegation, headed by County Agent W. L. Davis, to Yakima to investigate its operation and decided to affiliate with it. In a few days' work near Ellensburg Manager Brown recently signed nearly 2000 hens, and he expects to sign 3000 or 4000 more from there. Their product will be shipped to Yakima for sale just as are lower valley eggs at present. Seventy-five per cent of the association's receipts come from below Union gap, and General Agent H. M. West of the O.-W. R. & N. has recently installed a twice-a-week refrigerator car service, which is a great improvement over the old method of shipping by truck. After being assembled, eggs are shipped under one name to save freight, and they are delivered at the association's platform thoroughly chilled and free from dust. The organization's new location, one block north of the one where it started business, is not regarded as permanent, but it will answer all immediate needs. "We'll have to have a poultry dressing station and cold storage plant some time," said the manager, "but that's for the future."

FARM BUREAU HANDLES COAL.

The Spokane county farm bureau is planning this year to secure about 100 carloads of coal for its members at a total cost of about $30,000. Some of this coal has already been distributed at $11 a ton, or about $3 per ton below the current retail price. Last year the bureau handled about 50 carloads at a cost of approximately $15,000. T. S. Brown is secretary and has charge of this phase of its work.

SaveBig Money on Auto Parts

Why pay $5 for an automobile part when you can get that same part for $1.50 or $2.50 by sending in your order to "The House of a Million Parts," the largest company of its kind on the Pacific coast.

Better take that surplus and put it in the bank!

Used parts. New parts. Any parts for most any car—that's GEO. W. MILLER. All absolutely guaranteed and carefully inspected. Axles, gears, shafts, transmissions, bearings, etc.—even the motor complete. We ship your order the day we get it. Clip this ad, send it in with the order and we will prepay shipment.

Let us work with you and your garage man for Service and Saving.

GEORGE W. MILLER CO.

Weather Rots Unpainted Buildings

Can You Afford to Rebuild in a Few Years?

YOUR investment in buildings and equipment depreciates rapidly unless they are protected from the weather by paint.

Rotting buildings are a very heavy expense. They mean either costly repairing or total rebuilding. Paint saves this cost. Use paint now.

The next question is what paint to use. Use the best. It costs less in the long run.

The best paint spreads easily—it saves labor cost. It covers more surface per gallon than "cheap" paint.

And the best paint will serve you five or more years longer than "cheap" paint.

So paint your buildings when they need it and use the best paint. That's a dollar-saving policy.

The best paints are scientific in formula and preparation. We've made them for 73 years—to meet the weather conditions in the West.

The best materials—PIONEER WHITE LEAD—pure linseed oil, pure zinc and pure colors—are combined in Fuller's Paints in scientifically exact proportions with long-time skill.

House Paint: Fuller's Pure Prepared Paint, Phoenix Pure Paint, for painting houses. The purest, best protective and most durable paint manufactured—32 colors.

Barn and Roof Paint: A protective coating for barns, roofs, fences. Dries with a good gloss and wears. Economical in cost and dependable in quality—6 colors.

Floor Paint: Fuller's Rubber Cement Floor Paint—a sanitary, waterproof and durable paint for floors of kitchens, closets, etc. Attractive in color and gloss. Dries hard over night—12 colors.

Porch and Step Paint: A durable paint for use on porches, steps and other wood work exposed to the elements and subject to considerable wear. Six colors from which to choose.

Also makers of Fullerwear, an all-purpose Varnish, Silkenwhite Enamel, Fifteen-for-Floors Varnish, Decoret, Washable Wall Finish, Auto Enamel, Fuller's Hot Water Wall Finish (kalsomine), Porch and Step Paint, Silo Paint, Milk Can Enamel, PIONEER WHITE LEAD, Tractor Paint, and Fuller's Oil Stains.

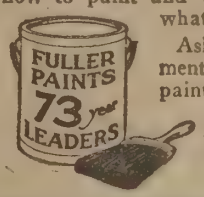
Advice on Painting FREE

If you want to do your own work and get the best results, ask our Specification Department for *free advice*.

We'll tell you how to treat old paint, how many coats to use, what kind of brush, etc.

Use *Fuller Service* as well as Fuller Paints and Varnishes to insure good work.

Fuller's SPECIFICATION Farm Paints



House Paint - Barn & Roof Paint
Wagon Paint - Rubber Cement Floor Paint
Pioneer Shingle Stain

Manufactured by W. P. Fuller & Co. Dept. M-68, San Francisco

Pioneer Manufacturers of Paints, Varnishes, Enamels, Stains and PIONEER WHITE LEAD for 73 years.
Branches in 19 cities in the West. Established 1849. Dealers Everywhere.

Free Book—Send Coupon

Send coupon for Fuller's "Home Service" Paint Guide, a free book which tells you how to paint and varnish home things, what brushes to use, etc.

Ask our Service Department any question about paint which you would like to have answered—complete detailed advice is given free.

Interstate Fair Is Interstate for Sure

(Continued from page three.)

Lady and Hercules Matchless 3d; 3, DeLay on Village Missie; 4, Heater on Memory's Snow Drift; 5, Craig on Fair Rose. Junior yearling—1 and 2, Day & Rothrock on Hercules Topsy 5th and Hercules Jasmine 2d; 3, Heater on Thistle Bloom 2d; 4, DeLay on Scottish Jane 5th. Senior calf—1 and 2, Day & Rothrock on Hercules Sylvia 3d (junior champion), and Hercules Missie 5th; 3 and 5, Delay on Scottish Jane, 6th; and Village Duchess D; 4, Heater on Memory's Roan Beauty.

Groups: Graded herd—1, DeLay; 2, Heater. Yearling herd—1, Day & Rothrock; 2, DeLay. Calf herd—1 and 2, Day & Rothrock; 3, DeLay. Get of sire—1 and 2, Day & Rothrock; 3, DeLay.

The Aberdeen Angus.

Two good herds of shiny, blocky blacks divided the Aberdeen Angus honors. One championship, senior and grand champion bull on Ericman CB 5th, a 2-year-old, went to J. A. Scollard of Chehalis, the other championships going to Congdon & Battles of Yakima. While competition was limited to two herds, the best show of Doddies in the recent history of the fair was staged.

Bulls: Group of three—1, J. A. Scollard, Chehalis, Wash., on Ericman CB 5th, Blackmead 2d, and Heathermead 4th; 2, Congdon & Battles, Yakima, Wash., on Queenmere 18th, Prideman CB 18th, and Queenmere 15th. Group of two—1, Congdon & Battles, on Prideman CB 18th and Queenmere 15th; 2, Scollard, on Blackmead 2d and Heathermead 4th. Three years or over—1, Congdon & Battles, on Blackbirdman CB 5th. Two-year-olds—1, Scollard, on Ericman CB 5th (senior and grand champion). Junior yearling—1 and 2, Congdon & Battles, on Queenmere 15th and Prideman CB 18th; 3, Scollard, on Heathermead 4th. Senior calf—1, Scollard, on Ericmead. Junior calf—Congdon & Battles, on Queenmere 18th (junior champion); 2, Scollard, on Blackcap 67th.

Females: Three years or over—1, Congdon & Battles, on Ridgelawn Barbara 2d (senior and grand champion); 2, Scollard. Two-year-olds—1, Congdon & Battles, on Queen Rosemere 13th; 2, Scollard, on Rose of Rosemere 8th. Senior yearling—1, Congdon & Battles, on Erica CB 4th (junior champion); 2, Scollard, on Blackcap of Broadmead. Junior yearling—1, Congdon & Battles, on Queen of Rosemere 15th; 2, Scollard. Senior calf—1, Congdon & Battles, on Barbara CB 2d; 2 and 3, Scollard.

Groups: Aged herd—1, Congdon & Battles; 2, Scollard. Yearling herd—1, Congdon & Battles; 2, Scollard. Calf herd—1, Scollard. Get of sire—1, Congdon & Battles; 2, Scollard.

The Holsteins.

The dairy cattle show was a free-for-all, with strong competition in every breed shown except the Ayrshires. The two chief competitors in the Holsteins were John L. Smith of Spokane and the Western State hospital of Steilacoom. The former's herd took all champions but one, junior heifer going to the hospital herd on a beautiful junior yearling. Hazelwood Heilo Butter King, now a junior yearling that last winter as a senior calf won the grand championship at the Western Royal, was made junior champion bull, but gave way to the aged bull, Segis Pietertje Clothilde for the grand championship. The University of Idaho, the State College of Washington and Sudhoff Brothers of Spokane fared well in the winnings, the university herd having probably a little the better of the secondary winnings.

Bulls: Three years or over—1, John L. Smith, Spokane, Wash., on Segis Pietertje Clothilde (senior and grand champion); 2 and 3, University of Idaho, Moscow, on Matador Violet Idaho and King Segis Violet Posch Idaho; 4, Sudhoff Bros., Spokane, on Idaho Hengerveld Belle Fayne. Two-year-olds—1, Western State hospital, Steilacoom, Wash., on Sir Pietertje Ormsby Blossom. Senior Yearling—1, Western State hospital, on Carnation King Matador Mutual. Junior yearling—1, Smith, on Hazelwood Heilo Butter King (junior champion); 2, University of Idaho, on King Posch Segis Idaho. Senior calf—1, Western State hospital, on Steilacoom Sir Ormsby Veeman; 2, Smith, on Hazelwood Stella Champion; 3, University of Idaho, on Idaho Matador Conqueror; 4, State College of Washington, Pullman, on Chinook Piebe Adam. Junior calf—1 and 4, Smith, on Hazelwood Sir Bessie Segis and Hazelwood Heilo Homestead; 2, State College of Washington, on Chinook Piebe Excellent; 3, Western State hospital, on Steilacoom Sir Pontiac Blossom.

Females: Three years or over—1 and 3, Smith, on Hazelwood Ormsby Butter Girl and Lady Bracelet Jewel; 2, University of Idaho, Segis Walker Colantha; 4, Western State hospital, on Bessie Pearl Tritomia. Two-year-olds—1 and 3, Smith, on Hazelwood Leda Heilo Korndyke (senior and grand champion) and Hazelwood Johanna Skylark; 2, State College of Washington, on Hazelwood Heilo Josephine Ormsby; 4, Western State hospital, on Steilacoom DeKol Colantha. Senior yearling—1 and 2, Smith, on Hazelwood Bessie Pauline Heilo, and Hazelwood Ormsby Heilo Duchess; 3, State College of Washington, on Hazelwood Heilo Aaggie DeKol; 4, University of Idaho, on Idaho University DeKol Korndyke Violet. Junior yearling—1 and 4, Western State hospital, on Steilacoom Bonnie Ormsby Lass (junior champion), and Steilacoom Ormsby Sadie Vale; 2 and 3, Smith, on Hazelwood Ormsby Homestead and Hazelwood Heilo Fobes Tritomia. Senior calf—1 and 4, Western State hospital, on Steilacoom Molly Hengerveld Ormsby and Steilacoom Blossom Zanke Mercedes; 2 and 3, Smith on Hazelwood Ormsby Duchess and Hazelwood Heilo Posch Ormsby. Junior calf—1, Western State hospital, on Steilacoom Jewel Pontiac Korndyke; 2 and 4, Smith, on Hazelwood Heilo Butter Girl and Hazelwood Bessie Pauline Posch; 3, State College of Washington, on Chinook Piebe Dora.

The Jerseys.

The Interstate has never had a better showing of Jerseys. Half a dozen breeders fought out a hotly contested show, with the four champion ribbons going to four different herds. Glen Tana farm, Spokane, started it by taking senior and grand champion on its aged bull, Glen Tana Perfection. Midfields farm, Winlock, grabbed the junior championship on the senior yearling bull, Fussy's Fern Noble 35th. Erickson Brothers took the senior and grand champion ribbon for females home to the Yakima valley on Sultan's Violet Rose, while the state college won junior female champion on Waikiki's Pilot Mary, the animal that, as a junior calf, was grand champion at the Pacific International last winter. While Waikiki farm, Spokane, carried away no purples, its entries were crowding the winners in nearly all classes and captured their share of firsts.

Bulls: Three years or over—1, Glen Tana Farm, Spokane, Wash., on Glen Tana Perfection (senior and grand champion); 2, Ericson Bros., Yakima, Wash., on Sultan's Olga's Boy; 3 and 4, Waikiki Farm, Spokane, on Sultan of Rockland and Count's Foxy Lad of Waikiki. Two-year-olds—1, Waikiki Farm, on Belle's Pilot of Waikiki; 2, Ericson Bos., on Raleigh's Fancy Lad; 3, Midfield's Farm, Winlock, Wash., on Champion of Midfields; 4, Dewey Rodgers, Spokane, Wash., on Glen Tana Morocco Fancy. Senior yearling—1, Midfields Farm on Fussy's Fern Noble 35th (junior champion); 2, Glen Tana Farm, on Glen Tana Morocco Wonder; 3, Waikiki Farm, on Waikiki Oxford Count; 4, Ericson Bros., on Sultan's Bonnie Lad. Junior yearling—1, Waikiki Farm, on Waikiki Jolly Rioter; 2, Julius H. Zodrow, Chewelah, Wash., on Linger Longer Prince. Senior calf—1, University of Idaho, on Idaho Baronet Hero; 2, Glen Tana Farm, on Glen Tana Morocco Jimp; 3, W. H. Hamann & Son, Buckeye, Wash., on Glen Tana Morocco Pollux; 4, H. T. Skeels & Son, Addy, Wash., on Esther Fair Oxford. Junior calf—1, Midfields Farm, on unnamed calf; 2 and 3, Glen Tana Farm, on Glen Tana Morocco Sultan and Glen Tana Morocco Majesty; 4, Waikiki Farm, on Waikiki's Genesta Pilot.

Females: Three years or over—1, Ericson Bros., on Sultan's Violet Rose (senior and grand champion); 2, University of Idaho, on Owlet's Louise of Waikiki; 3, Glen Tana Farm, on Glen Tana Sibyl 2d; 4, Waikiki Farm, on Oxford Bessie of Waikiki. Two-year-olds—1, Glen Tana Farm, on Glen Tana Dorothy; 2, Ericson Bros., on Olga's Pet; 3, Midfield Farm, on Cicelys Golden Dam; 4, University of Idaho, on Waikiki Altamont Maid. Senior yearling—1 and 4, Waikiki Farm, on Waikiki Pilot's Duchess and Waikiki's Foxy Prince; 2, Ericson Bros., on Sultan's Vesta Lass; 3, Midfields Farm, on St. Mawes Merry Olga. Junior yearling—1, State College of Washington, on Waikiki's Pilot's Mary (junior champion); 2, Ericson Bros., on Miss Olga Figgis; 3, Midfields Farm, on Sweetheart's Image; 4, Waikiki Farm, on Foxy Coquette of Waikiki. Senior calf—1, University of Idaho, on Idaho Torono Charity; 2, Midfields Farm, on unnamed calf; 3, Ericson Bros., on Sultan's Majesty Lass; 4, Glen Tana Farm, on Glen Tana Morocco Lady. Junior calf—1, Midfields Farm, on unnamed calf; 2 and 3, Waikiki Farm, on Waikiki's Morocco Beauty and Waikiki's Hazelwood; 4, Glen Tana Farm, on Glen Tana Morocco Fairy.

Groups: Graded herd—1, Glen Tana Farm; 2, Ericson Bros.; 3, Waikiki Farm. Young herd—1, Midfields Farm; 2, Waikiki Farm; 3, Glen Tana Farm. Calf herd—1, Midfields Farm; 2, Glen Tana Farm; 3, Waikiki Farm. Get of sire—1, Midfields Farm; 2, Glen Tana Farm; 3, Waikiki Farm. Produce of cow—1, Glen Tana Farm; 2, Ericson Bros.; 3, Midfields Farm.

The Guernseys.

Guernseys are not well known to the regular visitors at the Spokane Interstate—that is, they were not until this year. A barnful of the tan and whites this time almost necessitated standing-room-only signs occasionally as the crowds gathered to admire them. Several of the most prominent breeders of the Pacific northwest, nearly all from outside the Inland Empire, competed, among them three leading west Washington herds and one of Oregon. Nobody offered any serious complaint when La France of Bralee of the A. MacRae Smith herd of Bellingham received the grand championship ribbon in the female competition. Judges may differ as to relative merits of animals, but none deny that La France is a great little show cow. Smith also won the grand championship in bulls on a senior calf, Fircrest LaFrance Rival. The senior champion bull was shown by W. O. Reith of Astoria Ore., while Chicona farm, Chinook, Wash., received the purple for junior champion heifer.

Bulls, Three years or over—1, Chicona farm, Chinook, Wash., on Chicona Buster; 2, E. S. Fordney, Addy, Wash., on Chicona Noble Boy; 3, Orchard Hill Farm, Redmond, Wash. on Chicona Hero; 4, A. MacRae Smith, Bellingham, Wash., on Glendale's May Time. Two-year-olds—1, W. O. Reith, Astoria, Ore., on Glenwood Sequel Lad of W. W. (senior champion). Senior yearling—1, Orchard Hill Farm, on Glenwood's Jolly Tar of O. R. Junior yearling—1, J. C. Odell, Valleyford, Wash., on Amy's King; 2, Reith, on Squire's Noble Lad of W. W.; 3, Orchard Hill Farm, on Chicona Victory; 4, Chicona Farm, on Chicona Peter. Senior calf—1 and 4, Smith, on Fircrest LaFrance Rival (junior and grand champion) and Fircrest Leader; 2, Chicona Farm, on Chicona Luke; 3, Reith, on Willowwood Butter Maker. Junior calf—1, Smith, on Fircrest French Boy; 2, Chicona Farm, on unnamed; 3, Orchard Hill Farm, on Topsy's Captain Barlow of O. N.; 4, Reith, on Willowwood Belle Chene.

Females: Three years or over—1, Smith, on LaFrance of Bralee (senior and grand champion); 2, Chicona Farm, on Jewel of Rose City; 3, Orchard Hill Farm, on Sammamish Roxie; 4, Reith, on Elaine of Chicona. Two-year-olds—1 and 3, Reith, on Rose Girl of Oregon, and Sequel's Lady of Willowwood; 2, Smith, on Fircrest Pretty Maid; 4, Orchard Hill Farm, on May King's Fire Fly. Senior yearling—1, Chicona Farm, on Doris of Chicona (junior champion); 2 and 3, Smith, on Fircrest LaFrance Pride and Fircrest May Blossom; 4, Orchard Hill Farm on Glenwood's Bright Light of O. H. Junior yearling—1 and 4, Orchard Hill Farm on Wanda Topsy of O. H. and Flossie Topsy of O. H.; 2, Chicona Farm on Sunlight of Chicona; 3, Reith on Butter Girl of Willowood. Senior calf—1, Reith on Jewel Chene of Willowwood; 2 and 3, Chincona Farm on Lavinnia of Chicona and Diana Chicona; 4, Orchard Hill Farm on May King's Golden Glow of O. H. Junior calf—1 and 2, Chicona Farm on unnamed; 3 and 4, Smith on Fircrest Golden Girl and Fircrest Merry Dame.

Groups: Graded herd—1, Chicona Farm; 2, Smith; 3, Reith. Young herd—1, Chicona Farm; 2, Smith; 3, Reith. Calf herd—1, Chicona Farm; 2, Orchard Hill Farm. Get of sire—1, Smith; 2, Chicona Farm; 3, Reith. Produce of cow—1 and 2, Smith; 3, Chicona Farm.

The Ayrshires.

Two entries of the state college of Washington were the only competitors of the herd of E. W. Van Tassel of Wenatchee, Wash. All awards were taken by Van Tassel except 1st senior bull calf, Chinook Cavalier Karton (junior and grand champion) and 3d, senior heifer calf, Chinook Cavalier Elsie, the two state college entries. Van Tassel's championships were won as follows: Queen Scotish Cavalier, senior champion bull; Glengary's Scottish Queen, senior and grand champion cow, and Wenatchee Blossom, junior champion heifer. The Van Tassel herd of about 20 head contains only three of last year's show string.

The Horse Show.

The horse show this year was a revelation. Not for several seasons has this division compared favorably with the showing of tractors and self-propelled farm implements. This year, however, there was a showing of both that seemed clearly to indicate that there is a big place in farming operations for both the power machine and the horse.

The Shires.

The Shire show was largest, with several competitors. The string of M. W. and H. W. Merritt and that of Mr. and Mrs. W. A Clark were most notable, though the University of Idaho took the female grand championship

Stallions: Four years or over—1, W. A. Clark, Latah, Wash., on Eureka Nig 2d (senior champion); 2, A. B. Skidmore, Plummer, Idaho, on General Leonard Wood. Three-year-olds—1, Skidmore, on Teddy R; 2, H. W. Merritt, Rosalia, Wash., on Blue Ribbon Winner. Two-year-olds—1 and 3, H. W. Merritt, on Forest Prince (junior and grand champion) and, Mills Billie; 2, W. A. Clark, on Mack. Yearlings—1, H. W. Merritt, on Sir Gould; 2, Mrs. W. A. Clark, on Bardon Menestrel 2d. Colt—1, W. A. Clark, on Rothwell Forester 2d; 2, M. W. Merritt, Rosalia, Wash., on Irving Washington.

Mares: Four years or over—1, University of Idaho, on Sylvia Best (senior and grand champion); 2, M. W. Merritt, on Martha Washington; 3 H. W. Merritt, on Lady Victor Rose; 4, W. A. Clark, on Colony Heorine. Three-Year-olds—1, W. A. Clark, on Evalend's May Queen. Two-year-olds—1, W. A. Clark, on Mary Pickford. Yearlings—1, Mrs. W. A. Clark, on Colony Missie (junior champion); 2, H. W. Merritt, on Nancy Lee; 3, Skidmore, on Maud Shotkin. Colt—1, Mrs. W. A. Clark, on Lorna Doone; 2, H. W. Merritt, on Princess Victoria. Mare and colt—1 and 3, W. A. Clark; 2 and 4, H. W. Merritt. Groups: Get of sire—1, M. W. Merritt; 2, W. A. Clark. Produce of mare—1 and 2, Mrs. W. A. Clark; 3, M. W. Merritt; 4, Skidmore. Carload lot—1, M. W. Merritt.

The Percherons.

The Percheron show was not large, but was of good quality. The championships went to four different breeders.

Stallions: Four years or over—1, Whitman & Sievers, Rosalia, on Donland (senior champion). Two-year-olds—1, University of Idaho, on Grand Sultan (junior and grand champion); 2, A. H. Poston & Sons, on Stadicona. Yearlings—1 and 2, C. E. Thayer, Waverly, on Taco and King. Under one year—1, University of Idaho, on Brilliant Kurdes.

Mares: Four years or over—1, Thayer, on

SALMEL
(Brand)
FISH MEAL
For
POULTRY

SALMEL BRAND Fish Meal is manufactured by our "Alaska Reduction Co." plant at Hawk Inlet, Alaska, from fresh salmon waste. The meal is cooked, dried and sacked ready for use the day the salmon is received at the cannery, and the same care necessary for manufacturing food for human consumption is exercised in the production of this poultry food. The albuminoids of fish are more readily assimilated and digested than all forms of meat protein foods, when prepared under our exclusive process of manufacture.

WADE'S ANNOUNCE NEW SERVICE
FOR FAMOUS NEW PEORIA DRILLS

WE now offer you a personal service in obtaining the best drill in the world for your fall seeding. If you live in Oregon, Washington or Idaho our traveling representative whose route is nearest you will call and personally give you drill facts, which have increased grain yields. Just fill out the coupon and ask us to have the Peoria drill man call on you. You will be under no obligation.

We'll also be glad to send you, FREE, new catalogues on the New Peorias, 12 sizes, single and double disc, plain or fertilizer, horse-drawn or tractor hitch.

Don't Take Chances With a Worn-Out Drill

New Peoria disc shoedrills bring full, even stands. The patented disc shoe cuts trash, stalks, hard ground; shoe opens furrow; seed droppea evenly on packed seed bed; every seed covered, safe from wind and birds; all seeds germinate, sprout, grow, head out and ripen uniformly.

Now Is the Time to Get the Facts

A new Peoria will not only bring you increased yields but it will also save you money on seed. Send for catalog of users' testimony. Your neighbors will tell what it has done for them, too.

Fifty-seven years of experience back of Wade lines. Since 1865 we have been supplying farmers of the northwest with implements and machinery particularly adapted to the needs of this territory. The New Peoria is one of these "hand-picked" implements.

Act Now. Mail Coupon Today.

R. M. Wade & Co., Dept. W, Portland, Ore., or Spokane, Wash.

Please have your New Peoria drill man call on me. Also send by return mail free catalog and 1922 prices. This is not an order and does not obligate me to buy.

PORTLAND, ORE.-SPOKANE, WASH.

The Grays Harbor County Fair

The occasional showers that occurred on the two opening days of the Grays Harbor county fair at Elma made but little impression on the immense crowds that came from all parts of the county as well as from towns in other parts of the state. The fair was held from September 2 to 6 in order to include Labor day and give many townspeople who take that day off an opportunity to attend the races. The plan was indeed a success because there was a much larger attendance than has ever been known in the history of the institution. And the visitors were not the only ones who turned out strong in support of the county fair, but the exhibits came from all parts of the county, thus representing all districts better than has been known for many years. The agricultural products were especially well prepared and came from all districts in the county except one.

"We are more than well pleased with the turnout this year," remarked C. H. Palmer, secretary of the fair, "and believe it is partly due to the fact that we have tried to give the people more than their money's worth. The entire fair is larger than it has ever been in the past and there is also a better quality of exhibits than we have ever had before."

New Poultry Building.

In order to make room for all of the entries that were expected, the fair association voted funds for a new poultry building, the same size as the cattle barn. The finished structure housed all of the poultry exhibits with the exception of a few crates of ducks and geese which were placed outside. The old poultry building was used for the dog show, which was made up largely of local stock.

The poultry show this year was housed in the new poultry building and was larger by about 200 birds than it was last year and there was also a higher quality of entries. Chris Danials of Elma the new superintendent, introduced a new class of utility birds which called for a double system of judging. They were first looked over by George R. Shoup of the western Washington experiment station and classed according to their ability as producers, after which H. H. Collier of Tacoma judged them for type. Mr. Collier judged the main show exhibits, which consisted of nearly 900 birds. A. A. Turango of Elma won the coveted Kenworthy cup which was offered for the utility class.

The races were first class and, with the exception of one rainy afternoon, the weather was ideal. The commercial exhibits were well displayed and there was a clean bunch of concessions.

In addition to the regular routine, a Holstein sale was held. This was the dispersal sale of the H. O. Kjelland herd from North Bend, Ore., which will be reported later.

As a means of getting the exhibitors and business men together, a banquet was put on in the Methodist church on Monday night, the third day of the fair. The dinner was financed by the business men of the county. There were a number of interesting talks by prominent breeders as well as representative men from different towns of the county.

Communities Compete.

The displays in the agricultural building were unusually interesting this year, since they were made up by a number of community organizations, such as parent-teachers' associations and community clubs. Farm produce came from every section of the county but one, and W. L. Cox, secretary of the department, said that this is the first time the county has been so well represented since the first year of the fair.

The fruits took up a large part of the space and consisted largely of apples and pears of many varieties. The potatoes came from a number of individual growers, most of whom were farmers. There were some, however, from the certified seed growers in the county, which added to the quality and size of the show. The cabbage and rutabagas shown were exceptionally well developed for the poor growing seasons. Many of the crops were grown on upland soils.

The Summit and Montesano Garden clubs each put on a neat exhibit showing that they had not been idle during the summer. Two other club exhibitors were from the Oxford and Montesano potato clubs. These were not large displays, but they were very good and showed that the boys knew how to grow potatoes. Five boys of the county bee club put on a display of honey which was a credit to any honey producers.

Aside from the individual entries of honey there were three displays from individual apiaries, in which were many kinds of honey, but that made from the fireweed was the most attractive because of its being very clear. Two show cases were filled with many home-made dishes in which honey was used in the place of sugar.

The art building was filled with garden and potted flowers as well as art and sewing. The latter, however, took up all of one side, whlie part of the center was devoted to home canned goods. Another section was filled with cakes, cookies and other such articles from the kitchen.

The woman's department extended to the next building, where the club girls showed their sewing and canning work. The clubs entered were: Fairview, Wishkah, Wynoochee, Silver Star, Oakville and Montesano.

The public schools of the county also showed their exhibits in the building, two of which consisted of furniture made by the manual training classes.

The Live Stock Exhibits.

The cattle show was made up largely of Jerseys and beef cattle, while there were some local Holsteins entered for competition. The greater part of the space formerly devoted to the latter breed was occupied by the 45 head which were in the Kjelland sale.

The junior and grand champion bull, a senior calf, was from the Jim Carstairs herd of Elma. The senior and grand champion female was won by A. A. Seibert of Elma on Pauline Vicroy De Kol, the only aged cow entered in the show.

The Jerseys.

John R. Martin of Satsop won the junior and grand champion honors with Oxford Fern Theater Cup, the 10-month-old bull that was added to the herd this spring. The grand champion female award went to the A. M. Starr herd, which came from Coaldale, Alberta. The young heifer, Starr's Golden Miltie, was an extremely outstanding calf with an unusually well developed udder. Her high quality and typiness placed her above John Taylor's aged cow, Girletta's Lucy.

The special prize offered by the Aberdeen Chamber of Commerce for the champion producing dairy cows of Grays Harbor county was won by A. A. Seibert of Elma, with Pauline Viceroy De Kol. The grand champion Jersey in this class was Gwendola Rosaire's Gertie, a senior yearling of the J. H. Taylor herd of Montesano. Mr. Taylor also took second prize and J. R. Martin's cow placed third.

The Beef Cattle.

The beef breeds were represented by Shorthorns and the dual purpose by Red Polled. There were two herds of the latter breed, namely, that of F. H. Porter of Halsey, Ore., and L. K. Cogswell of Chehalis. The Porter herd had the grand champion male an dfemale, while the 18 head in the Cogswell herd took a number of firsts and seconds, making the prize money about equal. The E. C. Truesdell herd from Centralia had no competition in

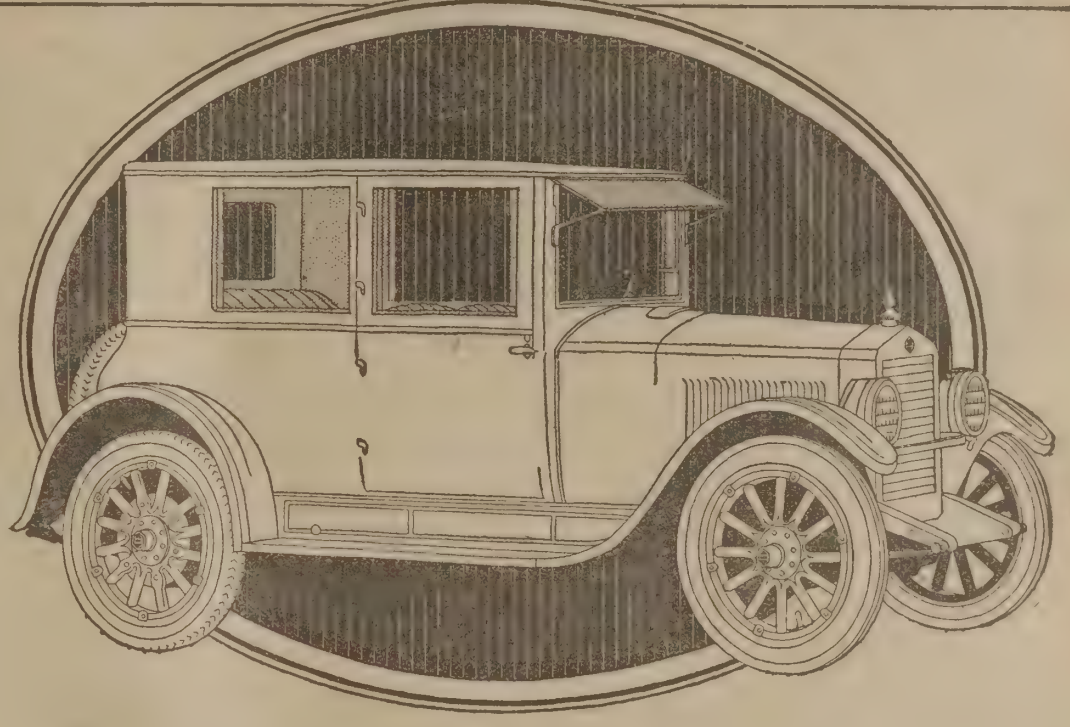
New Lamp Burns 94% Air



Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

ESSEX COACH $1295

All-Year Comfort and Dependable Service

With all the noted qualities of the Essex chassis, the Coach combines closed car utility, comfort and distinction, at an unrivalled price.

Note how little more it costs than the open car. That is made possible by great production. More Essex Coaches are now built than any other fine closed car.

You must see, examine and drive it to realize what is offered at this price.

Built to Endure Hard Service

The type of body construction is the newest. It gives a durable, comfortable type, of appealing distinction. But, perhaps more important, is the far quieter car that results. The Essex Coach construction absorbs and annuls practically all "drumming" noises of the closed compartment.

And the Coach is a product that will endure in good, useful service for years. Come see, and drive it before you buy any car.

What Owners Say the Real Proof

There is a simple way to get the real truth about any car. Why buy blindly?

You have the all-important advantage of being able to ask owners. Make use of it. Find out how any car you think of buying has served others. What mileage does it give on gasoline and tires? What are upkeep costs? Is the second or third 10,000 miles just as satisfactory as the first? What is the future expectancy of good service after twenty or thirty thousand miles? Just ask owners of the Coach how solid and quiet and free from rattles the body stays. How comfortable and easy it rides and handles. The satisfaction of owners is the best proof of all. We want you to know what Coach owners think because we believe their enthusiasm will win you, too.

POULTRY AND RABBITS

Best Mash

To Stimulate Egg Production

The best mash for stimulating egg production in hens of the general purpose breeds, such as the Plymouth Rocks and Wyandottes, according to experiments carried on by the United States department of agriculture, is one that is not so rich in corn meal and meat scrap as those frequently fed to Leghorns.

On the department's poultry farm at Beltsville, Md., the best results with general purpose hens were obtained with a mash containing only 18 per cent of meat scrap with considerable ground oats and wheat bran. The entire mixture is made up in the proportion of three parts of corn meal, one part of bran, one and one-half parts of meat scrap, one part of middlings, two parts of ground oats and 5 per cent of linseed meal. As a result of using this feed the hens produced a good yield of eggs, but did not become overfat and were in good breeding condition.

Leghorns and other breeds of the same type can use a heavier and more stimulating ration without endangering their physical condition and the hatching quality of the eggs. The mash that has been giving the best results with the department's Leghorn flock is made up of four parts bran, four parts middlings, 66 parts corn meal and 26 parts of meat scrap. Barred Plymouth Rock pullets fed on this heavy mash laid a few more eggs than pullets of the same breed fed on the first mash, but they suffered in health and their eggs were lower in fertility.

Among the vegetable proteins fed to poultry the department has found that gluten meal seems to be the best, although cotton seed and peanut meal are very satisfactory if supplemented with animal protein in the form of meat scrap, tankage, fish meal or milk, and with mineral salts. For good results the vegetable proteins should not exceed 10 per cent of the total mash. Tests have shown that a good grade of fish meal is practically as good as meat scrap or high-grade tankage.

Tuberculosis Takes Big Toll

Tuberculosis is one of the most costly diseases of poultry. Many a farm finds its hens unprofitable because of this malady, though the owner be unaware of it. Many a farm yard is infected with this disease, which spreads to the younger generation each year, the farmer or his wife wondering what is the reason they can not succeed with hens.

As tuberculosis progresses the liver becomes enlarged by the growth of the tubercles. It is not often that there will be found spots on the liver from other causes. The tuberculous spots are rather hard and gritty when touched with a knife, while other spots are soft. The symptoms are not always the same. While the disease usually affects the liver, sometimes it affects the intestines and may not be evident in the liver. It very frequently affects the intestines and often both liver and intestines. Sometimes the hen will be lame. There is usually a loss of flesh, but occasionally a fat hen will die of the disease. In the former case the hen becomes so emaciated before death that there is little flesh on the bones. In other cases the hen becomes filled with a watery fluid and the abdomen is full and hard. This is a dropsical condition frequently found.

There is no dependable cure for the disease when it once gets into a flock. Prevention is essential. When the disease has been in the flock for some time and the stock has no special breeding value the best plan is to kill off all the stock and start anew.

The remedial measures necessary will be indicated when it is understood that the bacilli pass through the fowl in the droppings. The intestinal wall breaks down when the tubercle becomes large and the germs are passed out in the excreta. A healthy fowl picking up feed that has come in contact with the infected droppings may take the disease. This is how the disease spreads in a flock and probably the only way, and is why the disease is confined largely to the digestive organs. Before other fowls, therefore, are put in the same house or same yards the ground must be thoroughly disinfected. They had better be left vacant for six months. If the direct rays of the sun can get at the ground the germs will be killed. The ground should be plowed or spaded up. The house should be sprayed as well as all drinking vessels and food troughs. In purchasing fowls it is a good plan to inspect the yards from which they come and not purchase any from a flock that has shown any suspicion of the disease.

The New Zealand Red Rabbit

By Agnes E. Brenner.

The New Zealand Red Rabbit made its first appearance during the year of 1909 and was a very poor looking specimen alongside of the beautiful rabbit we now have.

The origin of the New Zealand Red forms one of the most interesting chapters in the history of the rabbit family.

The first few specimens to be shown resembled an old dirty piece of canvas in color. Their type was also poor and many were covered with white hairs, some having considerable ticking on hind quarters and on top of back. The front legs had white bars and the hind legs on many specimens were entirely white. The ears were short, with ear lacing showing strong and large white circles around the eyes.

The New Zealand has made probably the greatest improvement of type and color of any rabbit in America. California contains the largest number of breeders. That is where the breed originated. Washington, Oregon and Oklahoma come next in number.

The New Zealand is not a fancy rabbit. Its type is ideal for meat and that is the reason for breeding it, but the public enjoys seeing them on exhibition and large classes are found at the shows.

The best age for fryers is from eight to 10 weeks. The meat is tender, white and delicious and has become a great favorite on the Pacific coast and other sections.

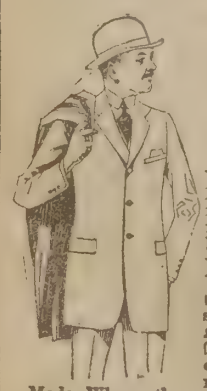
Half an Egg a Day

The per capita consumption of eggs in the United States is one-half an egg a day, as figured out by the United States department of agriculture. The department suggests that every one not only get his full share of egg, but eat the whole egg. This alone would double the demand.

More eggs have been laid this year than ever before. The total runs up to something like 22,000,000,000 eggs, an increase of 10 per cent since the armistice.

Increase of production is attributed by department marketing men to the fact that more hens are laying. There has been decreased consumption of poultry, and farmers have been compelled to keep their hens on the farm. Hens must eat, and to pay their board they must produce eggs. This is given as the chief reason for the increased production of eggs.

Free Book Tells How to Get More Eggs!



HOW to save feed and get double egg yield. How to cull out poor layers. How Mrs. Hume made $2000. How Mr. Luttrell makes $5 net profit per hen. This book explains Prof. Quisenberry's system now being used by 46,000 successful poultry raisers. 1000 money-making secrets.

Write Today! Simply send name, a postcard will do, for this 96-page free book, "Dollars and Sense." No cost, no obligation. However, if you enclose 25c, we will send you 25 colored celluloid leg bands to mark your best layers without using trap nests.

SPEED WAGON

For Every Kind of Hauling

Speed Wagons are today performing every kind of rural hauling and carrying.

Some one of the seven types of bodies that are now standard will do your work.

No matter whether yours be a general, a stock or grain farm; a commercial orchard, truck garden or chicken ranch—no matter where located, or what the nature of roads or loads—

Still a Speed Wagon will do your work quicker and cheaper.

Nearly 80,000 Speed Wagons now in use prove that.

Product of eighteen years of successful building of good motor vehicles, this Speed Wagon is the greatest single achievement of this famous organization.

And remember—"If it isn't a Reo, it isn't a Speed Wagon."

ORCHARD AND GARDEN

Honey for Health

By GEORGE W. YORK.

It is only within recent years that the question of food has received due consideration as related to good health and longevity. For the reason that we have taken it for granted that three meals a day were a necessity, instead of inquiring into the scientific basis of its need in an analysis of the why and wherefore of human nutrition, we have overlooked its potential powers in building bodies for resistance to disease.

An eminent physician says that the body requires in its building at least 14 elements, and these must be supplied by the foods that the Creator has furnished us in their many and varied forms.

We classify these foods as proteids, carbohydrates, fats and sweets, in order that bone and tissue may be built, but the sweets that are given him usually are made of refined sugars and other denatured products, instead of nature's unadulterated sweets, such as honey and similar products.

Honey is one of the greatest foods that nature has to offer. It was known and used ever since history records, and the item, "a land flowing with milk and honey" was synonymous with prosperity and peace.

On analysis, we find honey contains dextro-glucose, laevo-glucose and mannite-glucose. It no doubt owes its flavor to the ethereal acids found in the various sources of supply.

The finest honey is probably found in Narbonne, France, from the fact that a splendid variety of white clover is grown in that district, and the color of the honey is a greenish white.

The ancient Briton used a drink called "mead" made of honey and water. The Romans made a mixture of honey, wine and boiled water, called "mulsum." It was used for embalming in Egypt.

Among the peoples of India it was considered a great compliment to present their guests with a drink composed of honey and milk.

The aborigines of Peru offered honey as a sacrifice to the sun.

Honey cakes are today one of the dainties offered to guests by the Abyssinians and Bulgarians.

I am sure that if parents only knew the high food value of that incomparable sweet called "honey" they would never allow their children any of the pernicious and vile concoctions to be found in stores and markets, but would see to it that honey be found on every table.

Irrespective of price, honey has no superior as a food, and when a child desires candy he should receive his sweets in the form nature has perfected it.

The housewife can use honey in anything and everything that requires sugar or sweets. What more can I add than this: First, flavor; second, food value; third, cheapness; fourth, the Ambrosia of Eden?

Elements of Fertility

Complete fertilizers, as shown to the fertilizer manufacturer and the consumer, are fertilizers containing nitrogen, phosphoric acid and potash.

There are three forms of nitrogen, as shown by chemical analysis, which are used in complete fertilizers: The nitric nitrogen, ammoniacal nitrogen, and organic nitrogen, says A. V. Ahmet, agricultural chemist of Tacoma, Wash. The nitric nitrogen is soluble and immediately avaliable to plant life. Ammoniacal nitrogen is converted into nitric nitrogen by the action of the bacteria and soil chemicals in a rather short period, in which form it is taken up by the tree or plant that is fertilized. Organic nitrogen is slower than either of the other two forms to become available, for in its decomposition it must change to the ammoniacal form and then to the nitric form of nitrogen.

There are three forms of phosphoric acid: Water soluble, citrate soluble and insolnble. In the use of the three forms of nitrogen and the three forms of phosphoric acid there is a continuing availability of plant food throughout the growing season.

Potash is all water soluble, the two standard forms being muriate of potash and sulphate of potash, with practically the same agricultural value. Potash in some form, either as it exists in the soil or as applied in the form of an artificial fertilizer, is essential to wood growth.

Nitrogen, phosphorus and potash are essential to vigorous development of trees and other plants. They all exist in all agricultural soils, but in varying ratios. One of the vital problems of fertility is determining the ratio in which they do exist and their respective availability, together with the requirements of the crop being grown. With this information they may be supplied where deficient or deficient in availability in the proportions in which they are needed for maximum results.

Budding and Grafting

By PROFESSOR O. M. MORRIS.

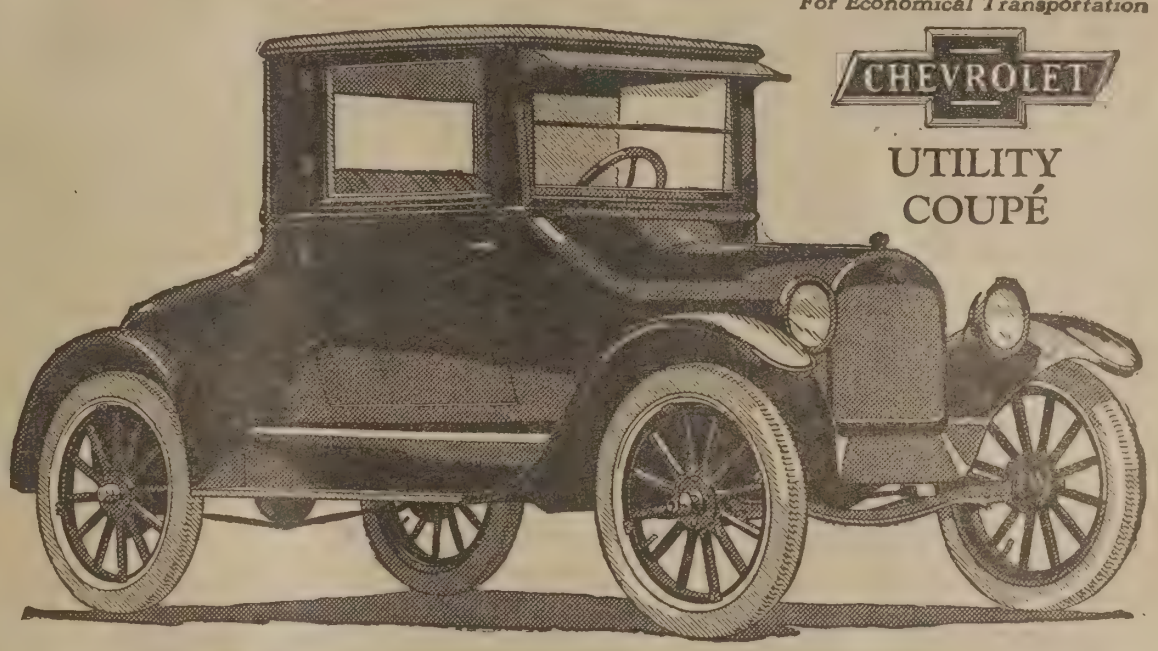
The common budding work is ordinarily done in midsummer, any time after the buds of the present season's growth are sufficiently matured. Peaches, cherries, plums and pears can usually be budded before the middle of the summer. Apples usually require a little longer time for the best maturing of the buds.

The bud is prepared for the setting by removing the leaf just at its base. The bud is removed by placing the edge of the budding knife about half an inch below the base of the bud and cutting up and slightly into the wood, and slicing out the surrounding bark containing the bud to about half an inch above the bud. This removes the bud, usually with a little wood under it; the entire piece removed is an oval or shield shape, with the bud in the center.

The stock is prepared to receive the bud by first having a perpendicular slit in the bark, and then a cross at the top of this slit, cutting through the bark, but no deeper into the wood than is necessary to make sure that you have passed through the bark. Lift the corners of the split bark. Place the lower end of the shield of bark around the bud in this opening, just under the two corners of the lifted bark, and above the bud downward in the slit of the bark on the stock. Push the bud down as far as it will go without further slitting the bark; then wrap with a light cord once below the bud about twice above, and tie it firm enough to hold the bark close. The string should be cut about 7 to 10 days after the bud is set.

In budding peaches, cherries and plums to start young trees, buds should be set as close to the surface of the ground as the work can conveniently be done. Seedlings that have started growth in the early spring should be ready for budding by the middle of summer and form the best trees. In pear and apple budding to form new trees, the seedlings are frequently a year and a half old before they are large enough to work well.

In budding into the top of trees to do top work, it is often necessary to cut into older wood, and great care is necessary in lifting the bark which has become old and stiff. No form of wax or covering other than the string is ordinarily required. The top of the seedling above the bud should be cut away the following winter, so that in the next spring this set bud may start to grow and form the new plant.



CRANBERRY GROWERS INCORPORATE.

The Pacific Cranberry Exchange has just completed its incorporation as a cooperative agricultural association, is the news from Ilwaco, Wash. Its officers are: J. S. Dellinger, president; L. W. Paul, vice president, and G. W. Hill, secretary. W. E. Schimpff, who served in the capacity of sales manager of the exchange last season, has been again engaged in that same capacity this year. Last year the total crop of cranberries grown on the Pacific coast was 33,000 boxes. This season the crop will not reach these figures, as the crop is spotted.

For Economical Transportation

CHEVROLET

UTILITY COUPÉ

The Lowest Priced
High Grade Closed Car

$680

f. o. b. Flint, Michigan

This is the car for the country.

No new model Chevrolet has ever met with such quick success with farmers. It is just what they have long wanted—a high-grade closed car at a surprisingly low price.

Like every other Chevrolet model it offers unmatchable VALUE.

The high-grade Fisher Body is practical as well as handsome. The extra large, heavy plate-glass windows afford clear vision on all four sides.

The mammoth rear compartment with locking cover contains 14 cu. ft. of space for luggage, packages, produce and merchandise of all kinds.

The upholstery is in gray whipcord—wide, comfortable, well-sprung seat and back—easily kept clean. Equipment includes standard three speed transmission, vacuum feed, cord tires.

The chassis is the Superior Chevrolet with that celebrated valve-in-head motor, which has been an important factor in giving us first place in sales of standard equipped automobiles.

No matter what car you own or think of buying, you owe it to yourself to see this all-weather Utility Coupé and COMPARE IT for value and low mileage costs.

Farmers know car value. That is why they are buying this model by the thousands.

Interstate Fair Is Interstate for Sure

(Continued from page ten.)

Louise (senior and grand champion); 2, 3 and 4, University of Idaho, on Kurdes, J. E. Mary and Iris. Three-year-olds—1 and 2, University of Idaho on June and Joanna. Two-year-olds—1, H. C. Doepke, Fairfield, on June Waltz (junior champion.) Under 1 year—1, University of Idaho, on Brilliantine. Mare and colt—1, University of Idaho, on Kurdes and foal.

Belgians.

Stallions: Four years or over—1, J. A. Marion, Fairfield, on Successful (senior and grand champion).

Clydesdales.

All awards in this class went to Robert C. McCroskey of Garfield, Wash., the only exhibitor. His champions were: Senior and grand champion stallion, Meg's Chief, a three-year-old; junior champion stallion, Prince, a yearling; senior and grand champion mare, Faibholme Meg, an aged mare; junior champion mare, Bonnie Brae Jean, a two-year-old.

The Hog Show.

The hog show was outstanding. There were strong exhibitions of the five leading breeds, with honors about divided as to numbers between the Durocs and the Chester Whites. Fewer numbers, but as good quality, were shown in the Polands and the Berkshires, while J. M. Fruitts, the principal exhibitor of Hampshires, offered a creditable show of the belted breed.

Berkshires.

Boars: Senior yearlings—1, Indian City Farm, Spokane, Wash., Senior pig—1 and 2, Pearl Wood, Gervais, Ore. Junior pig—1, Pearl Wood.

Sows: Aged sow—1, Indian City Farm. Junior yearling—1, Orval R. Loe, Silverton, Ore.; 2, Indian City Farm. Senior pig—1, 2 and 3, Pearl Wood; 4, John F. Peterson, Silverton, Ore. Junior pig—1 and 2, James C. Bonner, Silverton, Ore.; 3, Loe.

Groups: Herd—1, Pearl Wood. Get of sire—Pearl Wood. Produce of sow—Pearl Wood.

Championships: Senior and grand champion boar—Indian City Farm, on Matchless Less Royal. Junior champion boar—Pearl Wood, on Producer 4th. Senior and grand champion sow—Indian City Farm, on Iowana Lenore 76th. Junior champion sow—Pearl Wood, on Festline Lady 2d.

Poland Chinas.

Boars: Aged boar—1, A. Kloppenburg, Spokane. Senior yearling—1, Emil O. Loe, Silverton, Ore. Junior yearling—1, Loe; 2, J. F. Torgason, Suver, Ore.; 3, Charles C. Glover, Spokane; 4, B. F. Kammerzell & Sons, Colfax, Wash. Junior pig—1 and 2, Loe; 3 and 4, Kammerzell.

Sows: Aged sow—1, Loe; 2, Kammerzell. Senior yearling—1 and 2, Loe; 3, Kammerzell; 4, Glover. Senior pig—1, 2 and 3, Loe. Junior pig—1 and 3, Loe; 2, James Mulkey, Silverton, Ore.; 4, Kammerzell.

Groups: Aged herd—1, Loe. Young herd—1 and 2, Loe; 3, Mulkey. Get of sire—1 and 2, Loe; 3, Mulkey. Produce of sow—1 and 2, Loe; 3, Mulkey.

Championships: Senior and grand champion boar—Kloppenburg, on Headliner. Junior champion boar—Loe, on Loe's St. Peter. Senior and grand champion sow—Loe, on Wonderful. Junior champion sow—Loe, on Miss Hunter.

Chester Whites.

Boars: Aged boar—1, Ed Schoel, Albany, Ore.; 2, C. M. Meenach, Sharon, Wash.; 3 and 4, H. S. Curtis, Palouse, Wash. Senior yearling—1, Schoel. Junior yearling—1, Schoel; 2, J. L. Davidson, Tekoa, Wash.; 3, Curtis. Senior pig—1 and 3, Meenach; 2, Schoel; 4, Curtis. Junior pig—1, Schoel; 2, Meenach; 3, Curtis; 4, Davidson.

Sows: Aged sow—1, Schoel; 2, Meenach; 3 and 4, Curtis. Senior yearling—1, Curtis; 2, Schoel; 3, Davidson. Junior yearlings—1, Curtis; 2 and 4, Schoel; 3, Meenach. Senior pig—1, Schoel; 2 and 3, Menach; 4, Curtis. Junior pig—1 and 2, Schoel; 3 and 4, Curtis.

Groups: Aged herd—1, Schoel; 2, Mennach; 3, Curtis. Young herd—1, Schoel; 2, Meenach; 3, Curtis; 4, Davidson. Get of sire—1, Schoel; 2, Meenach; 3 and 4, Curtis. Produce of sow—1, Schoel; 2, Meenach; 3 and 4, Curtis.

Champions: Senior and grand champion boar—Schoel, on Iowa Lad. Junior champion boar—Meenach, on Sharon Buster. Senior and grand champion sow—Schoel, on Oregon Queen. Junior champion sow—Schoel, on Buster's Vesta.

Duroc Jerseys.

Boars: Aged boar—1, Frank P. Busch, Johnson, Wash.; 2, S. D. Cornell, Grandview, Wash.; 3, Spokane County Farm, Spangle, Wash. Senior yearling—1, Cornell; 2, E. A. Goodhue, Spokane; 3, Harry Needham, Greenacres, Wash. Junior yearling—1, Cornell; 2, Edwin D. Pease, Usk, Wash.; 3, Busch; 4, Earl F. Harper, Johnson, Wash. Senior pig—1, H. W. Turner, Sunnyside, Wash.; 2, Brown & Adams, Spokane, Wash.; 3, Cornell; 4, Busch. Junior pig—1 and 2, Busch; 3 and 4, C. T. Brownell, Spokane.

Sows: Aged sow—1, 3 and 4, Cornell; 2, Harper. Senior yearling—1, Cornell; 2, Lester Hartley, Cheney, Wash.; 3, Pease; 4, Goodhue. Junior yearling—1, Brown & Adams; 2 and 3, Busch; 4, Harper. Senior pig—1, Cornell; 2 and 3, Brown & Adams; 4, Busch. Junior pig—1 and 2, Busch; 3, Harper; 4, Brown & Adams.

Groups: Aged herd—1, Busch; 2, Cornell; 3, Harper; 4, Needham. Young herd—1 and 4, Busch; 2, Cornell; 3, Brown & Adams. Get of sire—1 and 4, Busch; 2, Cornell; 3, Brown & Adams. Produce of sow—1 and 3, Busch; 2, Brown & Adams; 4, Harper.

Champions: Senior and grand champion boar—Busch, on Busch's Royal Pathfinder. Junior champion boar—Busch, on Skookum Pathfinder. Senior and grand champion sow—Brown & Adams, on Miss Millionaire Fashion Girl. Junior champion sow—Cornell, on Grandview Wonder Chief Girl 4th.

Hampshires.

Boars: Senior yearling—1, J. M. Fruitts, Cambridge, Idaho. Junior yearling—1 and 2, Fruitts. Senior pig—1 and 2, Fruitts. Junior pig—1 and 2, Fruitts; 3 and 4, Harold W. Hastings, Thornton, Wash.

Sows: Aged sow—1, Fruitts. Senior yearling—1 and 2, Fruitts. Junior yearling—1 and 2, Fruitts. Senior pig—1 and 2, Fruitts. Junior pig—1 and 2, Fruitts; 3 and 4, Hastings.

Groups: Aged herd—1 and 2, Fruitts. Young herd—1 and 2, Fruitts; 3, Hastings. Get of sire bred by exhibitor—1, Fruitts; 2, Hastings. Get of sire—1 and 2, Fruitts; 3, Hastings. Produce of sow—1 and 2, Fruitts; 3, Hastings.

Champions: Senior and grand champion boar—Fruitts, on Silver King. Junior champion boar—Fruitts, on Rambling Kid. Senior and grand champion sow—Fruitts, on Idaho Lookout. Junior champion sow—Fruitts, on Brush Up.

Sows and Litters.

First, C. M. Meenach, Sharon, Wash., on Chester White; 2, H. S. Curtis, Palouse, Wash., on Chester White; 3, S. D. Cornell, Grandview, Wash., on Durocs.

Fat Barrows.

Under six months—1 and 2, Orval R. Loe, Silverton, Ore., on Berkshires; 3, H. S. Curtis, Palouse, Wash., on Chester Whites. Three barrows under six months—1, Loe, on Berkshires; 2, Curtis, on Chester Whites. Three barrows over six months, and under one year—1 and 2, J. M. Fruitts, Cambridge, Idaho, on Hampshires. Champion barrow and champion pen of three—Fruitts.

The Sheep Show.

There was a good sheep show, but seemingly a little less interest than in some previous years. Nearly all the common breeds were shown. Awards were widely divided between exhibitors of the three Pacific northwestern states and Canada.

Hampshires.

Rams: Aged ram—1 and 2, J. M. Fruitts, Cambridge, Idaho. Yearlings—1 and 3, University of Idaho; 2 and 4, Fruitts. Lambs—1 and 3, University of Idaho; 2 and 4, Fruitts.

Ewes: Aged ewe—1 and 2, Fruitts; 3, Harold W. Hastings, Thornton, Wash. Yearlings—1 and 2, University of Idaho; 2 and 3, Fruitts. Lambs—1 and 2, University of Idaho; 3 and 4, Fruitts.

Flock—1, University of Idaho; 2 and 3, Fruitts. Pen—1, University of Idaho; 2 and 4, Fruitts; 3, Hastings. Champion ranm and champion ewe—University of Idaho. Best showing—University of Idaho.

Shropshires.

Rams: Aged ram—1 and 4, Floyd T. Fox, Silverton, Ore.; 2, Archie C. Stewart, Aldergrove, B. C.; 3, Felzer Bros., Tangent, Ore. Yearlings—1 and 2, Felzer; 3, Stewart; 4, Fox. Lambs—1, Stewart; 2 and 4, Fox; 3, Felzer.

Ewes: Aged ewe—1 and 3, Fox; 2, Stewart. Yearling—1 and 3, Stewart—2, Felzer; 4, Fox. Lambs—1 and 3, Fox; 2, Stewart; 4, Felzer.

Flock—1 and 4, Fox; 2, Stewart; 3, Felzer. Pen—1, Fox; 2, Felzer. Champion ram and champion ewe—Fox. Best showing—Fox.

Southdowns.

Rams: Aged ram—1 and 3, J. G. S. Hubbard & Sons, Monroe, Ore.; 2, Archie C. Stewart, Aldergrove, B. C. Yearlings—1 and 4, Stewart; 2, University of Idaho; 3, Hubbard. Lambs—1 and 3, Stewart; 2 and 4, Hubbard.

Ewes: Aged ewe—1 and 3, Stewart; 2 and 4, Hubbard. Yearlings—1 and 3, University of Idaho; 2 and 4, Hubbard. Lambs—1 and 3, University of Idaho; 2, Hubbard; 4, Stewart.

Flock—1 and 4, Hubbard; 2, University of Idaho; 3, Stewart. Pen—1, University of Idaho; 2, Stewart; 3, Hubbard. Champion ram—Hubbard. Champion ewe—Stewart. Best showing—Hubbard.

Oxfords.

Rams: Aged ram—1 and 2, Floyd T. Fox, Silverton, Ore.; 3, Spokane County Poor Farm. Yearlings—1 and 2, Harold W. Hastings, Thornton, Wash.; 3 and 4, Fox. Lambs—1 and 2, Hastings; 3, Fox; 4, J. G. S. Hubbard & Sons, Monroe, Ore.

Ewes: Aged ewe—1 and 3, Fox; 2 and 4, Hastings. Yearlings—1 and 4, Fox; 2 and 3, Hastings. Lambs—1 and 4, Fox; 2 and 3, Hastings.

Flock—1 and 4, Fox; 2 and 3, Hastings. Pen—1 and 3, Hastings; 2 and 4, Fox. Champion ram and champion ewe—Fox. Best showing, bred by exhibitor—Hastings. Best showing, owned by exhibitor—Fox.

Lincolns.

Rams: Aged ram—1 and 2, William Riddle & Sons, Monmouth, Ore.; 3, University of Idaho; 4, Archie C. Stewart, Aldergrove, B. C. Yearlings—1 and 2, Riddle & Sons; 3, Stewart; 4, William Riddle Jr., Monmouth, Ore. Lambs—1, Riddle Jr.; 2 and 4, Riddle & Sons; 3, Stewart.

Ewes: Aged ewe—1 and 3, Riddle & Sons; 2 and 4, Stewart. Yearlings—1, University of Idaho; 2 and 3, Riddle & Sons; 4, Stewart. Lambs—1 and 2, Riddle & Sons; 3 and 4, Riddle Jr.

Flock—1 and 2, Riddle & Sons; 3, Stewart; 4, Riddle Jr. Pen—1, Riddle & Sons; 2, Riddle Jr.; 3, Stewart. Champion ram and champion ewe—Riddle & Sons. Best showing—Riddle & Sons.

Cotswolds.

All awards in the Cotswold division went to William Riddle & Sons, Monmouth, Ore., the only exhibitors.

Romneys.

Rams: Aged ram—1, H. S. Currie, Steveston, B. C.; 2 and 3, William Riddle Jr., Monmouth, Ore. Yearlings—1, Currie; 2 and 3, Riddle Jr. Lambs—1, Currie; 2 and 3, Riddle Jr.

Ewes: Aged ewe—1 and 3, Riddle Jr.; 2, Currie. Yearlings—1 and 2, Riddle Jr.; 3, Currie. Lambs—1 and 2, Riddle Jr.; 3, Currie. Champion ram—Currie. Champion ewe—Riddle Jr.

Leicesters.

All awards in the Leicester division went to E. F. Hubbard, Corvallis, Ore., the only exhibitor.

Rambouillets.

Rams: Aged herd—1 and 3, C. H. Craig, Lowden, Wash.; 2, University of Idaho. Yearlings—1, University of Idaho; 2, and 3, Craig. Lambs—1 and 3, Craig; 2 and 4, University of Idaho.

Ewes: Aged herd—1 and 4, Craig; 2 and 3, University of Idaho. Yearlings—1 and 2, University of Idaho; 3 and 4, Craig. Lambs—1 and 3, Craig; 2 and 4, University of Idaho.

Flock—1, University of Idaho; 2 and 3, Craig; 4, Ed Schoel, Albany, Ore. Pen—1 and 3, Craig; 2, University of Idaho; 4, Schoel. Champion ram and champion ewe—University of Idaho. Best showing—Craig.

Dorsets.

All awards in the Dorset division went to

Record Guernsey and Progeny Will Be Sold

A complete dispersal of the Dr. Park Weed Willis herd of Guernseys will be held November 22 at the farm at Redmond, in King county. This herd, which contains some of the best known blood lines in the breed, will be remembered, especially by Sammamish Topsy, that has a record of 629 pounds of fat as a 2-year-old and 831.58 pounds as a mature cow. This record is the highest for age of all Guernseys west of the Missouri river. She and several of her offspring will be sold in the sale, in which the entire herd of 41 head are offered. Only five are bulls, the rest being heifers and cows in milk. A son of Sammamish Topsy, Robin Hood, a great grandson of Imported King of the May, will be included. He is a 3-year-old and has produced 12 heifer calves out of 16. There will be three daughters of Sammamish Topsy and 12 granddaughters in the sale. The entire herd is government accredited and there are a number of cows that have A. R. records, while all of the cows have good production records. Dr. Willis is selling his herd with the intention of devoting his entire time to his professional practice.

The center of attraction in this picture is Sammamish Topsy, the high producing Guernsey cow. She is being inspected by a group of visitors on the west Washington live stock tour held recently. Her owner, Dr. Park Weed Willis, is at her head, proudly exhibiting her.

Natural oils are life to wood—particularly shingles. But summer suns and dry, hot winds quickly evaporate the original strength of even the best shingle roofs, if unprotected.

ORONITE SHINGLE OIL assures maximum preservation of shingles — penetrates the pores of the wood and holds in the sap. In roofs or shingled side walls treated with ORONITE SHINGLE OIL, there is the strength of live timber—sturdy defense against all kinds of weather. Old roofs can soon be renewed by its application.

Our agent, near you, will show you how easily ORONITE SHINGLE OIL may be applied — will give you color formulas, too, for decorative use.

ORONITE
SHINGLE OIL

Fairs On This Week

A number of important fairs are on schedule for this state during the present week. Among them are the Walla Walla county fair, the Lewiston-Clarkston fair, in which the farmers of southeastern Washington are interested, the Kittitas county fair, the Prosser Hog and Corn show and the Clallam county fair.

Next week the Washington state fair is on the docket, along with a few small fairs in distant parts of the state that can not conveniently participate in the big event at Yakima. The prospects for the state fair are exceedingly bright. Owing to the inability to house all of the live stock last year, much additional barn room has been prepared for the 1922 entries, which are reported to exceed in numbers those of any previous Washington state fair. Every department promises interest up to the highest standards heretofore set and in many instances even more. Agricultural products, a poultry show, a women's department, boys' and girls' club work, farm machinery, modern household equipment, college extension service, federal exhibits and a program of entertainment said to be of high class will compete with each other for the interest of the crowds that unquestionably will attend if weather conditions are favorable. With the early fall rains apparently over, Secretary Vermilye and his associates in the conduct of the fair are enthusiastic over prospects.

Grays Harbor County Fair

(Continued from page eleven.)

the milking Shorthorns, since the W. H. Johnson herd of beef Shorthorns from Elma was judged in a class by themselves.

Club Entries.

There were 10 animals shown by the boys' and girls' calf clubs, consisting of Jerseys, Holsteins and Shorthorns. The champion ribbon went to Forth Twidwell of Elma for one of his Jersey calves. The boys also showed their animals in the open classes and made a creditable showing against the older breeders.

In the pig club entries Floyd Gouchnour of Montesano took first place in the market class with his Poland Chinas. In the brood sow class Robert Polson took first with a Poland China sow, while Walter Tournquist took second with the only Chester White in the club. There were nine Poland Chinas owned in the club.

There were five breeds of hogs shown in the barn, which was not large enough for all enteries, some being placed outside. Practically all of the classes in the different breeds, with the exception of the Chester Whites, were filled by the Grays Harbor Pig company, a newly organized concern which will operate an extensive hog farm on logged-off land between Montesano and Satsop. The company has just purchased a shipment of hogs from the Pacific Meat company of Seattle.

There was one stallion, a Belgian, shown by Fred Bleckschmidt of Elma, and D. S. Baker of Nisqually entered a span of mules. W. T. McDonald of Victoria, commissioner of agriculture for British Columbia, judged the live stock classes in all departments.

Interstate Fair Is Interstate

(Continued from the preceding page.)

Floyd T. Fox, Silverton, Ore., the only exhibitor.

Fat Sheep.

Middle wools: Yearling wether—1 and 2, University of Idaho. Wether lamb—1 and 2, University of Idaho; 3, Harold W. Hastings, Thornton, Wash. Pen of three yearlings—1 and 2, University of Idaho. Pen of three lambs—1 and 2, University of Idaho.

Long wools: Pen of three lambs—1, Hastings.

THE GOAT SHOW.

Angoras.

All awards in Angoras went to William Riddle & Sons, Monmouth, Ore., except third on buck lamb and second on yearling doe, which went to Louis Pierre, Rockford, Wash.

Milk Goats

Toggenburgs: Aged doe—1, D. F. Martin, Spokane, Wash. Yearling doe—1, Martin.

Toggenburg: Grades or crossbreds—Aged doe—1, L. R. Walker, Spokane; 2 and 3, Martin. Yearling doe—1, Walker; 2, Mrs. John Latshaw, Spokane; 3, Fred Kellam, Spokane. Doe kid—1, Martin; 2, Latshaw; 3, Kellam.

Saanen grades or crossbreds: Aged doe—1 and 2, Minnie L. Rand, Spokane. Yearling doe—1 and 2, Mrs. J. A. Ince, Yardley, Wash. Doe kid—1 and 2, Rand; 3, Rex Kellam.

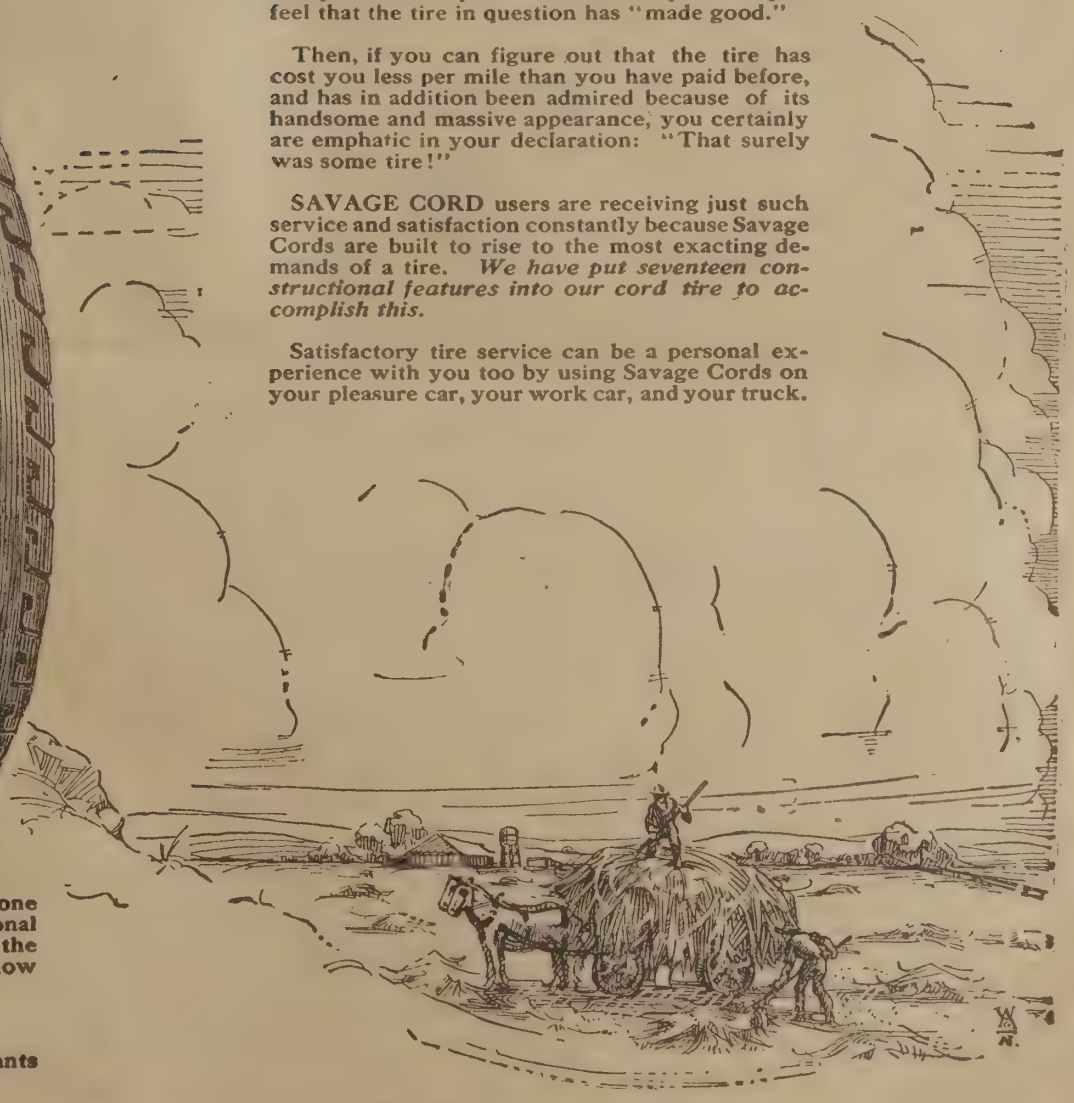
The livestock judged were as follows: All beef cattle: Frank Brown, Carlton, Ore.; Percheron, Belgian and Clydesdale horses, Frank Brown, Carlton, Ore.; Shire horses, A. R. Galbraith, Garfield, Wash.; Guernsey and Ayrshire cattle, Prof. F. W. Atkenson, Moscow, Ida.; Holstein and Jersey cattle, George Bulkley, Seattle, Wash.; all hogs, Thomas W. Brunk, Salem, Ore.; all sheep, Prof. Howard Hackedorn, Pullman, Wash.; all goats, A. L. White, Spokane.

Look for

GREATER SATISFACTION

from the next tire you buy

You feel that a tire has given you satisfactory service when it has hammered out more than the expected thousands of miles since it was put on the rim, and during that time has given you little or no trouble.



When you recall that much of the distance covered was over bad roads and through hard going, with perhaps a good deal of abuse because heavy loads and speed were necessary—then you feel that the tire in question has "made good."

Then, if you can figure out that the tire has cost you less per mile than you have paid before, and has in addition been admired because of its handsome and massive appearance, you certainly are emphatic in your declaration: "That surely was some tire!"

SAVAGE CORD users are receiving just such service and satisfaction constantly because Savage Cords are built to rise to the most exacting demands of a tire. *We have put seventeen constructional features into our cord tire to accomplish this.*

Satisfactory tire service can be a personal experience with you too by using Savage Cords on your pleasure car, your work car, and your truck.

Other good makes of tires may use one or more of the seventeen constructional features we have incorporated into the Savage Cord but no other tire that we know of begins to embody them all.

WE GUARANTEE

that not an ounce of shoddy or adulterants is used in the building of the

PIKE'S PEAK OR BUST

By LEWIS B MILLER

Copyright 1921

PM

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. For three days they have been trudging slowly southwestward carrying out the determination crudely lettered on the side of the wheelbarrow, "Pike's Peak or Bust." Rain and snow impeded their progress, and Orlando falls sick and requires a couple of days to rest before proceeding. Then, with the village that is now Kansas City passed, they follow the Santa Fe trail westward, being but one of scores of outfits of various kinds headed for the fields of golden riches. Once again they stop for a good rest before plunging into the real wilderness, 700 miles of which is still ahead of them to be conquered by foot, cow and wheelbarrow. After several days' tramping, they pitch their tent across a little stream from the camp of a family by the name of Cooper, also headed for the gold diggings. In the party is the daughter of the Cooper family, Hazel, whom Orlando by chance met when both went to the stream for water and in whom he became at once greatly interested. He reluctantly joined Esau next morning for the day's travel, leaving the Coopers to follow later, but with the expressed hope that they would all meet again at the gold fields. It was several days later that Esau and Orlando met up with another strange party on the trail, several men with a push cart to haul their belongings to the diggings. The two parties agree to travel together the rest of the journey. To save time they leave the Santa Fe trail and take a short cut that will save them more than 100 miles. But to their great distress they find themselves many miles out in a waterless, sun-scorched desert, with death from thirst staring them in the face. They meet a wagon party coming back famished, hurrying as best they can for the place they left the Santa Fe trail and water. The three parties hold a council and decide that the safest thing for them to do is to cut across the desert to the old dry Smoky river bed and dig a well in it for water. They hasten to put the plan to the test, with the result that at no great depth they reach water. After a long rest, they fill their kegs and turn back for the old Santa Fe trail, some inclined to give up the journey to the gold fields, others determined to get to Pike's Peak or bust. Esau and Orlando, a little later, come upon a great wagon train of freighters out on the prairie and accompany them until they reach the Arkansas river. They continue alone, finally entering the open buffalo coutnry.

They pass through a tremendous herd of buffaloes, pitch camp on the bank of the Arkansas river, kill a buffalo each and spend a few days drying the meat for future use. While there a wagon train with which the Cooper family is traveling comes up and camps, giving Orlando a chance to get a little better acquainted with the daughter, Hazel. They part with the hope of meeting again in a few days somewhere along the trail. They do meet again, and, meeting a large number of discouraged prospectors returning, the Coopers, the handcarters and the wheelbarrow pilgrims decide to turn back for home, too, though both Hazel and Orlando want to continue the journey. Hazel declares that she believes they ought to reconsider and go on to the Pike's Peak country. Orlando discusses it with others, with the result that most of the party decide to turn back toward the west. After a day or two they come upon a big Indian camp. The redskins flock about the caravan with curiosity. "What tribe?" asks Orlando of an old Indian.

CHAPTER ELEVEN.

At the Foot of Pike's Peak.

"Comanche—all Comanche," the aged warrior answered.

"Where are all your men—all your warriors?" Sanders questioned.

The old Indians pointed toward the south. "Go fight Texas white mens. Texas white mens bad—all bad," was the answer.

The deerskins were dressed, or tanned, and they appealed to the travelers, especially as they might need them to make clothes for themselves if they remained long in the mountains. The party had nothing to trade. But among their supplies each of them carried several pounds of sugar; and they soon learned that a very small cupful of it would buy a large, beautifully dressed buckskin. Though they really had no sugar to spare, the temptation was too great, and exchanges were soon being made. By the time the trading was finished, every white man owned one or more buckskins.

But the Comanches' hunger for sweets was far from being appeased. There was now a clamorous crowd of squaws and children around the little group, most of them eagerly holding up buckskins, and all of them crying, "Sooker! sooker!" The white party shook their heads vigorously and tried to move on. At first they had almost to force their way through the mob. Several little Indian boys sprang upon the cart, and one even perched himself on Esau's wheelbarrow. Still another leaped up and clung to the side of Brindle's pack, which caused her to try to run. All were unceremoniously pushed off.

Finally the travelers got clear of the red mob and hurried on, glad to escape from the clamor. Many of the children followed them a few hundred yards, and some of the boys for more than a mile.

"Well, we certainly did run onto some big bargains that pop," Esau remarked, when the village was out of sight and the last of the little, nearly naked Comanches had been left behind.

"Pity we didn't have a whole bar'l of sugar to swap. We could ha' loaded a wagon or two with buckskins," somebody else observed.

"Couldn't we, though?" a handcarter exclaimed. "It was almost a sin to cheat them pore heathen like we done."

Others made similar remarks; for all believed that they had obtained great bargains. They rolled their buckskins up among their bedclothes, and liked to look at them when they were in camp. But, after two or three days, they were not so sure of having cheated the Comanches.

By this time they were dividing their efforts between scratching themselves and denouncing the redskins, usually in very vigorous language.

The result of putting those deerskins in their packs with their bedding was that all of the travelers' clothes were soon infested with annoying and very loathsome live things.

On the party of seven marched, day after day. All were eager to reach the gold diggings, and were traveling as fast as they could stand to travel. Those vermin they had brought with their buckskins grew more numerous and more bloodthirsty with every mile. One or two men still kept up their denunciation of the Indians, but most of them, making the best of an unpleasant situation, were now joking and teasing one another about the way they had been "taken in."

A wild stampede began in the gambling house.

Not long after passing the Indian village the foot travelers came to Bent's Fort. This place had been established, perhaps 30 years before, by the Bent brothers, as a point for carrying on their trade with the plains Indians. It stood on a hill, some distance back from the road. The buildings were of adobes, or sun-dried bricks, and the whole was surrounded by adobe walls.

Not far from the trail, so the travelers noticed as they passed, were great piles of rusty irons. Apparently old, broken-down wagons had been left there for years, till hundreds of them must have accumulated. But fuel was scarce here, and the woodwork had all been burnt, leaving only the irons.

"A graveyard for old wagons," commented Orlando.

At last dim spots began to appear on the horizon ahead, visible only from high points. For a time these bore some resemblance to the edges of clouds. But Orlando, on the lookout for those very things, quickly discovered what they were.

"The mountains! The Rocky mountains at last!" he shouted.

After inspecting Orlando's discovery, the others agreed that they were now gazing upon either the Rocky mountains or some of the foothills. The sight encouraged them greatly, and they pressed forward with lighter steps.

When first discovered, the mountains must have been nearly a hundred miles away. Deep snow lay on their summits, which shone brightly in the sunshine. As the travelers drew nearer, the mountains seemed to rise higher.

"Now I understand why that range used to be called the Shining mountains," Orlando remarked one day, when they had halted for a brief rest on a high point.

Sanders answered. "I think it was the French who gave them that name. French traders and trappers and fur buyers were all over this western country a hundred years before an American ever set foot on it, I understand. I recollect seeing a copy of a very old map made by one of those Frenchmen. On it the Rockies were called 'Les Montagnes Brilliantes', which means the shining mountains."

Ere long, as they journeyed on, it seemed to the observers that those mountains could be only a few miles away. But, when night came, they appeared little nearer than when the travelers had started in the morning.

Higher and still higher rose those peaks, till the whole range became visible. Finally the seven men found themselves at the foot of the foothills. Here the trail they were following joined another trail from Santa Fe to Salt Lake. Northward the party turned here, and after that they traveled along the foot of the mountains.

Finally they began to catch sight of a conspicuous peak. Again the youngest member of the party was the first to notice it.

"Yonder's the famous mountain!" he called out to those behind. "The mountain discovered by Lieutenant Pike 53 years ago!" A reader from his childhood, Orlando knew more of this country's history and geography than did the rest of his party.

"Yes, reckon that must be the big mountain that's lent its name to this whole region," remarked a handcarter.

"If it is we'll soon be—we're almost already in the Pike's Peak country," Sanders observed.

Day after day the tramping party trudged along the foot of the range. They had abandoned the Arkansas when they headed north. But they found plenty of clear, cold water, in streams rushing down from mountain canyons; and also plenty of fuel for their campfires.

All this time the footmen had been passing numerous wagons that were headed toward the gold country. And they were meeting as many more, all rolling in the opposite direction. These latter were on their way back to the states. Most of the returning miners were bitter against the country that had disappointed them, and were not slow to utter what they thought. But the men with the handcart and the wheelbarrow had no intention of turning back again.

In time, after days of steady traveling, the seven men found themselves almost at the foot of Pike's Peak itself. Indeed, though actually a few miles to the west, the peak and its attendant mountains appeared almost to overhang the trail. Here the party halted and went into camp. And here they proposed to rest for a day or two, while they did some hunting and attended to a very important matter—important to them at least.

It was not long after noon when the wheelbarrow and the handcart camped, almost in the shadow of the famous mountain. Every man gazed up at its lofty, snow-hooded summit in awe, and more than one spoke of climbing it.

"Well, Esau, you've lived up to your hot iron," remarked Orlando. "More than a thousand miles from here you said it was Pike's Peak or bust. And now you and your wheelbarrow are both at Pike's Peak, and neither of you is busted."

And one of the handcart's crew added: "No, he ain't busted yit; but he came devilish nigh it, back yander where we all turned tail to the peak and started to run away."

"Well, I'm mighty glad I've landed here at last, and that I didn't keep on runnin' away," was all that the wheelbarrow pusher answered.

The party had traveled till past their usual dinner time, in order to reach the peak. After kindling a campfire on the bank of a creek and cooking and eating their dinner, they all lay down in the shade of some trees and rested; rested and slept as well as they could for scratching. Finally Sanders sprang up.

"Boys," he called out, "I've had enough of this eat-you-alive business! Enough and too much! Now for a good-old-time hog-killing—a hog-killing with the hogs left out! First we want a big fire."

Straightway all the party bestirred themselves. In a little while they had dragged or carried an abundance of dry wood to camp and piled it on their fire. And on top of the fire they placed pieces of rock, washed down by the stream from the mountains.

"Now grab your picks and shovels!" called out Sanders again.

Very soon he had them digging a hole in the ground, just a few feet back from the creek bank. When the hole was large enough and deep enough they fetched up water in their kegs and filled it.

That done, they shoveled up hot stones from the fire, carried them to the hole and dropped them into the water. The stones hissed and cracked and popped and sputtered angrily as they dived under. And the water gurgled noisily over them. More stones were thrown in, and still more, till the little pool was boiling like a dinner pot.

"Now we're good and ready for the scalding," their leader told them. "Off with your lousy duds, fellows, and be quick about it!"

"Here's where we get rid of our Comanche pets!" cried Orlando.

So, standing by that steaming, gurgling hole in the ground, every man of them began to strip off his clothes. And every time a garment was stripped off it was dropped into the bubbling pool. Nor did they pause till every man was stripped to the skin. With sticks some of the party now punched the clothes down and held them under the water.

"Fellers, lucky thing we got a good piece from the road to cut this caper," Esau told them. "I'm guessin' we fetch a funny figger, all seven of us standin' around this hole in the ground in our birthday clothes, like we air."

"Funny's no name for it!" exclaimed a handcarter. "I'll bet—I'll just bet a twist of terbacker we look like a passle of lunatics."

"That's what we do! Stark, ravin' lunatics!" declared somebody else.

When the clothes had boiled a few minutes they were lifted out of the water with sticks and laid on the grass not far away. Now all the quilts and blankets, with such other things as might contain vermin, were got ready. More hot stones were thrown in, to make sure that the water was hot enough, and the bedclothes pushed down after them.

When those had boiled sufficiently, they, too, were lifted from the pool and laid on the grass. As soon as cool they were wrung out and hung on bushes to dry.

Now, taking advantage of the fact that they had plenty of hot water, and that their clothes were already wet, the whole party gathered around that steaming hole in the ground and proceeded to give their clothes a thorough washing. After that they rinsed them in the near-by stream and hung them on limbs to dry. Later all bathed in the stream. But the water, flowing down from those snowy mountains, proved so cold that they were glad to get out and warm and dry themselves in the sunshine.

After that the seven remained in the shade for an hour or two, resting, till their clothes were dry enough to put on. A thorough job they had made of the boiling. Even these Comanche deerskins, the cause of all the trouble, had been dipped, for a few moments only, into the gurgling pool. Now the skins had to be rubbed while drying, to keep them from getting hard like rawhide.

When the travelers were clothed once more, and their buckskins were dry and soft, most of the men took up their guns, buckled on their six-shooters and set off hunting. Some returned with game, others empty handed. But, when night came, all slept at ease and without scratching. Nor were they troubled in that way again.

Though the scene of the gold excitement was known far and wide as the "Pike's Peak country," none of that much-sought metal had as yet been discovered in the vicinity of the peak itself. All the gold so far obtained had been washed out about 75 miles farther north. And it was in that direction that the stream of travel was now flowing.

After dinner the following day the seven wayfarers, feeling better for their rest and cleansing, packed up and set off northward again. The trail was still leading them near the foot of the mountains.

Often, as they toiled on their way, they met parties returning from the gold diggings. Naturally they inquired as to what was going on at the mines. But the news received through these disappointed gold seekers was so discouraging that nobody liked to listen to it. The brightest, most

(Continued on page eighteen.)

Not Mercy, but Justice

What does the animal ask of us? Not mercy. Never that. You and I alone of all God's creatures must pray for that. Give us justice, mutely plead the beasts of the field and the fowl of the air. Treat us as you would want to be treated were you in our places and we ask no more, says Dr. Francis H. Rowley.

How many of us have recognized humanity's debt to these lowlier creatures about us? How without the dog could man have herded the sheep and so passed into that pastoral stage that marked his forward march? How the fleece of the sheep has warmed him! How the milk of the cow has nourished him! How without the ox, the ass, the horse, could he have won from the soil its mighty harvests and built the cities and highways of the world?

That celebrated English poet will be remembered by these four lines of the "Ancient Mariner" long after all his fame as a scholar and thinker is forgotten:

He prayeth best, who loveth best
All things both great and small;
For the dear God who loveth us,
He made and loveth all.

Pike's Peak or Bust

(Continued from page sixteen.)

golden sunshine looks blue after passing through blue glass. So the trail trampers gave over making inquiries. Whatever might be the situation, they had fully made up their minds to push ahead and see it for themselves. And even the worst disgruntled of the returning miners admitted that some gold was being washed out.

Late in the afternoon of the fourth day—the fourth day following their halt at Pike's Peak—the handcart and the wheelbarrow arrived at a new, straggling town. This collection of log cabins and Indian wigwams, which had sprung up, like a mushroom, since the first gold discoveries, stood out on a barren plain, 12 or 15 miles from the mountains. It was built along a dry watercourse known as Cherry creek, at the point where Cherry creek joined the South Platte. Taking its name from the governor of Kansas—all this country, as far west as the line of Utah, was at this time part of Kansas territory—the town had been called Denver.

As the dusty pilgrims trudged along the dusty street they saw that this was already a bustling little place. There were perhaps a thousand white people here, and as many more Indians. The largest building, and the only large building, was the Denver house. This claimed to be a hotel, but did more business as a saloon and gamblers' den than in any other way. It was built of pine logs, with a roof and windows of canvas, and was more than a hundred feet long by nearly half as wide.

As the travelers passed in front of its open door they could see that its saloon and gambling place were filled with rough, swarthy men in rude costumes. Most of them wore buckskin pantaloons and moccasins, with woolen shirts and broad-brimmed slouch hats, and that had knives and six-shooters hanging at their belts.

About 300 log cabins were scattered over the plain, nearly half of them only roofless walls, and unoccupied. They had been put up the winter before for speculation. Of those somebody was living in a few had clapboard and a few more canvas roofs. But most of them were covered with logs, with a layer of grass and dried mud on top of the logs. The "cracks," or spaces between the wall logs, were chinked with wood and daubed with mud. And the chimneys were built up of sticks and mud.

Having obtained a fair view of the town, the foot party moved over to one side and camped at its outer edge, in a prairie-dog village. After preparing and eating an early supper, six of them started out to see what was to be seen. One of the handcarters, weary from tramping, had agreed to stay and help Frisk and Brindle to guard the camp.

Before going far the sightseers met a man and engaged him in conversation.

"Well, what's the latest word from the gold diggings? And is it sure that there's gold out here?" questioned Sanders.

"How long you fellers been in town?" demanded the stranger, after first emptying his mouth of a flood of tobacco juice.

"Just arrived a little more than an hour ago."

"Then you hain't heard how they've struck it rich over to the northwest of here?"

"Some people we met down the trail mentioned reports of rich gold discoveries over there. Are the reports true?"

"You bet your bottom dollar they air! Every word of 'em! About a month ago a feller named Gregory, a old Georgy miner, struck gold a-plenty. That was over t'wards the headwaters of Clear creek, some 40 miles from here. Been a mighty rush to that place since then. Thousands of people in that camp now. I've got a claim up thar, and I'm goin' to it in the mornin'. My pard's holdin' it down while I'm gone. Claims right clost around mine oin't payin' so overly much yit. But some of 'em, further down the gulch, is shorely pannin' out scads of dust. That's the place you fellers better make fur, as straight and as fast as you can hump yourselves. That is, if you're out here to mine it."

After asking several questions as to how to get to the new diggings, the party moved on, to explore what was some day to become, though they little suspected it now, the capital of a yet nuheard-of state and the chief city of the whole Rocky mountain region.

The new town in the wilderness was swarming with people. There were men here from every state in the Union; also Indians, Mexicans, half-breeds and trappers.The Mexicans were from the settled parts of New Mexico. They had come with pack train—burro trains—bringing meal and flour to sell. Besides the rude pine-log cabins, the party noticed numerous Indian wigwams. A large number of Indians were here—Arapahoes. Perhaps they were among the white people to shield themselves from the Utes, with whom they were constantly at war. Soon after leaving camp the newcomers passed by 30 or 40 of those wigwams. One squaw in particular they noticed. She had a pot on a fire, and was dressing a fat young pup, preparatory to stewing it.

Among other places the sight-seers noticed was a printing office. "The Rocky Mountain News" had been started here more than a month before.

Neither Esau nor Orlando drank or went into saloons. Nor did Sanders. But they all stopped at the door of the Denver House, to observe what was going on there. Three of the handcarters ventured inside.

It was a busy scene that the observers gazed upon from the doorway. The great room was without any floor but the ground.

While the three by the door were gazing curiously at the inside a man who had lost his last dollar to one of the gamblers, and had also taken several drinks suddenly jerked two six-shooters from their leather scabbards at his belt and began shooting. Most of the bullets passed through the canvas roof, but others flew in various directions.

Instantly a wild stampede began in the gambling house. Men came bursting out at the door, some with drawn revolvers in their hands. Pretty soon the space in front of the building was crowded with them.

The three handcarters who had gone in were among the last to rush out, having been several yards from the door. All of them were much excited and not a little frightened. There were too many drawn weapons here for safety, and the whole six now moved on till a prudent distance away.

While they were still standing there, wondering what else was to be seen, a shouting in another part of the town attracted their attention. People began to move with them. Presently they discovered the cause of this new excitement.

Two stagecoaches, each drawn by four mules, were coming in. They had started from Leavenworth, on the Misouri river, about a week before. Both were filled with passengers, most of whom, after they alighted, appeared not a little the worse for their 700-mile journey. Much of the time they had traveled day and night.

(To be continued.)

Home Recipes

Sour cream cake: One cup sour cream, one cup sugar, two cups flour, two teaspoons baking powder, two eggs, one-half teaspoon soda, a pinch of salt, flavoring. Beat eggs well, add sugar and beat in, then add the sour cream, to which has been added the soda. Sift the flour, measure and add the baking powder, then sift again and add to the mixture. Bake in a moderate oven either for a loaf or layer.

Burnt sugar cookies: One cup burnt sugar, one-half cup boiling water, mix and let cool. One cup lard or butter, one-half cup sour milk, one cup sugar not burnt, one teaspoon each of soda and baking powder, one teaspoon ginger or other flavoring, three or four eggs, flour enough to roll.

A READER.
Idaho.

Quick graham bread: Three-fourths cup brown sugar, two cups sour milk, one teaspoon soda, one teaspoon salt, three cups graham flour, one cup white flour, one teaspoon baking powder. Mix together and bake in a moderate oven. This makes one good-sized loaf. This is a quick help when one is short of bread.

Oregon. MRS. CHAS. NAHSS.

Grape juice: If the grapes are dusty wash carefully and mash them, stems and all, as well as you can and set away for a time in an earthern or granite dish till the juice begins to separate, then strain through a cloth, squeezing out all you can of the juice. Put in another cloth, but this time do not squeeze, but hang up and let all the juice drip that will. This removes all sediment and you have now pure grape juice. If you want it sweet add sugar to taste and put it through the cold pack process, same as for canning fruit. You will then have sterilized grape juice or wine. Use a thin sack for straining. It is necessary to strain twice if you want it clear.

MRS. MILLIE B. THOMAS.
Oregon.

To Corn Beef—For 100 pounds of beef take seven pounds of salt, one pound sugar, one ounce saltpeter and four gallons of water. Dissolve the saltpeter in a little hot water and add it and the salt and sugar to the water. Scald the barrel or crock, pack in the beef, and sprinkle over a little salt and then pour over the brine and weight the beef down, taking care to have every piece of the beef well covered with the brine.—Mrs. M. G., Idaho.

Butter scotch pie—One cup each of sugar and cold water, two eggs, two tablespoons flour, two tablespoons butter, one teaspoon vanilla. Mix sugar and flour, add butter and water, let come to a boil and add beaten eggs just before the boiling point is reached. MRS. L. BALSER.
Idaho.

To Remove Axle Grease—Rub the spot with the yolk of an egg and allow it to remain for about one hour or two, then wash out and it will be as nice as ever.—Mrs. S. E. L., Idaho.

The Cap that never fits

"NO harm can come to *me* from coffee or tea," is what so many people say. Yet those same people are often quick to note the signs of coffee harm in others.

How familiar the danger signals are—upset digestion, sleepless nights and irritability—all warnings of the nervous breakdown that lurks just a little way ahead. How easy and how delightful the escape—by drinking delicious Instant Postum instead of the beverages that contain the irritant caffeine.

Instant Postum is the tempting cereal drink made from roasted wheat. It is prepared instantly in the cup by the addition of boiling water. Its snappy flavor is not unlike that of coffee.

It is safe for everybody in your household including the children, and there's nothing in Postum to keep you awake even if you drink it at midnight.

Put a "Z" to Work on Your Farm

Avoid hours and days of blistering, back-breaking labor. Turn the drudgery jobs over to a simple, sturdy, dependable "Z" Engine. At present low prices, this engine is the cheapest "hired help" you can get anywhere. It is saving time and money on more than 325,000 farms.

The magneto equipt 1½ H. P., 3 H. P. and 6 H. P. are *real* kerosene engines, but operate equally well on gasoline. Simple, high tension oscillating magneto produces hot spark, starting engine quickly. Throttling governor assures steady speed. Prices, F. O. B. Factory:

1½ H. P. $67.00 3 H. P. $100.00 6 H. P. $160.00

Other "Z" Engines up to 20 H. P.

Write for complete details. See the engines at your dealer's.

The new "Z" 1½ H. P. battery equipt uses gasoline alone. Has high tension battery ignition, hit and miss governor and balanced safety fly wheels. Control lever gives six speed changes. Carburetor requires no adjusting. A remarkable value

$44.80—F.O.B. Factory

A LITTLE "WANT AD" FREQUENTLY OFFERS A BIG BARGAIN. MAKE IT A PRACTICE TO READ OUR "WANT ADS"

FAMILY CIRCLE

ALICE BARLAND
EDITORIAL CONTRIBUTOR

Dear Family Circle: I wonder why it is that some of you readers write to me and want an answer at once and never give name and address. Some are of such a personal nature that I can not answer through the paper, so the writers never get an answer of any kind. I presume they feel neglected. Had they given address they would have had a personal letter at once.

In my mail today is a letter from a girl 17 years old asking a number of questions and she gives no address; she says she wrote last February and has not had an answer. As her questions are likely to interest some other young girls I will try to answer through the paper. Here is her letter. I will answer her questions one by one.

"Dear Mrs. Barland: When a girl is introduced to a boy and he says, 'I am glad to meet you,' what should the girl say? Should she say anything to the one who does the introducing?"

It is proper for the girl to bow and smile pleasantly and say, "How do you do, Mr. Brown," or whatever his name may be. Nothing need be said to the person doing the introducing.

"If I am at home and some of the neighbor girls are visiting me and my sweetheart calls and wants to meets these girls, what should I do so they may become acquainted?"

You should introduce your young man to your other guests at once. It would be very rude not to do so. If your girl friends are on the porch, as you say, you should say to the young man, "Come and meet my friends." Then go to them and the natural and easy way, where you are all about the same age, is to say, "Girls, I want you to meet my friend, Mr. Brown." Then say, "Miss Smith, Miss Jones, Miss Gray." It is not necessary to repeat the name of your friend, Mr. Brown, but you can do so and still be doing the correct thing. In an introduction of a man and a woman of about equal age and station in life the woman should be introduced to the man, not the man to the woman. In cases where an elderly person is introduced to a younger the older person's name should be mentioned first. When girls are introduced to other girls or women it is proper to say, "I am glad to meet you," and shake hands. One should always stand when being introduced unless one is a cripple or very old or for some reason it is inconvenient.

"If I am standing talking with Miss Jones, for example, and a young man I know stops to talk with me, but doesn't know Miss Jones, what should I do?"

You should introduce them at once, speaking the girl's name first. Like this, "Miss Jones, meet Mr. Smith," or "Miss Jones, this is Mr. Smith."

"Suppose a group of girls come to a place where I am well acquainted, but they are not, what shall I say? I can not say these are the Jones girls, for perhaps they all have a different name."

You should introduce each one separately. If there should be several girls from the same family you shouldn't say, "These are the Jones girls," but, turning to the eldest of them, say, "This is Miss Jones," then to the others and say "This is Miss Mary Jones and Miss Clara Jones." The oldest girl is always the Miss Jones, the others should be alluded to as Miss Mary and Miss Clara.

"My cousin came to visit us and went to church with me and we had to pass through the group of young people. My cousin was from far away and knew no one there. I was sure I shouldn't pass by and say nothing, so I did my best, but what should I have done?"

I believe in being natural and easy and in a case like that I think it the best way to stop in the group and turn in a natural and general way to them and say, "Good morning, everybody; this is my cousin, Bill Jones from Ohio; come and shake hands with him and make him welcome to our church." Then I would turn to those nearest to him and mention their names. If the group is large this is a better way than to go through the formality of a stiff introduction to each one. If he should remain for a time you could introduce him to one and another and they would then in turn pass along the courtesy.

"Should a girl sit on the right or left of a young man,"

Except when at table where meals are being served it makes no difference. When sitting at a meal the girl should be seated at the left of the man, so he can have a better chance to wait upon her by using his right hand. In walking on the sidewalk the man should always take the outside.

This young girl says: "I wish more of this kind of questions could be found in the Circle page. I think if they were it would save us girls lots of trouble and headaches. Please, girls, try to help carry this along, and Mrs. Barland, please give me your address in THE FARMER next week."

My poor little friend, it is a pity you should have a headache over these things, so write and ask me whatever troubles you. I will be glad to help you in any way. Look in the Home Recipes for those you ask for. Letters should be directed to me in care of this paper.

Dear Mrs. Barland: I am a girl of 17, with very dark brown hair and brown eyes and a dark complexion. My hair is soft and wavy, but dandruff is so bad that I can hardly keep it out of my eyes when I comb my hair. I wash my head twice a week, but that seems to make it worse.

Is there any way to cure dandruff? And what will take away tan and sunburn? Also what should be done to a hydrangea for indoors, Should one cut it off in the winter and put it in the dark? Your friend, BETTY.

Dear Betty: If you had given your address you would have had an answer personally. Try dipping your fingers, just the tips, in coal oil and rubbing into your scalp. Use a very little bit. The next day comb your scalp with a fine-tooth comb, taking care not to irritate or make your head sore, then wash it and if the dandruff returns do it again in about 10 days. I have known that to kill dandruff. It will come and go, it always has, and I presume we will just have to fight it as long as we have hair.

You can relieve sunburn by applying common sweet cream. It will cure itself in time. Tan can be faded a little by the use of lemon juice; let it dry in for a little while, then wash your face gently with first hot water, then cold and use a soft cloth. Finish with a dust of any good face powder.

The best way to take care of your hydrangea is to keep it growing in the house in the winter; then in the spring put the whole thing, tub and all, outdoors for the summer. Write again.

ALICE W. BARLAND.

Just Folks

A sermon I heard last Sunday was a sad disappointment. I had heard the minister preach before and knew him to be a good speaker, who was given to talk about live and important questions.

This time he had the uppermost subject of the day, one of extreme importance—the railroad strike.

Although he did not use the words, yet I came away from it summarizing the sermon in my own mind something like this: The only way to permanently settle the strike was for everybody to be converted and join the church. Somehow that did not give me very much hope or encouragement. I have no desire to dispute the preacher's conclusions, but how is that sort of general talk going to help us out of our present labor difficulties in this good year of our Lord 1922?

One of the biggest religious bodies of the country is in session this week while I am writing this. In preparation for that important gathering a committee submitted a statement embodying some of the things that should be considered by the church leaders. In that statement I find this:

"It should be recognized as an outstanding and pressing duty of the church to convince its members of the necessity of nothing less than a fundamental change in the spirit and working of our social and industrial life. This change can only be effected by accepting as the basis of all our religion the principle of cooperation in service for the common good in place of unrestricted competition for private or sectional advantage."

The next resolution calls upon all the members of the church "to be foremost, both by personal action and sacrifice, in maintaining superiority of the claims of human life to those of property. To this end it would emphasize the duty which is laid upon all Christians of putting human values first, of avoiding extravagance and waste and of upbuilding a high standing of honor and thoroughness in work. In a word, they must set an example in subordinating a claim for right to the call of duty."

Here certainly was something definite and sweeping in character to be done right here and now.

"A fundamental change in the spirit and working of our social and industrial life" is certainly not mincing words over the situation.

The "avoidance of extravagance and waste" is something that can be practiced now, and every time that it is practiced by those who sit in the seats of the mighty it takes the edge off some bitter social murmurings. Every time we are reminded of "the superiority of the claims of human life to those of property" we are brought back to fundamentals with a sharp jerk. And every time we are enjoined to subordinate "a claim for rights to the call of duty" we are brought face to face—every man, woman and child of us—to another fundamental in everyday life.

There are preachers and preachers, and there are churches and churches, and perhaps the trouble is as much with the one who hears as with the one who speaks. At any rate, the 46,000,000 church members of the country last year contributed nearly $500,000,000 to carry on their good work, and now it is up to the 50-odd millions of nonchurch members to contribute an equal amount and show equal results. EAS

LEMON RINDS AS WHITENERS.

The lemon rinds left from making lemonade are splendid whiteners for anything grimey, from fine laces to dish towels. Add the rinds to the boiling water, let articles to be cleaned boil for 10 minutes, or until the grayish tinge has disappeared, then rinse and hang in sun to dry.

The Suit that's Tested by Water

CLOTHCRAFT "5130" SERGE
America's Standard Suit for Men and Young Men
$27

Will the Suit You Buy Stand this Test ?

IF you have ever been soaked to the skin you know how water can wreck a suit.

But here's a suit that water WON'T harm, for it has passed the severest of tests—the Clothcraft water-test. It was soaked in water, dried and pressed—and it remained as good as new.

Remarkable proof indeed of the way Clothcraft Clothes are built. And it is all pictured and described in this *Serge Folder*, which also contains actual cloth samples for you to see and feel for yourself.

There's a copy of this folder for you—FREE—if you ask promptly. Use the blank below or simply a postcard.

High Points in News of the Week

Notwithstanding the general prediction that the federal injunction secured by Attorney General Daugherty against the striking railroad shopmen week before last would bring about an immediate crisis in the transportation situation, last week was perhaps the quickest and least eventful week since the nearly 400,000 shop workers went on strike the first of July.

The injunction, which was granted by a Chicago federal court and was made effective over the entire country, was admittedly a drastic one in its wording. On the face of the order it appeared that it was the intention of the government to forbid absolutely any activities of any kind whatsoever on the part of the officials of the shopmen's organizations in conducting the strike. It was interpreted by labor organization leaders to mean that they were forbidden to use any organization funds for supporting the strikers while they were idle, to make any statements advising the strikers or encouraging them, or in any way whatsoever, by word or act, assist them in making the strike effective. Violent protests were made from all quarters of organized labor to this seeming character of the order. Many other labor organizations not directly affiliated with railroad workers expressed sympathy for the latter in their strike and even went so far as to go on official record favoring a general strike of all organized labor as a protest against the drastic action.

However, Attorney General Daugherty early in the week issued a statement designed to make it clear that the injunction was not intended to abridge any of the constitutional rights of the strikers and their officers as individuals or of their organization, but that it was intended solely to prevent the destruction of life or property or the intimidation of other workmen employed in the railroad shops or other branches of the transportation business.

Apparently little action has been taken by the government during the last week toward enforcing the injunction. This is probably due to the fact that a hearing was scheduled for Monday of this week, September 11, at which it would be determined whether or not the injunction should be made permanent. The temporary order has been made effective for an additional 10 days while the case is being tried on the application to make it permanent. A peculiar situation has arisen, according to a report, that the railroad owners themselves are opposed to the injunction as issued by the federal court. This is declared to be on the grounds that government interference would prevent the railroads from fighting out the controversy in their own way. On the other hand, organized labor has taken the position that the injunction was a direct blow by the federal government at labor itself and constituted an act directly in favor of the railroads in the controversy.

So violent has been some of the objection to the action of the attorney general and the federal court that considerable talk has been heard in labor circles and an occasional labor resolution has been adopted favoring the impeachment of both the attorney general and the federal judge that issued the restraining order. President Gompers of the American Federation of Labor is quoted as having expressed willingness to aid in impeachment proceedings against them. At this writing it seems probable that the action taken Monday will be a vital one in the history of the case. If the injunction is simplified and made permanent it is probable that the government through the office of the attorney general will take active steps to enforce it. To what extent this action would tend to unite all the forces of organized labor for a possible nationwide walkout in sympathy with the striking railroad workers is problematic.

There appears to be a vigorous effort being made in some quarters toward settlement between individual roads and the shopment formerly working for them. It is declared on reasonably good authority that settlements are already in sight covering railroads with about 80,000 of the 230,000 miles that are directly affected by the strike.

* * *

A report from the national capital says that President Harding has made it definitely known that he will not sign the soldiers' bonus bill as passed recently by the senate. The measure is now in a conference committee between the house and the senate. As passed, it carried no provision for raising the money with which to pay the bonus, which is estimated to amount to between $3,000,000,000 and $4,000,000,000. The bill also carried as a rider the Smith-McNary reclamation bill, which provides for the creation of a revolving fund of $350,000,000 with which to start the development of arid and swamp lands throughout the country. This measure constitutes the soldier settlement feature of the bonus bill. It is now understood that even though the president vetos the bonus bill this reclamation measure will not be killed, but that it can again come up for consideration on its own merits.

* * *

A report from Detroit announced last week that the Ford Motor company's shops and assembly stations throughout the country would not be closed on September 16, as was previously stated. The report said that Mr. Ford had contracted for 4,000,000 tons of coal, which would permit a continuation of the firm's activities. He had previously announced that the shops would all close on September 16 because of inadequate coal to operate them.

* * *

Mrs. Warren G. Harding, wife of President Harding, is reported to be critically ill. At this writing considerable doubt is expressed as to the probability of her recovery, though she is reported to be considerably improved over her condition late last week.

* * *

Announcement is made at Paris that Monsieur Clemenceau, the war premier of France, will soon come to America for an extended tour with a view to cementing the friendship of the United States and France and to explain to the people of this country the reasons for the latter's action in standing out against more liberal terms to Germany in the matter of reparations.

* * *

The Western Pine Manufacturers' association announces that much better conditions exist in the lumber industry now than a year ago.

* * *

A conference committee of the senate and the house of representatives is now working over the tariff bill that has already been passed by both houses. The measure was greatly amended when passed by the senate and the effort is now being made to harmonize the differences of opinion between the house of representatives and the senate. It is expected that agreement will be reached and that the measure will be passed in its permanent form by both houses and sent to the president for his consideration within a week or possibly 10 days.

* * *

Both houses of congress have now passed a measure recommended by President Harding providing for the establishment of a federal coal agency with power to purchase and distribute sufficient coal during the present shortage to regulate the price and prevent profiteering. Secretary Hoover of the department of commerce has taken additional action looking toward the prevention of exorbitant coal prices. Nearly all of the coal mines have settled their strikes in many instances are now operating at nearly normal capacity. Owing to the fact, however, that the coal supply had been almost exhausted prior to the resumption of mining, and to the additional fact that transportation is greatly handicapped by the railroad strike, a semi-shortage of coal seems sure to exist during the present winter. A settlement of the rail strike, however, would likely make fuel conditions comparatively easy.

* * *

A report presented at the third assembly of the league of nations last week showed that the leading nations of the world are making a considerable reduction in armaments under the measures adopted at the arms conference in Washington last winter. The report did not cover the United States, since this country is not a member of the league of nations. It showed that Great Britain has made a reduction of about 55 per cent in naval tonnage, France 36 per cent, Italy 49 per cent and Japan 59 per cent. France is also reported to have reduced her standing army 200,000 men.

* * *

A county grand jury in Illinois last week returned indictment against 38 persons for criminal participation in or conspiracy to bring about the massacre of coal mine strikebreakers in Illinois two months ago. A considerable number of the indictments are on the charge of murder.

* * *

Lieutenant B. W. Maynard, known as the "flying parson" and noted as an aviator during the war and in special ventures since that time, was killed in a fair demonstration in Vermont last week, when his airplane fell a distance of 3000 feet. Three other persons were killed with him.

* * *

A report from Washington indicates that the measure introduced by Senator Poindexter and passed by the senate appropriating $100,000 for a thorough investigation of the Columbia basin by the government will soon be taken up and acted upon by the lower house.

* * *

Bernard M. Baruch, prominent New York financier and one who has been interested in the financing of the agricultural industry for several years, stated last week that the most important legislation now before congress is that dealing with the financing of the farmer. Mr. Baruch says that at least $200,000,000 should be provided for short-term credits to agriculture. He favors the conduct of this financial enterprise by a separate branch of the federal farm loan bank, wholly distinct and under separate direction from the regular long-time loans on farm land.

* * *

Lieutenant James H. Doolittle, an army aviator, flew from the Atlantic coast of Florida to the Pacific coast at San Diego, Cal., last week in 22 1-2 hours, the best record ever made for a coast-to-coast flight.

* * *

While cold rains and an occasional local frost visited the Pacific northwest last week other sections of the country were experiencing unusual heat. San Francisco reported a temperature of 91 degrees, the highest for the season. Chicago reported as high as 96 degrees.

WESTERN CANADA for Big Wheat Crops

Canada is the world's greatest producer of wheat—second only to the United States—yet only about 12% of the tillable area has been worked. Yields of 40 bushels of wheat per acre are not uncommon.

Oats have given as high as 100 bushels per acre, while 40 to 50 bushels per acre are ordinary yields; barley and rye in like proportion. Cattle and horses thrive on the native grasses which grow abundantly and corn and sunflower culture are highly successful.

Stock Raising, Dairying and Mixed Farming

secure for the industrious settler ample returns for his energy. Clearing the cost of one's farm with a single year's crop has an appeal, and has been done by hundreds of Western Canada farmers. Taxes only upon land (not on improvements). Perfect climate, attractive social conditions, good neighbors, churches, schools, telephones, excellent markets and shipping facilities make life happy as well as prosperous.

For illustrated literature maps, description of farm opportunities in Manitoba, Saskatchewan, Alberta and British Columbia, reduced railway rates, etc., write to

Cor. First and Post Sts.,
Spokane, Wash.

Authorized Agent, Dept. of Immigration and Colonization, Dominion of Canada.

New 1½ H.P. CUSHMAN

For Light Jobs

A little wonder—regular Cushman quality, but at a very low price. Horizontal design, hopper-cooled, fewer moving parts. A real no-trouble engine for pumping, etc.

(11)

LIGHT WEIGHT 4 H. P.

For all power jobs up to 5 H. P. Weighs only 190 lbs. May be attached to binder and other machines to save a team. This engine is a necessity on every farm. Improved Throttling Governor insures very steady running and less gasoline used.

Ask for book on Light Weight Engines. If interested in Electric Lighting Plants, write for free book.

Bits of Fun for Everyone

The Fatal Metaphor.

The young man was telling his sweetheart how he had been attracted to her.

"You were a lovely flower and I was a bee," he explained to her. "I was a mouse and you were a piece of cheese."

And then he wondered why she rose and left the room.—Exchange.

Wanted a Real Knockout.

The division was having maneuvers for the benefit of visitors' day and everything was being let loose at once. A pretty girl was eagerly watching the performance when a rifle volley crashed out. With a surprised scream she fell back into the arms of a young corporal who was standing just behind her.

"Oh, I beg your pardon," she gasped, blushing. "I was frightened by the rifles."

"Quite all right," replied the corporal. Then he added hopefully, "let's go over and watch the heavy artillery for awhile."—The American Legion Weekly.

And How He Is.

She—Have any of your boyish ambitions been realized?

Old Man—Yes; when my mother used to cut my hair I often wished I might be bald-headed.—Life.

Considered Abdominally.

A group of Atlanta porters were overheard discussing politics, and especially the relative merits of presidents of the United States, past and present. There was one autocrat, according to Roger T. Lively of the Atlanta Pullman office, who monopolized most of the conversation, embellishing his remarks with splendiferous words that probably neither he nor his audience understood.

"Ah tells you, gemmuns," said the authority, "Teddy Roosefelt was the mostest bellicose president whut we ever had."

Contemplative silence. Then from a dissenter:

"Brudder Johnson, you fergits Misto' Taft, doesn't you?—Pullman News.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4114. Junior's dress. Cut in three sizes: 12, 14 and 16 years. A 14-year size requires 4 3-4 yards of 36-inch material. Price 10 cents.

4105. Girl's coat. Cut in four sizes: 6, 8, 10 and 12 years. A 10-year size requires 3 3-4 yards of 44-inch material. Price 10 cents.

3473. A good school costume. Cut in four sizes: 8, 10, 12 and 14 years. A 10-year size will require 2 1-8 yards of 42-inch material for the skirt, and 2 5-8 yards of 42-inch for the blouse. Price 10 cents.

3926. Misses' dress. Cut in three sizes: 16, 18 and 20 years. To make the dress for an 18-year size requires four yards of 44-inch material. The width at the foot is about 2 1-8 yards. Price 10 cents.

4073-4113. Ladies' costume. Blouse 4073, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4113, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make the dress for a medium size and as illustrated requires 5 1-2 yards of 32-inch figured material and 3 1-8 yards of plain material. The width of the skirt at the foot is about 2 1-8 yards. Two separate patterns, 10 cents for each pattern.

4110-4013. Ladies' costume. Waist, 4110, cut in six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. Skirt 4013, cut in seven sizes: 25, 27, 29, 31, 33, 35 and 37 inches waist measure. To make this design as illustrated for a medium size will require 8 5-8 yards of 32-inch material. With pointed outline 9 3-8 yards are required. The width of the lower flounce at the foot is 2 1-2 yards. Two separate patterns, 10 cents for each pattern.

4119. Girl's guimpe dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 1 3-4 yards of 32-inch material for the dress and 1 3-4 yards for the guimpe. Price 10 cents.

3930. Girl's dress. Cut in four sizes: 4, 6, 8 and 10 years. A 6-year size requires 3 1-4 yards of 32-inch material. Price 10 cents.

4123. Ladies' dress. Cut in seven sizes: 36, 38, 40, 42, 44, 46 and 48 inches bust measure. A 38-inch size requires 7 1-2 yards of one material 44 inches wide. The width of the skirt at the foot is 2 1-8 yards. Price 10 cents.

4111. Two corset substitutes. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires three-fourths yard of 36-inch material for either style. Price 10 cents.

3971. Ladies' apron dress. Cut in four sizes: Small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires four yards of 36-inch material. The width at the foot is about two yards. Price 10 cents.

3622. House or porch dress. Cut in seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will requires seven yards of 27-inch material. The width of the skirt at the foot is 2 1-2 yards. Price 10 cents.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

A short time ago I attended a medical convention. Men and women gathered from all over the country. For five days they attended sessions of the society, morning, afternoon and evening. One session lasted till after midnight.

Dr. Copeland.

What do you suppose these doctors talked about?

Of course, they read papers about operations and strange diseases, as well as about many common ailments. But what impressed me most were the many discussions over the prevention of disease. There were earnest, solemn conferences over the best and surest methods of keeping people well.

The doctors realize that most illnesses are due to preventable conditions. They feel it is their mission to wipe out disease. They take pride in the accomplishments of the profession in this direction.

Every speaker emphasized the relation of neglect to disease development. Of course, there are diseases which are violently contagious or infectious, but even these are dependent for their onset and development upon the lowered vitality of the victim. It is doubtful if a perfectly sound individual would yield to any disease.

A few weeks ago I happened to be in the midst of a terrific rain and wind storm. Thousands of trees were blown down in the country. In my immediate vicinity scores fell. Every fallen tree or broken branch that I saw showed some defect—rottenness at the heart, worm holes, decayed places.

The perfectly sound and hardy trees, even though they were bent almost to the ground, withstood the storm and proudly raised their heads.

It is this way with the human family. The storm of disease attacks the body, and if there is a defect it yields to the ravages of the ailment.

GENERAL ADVERTISING.

Stop Using Coal and Wood

New Discovery Replaces Old Method. An Entirely New Kind of Heat.

At last the housewife has come into her own. The world seems to be aiming to make every branch of her work lighter. And now comes a wonderful new invention which frees her entirely from one of the greatest of her drudgeries—heating and cooking with coal and wood.

This new device—the Oliver Oil-Gas burner—does away with all the muss and tiresome labor of using coal and wood to cook or to heat. Mr. B. M. Oliver of St. Louis has perfected a cooking and heating device that burns 95 per cent air and 5 per cent oil. Right at the turn of her wrist the housewife now has as much or as little heat as she needs—three times the heat of coal or wood if she needs it. And even in the summer she no longed need endure the sweltering kitchen that she dreads so much. The device sets right into the firebox of any stove or furnace without adjustment. If you will write to him at 2121-I, Oliver bldg., St. Louis, Mo., you will receive an attractive booklet free that tells all about it. Mr. Oliver is now making a special low price offer, including a thirty-day free trial. He is also looking for good, live distributors and will tell you how to earn $500 a month if you are interested and request his sales plans.—Adv.

Ellen Nelson, who is 11 years old, waited a long time before she wrote to us this time. However, she does not want the cousins and Aunt Nellie to think she does not live in Washington any more. She has two friends, Howard and Helen Tomlinson, who like The Junior Farmer very much. Her home is in Walla Walla county. August 10 is her birthday.

We were glad to receive a letter from Verna Stevens, a Snohomish county (Wash.) cousin. Verna was 11 years old September 18, 1922, and she is in the sixth grade. Her school commenced September 3.

In a note from Hazel Schafer, written September 1, she says she is glad that school will start soon. Hazel's birthday is November 22. She lives in eastern Washington, Adams county.

March 15, 1922, Marion Lewis was 7 years old. Marion is a Whitman county (Wash.) cousin and she is in the second grade at school. She says school commenced early in September. She has two sisters and one brother.

From a farm in Spokane county, Washington, comes a letter from Elizabeth Milen, who is one of our new cousins. Elizabeth's birthday is April 14. She is 11 years old. The main product of the Milen farm is apples. Elizabeth likes the riddles and stories in The Junior Farmer.

From Grant county, Washington, comes a letter from Edna Amend. Edna says she has two kittens, but they are both so wild that she can't catch them. She also has a dog named Shep, but he is at the ranch in the hills. Shep is black and white. Every day Edna carries water to the chickens and sometimes she gathers the eggs. She has some flowers in bloom. They are ragged robins.

Martha May Jenkins, who used to live in Spokane county, Washington, now lives in Pierce county. This summer Martha raised 10 little Bantam chickens and she has a calf for a pet. She was 7 years old September 16, 1922. She says she misses her old playmates in Spokane county. Martha likes to have her mother read to her from The Junior Farmer.

BEDTIME STORIES

By THORNTON W. BURGESS.

UNC' BILLY CAUGHT AT LAST.

Unc' Billy Possum certainly is fond of eggs. And it is because of this fondness for eggs that the Green Meadows were thrown into great excitement late one afternoon. Just as the Black Shadows

"Well, well, I wonder what happened to this fellow?" said Farmer Brown's boy.

came creeping down from the Purple Hills Reddy Fox brought the news, and when he told it he grinned as if he enjoyed it, and was glad of it.

"Old Billy Possum is dead. I know it because I saw Farmer Brown's Boy carrying him home by the tail," said Reddy. "So you see he wasn't so smart as you thought he was," he added maliciously.

No one really believed Reddy Fox, for every one knows that he seldom tells the truth, but when Jimmy Skunk came mournfully down the Crooked Little Path and said that it was true, they had to believe it. Then everybody began to talk about Unc' Billy and say nice things about him and tell how much they had enjoyed having him live in the Green Forest since he came up from "ol' Virginny." That is, everybody but Reddy Fox said so. Reddy said that it served Unc' Billy right because he was of no account, anyway. Then everybody began to hoot and hiss at Reddy until he was glad enough to slink away.

And while they were all saying such nice things about him Unc' Billy Possum was being carried by the tail up to Farmer Brown's house. For once Unc' Billy had been too bold. He had gone up to Farmer Brown's henhouse before dark. Jimmy Skunk had tried to stop him, but he had heeded Jimmy Skunk not at all. He had said that he was hungry and wanted an egg and he couldn't wait till dark to get it. So off he had started, for Unc' Billy Possum is very headstrong and obstinate.

He had reached the henhouse and slipped inside without being seen. The nests were full of eggs, and soon Unc' Billy was enjoying his feast so that he forgot to keep watch. Suddenly the door opened and in stepped Farmer Brown's boy to get some eggs for supper. There was no time to run. Unc' Billy just dropped down in his tracks as if he were dead.

When Farmer Brown's boy saw him he didn't know what to make of him, for he had never seen Unc' Billy before.

"Well, well, I wonder what happened to this fellow?" said Farmer Brown's boy, turning Unc' Billy over with the toe of one foot. "He certainly is dead enough, whatever killed him. I wonder what he was doing in here?"

As they passed the woodpile he tossed Unc' Billy on the chopping block to wait while he gathered an armful of kindling to take to the house. When he turned to pick up Unc' Billy again Unc' Billy wasn't there!

Farmer Brown's boy dropped his wood and hunted everywhere, but not a trace of Unc' Billy could he find.

Birthday Greetings

THURSDAY, September 14 — Grace Grandstaff, 11 years old; Glennie Herin, 11; Irma McGloughlin, 7.

Good Records Are Being Made

The first official record to be completed on the farm of Grant Nichols of Ellensburg gives his Jersey cow, Brown Lad's Cowslip, gold medal rank with the American Jersey Cattle club, on double letter production of 15,017 pounds of milk and 711.85 of butterfat. George Plunkett was herdsman during the entire test.

Two other good Jersey records and a new state Holstein record are reported in the July summary of official testing in Washington. Rosaire's Olga Gem, a mature cow owned by R. I. Tanner of Sumas, made the highest Jersey record reported during the last year and takes second place among Washington Jerseys. Her double letter production was 13,495 pounds of milk and 826.34 of butterfat. First place in the senior 4-year-old class of the 305-day division is taken by Double St. Mawes, owned by David McCleod of Bellingham, which made 683.53 pounds of fat from 10,636 of milk.

A new state record for junior 3-year-old Holsteins in the 365-day division was set by Carnation Matador Nora, owned by Carnation stock farms, which produced 25,747.6 pounds of milk and 86..503 of fat. In her first producing year this remarkable heifer made 677 pounds of fat from over 20,000 of milk, hence for a young thing her average is high.

Griffith Brothers of Dabob, S. D.; Cornell of Grandview and the Eastern state hospital at Medical Lake are the breeders who renewed work in July or took up official testing for the first time, according to the report, which shows the same number of herds on test as in July, 1921, with a slight increase in the number of animals.

Holsteins Will Sell at State Fair

The Washington State Holstein-Friesian association will hold a sale at the pavilion at the state fair grounds at Yakima on September 20. Since this will be during the fair, it will give the breeders a better opportunity to attend the sale and there is also the advantage of the consignor showing the animals before they are sold.

There will be 65 animals consigned to the sale from some of the most prominent herds of the state, including the following: Charles Eldridge, Thomas McGee and Thomas Yarr, Chimacum; Hollywood farm, Seattle; S. D. Cornell, Grandview; Lloyd Garretson, Grandview; Z. T. Parker, Toppenish; A. F. Barnard, Alfalfa; J. H. Sunnyside; G. D. Ames, Yakima; The Milky Way farm, Sumas; H. J. Evans, Ferndale, William Todd & Sons, Yakima; Yarr Brothers, Chimacum; L. G. Stickney, Prosser; F. L. Shannon, Walla Walla; Fred Howard, Yakima; William Bishop, Chimacum, and Robert Kooistra, Tolt.

The sale committee has made arrangements with Auctioneer George Gue to handle the sale.

BUYS FOUNDATION JERSEYS.

During the Southwest Washington fair William Cook of Shelton, Wash., purchased three young registered Jersey cows from N. C. Sorensen of Chehalis, Wash. Two of them are bred heifers by Firwood Gwendola St. Mawes, son of the ex-world record senior yearling heifer, Silver Chimes Gwendola. They are bred to Firwood Rosaire St. Mawes, a son of Gwendola Rosaire, dam of Silver Chimes Gwendola, and with a record herself of 919 pounds of fat. The other is by a full brother to Mr. Sorensen's gold medal cow, Dahlia Forest Girl. Mr. Cook is the man who bought the fine bull calf, U Tell Um, from N. C. Sears of Winlock, Wash., last fall, at the Puyallup fair. He has a good grade herd of Jerseys and believes the time has now come to go into purebreds.

TO DISPERSE GUERNSEY HERD.

On November 22 Dr. Park Weed Willis of Seattle will disperse his entire herd of Guernseys, on his farm near Redmond, Wash. This herd includes the famous cow, Samamish Topsy, with a record of 831.58 pounds of fat in a year, as well as a junior 2-year-old record of 629 pounds, which was for a long time the state record for all ages. Samamish Roxie, a half sister to Topsy, and a number of high-class animals are in the herd. There are a number of excellent A. R. record holders also. Over 40 granddaughters of Samamish Topsy are among the Guernseys to be sold and they are by a son that sired 12 heifers out of his last 16 calves. The herd is federal accredited.

CHEHALIS SHORTHORN SALE.

The Shorthorn sale at the Southwest Washington fair resulted in low prices. The cattle were practically all taken by local buyers and some new herds were started. Top price was only $210, for the extra good senior yearling, Maud Jewel, the buyer being George Dacres of Walla Walla, the only buyer from a distance. Other buyers were John K. Lovelace, Chehalis; C. G. Ingalls, Rochester; James A. Luman, Bucoda; N. C. Withrow, Centralia; W. Z. Hartman, Nisqually; J. S. Carstairs, Elma; A. B. Lyons, Mossy Rock, and William A. Wherret.

Barnyard Golf Rules

By PROF. L. J. SMITH, W. S. C.

Will you please give me rules for "barnyard golf," the distance (standard) of pegs, size of pegs and slant of pegs and weight of shoes? F. L.
Stratford, Wash.

Twenty-one points shall constitute a game. (50 in the national.)

No shoe of freak design will be allowed. No toe or heel calk shall measure over three-fourths of an inch in length.

The distance from stake to stake shall be 40 feet.

At the beginning of a game first pitch shall be decided by toss of coin.

All equals shall be counted as ties. If both contestants have one shoe each an equal distance from the stake or against the stake, or ringers, they shall be counted tie, and the next closest shoe shall score. In case of all four shoes being tie, no score shall be recorded.

The closest shoe to stake shall score one point. If both shoes are closer than the opponents' they shall score two points. A ringer shall score three points. A ringer and a closest shoe shall score four points. A double ringer shall score six points. In case of each contestant having a ringer the next closest shoe shall score. If each contestant has a double ringer both double ringers are cancelled and no points scored. If a contestant shall have two ringers and his opponent one the pitcher having two ringers shall score three points.

Any shoe leaning against the stake shall have no advantage over a shoe lying on the ground and against the stake. All such shoes are ties. If a contestant has a shoe leaning against the stake it shall count only as a closest shoe

It is well not to count any shoe resting more than on agreed distance from the stake, say, 15 inches.

The stakes are one inch iron or three-fourths gas pipe. They project eight inches above the ground and slant one inch toward the other pitch.

Rules of the National Horseshow Pitchers' association, which are less simple than the above, may be secured by addressing the association at Akron, Ohio.

Grange Women Lend Aid

The ladies' auxiliary of the Snohomish County Pomona grange has been making a special effort to help the county orphanage and has done much sewing and has canned fruit, the proceeds of which is given to the institution. Each year a harvest dinner is held to raise money for the children and the whole neighborhood turns out with their support.

This work is entirely separate from the grange," said Mrs. G. Barker, who is master of the Snohomish County Pomona grange. "We have our grange work to look after besides, and it sometimes keeps us busy to do them both justice, but we feel that the auxiliary is well worth while and it is doing a good work."

Mrs. A. G. Ziebell, one of the main workers in her community, told how the women of the grange have been trying to create a better moral tone to the country life. "When we get together at any of our meetings, whether it be the auxiliary or the regular grange, we always enjoy ourselves and talk over plans for bettering conditions for our farm people. We have taken a determined stand in favor of the prohibition law and it is having the desired effect.

"There is also a movement on foot to group ourselves together for the purpose of buying our goods on the wholesale plan. We do not have a grange store in the county so we have formed buying clubs and have been able to save enough to make it worth while. We can in this way buy from the Associated Grange warehouse at Seattle, when with smaller shipments it would not be practical."

Mrs. Ziebell told how she had tried to buy some woolen blankets, but the price was so high that she made an effort to make them at home. She purchased some raw wool and some cards and combed the washed wool and made her own comforters at a great saving and yet she had an article that is good for a lifetime. This she said can be done on a small scale and only when circumstances permit, but it shows that there are ways to utilize some of the raw material at home and at a great saving of expense if one has the time to spare.

SET APPLE PACKING WAGE.

Apple packers this year will be paid 5 cents a box for their labor and sorters and pickers will receive between 30 and 35 cents an hour, according to a wage schedule announced by officials of the Spokane Valley Growers' union at Opportunity.

The union will employ between 150 and 175 people at its Millwood and Opportunity plants and the Opportunity plant will operate both day and night shifts.

PEACHES AT 60 CENTS.

The sale of three car lots of peaches at 60 cents f. o. b. is reported by Fred Eberle, manager of the horticultural union at Yakima.

For Good Farming, Attractive Country Homes and Happy Country People

What the War Did for the Palouse Country

By F. J. SIEVERS, Head Soils Department, State College

It is a fact well known to the economist and fully appreciated in general that the average farmer has had to depend on the increase in the value of the land for his profit. In other words, in the older sections of the country, where the land has been held in the same family for several generations, the total wealth is represented by the value of the land and improvements the same as it was when it was first brought under cultivation. There is practically no available cash. This is evidenced by the fact that when it became necessary to divide an estate among the children of even a small family the farm either had to be sold or otherwise divided into as many portions as there were heirs. Another interesting indication of the operation of this principle is found in checking over abstracts of title to property in any new section of the country. The mortgage held against farmers is nearly always as large as the security will permit, but we find that these mortgages increase in amount with every renewal or transfer. Since statistics show in general that the increase in valuation of the farmer's holdings are his only source of profit, the agriculture in any section of the country will prosper, as far as the general rural population is concerned, only so long as something justifies such increases in valuation. These increases are dependent either on a better net price for the marketed product, or on a greater production per unit of investment.

Better prices result from improved marketing conditions, such as more economical transportation, more efficient buying and selling agencies, etc., as well as a change of the form in which the products are marketed. Increased production per unit of investment may result from more intensive methods of tillage, better fertilization, proper crop rotations and improvements in management.

FROM GRAIN TO DAIRY FARMING

Under normal conditions, where the law of supply and demand is not artificially interfered with, any development that results in increased land values is generally led by a few far-sighted individuals and takes place very gradually. We find communities in the Mississippi valley where 40 years ago nothing but grain was marketed, that are today known the country over as leading dairy centers.

This development was not accidental nor entirely premeditated. It was the natural result of the farmer's effort to justify the price paid for his land under conditions of declining yields. Continuous cropping to small grain had depleted the soil of its available nitrogen, and clover was recommended to enrich the soil in this element of plant food. The farmer soon found that growing clover in a rotation with small grain gave him practically as large a yield of grain in one year as he had been accustomed to grow in two when he grew small grain only. Most of his clover was harvested and cured into a comparatively poor quality of hay, and this at a time when the prejudice against clover hay as a feed for horses was so pronounced that even a good quality product was not marketable. In other words, clover hay was so cheap that the old scrub cows, of which there were several on each farm, that had never been fed anything but straw during the winter months, were allowed to feed on these clover stacks. This change in ration increased the milk flow of even these scrubs to the extent that the farmer decided to keep enough cows to consume all of the clover hay. Before long he realized that his clover crop, marketed in the form of dairy products, produced for him greater returns than he got for his small grain in the rotation. This led to the introduction of more and better cows and a complete change in the general plan of farming. Primarily the clover was grown to make it possible to grow more grain, but eventually the clover crop became so profitable that it displaced the small grain in the rotation. The dairy cow was not introduced because any one particularly enjoyed milking, but she became popular as soon as she supplied the farmer with a means of converting his crops into a product that could be marketed at a greater profit. This justified an increase in the value of all land in that section suited to the growing of crops that could be converted into dairy products and again the farmer made his profit.

COULD NOT DISLODGE THE MODERN METHOD

This system of farming had become so well established up to the time that we went into the war that wheat, which once occupied a place of major importance, was now practically unknown. The strong appeal made by the nation at that time for the growing of more wheat caused many farmers in the dairy sections to seed a few acres to this crop. The last yield of wheat grown on that particulr portion of the farms about 40 years ago possibly produced at the rate of about 15 to 18 bushels per acre, but now, after dairying had been practiced for a period of years and the large amount of manure produced had been returned to the soil the farmer obtained, to his surprise, a yield of about 45 bushels per acre. In spite of this high yield, however, the valuation of his land had reached a figure where wheat growing was justified only on the basis of patriotism and not of profit with the result that with the war well over no further efforts were made to produce this crop.

BUT WHAT ABOUT THE PALOUSE COUNTRY?

This illustrates normal development as it influences land values. Let us turn for a moment to an illustration of abnormal development resulting from the war, an influence that prevented the ordinary laws of supply and demand operating freely.

The Palouse country, a region covering a portion of eastern Washington, eastern Oregon and western Idaho, is universally well known for its high yields of wheat. Here wheat is grown to alternate with summer-fallow, and under favorable seasonal conditions, 40-bushel crops are not uncommon. Under this system the land is cropped only once every two years. During the uncropped or summer-fallow year, the land is plowed in the spring and then surface tilled sufficiently often during the summer with a harrow or other similar surface-tilling implement to control weed growth and to maintain the mulch necessary for moisture conservation. Up to the time of the war, the farmer had developed this system of cropping and tillage to such a stage of efficiency that it was difficult, if not impossible to suggest methods of improvement. Men of vision that knew that the farmer in general must depend on increases in land value for his profits, began to look for something to assure such increases and thus offer some encouragement to posterity. When the government set the arbitrary minimum price on wheat during the war, which gave the farmer over 100 per cent above normal per bushel, the price of farm land also increased until at about the close of the war, land that had previously sold from $75 to $100 per acre could not be purchased for less than $150 to $200. This took care of the immediate situation, theoretically, at least, as far as the individual was concerned who maintained possession of his land and in a very practical and applied sense where it affected the farmer who sold out during this period.

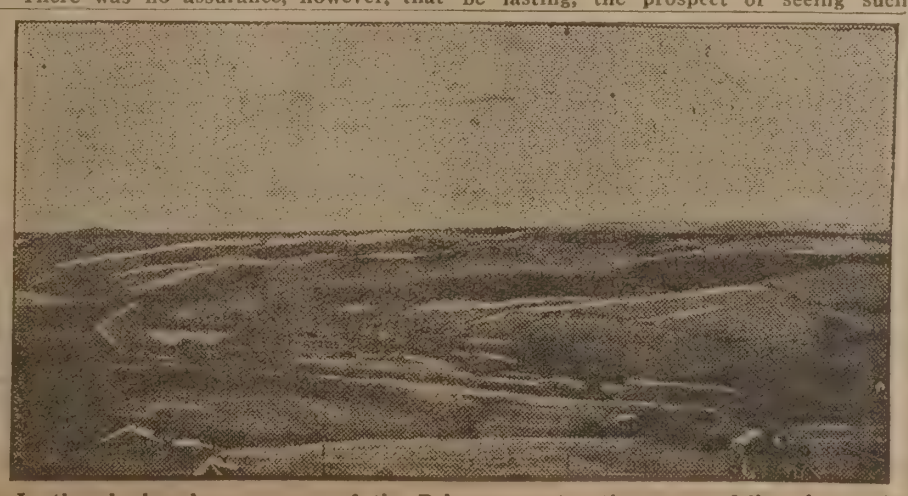
There was no assurance, however, that the price of wheat would remain at the war figure, but instead, everything in the world indicated that this price, when again governed by the operation of the law of supply and demand, would rapidly find its pre-war level. Such a sudden reversal in conditions not only would mean a great disappointment to the farmer who did not sell his land when prices were up, but it spelled disaster for the man that invested during this period. Adjustments had to be made and that quickly, and it is due to the foresight of a few men of exceptional vision that this was possible.

McCROSKEY PLAYED A PROMINENT PART

In this respect the late Senator R. C. McCroskey of Garfield, Whitman county, did in no small way for the wheat farmer of the Palouse region what Governor W. D. Hoard of Fort Atkinson, Wis., did for the dairy industry of that state and adjoining territory. He was one of the largest and most progressive farmers in Whitman county, the county that has repeatedly ranked first in wheat production in the United States. By virtue of his position as a member of the board of regents of the state college, an office which he held for practically a quarter of a century, it was possible for him to inspire men in that institution with the fact that it was their opportunity as well as obligation to develop the details fundamental to a system of farming that would mean prosperity and permanency to the agriculture of the section under consideration. The Palouse was his home and he loved it. He had long recognized the fact that a decline in crop yields spelled disaster as far as the future of any agricultural region was concerned. It was also evident to him that crop yields under this alternate summerfallow system were only being maintained through greater effort in the tillage preparation of the soil and at the expense of a gradual drain on the plant food. Other sections of the country had been forced to make changes in their methods of farming to justify increases in valuation, but in many of these sections such changes frequently meant a change in the entire farming population. Many of the prosperous farming communities did not become so because the American farmer solved the problem, but largely because he felt it more profitable for him to sell out to farmers of more recent foreign extraction who had either learned better methods before they came across or otherwise had better methods handed down to them by their imported ancestors. Our American farmers have not always been ready to make the improvements in methods necessary to justify the greater investment, but they have been more ready to sell out to the foreigner so that they might move westward to take up cheaper land and thus be enabled to continue the more extensive and exhaustive methods they had been used to.

THE FUTURE DEMANDED AN IMPROVED SYSTEM.

To one who goes through the pioneering of a region and lives there the greater portion of his life and in the course of this period builds up a friendship among his farm neighbors with the hope that it will be lasting, the prospect of seeing such neighbors forced to sell out to some one better qualified to farm, but not to fill the neighbor's place in any other respect, is a rather gloomy one. To this class belonged Senator McCroskey and it was one of his main ambitions gradually to cause new methods to be introduced and adopted with the hope that the present population of the Palouse region might become permanently established. The future of the country demanded the establishment of better and more permanent homes and this development demanded faith in the possibilities of increased returns from the land.



Here is where the war helped him out. Results from investigational work, conducted by the state experiment station, had shown that the summer-fallow system generally practiced, which required half of the land to lie idle every year on the supposition that it was necessary to conserve two years' moisture supply to grow one crop, was absolutely without foundation. It was found that the summer-fallow tillage in this region where summer rains are practically unknown and where wheat frequently makes its entire developement without receiving any precipitation during the growing season was practiced, not to conserve the moisture, but to make nitrogen available. Farmers had tried growing wheat continuously without summer fallow with unsatisfactory results. When an intertilled crop like corn was grown in place of the summer fallow there was no decrease in the yield of the succeeding wheat crop. The farmer, however, who was interested in nothing but wheat, argued that corn was poorly adapted both because of climate and topography. Legumes, like clover, alfalfa, sweet clover and peas, not only produced profitable yields when grown in rotation with wheat, but, if anything, had a beneficial effect on the yield of the succeeding wheat crop. The farmer, however, argued that it cost more to produce these legumes than they were worth (which was not true), that he had nothing to feed the crop to when he got it and that a legume sod when plowed up and seeded to wheat would cause the grain to "burn." There was considerable truth in the latter point, and when it is understood that burning here is caused by much the same condition that causes lodging—in the Mississippi valley—it will be readily understood that small grain will have that tendency when grown after a legume. In the corn belt this place in the rotation is always filled by corn, a crop that has no lodging or "burning" tendencies. In the Palouse this objection to the legume had to be overcome because these crops were so splendidly adapted and filled such an important place in maintaining the nitrogen supply in the soil which, due to the drain on this element resulting from the summer fallow system of tillage, was already becoming the limiting element of plant food. The investigators had found, however, that if wheat straw was applied to a legume sod before it was plowed up for wheat, this straw prevented the burning of the following wheat crop.

STRAW MUST NO LONGER BE BURNED IN STACK.

Wheat straw has always been produced in abundance, but none of it was returned to the soil because experience had shown that an application of this material under the summer fallow system invariably caused a decreased wheat crop the following year. The straw was consequently burned in the stack while the soils hungered for nitrogen and organic matter. By finding a place where straw could be introduced in the rotation system it served two purposes—both encouraging from the standpoint of permanent agriculture. In spite of all this evidence the farmer still persisted in cropping only one half of his land and in cropping that half to wheat only. He would have continued this practice for another considerable period had not the close of the war left him confronted with a real problem. He found himself farming $200 an acre land and growing crops that only justified a $100 an acre investment. He could not sell out without suffering a prohibitive loss of over 50 per cent on his investment nor could he continue to grow wheat in an alternate year summer fallow system and hope to meet his interest and taxes.

The result is that he is making over night, figuratively speaking, the adjustments in farming methods that ordinarily might have taken a period of 25 years. The

(Continued on page twenty-two.)

In the checkered appearance of the Palouse country the summerfallow brown is giving way to the green of forage crops.

THE WASHINGTON FARMER

VOL. XLVII. NO. 12.

Trade Mark Registered U. S. Patent Office.

Published Weekly, on Thursday.
By Cowles Publishing Co.
REVIEW BLDG., SPOKANE, WASH.
SEATTLE, WASH., Office, 617 Central Bldg.

To either of which communications can be sent, but to avoid delay address office nearest you.

Subscription price: Five years, $1.00; three years, 50c; one year, 25c. Canadian, one year, 75c. Foreign, one year, $1.25.

OUR GUARANTEE TO SUBSCRIBERS.

Any subscriber who does not feel that The Washington Farmer is worth to him all and more than the subscription price may order the paper discontinued and the unused portion of the amount paid for the subscription will be refunded. You must be satisfied.

Entered as second-class matter, January 13, 1916, at the postoffice at Spokane, Washington, under the act of March 3, 1879.

GUARANTEE OF ADVERTISEMENTS.

We guarantee every subscriber against loss through dishonesty or swindle by any advertiser in this publication; we do not attempt, however, to adjust trifling differences between subscribers and honest, responsible bankrupts. Complaints must be sent to us within 30 days from the date of the transaction and the subscriber must have mentioned The Washington Farmer when writing the advertiser. This guarantee applies to live stock, except that we will not be responsible for claims for damages on account of diseases in stock sold through these columns.

The New Tariff Schedule

While THE FARMER is not a partisan publication, it must, in all fairness, give credit to the agricultural bloc in congress for giving the country the fairest tariff bill that the agricultural interests have had in a generation. The Underwood tariff law, passed during the administration of President Wilson, put a large majority of agricultural products on the free list. The pending tariff bill, as now agreed to in conference between the house and the senate and practically assured of approval by President Harding, takes these agricultural products out of the free list and gives them the protection they deserve if the farmers of this country are to have a square deal in tariff legislation.

We give upon another page the agricultural schedule of the new tariff bill with comparisons of previous tariff laws on some items. It makes an interesting study and shows conclusively that the agricultural bloc has been faithful to the farmers' interests and has conducted an effective and winning fight against that element in both the democratic and republican parties which has been more concerned about protection for the great manufacturing interests of the east than with looking out for the rights and welfare of the producers on the farm.

At the same time the new law will put on the free list a number of commodities that are essential to the farmers. The new free list will include agricultural implements, including plows, tools, tooth or disk harrows, harvesters, reapers, agricultural drills and planters, mowers, horse rakes, cultivators, threshing machines, cotton gins, wagons and carts. Animals imported for breeding purposes may also be brought in free of tariff tax. Other commodities on the free list are binding twine, coal, petroleum and fuel oil, fertilizers, boots and shoes, all barbed wire, white arsenic and Portland cement.

THE FARMER is glad to commend the good work of the agricultural bloc, because that work has been closely in line with its own policy on the tariff question. This journal has held firmly to the doctrine of a square deal for the agricultural interests. It has insisted for years that, if the manufacturing interests are to have protection, the farmer must have his compensation in the way of adequate protection for his products. On the other hand, we have contended that, if agricultural products are to be put on the free list, then manufactures should go on the free list. What we have objected to is a lop-sided tariff law.

Study the Local Tax Budget

Under the requirements of the law the officials of tax levying organizations are now publishing their budgets for next year's expenses. These budgets are the basis on which the tax levies will be determined. They can not be increased after publication, **but they may be reduced.** That is the big point—they may be reduced. Whether or not they will be reduced depends on whether or not the taxpayers study these budgets carefully and demand reduction in items where reductions may be made without loss of efficiency in the department.

Public officers that levy taxes under these budgets should be the target for personal conferences from now until the first Monday of October. On that day a final public hearing is authorized by law, when massmeetings should be held with the taxing officials to discuss possible reductions. Every taxpayer should, between now and the first Monday in October, study his local budgets carefully and be present on that day to tell how and why reductions should be made. By that means real influence will be brought to bear to secure tax reduction.

Now is the time to act. Now is the time to kick—not next spring when the tax statements begin to arrive in the mail. There is no chance then of reducing the amount you have to pay. There is a chance now. Study the budget. Take it up with your local officials. Be present at the meeting Monday, October 2.

Community Spirit

Interest the young folks and you get the old folks, too. There is no doubt about that fundamental proposition.

There was a remarkable community gathering on the grounds and in the buildings of the Sunset Farm bureau of Spokane county the other day. It centered around the work of the boys' and girls' clubs. More than 200 persons were present from that community before the day was over. There was judging by the boys' clubs on sheep and pigs and cows, as well as judging of potatoes by the potato club. There were exhibits by the girls' sewing clubs, and there was an all-around good time.

It proved one thing—that the community had to be united or such an affair could not have been pulled off. It also proved that the boys' and girls' club work, when properly managed, can unite the community in cooperative work.

Ambitious Apple Trees

Ambition can be aroused in apple trees as well as in men. Give the trees plenty of good food and good care and they like to see how many apples they can yield. Their ambition, like all well-directed ambition, pays in the long run.

One apple grower figured out that on the average it cost him $1.94 per box during the years from 1912 to 1921 to produce apples, when the yield was 200 boxes per acre, while it cost but $1.01 when the yield amounted to 600 boxes per acre.

E. G. Wood, extension specialist at the state college, declares that with orchards nine years old or more no grower in the Wenatchee district or the Yakima valley should be satisfied with the condition of his orchard or with his management until his average annual production is over 600 boxes per acre.

LOOKING INTO OTHER FARM FIELDS

British Columbia probably will have 75 per cent of last year's apple crop, or 793,120 barrels (2,379,360 boxes), according to an official report from Ottawa. Wealthy and Wagener varieties will be very light; Delicious and Jonathans heavy.

* * *

A warning to food officials and consumers throughout the country has been issued by R. E. Rose, state chemist of the department of agriculture of Florida, concerning the consumption of immature oranges, which possibly might get into trade channels through coloring prior to sale. It is said that many packing houses are equipping themselves to color these immature oranges.

* * *

The production of lemons in Sicily is about 8,000,000 boxes per annum, each box containing 300 or 360 lemons, according to the American consul at Palermo, Italy. Of this amount approximately 20 per cent is exported to the United States.

State Farm News

Fruit growers in the Kettle Falls district are making arrangements to handle their fruit through an organization known as the Kettle Falls Growers, of which F. G. Carlisle is president and Lee Alloway secretary. The Kettle Falls growers are contracting individually with the warehouse company at Meyers Falls to handle, ship and market their fruit and the warehouse has contracted with the North American Fruit exchange to market the fruit on a consignment basis.

Several other concerns are also handling large quantities of the Kettle Falls and lower Columbia river tonnage and it is estimated that almost 200,000 boxes of apples will be shipped from the Columbia river valley this year.

* * *

Grain men at Pullman estimate that fully 50 per cent of the 1922 crop of wheat in the Pullman district has been sold and that the price has ranged from 85 to 92 cents a bushel.

* * *

C. A. Pratt, one of the original box factory men of the Pacific northwest, who was in Wenatchee recently on his way from Lake Chelan, is one of the two men who worked out the present box that is used all over the west. In fact it is the standard box all over the world at the present time for apples. He is also the man who shipped the first carload of box shooks into the Wenatchee valley. This was about 23 years ago.

The size of the box was decided upon by the Northwest Fruit Growers' association some 24 or 25 years ago, when at a meeting at Portland it was found desirable to standardize the apple box. Prior to that time each manufacture had a size of his own.

* * *

Reorganization of the Walla Walla County Cow Testing association shows that 300 cows have been signed up for next year, according to a report sent in by W. H. Talley, county agent. A. W. Kasten, vocational agriculturist of the Walla Walla high school, is superintendent and Joe Maher tester.

* * *

Nearly 600 cars of fruit from the Wenatchee district have been sold at prices regarded as more satisfactory than had been expected. According to a statement of Dwight L. Woodruff, general manager, the Wenatchee District Cooperative association has sold and booked for shipment 337 cars to 28 states.

Other sales have been made of upward of 200 cars by other organizations and firms. Jonathans and Winter Bananas constitute the bulk of the sales, although some Delicious are included. Prices for extra fancy Jonathans are reported at around $1.25 to $1.50 a box.

* * *

The prune crop in Clarke county this year will be between 8,000,000 and 10,000,000 pounds, according to W. H. Wood, manager of the Washington Growers' Packing corporation. This is slightly better than the average for the last 10 years.

This total includes about 2,000,000 pounds from trees just coming into bearing.

* * *

Hail in parts of the north central Washington district recently did damage that will cut down the total apple production about 887 cars, according to District Horticultural Inspector Frank C. Nielson's crop estimate. The hailstorm of August 30 did some damage in the vicinity of Omak, there being from 12 to 14 orchards seriously harmed and probably as many more damaged. There will be a cut in the Omak tonnage of approximately 5 per cent or 75 cars, Mr. Neilson's report indicates.

Hail damaged an area of about 200 acres at Manson. The Manson section, however, was not hit severely. Tonnage will be cut about 25 cars. About 20,000 boxes were damaged in orchards in Bridgeport and vicinity.

* * *

The Pend Oreille county commissioners have awarded to J. W. Rauch of Newport the contract to build two miles of permanent highway for $9990. The work is to be done north from Locke and is a continuation of the seven miles of road being built by the state this year.

* * *

Dr. H. A. Trippier, president of the Walla Walla County Fair association, who spoke at a recent commercial club luncheon, said that Walla Walla in three years had spent $340,000 for mules shipped in from the east and in the last year had spent more than $81,000 for beef cattle and more than $129,000 for hogs raised elsewhere. These sums, he said, could be kept in the community if farmers were given more encouragement in raising stock.

* * *

A new quarantine order has just been issued by E. L. French, director of agriculture, which is an amendment to quarantine No. 7, which prevents all shipments of currant or gooseberry stock. The new order, the amendment states, that since no white pine blister rust has been found on either currants or gooseberries, there seems to be little danger of spreading this disease by the shipment of plants from inspected and licensed nurseries. Shipments of plants may now be made when completely defoliated to points within the state of Washington. This provision, however, does not include the black currant, which is being taken out wherever found.

* * *

Farmers in Pend Oreille county have reduced the loss of wheat from smut from 25 per cent to 4 per cent by treating the seed with dry copper carbonate, according to County Agriculturist E. E. Hupp. Mr. Hupp is demonstrating this treatment to the farmers, who are using it for the first time.

* * *

At a meeting of the commissioners of Columbia county a program of economy was adopted which will reduce the taxes about $75,000 annually, says a Dayton report. The commissioners feel that with poor crops and low prices for all farm products the farmers can not afford to go through with the road construction program planned last year, nor pay the salaries they have been allowing the deputies of the several county offices.

The levies for road districts will be reduced from 2 to 4 mills, county agent work will be dispensed with, cars furnished county officers will be used for official business only, and the assessor will not be allowed an office deputy.

All permanent road construction will be suspended and but enough work done on the roads and bridges to make them safe for travel.

FARM BUSINESS AND MARKETS OUTLOOK

Scarcity of prime and choice steers lifted prices to a new high for the year of $11.35 at Chicago last week. Plenty of plain steers are arriving, however, so that the total supply of beef is ample. Chicago has had the largest run of "westerns" of the season and other points to which the range contributes were well supplied. The corn belt is sending a generous quota of medium and common grades of steers so that there is an abundance of low grade beef on the market and prices were lower on the hoof following a similar trend in the dressed beef trade. Combined receipts at the seven leading markets in the last five weeks have held consistently above the average for the corresponding period in previous years.

The stock prices behaved the same as in the steer market, "corney" cows and heifers being unchanged for the week while medium and common grades which made up the bulk of arrivals were lower. The culling out process is under way and in spite of the need for restocking, some western range cows and heifers are arriving and increasing the competition in this division. The veal calf market again reached a $13 level at Chicago for choice heavyweights. Receipts are seasonably small. Prices may go a little higher on vealers, but after another two or three weeks a downward trend will be probable.

Broad Demand for Feeder Cattle.

Combined shipments of stocker and feeder cattle from the 12 important markets during the week ending September 1 totaled 126,294 head, the largest for any single week since October last year and more than double the average for the corresponding week in the two preceding years. With grassers arriving in large numbers, the demand has been satisfied and at the close of last week values both at Chicago and Kansas City were easing slightly. Most of the feeders at Chicago and river markets are selling at a range of $6.25 to $7.25. A few are available at $5 and below, but such kinds are lacking in breeding, light in weight and extremely thin. Thus far, the season's movement to the country indicates an average supply of beef during the winter, although if the rate shown during the last week or two is maintained during the next three months, the number placed in feed lots will be above normal.

Another Record Supply of Hogs.

Receipts of hogs at the 11 leading markets in the week ending September 9 totaled 408,000 head, the largest on record for the corresponding week which in the past has averaged the smallest of the year. The 10-year average is 312,000 head. The decline in prices has been checked temporarily, but packers are as bearish as ever and unless a letup in the run comes, values will be hammered again at the first opportunity.

In spite of low prices for hog meats during the last month, stocks in storage at the six leading packing points declined only 9,000,000 pounds, the smallest decrease for August in at least eight years. The five-year average decreased 18,000,000 pounds compared with a five-year average of 14,600,000 pounds. With the large receipts of hogs during the month taken into consideration it is evident that consumption of hog meats and lard is at a rather high level, but not high enough to remove accumulations as fast as would be desirable in view of the big new crop of hogs which will begin to show up within a short time.

Lamb Receipts Continue Small.

Combined receipts of sheep and lambs at the seven leading markets in the week ending September 9 totaled approximately 180,000 head compared with an eight-year average in the corresponding week of 352,000 head. Prices have held at about the same level for several weeks as a result of unusual uniformity in the supply. The sheep population is known to be much below normal, but not until the last month or two has this fact been prominently manifested in the volume of market receipts.

Feeders are paying practically up to the fat lamb market for their raw material, but are unable to obtain a normal supply. Total shipments to the country from the 12 leading markets in the week ending September 1 were 86,539 head, the largest since last November. In the corresponding week last year 133,642 head were shipped out with 126,408 head two years ago.

Demand for Horses Doubled.

Horse markets are able to absorb about twice as many head as three weeks ago. Coal dealers and industries which were cramped by lack of coal have been able to enter the market again. Drafters eligible to sell above $225 at Chicago are readily absorbed and 1250 to 1400 pound chunks are about $10 per head higher than a month ago. All offerings are moving much more freely.

Better Tone in Wool Market.

Moderate buying of wool at seaboard markets continues with a better tone in the trade generally and prices steady upon domestic wools. Labor troubles in the textile trade have been settled for the most part and mills are fairly well supplied with orders for goods. Most of the clip is now in second hands. The tariff remains the most uncertain factor in the situation, the conference report calling for 31 cents per clean pound. Foreign markets show a slightly higher trend.

Wheat Export Sales Remain Small.

Until the last few days sales of wheat for export as reported to the grain trade from day to day have been running only 500,000 to 1,000,000 bushels daily, including both United States and Canadian wheat. Much more is being shipped on old sales, however, since actual clearances of wheat alone in the three weeks ending September 2 totaled 23,000,000 bushels. Adding the Canadian wheat exported and clearances of flour from day to day, the amount going out is fairly large although too small to remove the North American surplus before southern hemisphere wheat will again be an important factor. It is estimated that Argentina and Australia together have only about 20,000,000 bushels to ship before their new harvest, leaving the bulk of the demand to be supplied by North America in the next five months.

Flour trade has been rather dull right along, but flour production by United States mills in the last week reported upon amounted to 3,000,000 barrels compared with an average of 3,688,000 barrels in the corresponding week in the four preceding years. It is noteworthy also that in the nine weeks ending September 2 the total disappearance of wheat from primary markets into consumptive channels, both domestic and export, was 93,846,000 bushels compared with 107,123,000 bushels in the corresponding period last year and a 10-year average of 64,109,000 bushels.

Big Wheat Surplus.

Assuming average domestic consumption in the present crop year, the revised estimate in the United States points to an export surplus of 230,000,000 bushels. If home consumption is no larger than last year, the exportable surplus will be about 50,000,000 bushels more.

The official estimate on the Canadian crop has now been raised to 289,000,000 bushels, almost equal to the record crop produced in 1915. This means an exportable surplus from that country of approximately 300,000,000 bushels.

The total exportable surplus based on the foregoing is 530,000,000 bushels. The revisions in crop estimates in the last month have removed all bullishness from wheat statistics unless a crop failure occurs in Argentina or Australia, or both. Present prospects are for average crops in both countries.

The question now is at what level can these prospective surpluses be merchandised. In view of price levels upon other commodities, wheat at $1 a bushel can not be considered out of line to the foreign buyer. Nevertheless, values may sag below this figure for brief periods during the season of heavy movement in Canada.

Crop Estimates Revised.

The September estimate of the wheat crop made by the department of agriculture shows a gain of 14,000,000 bushels in spring wheat over the August returns. The total crop of both winter and spring is placed at 819,000,000 bushels compared with 795,000,000 bushels harvested last year. Taking stocks on farms, the visible supply and holdings by country mills and elevators into account, the total available supply in the United States on July 1 was practically the same as on the corresponding date a year ago.

The corn crop lost 142,000,000 bushels or nearly 5 per cent during August, due to hot, dry weather in Kansas, Nebraska and South Dakota. The estimated yield on September 1 was 2,875,000,000 bushels compared with 3,080,000,000 bushels last year. Since farm holdings are believed to be considerably smaller than at this time last year and since the visible supply at terminals is much smaller, the statistical position of corn is fairly strong. The increase in the hog population to be fattened this fall and winter and expansion in cattle feeding operations also give corn fundamental strength.

The September oats crop estimate was 1,255,000,000 or about the same as a month ago. Last year's harvest was 1,061,000,000 bushels. Barley was placed at 194,000,000 compared with 151,000,000 bushels a year ago. Besides the loss in corn during August, sorghum grains declined about 16 per cent, the September estimate being 96,000,000 bushels compared with 115,000,000 bushels a year ago. Flax was placed at 11,700,000 bushels compared with an average of 10,500,000 bushels in the six preceding years.

Coarse Grain Prices Doing Better.

Demand for cash corn continues brisk so that liberal receipts are being absorbed. Prices are up about 6 cents from the low point of a few weeks ago.

Oats prices have advanced about 5 cents from the low point as receipts have failed to show the usual increase following harvest. Arrivals at primaries in the week ending September 9 totaled only 4,665,000 bushels compared with a 10-year average for the corresponding week of 7,611,000 bushels.

Cash Grain Markets.

The range of cash grain prices for the week ending September 13 are as follows:

Chicago—Wheat—No. 2 hard, $1.02@1.04 1-2; No. 3, $1.01 1-4@1.03 1-4. Corn—No 2 mixed, 63 1-4@64c; No. 3, 62 1-4@63 1-2c; No. 2 yellow, 63 1-2@64 1-2c; No. 3, 62 1-2@64c; No. 2 white, 63 1-2@64 1-2c; No. 3, 62 1-4@64c. Oats—No. 2 white, 36@39c; No. 3, 34 3-4@38 3-4c. Rye—70 1-4@74 1-2c. Barley—55@62c.

Clover Seed Market Strong.

Clover seed markets advanced slightly in the last two weeks, due primarily to light offerings. Above $10 for prime red clover at Toledo, however, a great deal of seed is for sale and it is doubtful if values will get above that figure very far in the next few months. Reports upon the new crop are favorable for the most part.

Chicago—Per 100 pounds: Clover, $12@16.50; timothy, $4@5.10.

Feed Markets Inactive.

Feed markets are inactive as buyers are not purchasing beyond immediate needs and flour mills are storing wheat feeds instead of forcing them upon the market at low prices. Both cotton seed meal and linseed meal have lost considerable ground in the last few weeks.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $17.75; standard middlings, $18.75; flour middlings, $24; cottonseed meal, 36 per cent, $37; 43 per cent, $41; hominy feed, $24.50; gluten feed, $30.35; old process oil meal, $38.50; tankage, $55.

Crop Reduced Slightly.

The September estimate upon the hap crop was 109,000,000 tons compared with 110,000,000 tons a month ago and 97,000,000 tons harvested last year. Prices generally are weak, although receipts are small; they are equal to or slightly in excess of the demand. Buyers are not going beyond immediate needs.

Prices per ton in carlots—Chicago—No. 1 timothy, $19; No. 2, $15@18; No. 3, $10@14; No. 1 light clover mixed, $16@19; No. 1 clover, $13@16; No. 1 clover mixed, $13@16; upland prairie, $17; midland prairie, $12@14; rye straw, $10@11; oat and wheat straw, $8@9.

Big Decrease in Egg Stocks.

Cold storage holdings of case eggs on September 1, according to the preliminary reports of the bureau of markets amounted to 9,586,000 cases, the largest on record for the corresponding date. The five-year average is 6,794,000 cases. The reduction in holdings during August amounted to 639,000 cases, the largest on record for that month and compared with a five-year average decrease of 364,000 cases. Prices are about 50 per cent higher than the low point of the season.

Poultry prices are holding up unusually well in view of the increase in receipts at the leading markets as compared with preceding years and the prospect of a heavy run during the fall and winter months.

Butter Market Strong.

Butter prices advanced again early last week as hot weather continued to cut down production as well as to reduce the quality of arrivals and the percentage of fancy butter. Undergrades were not so scarce, however, and the result was a wider range of values. Storage holdings are decreasing, the decline at the four leading markets in the first seven days of September being over 1,000,000 pounds, whereas the decline throughout September a year ago was less than 200,000 pounds. In September, 1920, there was an increase of nearly half a million pounds. Cold storage holdings on September 1 in the entire United States amounted to 112,104,000 pounds compared with a five-year average on that date of 109,350,000 pounds. During August, storage stocks increased only 8,835,000 pounds compared with a five-year average increase in that month of 12,333,000 pounds.

Prices for 92 score creamery butter on September 13 were:

Chicago, 38 1-2c New York, 39 1-2c; Boston, 39c; Philadelphia, 40c.

Cheese Stocks Below Average.

Storage holdings of cheese in the United States on September 1 amounted to 53,500,000 pounds compared with 46,635,000 pounds a year ago and a five-year average on the corresponding day of 66,191,000 pounds. Receipts have been above the average in the last month. Nevertheless, the increase in storage holdings was only 7,213,000 pounds compared with a five-year average increase during August of 11,823,000 pounds. Cheese prices eased slightly toward the latter part of last week as buyers are only taking small amounts and trade was comparatively inactive. Sales to the south usually are of large volume at this season, but the strike, weather conditions and lack of prosperity on the part of southern farmers have prevented the usual fall increase in demand from this section.

Kittitas Fair Larger, Better

High Class Exhibits and Good Weather Draw Crowds

By RALPH ERSKINE.

The grounds of the Kittitas county fair at Ellensburg had been greatly enlarged to make room for the new barns and pens which were necessary to accommodate all comers for this year's event, which took place September 14, 15 and 16. Two new hog and sheep barns had been erected and a double-sided shed set up for the beef classes. While the departments inside of the main exhibit building were not any larger in numbers of entries than they were in past years, there was a noticeable advance in the quality of almost every division.

The women's department boasted of a higher class of fancy work and home-made pieces, which were displayed in a very unique manner. The poultry show had about the same number of entries, but the birds had been picked over more carefully than ever before. The garden, grain and hay exhibits were all high-class and were representative of the main agricultural products of the county.

Good weather prevailed throughout the whole week and helped to swell the gate receipts and to insure a successful crowning ceremony of the country-wide elected queen of the fair, which was the main part of the program on the first night. Among the noteworthy visitors who attended during the three days were Governor Louis F. Hart and Congressman John W. Summers, both of whom were in town attending the good roads convention.

On the night of the second day of the fair a banquet was held in honor of the boys and girls' club members, who were addressed by prominent farmers and business men. The live stock parade through the center of town was a feature of the last day and all animals that could be led were taken out in the long line. Motor vehicles of all shapes and sizes were included, many of which were constructed for the occasion. The four-horse teams and prancing stallions, however, attracted the most attention.

The dairy show had a larger number of Jerseys than any other breed, there being 50 head in all. They came from the Nichols & Plunket, Leo Stevens and R. W. Woods herds. The special prize of champion bull of all breeds went to Nichols & Plunket on Majesty's Cowslip Noble, an outstanding individual with an excellent top line and a perfect conformation.

Loretta P. Olga 2d of the same herd won senior and grand champion female honors. She was a neat little 2-year-old with a typical Jersey head. The junior champion female was as equally outstanding as was the grand champion bull. She was a 9-month-old heifer, Precious Little Pearl, owned by Marie Tornay, a member of the calf club, who entered the calf in the open class.

There were 12 head of Holsteins from the H. E. Hansen herd who took all awards in the classes filled. His herd sire, a son of Judge Segis, was placed as junior champion. In the Guernsey classes Fred C. Drake won champion female on Princess Cathleen of Catherbury, a 4-year-old animal of splendid conformation. The junior champion bull ribbon went to the W. H. Jackson herd on Chicona Prince, a junior yearling. Drake, however, had grand champion, on Nanum Chief of Orchard Hill, an animal that traces back to the Dr. Willis herd at Redmond.

A new feature of the beef cattle department was the showing made by the Kittitas Hercules Shorthorn Baby Beef club, which brought out 15 animals, three of which were fitted by girls who won five of the first places. Nora Waite of Ellensburg had the champion steer and the champion pair of fat animals. In the class of individual steers she won second, Jessie Woodhouse third and Willie Waldron fourth. Harry Waldron took second in the pair of steers, with Meta Bennett third and Jessie Waldron fourth. There are eight members in the club, all of whom purchased their animals from the Hercules stock farm at Sprague.

In the regular classes of beef Shorthorns Roy Bowers took senior champion on Headlight, a 2-year-old polled bull. The junior and grand champion went to the Henry Wager bull, that was only 10 months old. He had just been purchased from Day & Rothrock to head the herd of beef animals.

J. Alva Bull of Ellensburg had the senior and grand champion female, Red Daisy, a 3-year-old, with a splendid frame and good udder. Thomas McKeman of Ellensburg won first on a junior 2-year-old heifer, Sweet Maid.

There were 24 horses in the show, which included many purebred animals, although grade mares were allowed to compete as farm work teams. The champion stallion of the show was the steel-gray Belgian owned by the West Side Horse club and is being cared for by Leo Stevens. A Clydesdale stallion owned by George Snodgrass won first in his class. Mr. Snodgrass also was the heaviest exhibitor of grade mares. L. J. Richards won first on geldings and first in the Shire mare and stallion classes. George Wilson of Rocklyn judged the horses.

There were some good Chester White classes, part of which were shown by the club boys of the county. The first and champion boar was Big Dollar, a 600-pound animal from the Steve Woodhouse farm. The champion sow was also in this herd, Yakima Queen, a 2-year-old from the Ames herd in the Yakima valley. The champion fat barrow of the breed was another one of the Woodhouse animals.

In the boys and girls' club classes Ward Rugh won first on his pen of four barrows under 6 months, while the first sow and first boar of the same age were shown by Leonard Newman of Thorp. Leonard took eight firsts on his herd, which included the herd classes.

The champion Berkshire boar was Lassier Leader, owned by Broadview Pig club. The champion sow was Silver Brook Beauty 2d, owned by Irwin Mills of Ellensburg. The best herd, a boar and three sows, was owned by Irwin Mills, a club member who showed in the open class, as well as the club entries. Helen Wilson, also a club member, won in the produce of sow class. Harold Wilson had the best boar pig under 6 months and Helen Wilson had the best gilt of the same age, in club classes.

Elmer Smith of Thorp had the only entry of Poland Chinas, of which there were four boars and a gilt.

In the sheep barns, the Hampshires had the greatest showing, part of which were shown by the club members. The champion ram lamb was one of Rowland Newman's entries, while the champion ewe was shown by Ernest Wilson. The first pen of lambs was won by Simon Wipple & Sons, while Ernest Wilson took second place.

In the club awards Rowland Newman won first on ram under 1 year and Clarence Wipple won on ewe of the same age and on ewe over 1 year.

Fred Wipple was the only exhibitor of Shropshires, having two pens of lambs.

UTILIZES HIS STRAW.

There is very little straw that goes to waste on the Pete Omdahl farm, near Sedro-Woolley. He has a 200-ton straw shed, into which all of his straw is stacked as it is threshed. Three sides of this building are boarded in, while one end is left open and serves as a feeding shed, where the entire herd may stand and eat what straw they desire during rainy weather. Mr. Omdahl feeds a quantity of hay, and believes that access to straw is beneficial to all mature animals. He finds that they consume a large quantity of this feed during wet weather.

TUBERCULOSIS TESTING.

Nearly 400 applications have been received by O. V. Patton, county agriculturist, who is directing the work of making tubercular tests of dairy cattle in Spokane county, in charge of L. V. Hardy of the United States bureau of animal industry. Applications for the test should be made to the county agent's office, courthouse, Spokane.

Are You Satisfied With Service Rendered by FARMER Advertisers?

As readers of THE FARMER know, this magazine aims to keep its advertising columns thoroughly reliable by excluding all announcements of doubtful character. It exercises such care in this respect that it is seldom a complaint is received. However, there is always the possibility that there may creep into the columns an advertisement of some firm which does not give entire satisfaction in its dealings with some subscribers.

In any such case our advertising manager wants to be notified at once so that he may use his influence in arranging a satisfactory adjustment and in safeguarding the interests of other subscribers.

Are you satisfied with the treatment and service given you by advertisers in this magazine? If you are, we would appreciate your writing us to that effect, but we are much more anxious that you write us if you are dissatisfied with the treatment given you in any case. Address your communication to the advertising manager and give him names, addresses, dates, prices, articles and any other information which throws light on the transaction.

Every advertiser using space in this paper must measure up to a high standard of business integrity, and in achieving this result we solicit your constructive cooperation.

GENERAL ADVERTISING.

Oil Light Beats Electric or Gas

Burns 94% Air

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

FROM a mountainous section of Colorado, especially hard on tires because "the roads are always full of rocks," comes the following testimony:

"One of our dealers drove in here recently from the country with four Red-Tops on an old Ford car, which he said had been on for over two years and he had given up figuring how far they had gone. 'The only trouble with the Red-Top,' he said, 'is if you ever sell a man you never get a chance to sell him again because the tire never wears out'."

Where the roads or the loads break down ordinary tires quickly, there its extra ply of fabric and the extra heavy tread place the Red-Top in a class by itself.

There's a Fisk Tire of extra value in every size, for car, truck or speed wagon.

Summer Fallow

Some Stevens County Results

"Where it is not possible to irrigate for grain in this county it is imperative to summer fallow," says Henry J. Plumb, who is county agent in Stevens county. Mr. Plumb adds that the importance of summer fallow lies in the fact that it conserves moisture, that by it nitrogen is liberated in the soil and made available for plant growth, that it enables the farmer to kill all the weeds and thus have the ground free from plant growth, which will compete for moisture with the grain crop.

Mr. Plumb backs up his statements by results obtained by farmers in Stevens county.

James M. Newhouse of Ford, Wash., is not only one of the best farmers in his community, but he is one of the best in Stevens county, from the standpoint of wheat growing. This year's crop is eloquent tribute to Mr. Newhouse's farming—a crop of Fortyfold wheat of outstanding quality, which will yield, conservatively figured, from 35 to 40 bushels per acre. When I visited Mr. Newhouse's farm early last spring he was plowing the ground for this wheat with a tractor, putting the plows down to a good depth and doing an excellent job of plowing. The harrows followed the plows immediately and thus began the cultivation of the summer fallow for this year's excellent crop. Later on in the season I was there and he had just finished cultivating the summer fallow with a weeder, and Mr. Newhouse told me he cultivated throughout the summer, at all times maintaining a dust mulch and never allowing a weed to even make a start. One can realize more fully the value of this practice to Mr. Newhouse when he is told his was practically the only crop in his neighborhood. His neighbors had as good land, but their tillage was faulty.

William T. Rader of Chewelah, who farmed the Paul Sheshetay place, an Indian-owned tract of land, reports results that are even more sensational and prove the value of summer fallow even more. Planting hybrid 128 last fall in a field part of which was summer fallowed and part of which remained in stubble throughout the summer (he stubbled wheat in on the stubble land) he reports a yield of 40 and a fraction bushels per acre on the summer fallow and 20 bushels per acre on the stubble ground. Ample evidence this, as there could be no other difference in the ground, as it was all in the same field and the same type of soil. It was all sown out of the same seed, therefore the seed could not account for it. We must give the summer fallow the credit for this difference in yield of over 100 per cent.

John Swan of Meyers Falls, whose farm lies about half way from Colville to Meyers Falls, had conspicuous success with his wheat this year, having the only crop between these two towns. It was hybrid 128 on summer fallow and yielded at the rate of 35 bushels per acre.

Herman Stone, a very good farmer of the Kelly Hill region, had very good results with summer fallow, his wheat yielding 10 bushels more on his summer fallow than it did on the spring-plowed ground.

E. G. Kohlsedt, near Colville, got 42 bushels per acre from his wheat on summer fallow.

Kjelland Sells Herd

The entire herd of Holsteins owned by H. O. Kjelland of North Bend, Ore., was sold at auction at the Grays Harbor county fairgrounds, Tuesday, the fourth day of the fair. There were 45 animals listed in the catalogue, and more than half the number were bid off to buyers from out of the county.

The sale brought a total of $6372, which made an average of $154. This figure was considered a good mark although many of the animals might have brought more. The top animal was Belle Sadie Vale, a 6-year-old cow, a daughter of Chimacum King Korndyke Sadie Vale. She is out of Chimacum Belle Fayne that traces back to Segis Korndyke Johanna De Kol. The animal was bid off to Thomas J. Owens of Kirkland for $370.

There were 16 head of the animals that were purchased by dairymen of Grays Harbor county, while 14 went to George Krause of Auburn and Thomas Owens bought nine. Charles E. Fisher of Thomas purchased three of the animals.

A list of the animals and their buyers are as follows:

Females: May Skylark Ormsby, $105; Canary Joh. Dakota Ormsby, $110; Buttermaker Colantha Queen, $105; Lady Bessie Joh. Ormsby, George Krause of Auburn, $110; Pauline De Kol Posch Gem., C. Weiks, Little Rock, Wash., $200; Snowflake Dakota Ormsby 2d, $105; Cornucopia Bessie 2d, Krause, $125; Belle Sadie Vale, $370; Bos Sadie Vale, Thomas J. Owens, Kirkland, $300; Fancilla Aaltje Surprise, $165; Dakota Marie Kaan 3d, Rufus H. Arland, Montesano, Wash., $155; Kaan Marie of Dakota, Krause, $50; Dakota Marie Segis Pontiac, Arthur L. Brown Hoyuiam, Wash., $175; Kaan Marie Barbetta, Krause, $120; Daisy Johanna Segis De Kol, Robert Thomason, Hoquiam, $135; Canary Johanna Dakota Ormsby 2d, Krause, $155; Pearl Grace De Kol, Thomas Owens, $300; Glenview Black Queen, Louis Larson, Elma, $160; Pleasant Grove Maid Colantha, Krause, $180; Pleasant Grove Beets Colantha, Ed Cavett, Oakville, Wash., $160; Countess Elgin Belle Pet 3d, Owens, $255; Ormsby Skylark Heng, Weiks, $180; Heng. Dakota Ormsby De Kol, Krause, $105; Terrace Hall Belle Burke, Krause, $105; Terrace Hall Colantha Pontiac, Cavett, $225; Terrace Hall Colantha Mercedes, Krause, $105; Terrace Hall Colantha Mercedes, Brown, $165; Kaan Marie Wa Wa Segis, $105; Krause Johanna Ormsby Burke, Owens, $160; Terrace Hall Lady Ormsby, D. A. Watson, Markham, Wash., $170; Terrace Hall Marie Burke, Arthur Benson, Hoquiam, $150; Terrace Hall Colantha Ormsby, Weiks, $155; Terrace Hall Johanna Ormsby, Owens, $200; Terrace Hill Skylark Surprise, A. L. Soule, Welma, $155; Terrace Hall Burke Colantha, Weiks, Little Rock, $160; Terrace Hall Sadie Vale Burke, Owens, Kirkland, $190; Terrace Hall Bessie Burke, Owens, $200; Terrace Hall Sadie Burke, Owens, $190.

Males: Terrace Hall Kaan Burke Segis, C. E. Fisher, Thomas, Wash., $40; Terrace Hall Burke De K., Fisher, Thomas, Wash., $100; Terrace Hall Canary Ormsby 2d, Charles Fisher, Auburn, $120; James Carstans & Sons, Elma, consigned an unnamed bull calf, $100, to C. E. Fisher, Thomas, Wash.

Likes Alfalfa Cover Crop

H. M. Gilbert, well known in the fruit industry of the Yakima valley, is using alfalfa as a cover crop and declares that he is through with clean cultivation and will never go back to it. There are, however certain difficulties to be overcome in this cover crop system. Mice, which inevitably come in where alfalfa is used as a cover crop, have to be fought vigorously with poison. Then there is the difficulty which the use of the cover crop entails in irrigating, which Mr. Gilbert overcomes by deeper ditches. He uses fertilizers extensively, having spent $5000 for that purpose this year. He favors sheep manure.

The New Oakland Six

The 1923 Oakland is Indeed The Ideal Farm Car

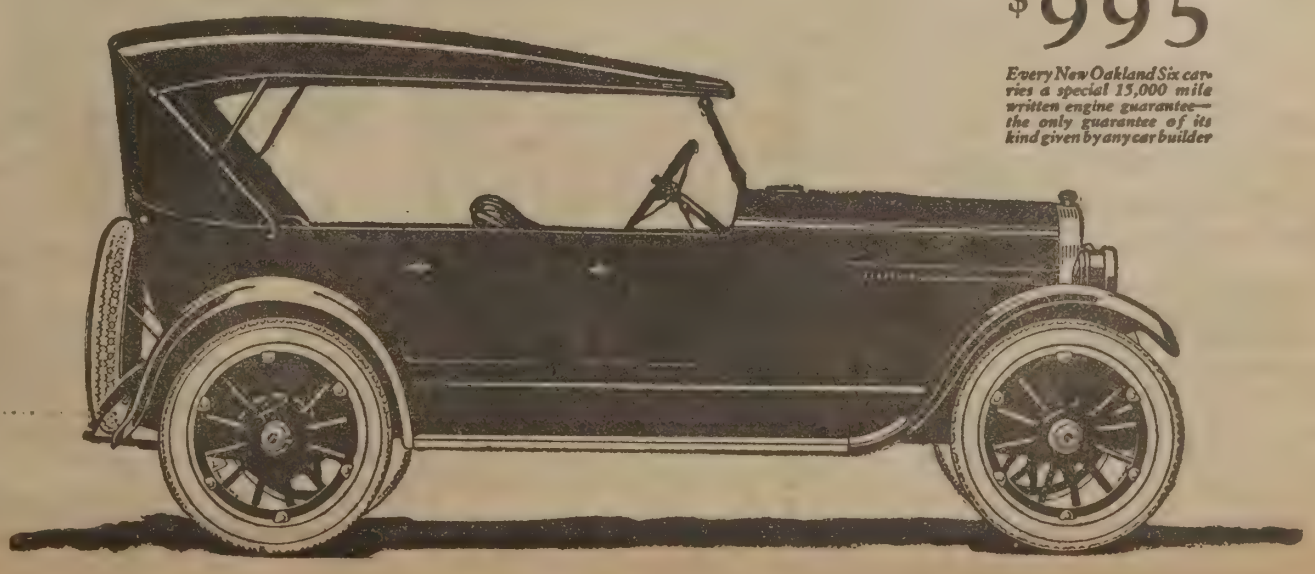
What other car, at anywhere near its price, even approximates the value of the New 1923 Series Oakland Six.

Visit an Oakland salesroom and examine its superior worth. Go over it point by point and your own sound judgment will convince you that here is automobile value without equal.

Note particularly its powerful, quiet, over-head valve, six cylinder engine, so good that *we guarantee its performance in writing for 15,000 miles.* See the unusually roomy body; the deep-cushioned, genuine leather seats. Examine the sturdy chassis construction—the deep frame, long buoyant springs, the size and strength of every moving part.

Consider the many unusual refinements that make country driving safer and more pleasant—the new dimming device, mounted on the steering wheel and controlled by the thumb while driving; the improved carburetor with automatic heat control; the door-opening curtains; the cowl ventilator and many other similar features.

These unusual features, coupled with the known high quality of its construction make this 1923 Oakland an ideal farm car—a car powerful enough to negotiate the roughest roads and the highest hills; sturdy enough to keep running year in and year out with a minimum of service attention; roomy enough for quick trips to market, loaded with grain or produce; economical enough in first cost and in maintenance to be practically indispensable.



The more carefully you examine this New Oakland, the more certain you will be to buy it—not upon our word, but because of its own high quality, quality almost unbelievable in a car that is sold for only $995.

Roadster, 2 Passenger - $975 | *Coupe, 2 Passenger - - $1135* | *Sport Car, 4 Passenger - $1165*

Every New Oakland Six carries a special 15,000 mile written engine guarantee—the only guarantee of its kind given by any car builder

LIVESTOCK AND DAIRY

Making Silage

By A. B. NYSTROM.

Will you please tell me if it would be possible to cut up green corn fodder with an ensilage cutter and blow it into a barn, mixing a little hay with it, and have it keep, or would one be likely to lose their feed from spoiling and stand a chance of burning the barn by the fodder heating?—E. L. C., Kettle Falls, Wash.

The secret of making silage is to have all the air excluded, so that mold will not have a chance to grow. Mixing green corn fodder with dry hay will not do at all unless they were chopped up together, and tramped well into a silo. It would be necessary also to add water sufficient to insure perfect settling with no air pockets. Mixing the hay and green feed in a loft as you suggest would be sure to cause a spoiled feed, and may even cause spontaneous combustion.

Increased the Butterfat

Eight years ago Hans Thompson of Arlington purchased a Guernsey bull that was 31-32 purebred and he noticed that there was a decided rise in the fat content of the milk from the bull's daughters.

"In checking up our records in the county cow testing association," said Mr. Thompson, "we found that one of the old cows had a fat record of 351 pounds, while her daughter has a 206-pound production record as a 3-year-old. Another mature cow has a 338-pound record, while her daughter produced 361 pounds as a 2-year-old. With foundation stock of this kind in the herd I will raise all the heifer calves and get good cows as a general rule. All of the cows in the herd will average 300 pounds and more."

In 1912 this herd averaged 265 pounds of fat per cow. In 1917 the average had increased to 295 pounds and in 1921 average production per cow had reached 341 pounds. This increase is due largely to the use of a good herd sire.

Much Depends Upon Feed

One of the neatest Jersey herds to be found in Clarke county is that of the Stickney Brothers, northwest of Vancouver. While this is entirely a high-grade herd, with the exception of one purebred heifer, there is very little about any of the cows that would indicate they are not all registered animals.

All of the cows show a distinct Island type, and there is no animal in the herd that does not show the result of good feeding and attention. There have been three purebred bulls used on this herd in the last 15 years. Five of the original cows are still in the herd, and are still producing a good flow of milk. One cow, the grandmother of the herd, has 25 descendants that are now milking.

Both of the Stickney Brothers are careful feeders, and believe in giving all cows as much as they can handle while they are milking. "Much depends on the feed that a cow gets at the time of her first freshening," said one of the boys.

There is no manure wasted, since it is all stored under a manure shed, as it is wheeled from the barn daily. The shed, which measures 24x40 feet, was erected at the cost of $50, this being for lumber and other material only, all work being done by the owners themselves. This shed will hold the manure for the entire winter, provided too much bedding is not used. It is applied on the fields with a spreader at any time when the ground is not too soft.

VETERINARY

By DR. S. B. NELSON.

Dropsy.—What do you recommend for dropsy among cattle and how does it act on them? R. J.

A true dropsy is caused by weakness of the heart, kidney trouble or difficulty with the liver. You will sometimes find good results from giving sulphate of iron, one-half teaspoonful on the feed, for a number of days.

Leaky Teats—I have a cow that has leaky teats. Is there any remedy for this? J. M. I.

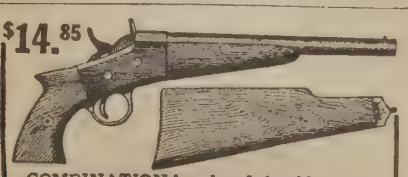
Try wrapping adhesive tape around the end of the teat. Use the type that is known as the electric tape. Tie it just tight enough to stop leaking, but not sufficiently tight to stop circulation. This may cause sufficient irritation and swelling so that the leakage will gradually be stopped.

Proud Flesh.—I have a 4-year-old colt that got her hind foot cut in barb wire and I thought it was getting along all right, but now there is proud flesh in it. What is best to do for it? J. B.
White Bluffs, Wash.

Probably the best way to remove the proud flesh is to use actual cautery with a hot iron, burning down the extra tissue, but not injuring the skin lining. After this use an astringent ointment, such as the benzoated zinc oxide ointment.

Horse Breathes Hard.—I have a horse that breathes hard and also makes a whistling sound. She also coughs a great deal and has a gurgling sound in her throat. When I ride her for a way her hard breathing seems to go away.
Cape Horn, Wash. R. W.

It is possible that your horse has either a bad laryngitis, or an infection in the nasal passages, a lessening of the breathing space in one of them, or a combination of both. I would suggest one dram of chlorate of potash in the drinking water morning and evening, and one dram of oil of eucalyptus in an ounce capsule, which should be filled with linseed oil and given to the animal. If you are not accustomed to giving animals medicine by capsules you can not use this remedy. It is practically the only way it can be given. In lieu of it you can give two drams of turpentine in a quart of water as a drench, but it is not as good.



Use Salt Douche—I have a cow that had a bad udder last summer. The left hind quarter hardened and gave lumpy milk. I rubbed her and milked her frequently and she got all right until November when the other hind quarter became affected. She calved last March and has not got with calf since. She was a good milker before this trouble set in. She eats well and puts on flesh. P. P.

It may be well, because of the two difficulties your cow has, to consult a local veterinarian in order that he might give her a careful examination to see why she does not get with calf. In the meantime I would suggest that you douche her with a normal solution of salt water, using a little more than a level teaspoon of salt to a quart of water. It will take two or three gallons to douche her.

For the udder trouble try injecting her with a 2 per cent solution of boracic acid in water. Boil the water and add the boracic acid. Be sure to sterilize the teats well by dipping in tincture of iodine before inserting the tube of the injecting instrument. The instrument should be sterilized with boiling or washing out with a 10 per cent solution of carbolic acid and rinsing in boiling hot water. After the injection is made, massage the udder carefully so as to get the liquid into all parts of the udder and then milk it out thoroughly. Repeat in two or three days.

Life Partners

THE union of Nature, Science and the Farmer is a partnership for life.

In the golden sheaves of living wheat, and in the waving, shimmering fields of barley, Nature stores the vital elements of human power and energy which Science converts into Grape-Nuts—the famous body-building food.

Grape-Nuts with milk or cream is a complete food, which contains all the nutrition (including the mineral elements) required for making rich, red blood, and for building sturdy body tissue, sound bone structure and strong, healthy nerve cells.

The 20-hour baking process makes Grape-Nuts easy to digest and develops that delicious, sweet flavor and crispness that has made this food a favorite the world over.

"There's a Reason" for Grape-Nuts

Do Without It

When a frugal family finds its income comparatively low, the husband and wife, if of a wise and cooperative disposition, sit down at the table and figure out what they can afford to have and what they can not afford to have. They figure out carefully how much money they are going to have to spend after laying away a reasonable amount for the rainy day. Then if they discover that they can not have a new automobile, they do not buy a new automobile. If they decide they can not afford to put the new roof on their house that it seems to need, they patch up the old one for another season and make it do. If they decide that they can not have as many pairs of new shoes as they and the children could well make use of, they gather up the old ones and take them to town for repairing and save several dollars thereby. If they decide that they can not afford to keep a hired man or have the neighbor's girl come in to help the housewife with the family washing, they merely buckle down to a little harder work on their own part (if that is possible) and get along without the hired man and the hired girl.

In other words, the way to get along with the amount of money you have is to buy only those things that it will pay for. If you want to save money, do not spend all that you have or borrow some that you do not have with which to make purchases. One can not spend money and save it.

The taxpayers of this state are one big family. Unfortunately, this large family has not gathered itself about the table, figuratively speaking, to decide what it could get along without. In the main, it has purchased everything that it wanted, and dug down deep into its pockets to get the wherewithal with which to pay. It has taxed itself to the limit to raise the money. It has searched all its old clothes to see if it could not find a few more dollars with which to pay for things that it could have done without with not great discomfort. It has endeavored to shift the burden from one member of the family to the other without much success. This huge family is in a pretty mess, merely because it has insisted on having everything that it wants, forgetful of the fact that a day of reckoning is coming.

If we want to reduce our taxes, the way to do it is to quit spending. We must sacrifice some of our desires. We must get along even without some of the things that we have learned to consider necessities, but which, in fact, are not necessities. We can not shift the burden to anybody, because every taxpayer in the state is carrying a burden so big today that there is room for no addition. The only possible way of getting rid of our excessive taxes is to call a halt in public expenditures. And let us bear in mind that calling a halt, like charity, begins at home—right here in our own school district, our own road district, our own irrigation district, our own township, our own county.

Entire Family Is Interested

It is little wonder that the J. H. Quick Jerseys are doing so well when one learns that Mrs. Quick and the two boys as well as Mr. Quick himself devote the greater part of their time to the care of the animals. Mrs. Quick can be found about the barn at milking time and she knows the pedigree of any purebred animal in the herd. She can also tell what each cow tests because she attends to the testing herself.

For 20 years the Quicks have been breeding up a herd of grade Jerseys and four years ago they bought a few heifers of the St. Mawes strain. They increased the number from year to year and there are now 11 head of registered cows. The herd bull, St. Mawes Rosaire Boy, is a well-proportioned animal and only 6 years old. Mrs. Quick remarked that they had sold eight of his heifers to neighbors and there have been no dissatisfied customers.

"We have sold at least 16 grade heifers from the bull," said Mrs. Quick, "because we are trying to eliminate all but the purebred animals. There will be a number of new heifers this fall and by the time they are ready for service the new bull will be over a year old. This animal is only a 2-month-old calf from one of our herd cows and a grandson of Sophia 19th. He carries St. Mawes blood from his dam's side."

The plan of doing their own testing has been very successful in this herd and the Quicks have been able to weed out some of their heifers that have not been what they wanted to keep in the herd. On the other hand, they have been able to study the different matings and breed for production as well as type, which would be more difficult to do if the bi-monthly tests were not made.

PREDATORY ANIMALS DESTROYED.

A total of 2312 predatory animals were destroyed in the state of Washington during the year ended June 30, 1922, by federal and state agencies cooperating. In addition there were killed 245 unborn young, consisting of 228 coyote pups, 14 bobcat kittens and 3 cougar kittens. Of the adult animals destroyed 1770 were grown coyotes, 332 coyote puppies, 118 adult bobcats and 11 bears, the remainder being made up of foxes, mink, skunk, etc.

The average cost of taking each true predatory animal by Washington state hunters was $9.29, while the skins of 378 such animals were sold to fur dealers for an average price of $4.08 per skin, the proceeds being turned over to the state department of agriculture, the aggregate return being $1,547.92.

It is estimated the damage to live stock and poultry by bobcats and coyotes is $50 each per annum, while the damage by bear and cougar is estimated at $500 each per annum.

Daughters of Holstein Royalty

Two Holstein cows on whose forthcoming performances much attention will be centered—milk and butter champions in their respective states and both high in the annals of the dairy world—recently freshened and began again the daily round of producing milk. They are Segis Pietertje Prospect, world milk champion, owned by Carnation Stock farms of Seattle, and Stanhope Belle Johanna, fourth in the United States and sixth in the world, owned by H. G. Mullenhoff of Gresham, Ore. Each bore a heifer calf, Prospect's by her half brother, Matador Segis Walker, and Belle's by her own son, Segis Walker Matador Johanna. The latter bull is sired by Segis Walker Matador, a full brother to Matador Segis Walker, hence the two distinguished arrivals are closely related—second cousins, in fact. Stanhope Belle Johanna suffered from milk fever for several days after freshening early in July, hence failed to do herself justice the first month, but early in August she was producing 126 pounds of milk per day. Her owner, who expects to build his herd on the foundation of this cow's greatness, was delighted that the calf was a heifer—a fine, strong calf and the first heifer in six calves that the animal has produced. Segis Pietertje Prospect freshened early in August—too recently for any predictions as to her production. Her owners had hoped for a bull calf.

BLANTON JOINS TRACTOR FIRM.

A position in charge of the tractor department of the Hess Motor company has lured T. Y. Blanton from that of county agent in Cowlitz county, which he has occupied for about two years past. Cowlitz county was just coming to regard Blanton as permanent, after previous experience with two county agents who stayed only a few months each.

If DELCO-LIGHT Did Only This ~

If all that Delco-Light did was to give electric light—if it only did away with the coal-oil lantern and other old fashioned lighting methods—if it gave only the convenience, healthfulness and safety that come with electric light—if Delco-Light did only these things, it would still be the best improvement that any farm home could have.

25 Styles and Sizes, $250 and up f. o. b. Dayton

But electric light, with all its advantages, is only part of what Delco-Light gives. For Delco-Light furnishes electric power as well as electric light.

Delco-Light power pumps fresh water for the stock and provides an abundance for the kitchen, bath-room, and laundry. It operates the milking machine, the separator, and the churn. It turns the grindstone that tools may be sharpened. It sets a willing and tireless hand to the corn grinder or fanning mill. It proves a blessing in the home by saving time and hard work—operating the vacuum cleaner, the washing machine, and heating the electric iron.

For nearly every task that must now be done by hand Delco-Light furnishes abundant and cheap electric power.

You can secure Delco-Light right away on an easy time payment plan. Mail the coupon and let us tell you the details.

Delco-Light

—is self-starting
—has a simple, efficient oiling system
—has a 4-cycle, valve-in-head, air-cooled motor
—is free from troublesome oil cups, oil pump, water reservoir, carburetor, rheostat and belts
—has good bearings
—runs on either gasoline or kerosene
—has long-lived, thick-plate batteries, with both wood and rubber separators
—is economical
—is durable
—has 160,000 satisfied owners
—has an organization back of it to see that you get prompt, efficient service

DELCO-LIGHT COMPANY, DAYTON, OHIO
Subsidiary of General Motors Corporation

Also manufacturers of Delco-Light Water Systems, Delco-Light Washing Machine, and Frigidaire, the Electric Refrigerator

Home of the Island Belle Grape

There are few horticulturists in the state of Washington that have not heard of the Island Belle grape. There are not many, however, who have had the opportunity to visit the home of this variety, on Stretch island, in Puget sound, in Mason county. The community is now known as Grapeview, but was formerly called Detroit. It is situated about 15 miles north of Shelton and 18 miles southwest of Port Orchard.

A general view of the Eckert grape farm and a picture of the 70-foot Niagara vine are shown above. W. O. Eckert stands in the barn door.

The W. O. Eckert farm has been producing grapes since it was first purchased by Adam Eckert in 1890, at which time he was on his way to California in search of a climate suitable for the growing of grapes. A vineyard in this vicinity showed up so well that he decided to go no further, but to locate. At that time the Concords were the only grapes known to do well in the Puget sound district and the first planting was of this variety.

One vine showed up unusually well and produced fruit that was far superior to the rest of the patch in size, color and flavor. No one could tell what this variety was, so it was named the Island Belle. That the new grape was worthy of recognition is shown by the fact that it has rapidly grown in the favor of all who have tried it and the demand for the plants has far exceeded the supply.

There are now between 8 and 10 acres of grapes on the Eckert farm, all of which are the Island Belle. The main patch is now nearly 30 years old and the vines are still bearing heavily. There is a small planting of vines which are 3 years old and will come into bearing next year.

No Trouble From Frost.

"Although the vineyard is planted on a west slope, there are a number of rows on top of the hill and thus exposed to the weather more than the others," said Mr. Eckert, "but as yet we have had no injury from freezing. Even in the coldest winters we have had no trouble and cold weather seems to have no effect on grapes in this location.

"We have a large plant fitted for the manufacture of grape juice and up until the last three years there was a good demand for this product. Lately, however, there seems to be very little demand for grape juice and we have been selling the grapes as fresh fruit. It takes more work to market the fresh fruit than it did when we were selling the juice, but we find that the Island Belle variety is a fine shipper. There is a tendency on the part of some growers to pick the fruit soon after it has colored, but the flavor does not develop until the fruit is fully ripe. It will hold up for some time after ripening and will stand being shipped better than some of the other grapes."

A Seventy-Foot Vine.

A few other varieties of grapes are grown in the Eckert vinyard, but more for home and trial purposes than anything else. One vine, a Niagara, was planted 12 years ago, next to the barn, and it has made an exceptional growth, due to the warmth that is drawn by the barn from the afternoon sun. A careful measurment of the vine would show a growth of 70 feet or more. Last year there were at least 20 baskets on this vine.

Mr. Eckert has other fruits on the farm as well as grapes, including 117 Bosc pear trees, apples and Cuthbert raspberries. The raspberries are planted in the home garden, but the apples and pears are grown for commercial crops. The King and Gravenstein apples have done particularly well, according to Mr. Eckert, and they sell well on the market. They both produce early fruit and are easy trees to take care of in an orchard.

Walnuts Do Well.

There are 10 English walnut trees which have been planted near the house. These produce a crop of nuts every year and the trees seem to thrive well under local conditions. One of the oldest trees has a spread of about 50 feet.

The dwelling house is located on a slight rise on the edge of the bank, overlooking the sound. There is an excellent view from this point and the shores of the opposite side of the inlet, which is a part of Pierce county, can be seen. A boat landing has been put in and affords a convenient outlet from the farm, but most of the travel is by way of a bridge built from the island to the mainland.

Would Organize to Cut Taxes

"The most essential thing in the fight for tax reduction is to organize and unite the taxpayers," says a statement issued by the State Federation of Taxpayers' Associations.

"The high tax rate is the result of indifference and carelessness on the part of the taxpayer. Whenever taxpayers generally inform themselves closely on legislative matters; when they study the methods of conducting governmental affairs; when they know as well as public officials how public funds are spent, and when they demand retrenchment, economy and wisdom in handling such funds, then the tax burden is going to be materially lessened.

"The principal function of the State Federation of Taxpayers' Associations is to organize taxpayers in each section of the state and then to coordinate the work of these local tax organizations. Seventy-five per cent of all money raised by taxation is expended for local purposes in conducting county, city and district government; hence, the greatest cut in taxes must be made in local expenditures.

"If the taxpayers remain unorganized they will continue to pay higher taxes each year, with the ultimate result of confiscation by taxation.

"Taxes can be reduced and will be reduced whenever the taxpayers demand it, if the demand is backed by sufficient organized voting strength and based upon knowledge of public needs. The taxpayers must first exercise good business judgment and then require public officials to conduct public affairs along sound business lines."

Pump for Farm Use

By L. J. Smith, Head Department of Agricultural Engineering, W. S. C.

We are on an 80-acre ranch and have to put in a pump, but don't know just what kind. We want one that can later pump water to a pneumatic tank. Well is about 30 feet deep. P. J.
Yacolt, Wash.

It depends a great deal upon what method of pumping you intend to use. If you are going to use a windmill for power I would buy a heavy type, submerged cylindered, well windmill, double acting force pump, which can be secured from any of the standard pump companies.

If the pump is going to be operated from engine power and by the use of a belt, then you need a regular standard working head. Some of these are equipped both for belt and windmill and hand power. These are connected to a cylinder just above or at the surface of the water. Many of the standard pump companies have all this equipment.

Utilizing Drainage Water

Utilizing drainage water for irrigating an additional 35,000 acres on the Wapato and Satus projects is part of the plans for reclamation on the Yakima reservation, according to L. M. Holt, supervising engineer. With that idea in view he is keeping close check on the discharge of the present drains and finds that the total at present is 1000 second feet, and that the total discharge for the month of July was 55,000 acre feet.

This means that the drainage canals on the reservation are delivering two-thirds as much water as is being diverted to irrigate the Wapato project. The peak of diversion at Union Gap is only about 1500 second feet, and only about a third of this amount is utilized in growing the reservation crops. The remainder is percolating through the light soil into the gravelly subsoil and is being carried away by the drains.

Oakesdale Fair

Promises to Be Better Than Ever

The Live Stock and Farm Products association of Oakesdale will put on its fair this fall, October 6 to 7.

The Oakesdale fair was begun in 1907 and had a satisfactory growth until 1913 when it was discontinued during the war. It has now been revived. The object of the fair was to demonstrate local production, to enhance local value, to stimulate increased production and to furnish a means of construction among the rural and town people.

Prizes are being offered in all departments, and group displays will be featured prominently. Much expert stock is raised in the vicinity of Oakesdale and a display of real merit is expected.

A. G. Woodward is secretary and manager. The president of the association is R. V. Perringer of Belmont. S. R. Warwick is vice president R S Comiges, Thornton; Harry Goldsworthy, Rosalia; Burt Ellner and W R. Walker of Oakesdale, are directors, together with the president and vice president.

The department heads of the fair are as follows:

Horses and mules, Horace Comiges; cattle, J. F. McCroskey; sheep and swine, H. E. Kendall; poultry, W. H. Jones; grains and grass, Verne Corlette; fruits and vegetables, F. H. Brown; dairy, culinary and canned goods, Mrs. Nance and Mrs. Hansford; fine arts, Mr. E. S. Hawford and Mrs. H. N. Whitelaw.

The fair welcomes exhibits from any and all interested parties This is the only all-round fair of territory including Rosalia, Thornton, Garfield, Tekoa, Farmington and Latah.

Among the entertaining features will be an address by Dr. E. O. Holland, president of the state college of Washington, on Friday evening.

Adequate facilities for display of exhibits will be provided and the town is ready to welcome a large number of visitors.

The Washington Farmer is glad to make this announcement of the revival of the Oakesdale fair. It has confidence that it will more than live up to its former reputation.

Mason County Crops

"I find it a convenient method to grow oats and vetch together and thresh them for seed without making any attempt to separate them," said Frank Binns of Shelton, Mason county, to a representative of THE FARMER. "If the grains are in the right proportion to be seeded for hay or silage, it is an easy matter to dispose of all seed of this kind.

"This year there is some winter wheat mixed with the seed, but it does not hurt the mixture for a hay crop. The oats is the gray winter variety, while the vetch is both the winter variety and common vetch. About 20 per cent of the mixture is vetch. When seeding for hay, I like to seed about 125 pounds of the mixture to the acre."

Mr. Binns has never found it necessary to inoculate the soil for a vetch crop, but, on the contrary, says he finds that it makes its best yield on new land or on land that has just been manured. This, he says, may not be due to the soil bacteria, but it is very likely that some of the essential minerals are more abundant in the new soil. The supply of potash in the soil may be depleted to a great extent after the second or third year and thus make the difference in the yield.

"There is very little spring wheat planted on these upland soils in the county," said Mr. Binns. "I have seen some spring wheat planted in the fall, but it is hard to get it to come through the winter in the best condition for growing. The winter varieties all do well and will get a good start if seeded early enough in the fall.

"There have been times when we could not get winter grain seeded and we have had to depend entirely on spring-seeded crops, but they never produce as well as those seeded in the fall and allowed to grow all winter. Last fall I planted a small acreage of winter and it outyielded all the other grains, although they were all below normal this year.

Rye a Profitable Crop.

"Another crop that should be tried more in western Washington is rye. There are very few farmers who will give rye an even chance with other grains. They will plant it on ground that is either too dry or not suited to wheat or other crops. They seldom seed it on first-class ground.

"I had an interesting experience with a crop of rye and it has demonstrated to me that rye should have a place in the rotation plan of any farm. There was about three-quarters of an acre that I set aside for a crop of winter rye and I seeded it late in the fall. It came through the winter in fine shape and I began cutting it for the two horses and the herd bull, feeding it as green feed.

"These three head were fed from the middle of May until the first of August, from this patch alone and all the animals proved to be in excellent condition when we started to feed hay. I could not begin to feed this many animals on the same amount of land if it had been in pasture and it shows the value of a soiling crop if you can afford the time to cut some every day. There was, however, a small amount of vetch in the ground which had come up from seed which was lost from harvesting the previous crop. This goes to show that the two grains will make a good combination for pasture or soiling crops."

There are about 60 acres of land on the Binns farm and the greater part of it is planted to grain and hay crops. A small acreage is held each year for cultivated crops, such as potatoes, root and garden vegetables, in order to afford a rotation and make the best use of the fertility. Mr. Binns also finds it convenient to keep a few head of cattle to clean up the stubble land and he is breeding his milch cows to a Shorthorn bull in order to obtain a herd of grade beef animals, which he believes will pay best under the conditions on his farm.

TRANSPLANTS CORN.

A. E. Johnston of Gig Harbor finds that he can get corn to mature a week or two earlier if the seed is planted in pots in the house and transplanted after all danger of frost is past. Corn will respond to transplanting as well as will cabbage or other such crops, according to Mr. Johnston, and it should be set out in this manner by more home gardeners who wish to obtain an early maturing patch of corn for summer use.

Registered Herd

Should Be Acquired Gradually

By DON G. MAGRUDER.

A dairyman should, as soon as possible, buy one or more good registered dairy females and work gradually into a registered herd. However, there are some qualifications to be followed before entering the registered business. If you have had enough successful experience with a dairy herd that your losses from the common ailments of dairy cattle are reasonably low and if you have been in the habit of growing your heifers out well and getting reasonable production from your cows, according to their ability to produce, then go in for registered cattle. I do not say that you should not have registered cows unless you have these qualifications, but I do say that it will pay you to work gradually into a registered herd if you have these qualifications.

Even if you never sell a single male for breeding purposes, you will in the long run be ahead of what you will be with a grade herd.

You will get more profitable production on the average from the off-spring of your registered cows than from those of your grade cows because of the breeding back of them. The very fact that a cow is registered is a good evidence that excellent sires are in her ancestry. As a rule much better sires are used in registered herds than in grade herds. Furthermore, the females are culled closer in registered herds than in grade herds. It is too often true that a breeder sells a cow for breeding purposes to some careless buyer when she should go to the block, but the owner of a registered herd is more likely than the owner of the grade herd to know accurately the production of his individual cows and to get the poor ones out of his own herd. I doubt very much if the owner of registered cows is any more likely than the owner of grades to sell cull cows for breeding purposes instead of sending them to the block. Anyway, breeders of registered cows can not keep all of their good ones and you can get the good ones if you are careful in your buying.

You will not only get more profitable production from your herd as the registered heifers come on, but your herd will increase rapidly in selling value. Surplus registered females will sell for more than grades and when you finally decide to disperse your herd, your estate will be much greater if the herd is registered than if it is composed of grades.

The only expense which you will have to charge up against this registered herd, other than against a good grade herd will be the difference between the cost of your registered foundation females and the cost of grade females which would return you the same immediate profit. The cost of registering the heifers as they come on would amount to practically nothing compared to the value of the herd and the increased taxes are comparatively slight.

You need not count on the sale of breeding males, but any man can expect to sell some breeding males as his reputation as a breeder becomes established.

FOR FUTURE USES.

Take your notbook to the fair.

Costs Less by the Month and the Year; Does Better Work on the Farm

The Hupmobile record in any neighborhood shows what a good business proposition this car is.

Costs by the month or the year are lower—proven by the fact that large corporations operate business fleets of Hupmobiles in preference to lighter cars which cost less to buy.

The Hupmobile makes fewer trips to the repair shop. It misses fewer days at work. It goes farther on tires.

Invariably, the Hupmobile record is a story of continuous savings, that amount to actual earnings.

There is no speculation about the Hupmobile.

From first to last, it is a good investment for the farm.

The Beauty, the Comfort and Luxury of the Hupmobile, and its Driving Ease, Win a Woman's Heart

POULTRY AND RABBITS

Questions Answered

By W. D. BUCHANAN, Poultry Specialist, State College of Washington.

Please tell me does the sodium fluoride dip affect the meat of fowls for table use?
Riverside, Wash. MRS. H. D.

Sodium fluoride will not affect the meat of fowls for table use unless they are used within a week after they are dipped. If used earlier than this they should be thoroughly washed. But there is no need of dipping birds that are intended for table use within a week, provided, of course, that they are not allowed to spread lice among fowls that are dipped.

NEED SEPARATE PENS.

I have about 120 Rhode Island Red pullets that had free range and now I must shut them in pens. They are 2, 3 and 5 months old. Would you advise me to put each group in a separate pen?
Concrete, Wash. D. R. H.

It would be much better to keep them in separate pens, as the 2 and 3 months old pullets should not be getting as much protein as the 5-month birds. After they are mature they may run together, provided, of course, that they are not crowded. If possible, let them have free range till they start to lay.

MAY HAVE TUBERCULOSIS.

We are losing our White Leghorn hens from some cause which we are unable to discover. They seem to be in good health until a few days before they die, when they begin to go lame and lose flesh. They eat good and do not appear to be sick in any way except that their combs turn dark. When they die there is a yellow fluid runs from their mouths. Will you please tell me what to do for them? J. L. A.
Deer Park, Wash.

I am unable to diagnose accurately the trouble in your flock. Hens do not lose much flesh in a few days, hence they must be ill before you notice them. If the hens get light, then lame and the comb shrivels and turns a dirty gray, I would suspect tuberculosis. If, however, the comb does not shrivel, but merely turns black and purple, and the hens get weak instead of lame, I would suspect that they are crop-bound or are suffering from ptomaine poisoning.

If you have reason, from the above, to suspect tuberculosis, post a sick hen, examine the liver and the intestines, especially the liver, and if covered with hard raised nodules, I would pronounce it tuberculosis and advise burning all affect hens. If you find, on the other hand, that they are crop-bound from too much crude fiber, give them a teaspoonful of sweet oil, and massage the crop gently. If it is ptomaine poisoning, give them a dose of castor oil or epsom salts and remove the cause.

HOW TO "PICK" GEESE.

Will you please send me any information you can about picking geese? When should they be picked and how? Also how should the feathers be prepared for pillows? About what are goose feathers worth a pound? MRS. C. C.
Nine Mile Falls, Wash.

The practice of picking live geese is slowly dying out, especially in the northern states. Where the practice is still followed the picking is done in late spring and early fall, but never in the breeding season, and never in cold weather. Feathers are supposed to be ripe for picking when the quills appear dry and do not contain blood. In plucking do not pull many feathers at one pull. It is best not to pluck the wing and tail feathers. If feathers showing stiff quills are picked, they must be stuffed before using for pillows. Live goose feathers vary in price from 30 to 80 cents a pound. White feathers are worth more than colored ones.

MARKET EGGS THE YEAR ROUND.

J. N. Cramer of Seattle, head of the sales department of the Washington Cooperative Egg and Poultry association, points out that egg production is not a seasonable industry, but lasts the year round, for there is not a day in the year but what the poultrymen have eggs to go on the market. He also finds that wherever the consumers become accustomed to graded eggs and their uniform good quality "they will have nothing else."

The Rabbit Game

Needs Common Sense and Energy

By HARVEY NORRIS.

Make a thorough study of the rabbit business before attempting to make your start. Buy a good book and send for several sample copies of the different rabbit magagines, making sure that you have your plans laid out beforehand.

Buy only good pedigreed stock from a breeder whom you know to be reliable and who has had experience in raising rabbits. You will buy pedigreed stock eventually, why not at the beginning? You will usually find the specialty breeder (a breeder who specializes on one certain breed) with the most carefully bred, highest grade stock. Pay a reasonable sum for your rabbits and don't expect a breeder to sell you a good rabbit for a "little or nothing." Avoid the rut of buying cheap priced stock. Cheap priced stock is usually cheaper than it is priced. Most beginners make the mistake of buying just common, mongrel meat rabbits, and this is the last thing a beginner should do. Rabbit breeders who deserve the name of rabbit breeders, hate mongrel stock. They deal with the purebred strain, for they know that they can make more money by selling the better specimens as breeders and the poorest as meat.

An important rule that is important: Never enter the rabbit game expecting to get rich quick and dreaming that you will not find much work. The rabbit game has no room for slackers and there is work and hard work for the breeder who is to make a success. As for getting rich quick, the rabbit business is like any other established business, not everybody can even make a success—it takes brains and energy. Do not let the get-rich schemes mislead you. The people who peddle all this "hot air" are the beginner's worst enemies. There are many beginners who have invested their capital on the basis of a get-rich scheme, peddled by some buy-back firm who makes it a business to dam the rabbit business by selling some beginners poor common stock for a high price and then signing a contract whereby he agrees to buy back the offspring at a certain fabulous price, which he alreadyknows he can not fulfill. There is nearly always a crook in his "crooked" contract where it will not necessitate his buying back the offspring. Many beginners are deceived in this way and most of them will quit the rabbit business in disgust and advise all other prospective beginners that there are nothing but crooks in the rabbit business and if they

(Continued on page fifteen.)

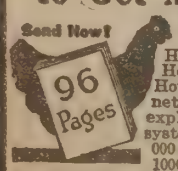
Stop Hatching Weak Chicks With Cheap Incubators

It's a shame to waste your time and eggs hatching weak, wobbly chicks in cheap incubators, when everyone knows that

Queen Incubators
Hatch Strong, Healthy Chicks—That Live and Grow!

A good incubator is the start to profitable poultry production—it's the cheapest thing you can buy.

One dealer who has sold Queen machines for 9 years says: "I can get hundreds of testimonials of stronger chicks and almost perfect hatches with the Queen."



You, too, will hatch better chicks with a Queen Incubator and raise more of them with the Queen Brooder. Ask about the remarkable Queen Brooder Stove. If your dealer doesn't sell Queens, write us. Catalog free. (54)

QUEEN INCUBATOR CO.
Lincoln Nebraska

Queen Incubators are distributed by:
The Queen Hatcheries, 4th Ave. and Pine St., Seattle, Wash.
The Routledge Seed & Floral Co., Portland, Oregon.
The Brackman-Kerr Milling Company, Victoria, Vancouver and Westminster, B. C., Can.

Free Book Tells How to Get More Eggs!

HOW to save feed and get double egg yield. How to cull out poor layers. How Mrs. Hume made $2000. How Mr. Luttrell makes $5 net profit per hen. This book explains Prof. Quisenberry's system now being used by 46,000 successful poultry raisers. 1000 money-making secrets.

Write Today! Simply send name, a postcard will do, for this 96-page free book, "Dollars and Sense." No cost, no obligation. However, if you enclose 25c, we will send you 25 colored celluloid leg bands to mark your best layers without using trap nests.
American Poultry School, Dept. 605 Kansas City, Mo.

Dry

All agree on this kind of prohibition ⤷ **Ball games can be "called" on account of weather. But not work! That must go on, rain or shine. And when it rains, working feet must be kept dry. That's the "dry law" for all those who would keep well. Shoes must NOT be affected by acid moisture of the barnyard. They must wear long for the man on the farm—through wet, acid and hard wear.** ⤷ **Meeting these requirements over a score of years for thousands upon thousands of farmers, Washington Dry Sox Shoes have achieved wide popularity.** ⤷ **Your dealer offers you them, because they are the most economical and profitable shoe investment you can make. Here's why! Dry Sox Shoes have features found in NO other shoes—this you already know. And then, dealers can carry a complete stock on a small investment. The nearness of our factory permits the filling in of broken lines on very short notice. Thus, there is avoided that customary heavy investment for reserve stocks against which prices charged customers must include interest, insurance, etc. Further, dealers can afford to sell on a much smaller margin of profit because stocks are turned oftener. These are things to consider. They mean substantial economies for you. Remember the name, "Dry Sox," so that you may obtain the same complete shoe satisfaction other farmers have long enjoyed.**

KLIMATICALLY KORRECT SHOES FOR MEN

ORCHARD AND GARDEN

Soil Needs Humus

G. H. Jensen owns a small tract of berry land near Bellevue where he is raising berries, grapes and fruit trees. While the berry crop is largely raspberries, there are about three and a half acre that have been planted to loganberries and will soon be in bearing. Mr. Jensen raised most of the young plants himself and expects to put out more next year.

The grapes are the Island Belle, part of which have a crop this year. The patch is being enlarged as the new plants can be grown and the center of the rows are planted to such hoed crops as tomatoes, peas, beans or kale.

"The land is as heavily fertilized as can be supplied from what chickens and cows we have," said Mr. Jensen, but we feel that the soil is more in need of humus than fertilizer. A dust mulch is one of the best means for holding the moisture content, but there should be plenty of organic matter to aerate the soil. An abundance of straw in the hen house or when used for bedding in the cow stable will help greatly in returning vegetation to the soil and it should be used to a greater extent for all crops in this part of the county.

Yakima Has New Apple

An apple, new to this country, has been brought to Yakima from Paris, France, by H. M. Gilbert on his recent return from Europe. It is known as the Colville. On his last visit to France Mr. Gilbert was able to secure two trees in Paris.

He carried them with him on the remainder of his trip through Europe, the roots being wrapped in moist moss. On arriving here he had the trees set out on his ranch. The little trees are still sappy and have some green leaves, thus showing that they are alive.

According to Mr. Gilbert, the Colville apple is a yellow apple of the color of the Grimes, but averaging one-half larger, has a spicy flavor and is a long keeper. It keeps in common storage until May, and Mr. Gilbert says, was selling at 30 cents apiece in Paris.

Mr. Gilbert also saw the Colville apple seven years ago in Berlin, where it arrived packed in excelsior in 200-pound boxes, one box alone retailing for $40. It is grown in the Alps on trees that are trained to trellises, each tree being permitted to produce just a certain number of fruits.

Tent Caterpillars Do Damage

Tent caterpillars have caused considerable damage to orchards in some parts of Pierce and adjoining counties this season. In most cases they got a start in alder and other native growths and from there went to the orchard trees.

Commenting on the damage being done by this pest, Henry Huff, state horticultural inspector, said that it is a comparatively easy insect to control. If a lead arsenate spray is used just as the worms are coming out of the webs they will all be killed off in a short time. Spraying at this time will kill the worms and prevent the moths from coming out and laying eggs in clean areas.

"There is a parasite working on the caterpillar which was thought would eradicate it," said Mr. Huff, "but a careful examination this summer showed that it was not doing as much as was hoped. The only sure means is with the spray, which will kill the worms in your own orchard. There are very few eggs that are laid by the moths from other shrubs."

Fight Blister Rust

A seven-mile barrier which is entirely free from wild currants has recently been completed in the northern part of Whatcom county for the purpose of preventing the spread of the white pine blister rust, according to C. L. Robinson, supervisor of horticulture of the state department of agriculture.

A number of scouts have been working throughout the northern part of the state locating patches of black currants, which are now completely eradicated from Whatcom, Skagit, Snohomish, San Juan and Island counties.

No serious outbreak of the white pine blister rust has been found in these counties, and those in charge of the work expect the quarantine regulation to have its effect in the course of time.

There is, however, a new turn of affairs in Pacific county, where a few infestations of the blister rust is found in red currants. Mr. Robinson says that this may not cause a serious spread of the disease, but will necessitate an amendment to the state quarantine order to include Pacific county.

The former quarantine order, which prohibited the shipping of currants from any part of western Washington, has just been amended, and will allow shipments on stock from inspected and licensed nurseries. No black currants, however, will be allowed to be shipped.

Make Use of Certificate

Fruit shippers of Washington are making better use of the horticultural products inspection certificates, issued by the state department of agriculture, since they are now indorsed by the United States department of agriculture. One of these certificates is issued with each car of fruit after the district inspector has passed on the contents and designated its grade and condition. This inspection, however, is done only at the request of the shipper.

"Since the inspection service is now being handled in cooperation with the United States department of agriculture each district inspector is also an authorized agent of the federal government," said C. L. Robinson, supervisor of horticulaure of the state department of agriculture. "The certificate is, therefore, prima facie evidence in all courts of the United States. The certificate now has the federal stamp on it and prevents any necessity of inspection at the receiving end. It protects the shipper in both grade and quality and he can force collection on a contract shipment even if the market price drops $1 a box."

The inspection service may be had upon application from the shipper or the buyer himself, as is sometimes the case. The cost of this service is $5 for each car. The new feature of the certificate has called for a number of additional inspectors in the apple and vegetable producing sections of the state and all growers are reporting good results from the additional fee.

Red Spider Pest

Yakima orchardists are complaining of the red spider. E. J. Newcomer of the United States bureau of entomology, who has been studying the codling moth and its growth, has also been devoting some time to this pest. After trying many suggested remedies, he finds the sulphur paste spray with the addition of caustic fairly successful. He finds the use of lime-sulphur alone on apple trees has given 90 to 95 per cent extermination of the red spider.

WHERE IRRIGATION PAID.

F. W. Nye of Grand Mound states the following correction for the production of his berry crop on irrigated land. The article was printed in a recent issue of THE FARMER. On one acre of land watered by the Skinner system Mr. Nye produced 425 crates, while on the non-irrigated land he raised from 150 to 200 crates to the acre.

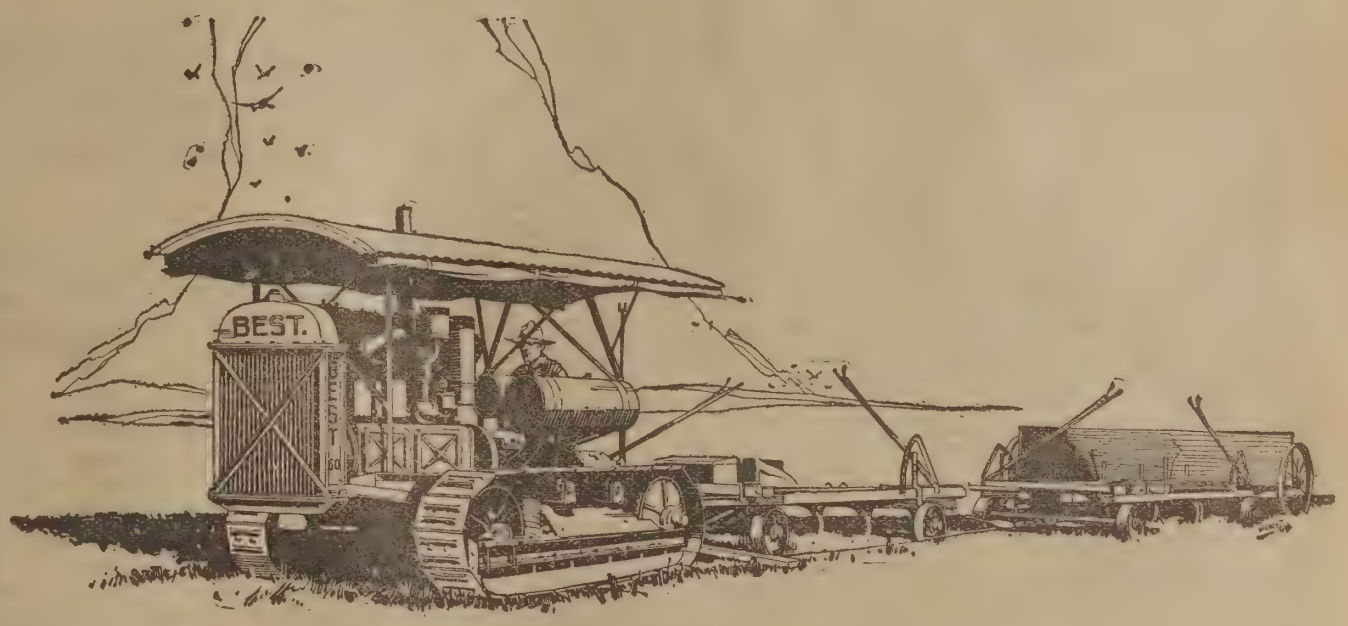
New Warehouses for Apples

Four new warehouses will be in readiness for the apple crop, by the Wenatchee District Cooperative association.

At Leavenworth a modern frost-proof tile warehouse, 60x82½ feet, two stories high, is being built.

At Chelan Falls a two-story brick warehouse, 60x60 feet, also will be built. The association has also bought the modern brick warehouse formerly owned by the Spokane Fruit Growers' association at Grant Orchards.

At Palisades the old unit warehouse has been taken over by the association to handle the tonnage in Moses Coulee.



At Pateros a warehouse has been leased for the use of the Bridgeport and Methow valley growers.

Other storehouses are being prepared by the different fruit selling agencies.

What will a Tractor do?

If it's a Best Tractor it will do almost any power job and do it well—day in and day out—year after year—with a minimum of upkeep and depreciation.

Good tractors are one of the outstanding factors in increasing yields for the farmer. Plowing, cultivating and harvesting can be done so fast and so thoroughly, and with fewer hands, that the saving is the difference between profit and the even break. Then there are the numerous in-between jobs on all of which the Good tractor more than pays its way—in fact many Best owners have found a very profitable business in doing road and general contract work between seasons.

Best Tractors are not only a good investment this year; their long life and dependability keep them in service for many seasons, so that the first cost is spread out over several years, each year paying a profit.

Best Tractors are more than a combination of metals shaped and fastened together to specifications drawn to meet a price. They are the product of years of experience in building *successful tractors.* Experience that has developed a correct and balanced design—that has taught the use of special heat treated steel here—drop forgings there—anti-friction bearings at other places and so on. Just as a clean limbed horse comes into the thoroughbred class through careful breeding and rearing over a period of years—so Best Tractors have reached the top of tractor perfection.

There are two models of Best farm tractors, the "Sixty" and the "Thirty," Let us send you full information on both and the name of our nearest dealer.

BEST TRACTORS

In God's Great Out-o-Doors

By G. L. NOBLE, Executive Secretary of National Committee on Boys' and Girls' Club Work

The accompanying article telling how a group of Chicago high school boys have taken up farming during the summer vacation, has two or three points of interest. It is not so much that any appreciable number of these boys will become farmers, as the importance of the fact that every bit of knowledge of farming and farming conditions gained by the young folks of the towns will enable them in after life to better understand the true relations between city and open country conditions. Moreover the eagerness with which these boys take up open country work may help the young folks of the country themselves to inquire if they are getting all that can be got out of life on the farm.—Editor.

A number of Chicago high school boys have taken up farming this summer to round out their education and training. They have gone back to the sod, and are willfully exposing themselves to actual farm work and farm conditions. Located at Edellyn farms, Thomes E. Wilson's estate at Lake Forest, Ill., they have pitched their tented camp and daily they apply themselves to the task alongside the other farm help.

There was a time when town and city boys looked upon all farm dwellers as the tail end of society—backwoodsmen; some were even unkind enough to call them "hayseeds" and "country jakes." They thought that the less education one had the better he could farm. But gradually a change has come about. The farmer is now considered a real business man who must apply a great deal of science to his operations in order to achieve success. The city boy, bred and born, who has grown up wholly in an atmosphere of artificiality, perchance in a cramped apartment with brick walls for prospect and garbage cans for retrospect, is coming to learn that there is great enjoyment and satisfaction in God's great outdoors, unstained by factory smoke or marred by the sound of grinding wheels.

It is here that they are studying some of the soil in which combinations are prepared which result in the green fields and mighty trees, the blossom and the fruit, and wheat, corn and all the rest for the sustenance and pleasure of man and beast.

These Chicago boys are not out on a lark for a few weeks of idle leisure at a Lake Forest country home. They are there to do a constructive work for the owner of the farm and for themselves. They want to become acquainted with actual farm conditions. And, speak it softly, the Thomes E. Wilson holding is one of the few country homes which is operated on an honest-to-goodness practical basis and which is paying its owner a profit as it progresses. The boys work from 7 in the morning until 4 in the afternoon each day, the remaining two hours until the supper gong rings being utilized in a lecture and study period to discuss the day's operations or perchance to learn the whys and wherefores of what they will do on the morrow.

"It is really surprising how the city boy takes to farming," said F. B. Post, instructor in agriculture at the Parker high school, who is in charge of the camp and who, incidentally, is the originator of the idea. "The boys learn quickly how to carry on the farm operations and soon become hardened to regular farm work." "They are getting a new viewpoint of farming as a vocation and even though they may not follow it, their experience here is going a long way in giving them a liberal education."

The first work assigned to these young city farmers was the mapping of the 900-acre farm, showing the location of the fields and buildings and the crop rotation plan. It was a good lesson in farm management, the basis of all the farm operations. Gardening, harvesting and threshing followed in rotation. A new job and a new lesson every day—always something new—nothing monotonous. The mechanism of every farm implement and its use is known. When your observer landed at Edellyn farms on August 2 the "lusties" who might otherwise have been riding a "bike" on the boulevard or playing ball in an alley, were helping to bale rye straw, just threshed, so that it might be stored in small space under cover. Then, too, all the weed pests, from Canadian thistle to ragweed, were classified, the life history written up and the means of control decided upon.

It is fortunate for this camp that Mr. Wilson maintains such large herds of pure-bred stock. He is a firm believer in a farm well balanced with live stock in order to maintain soil fertility. His 90 head of Shorthorn cattle is one of the best herds in the district, to say nothing of the Clydesdales, Ayrshires, White Orpington poultry, ducks, turkeys, saddle horses and swine. Live stock judging, therefore, has been no small part in their practical education. The boy who asked to see the "Bull Durham" breed of cattle when he first arrived at Edellyn farms now knows "there is no such animal" except on the advertising posters. For their six weeks of work the boys will receive regular credit from the board of education of the Chicago city schools.

The camp is self-sustaining. Each boy is given a regular wage according to his ability as a workman and his board and other incidentals are charged against his earnings. Although strict camp regulations, army style, from the morning bugle until the blowing of taps, is enforced by their own elected "mayor," the boys have their quota of fun and play as well. Horseshoes are popular every evening and some have become expert enough to "almost" make a ringer every time. Besides that there is soccer ball, duck-on-the-rock, indoor baseball, or if the muscles are a wee bit sore, the radio outfit furnishes recreation and entertainment. On the Fourth there were fireworks and real "T" bone steaks, a whole one for each, brought direct from the Union stockyards by Mr. Wilson himself as a surprise for his newly adopted farm hands. Then there is the swimming hole, down in an old stone quarry. The work of the K. P.'s (kitchen police) and the washing of clothes, a job to which every camper falls heir, is a new experience to many city boys, and a thing or two is learned about the things that "mother used to do." All in all, the camp school gives the boys a better understanding of farm life and a feeling of independence and self-reliance, which is a new experience in their young lives.

The whole plan may develop to be a valuable addition to the educational system of our larger cities. A first-hand knowledge of the basic science and industry of the nation (agriculture) is of considerable importance in the education of the young people of our metropolitan centers. If adopted generally it would help to create a more sympathetic appreciation among its people of the farmer's difficulties. Because of the fact that under such a plan the work can be carried on a self-sustaining basis it would seem feasible that it could and should be adopted generally by our larger cities. At any rate it is a satisfaction to farm folk to know that the city is turning the minds of its youth countryward to learn many of the things about our basic industry, agriculture, without which their education would be incomplete.

New Tariff Bill

Is Almost Ready to Become a Law

The administration's tariff bill was passed by the lower house of congress several months ago and transmitted to the senate. The senate has considered it for several months, making many amendments to it, and passing it in the amended form. It then went to a joint committee of house and senate for agreement on the changes between the senate and the house provisions. This joint committee reported last week, and with few exceptions, if any, the bill will undoubtedly be adopted soon in the amended form by both houses and sent to the president for his signature.

So far as agriculture is concerned, the principal point yet undetermined is whether or not potash for fertilizing purposes shall be admitted entirely free of duty or whether a special provision shall be made that for the first three years from the passage of the act imported potash shall pay a tariff of 1 1-2 cents per pound. The bill as recommended by the conference committee includes the 1 1-2 cent provision, but it has been referred back to the committee for reconsideration.

As the measure was reported from the conference committee last week it provided for tariffs as follows on articles of especial interest to farmers:

Live Stock.

Cattle, from 1 1-2 to 2 cents a pound; Payne-Aldrich, from $2 a head to 27 1-2 per cent ad valorem; Underwood, free.

Sheep and goats, $2 a head; fresh lamb, 4 cenes a pound.

Hogs, 1-2 cent a pound; fresh pork, 3-4 cent a pound; bacon, ham and shoulder, 2 cents a pound; lard, 1 cent a pound; lard compounds and substitutes, 4 cents a pound.

Horses and mules, valued up to $150 each, $30 each; valued over $150 each, 20 per cent. Raw wool, 31 cents a pound scoured.

Farm Produce.

Milk, fresh 2 1-2 cents a gallon; buttermilk, 1 cent a gallon; cream, 20 cents a gallon; milk, condensed or evaporated, sweetened, 1 1-2 cents a pound; butter and oleomargarine and other butter substitutes, 20 per cent.

Cheese and substitutes, 5 cents a pound; Payne-Aldrich, 6 cents; Underwood, 20 per cent.

Poultry, live, 3 cents a pound; poultry, dead, 6 cents a pound; eggs of poultry in the shell, 8 cents a dozen.

Honey, 3 cents a pound.

Fresh or frozen salmon, mackerel and halibut, 2 cents a pound. Herring and mackerel, pickeled or salted, 1 cent a pound.

Barley, 20 cents a bushel; corn, 15 cents a bushel; oats, 15 cents a bushel; milled rice, 2 cents a pound; rye, 15 cents a bushel; wheat, 30 cents a bushel; wheat flour, 78 cents per 100 pounds.

Fruit.

Apples, 25 cents a bushel; apricots, green, ripe, dried or in brine, 1-2 cent a pound; cider, 5 cents a gallon; figs, fresh, dried or in brine, 2 cents a pound; raisins, 2 cents a pound; lemons, 2 cents a pound; limes, oranges and grapefruit, 1 cent a pound; olives, in brine, green or ripe, 20 cents a gallon.

Peaches and pears, 1-2 cent a pound; pineapples, in bulk, 3-4 to 1 cent each; marmalade, jellies and fruit butters, 35 per cent; almonds, unshelled, 4 3-4 cents a pound; shelled, 14 cents a pound; Brazil nuts, 1 cent a pound; coconut meal, shredded, 3 1-2 cents a pound; peanuts, unshelled, 3 cents a pound; shelled, 4 cents a pound; walnuts, unshelled, 4 cents a pound; shelled, 12 cents a pound.

Peas, green or dried, 1 cent a pound; onions, 1 cent a pound; Irish potatoes, 50 cents per 100 pounds; tomatoes, 1-2 cent a pound; turnips, 12 cents per 100 pounds; chocolate and cocoa, 2 cents a pound; hay, $4 a ton; hops, 24 cents a pound.

Cream separators valued above $50, 25 per cent; sugar, 2.20 cents a pound (1.76 a pound Cuban raw).

Foreign Oils.

Castor oil, 3 cents a pound; linseed oil, 3 3-10 cents a pound; olive oil in containers, 7 1-2 cents a pound; in bulk, 6 1-2 cents a pound; cotton seed oil, 3 cents a pound; coconut oil, 2 cents a pound; peanut oil, 4 cents a pound; soya bean o 2 1-2 cents a pound.

On the Free List.

The principal items on the free list ar Agricultural implements, includi plows, tooth or disk harrows, harveste reapers, agricultural drills and plante mowers (except lawn mowers), hor rakes, cultivators, threshing machines, co ton gins, wagons and carts.

Animals imported for breeding purpos Binding twine made from New Zeala hemp, Manila. Tampico fiber, sisal gra or sunn.

Sulphur in any form and sulphur or sodium nitrate, sulphate, crude, or sa cante and nitre cake; fish for fertilize potassium nitrate or salt petre.

SELLS PRODUCTS AT HOME.

The Grays Harbor Egg association h been selling its products entirely with the county and has averaged about 10 cases a month during the last year. Th plan has been carried out with the c operation of the dealers in the differe towns who realize the value of using pro ucts from their own district. The pric received were better than if the eggs ha been shipped to outside points, since th greater cost of hauling was eliminate All of the members are required to stam the date on each egg as well as the pr ducers' number. There are about 65 mem bers in the association.

TREES ON WASTE LAND.

Many a non-producing spot on the far could be made to produce shade, woo posts and so on. Plant a tree.

Do You Want Duty-Free POTASH?

If so, write at once to the Representative from your Congressional District, and also to both of the United States Senators from your State, and urge them to ask the members of the Conference Committee, which is now considering the Tariff Bill, to agree to the Senate amendment which leaves Potash on the Free List, where it always has been.

Briefly, what has happened is this:—

The Tariff Bill passed by the House imposed a duty of $50 per ton on fertilizer Potash. The Senate restored fertilizer Potash to the Free List, and voted down a proposal to pay a bounty of $50 per ton on Potash produced in the United States.

The question now before the Conference Committee is simply whether fertilizer Potash shall remain on the Free List or shall pay a duty of $50 per ton. This duty would double the price of Potash to the farmer.

The House of Representatives did not vote on fertilizer Potash as a separate item, although many members wished to do so. There will now be a chance for such a vote, when the Conference Committee makes its report.

The proposed duty would make farmers pay over sixty million dollars ($60,000,000.00) more for the same amount of Potash that they have been using in the past.

The promoters of the speculative Potash enterprises in this country maintain a very active organization in Washington, and will spare no effort to induce Congress to impose this enormous burden on the farmers of the country.

The Washington representatives of the Farm Organizations oppose this duty and will welcome your help.

Write to your Congressman and Senators today, and let them know how *you* feel about it.

SOIL & CROP SERVICE, POTASH SYNDICATE
H. A. HUSTON, Manager
42 Broadway New York

Holstein Case Still Unsettled

Readers of THE FARMER will remember the publication in this paper three years ago of the report of an alleged confession by one Charles Cole who, while acting as milker in the Holstein barns of Oliver Cabana Jr. of New York state had, according to his statement, "helped" the Cabana cows make high butterfat records by injecting butterfat into the milk unknown to the testers. It will be remembered that Mr. Cole later repudiated the alleged confession, declaring that it was untrue.

From that day to this the Holstein-Friesian Association of America has been endeavoring to clean house with reference to the alleged fraudulent records, but has been halted in its move by one court action after another forbidding it to take the necessary action to adjust the records.

What appeared to be the final decision in the matter was rendered recently by the supreme court of New York, untying the hands of the association and permitting it to investigate the records and act upon them. The result was that a painstaking investigation was made and, on the basis of the evidence found, 33 of the 34 records made during the period of the alleged fraudulent practices in the Cabana herd were cancelled by the board of directors of the association.

A report of this action was ready for publication in THE FARMER when the following telegram was received from the Holstein association:

"Cancel Cabana story sent you. Let no story on case appear over our name until further notice. Association enjoined from publishing. Letter follows."

As stated in the telegram, the association had been again enjoined by the supreme court of the United States, this time from another angle, from giving out any publicity on its action as to the cancellation of the Cabana-Cole records. In the words of the supreme court's injunction, the association was enjoined against "all further proceedings on the part of the Holstein-Friesian Association of American concerning such reports of cattle now or formerly owned by Cabana, and with respect to any determination that may have been heretofore made cancelling the same and the promulgation of any such determination through any publication of said association or otherwise."

Thus it appears that at the end of over three years' effort to wipe out the stain of this unfortunate incident in Holstein record making, the association is again halted by a court action started by a party who would consider himself injured were the records of the Cabana herd cancelled. How much longer the association will be prevented from carrying out its laudable purpose of cleaning up this scandal is problematic.

From the history of the case it appears that Mr. Cabana started in the Holstein business about 10 years ago; that during the first two years he made no records of note, but that, beginning with 1915, a considerable number of high records were broken at his Pine Grove farm, near Buffalo, N. Y., culminating in a sale of a considerable number of his cattle at world record prices for a large sale, reported to be an average of over $3000 per animal. This sale occurred in May, 1919, and the alleged confession of Cole took place in August of that year. Mr. Cabana denied any knowledge of fraudulent methods having been practiced in obtaining high records in his herd.

Hog Production

Rise and fall in hog production in the Pacific northwest is indicated by the receipts of live hogs at the Portland Union stockyards. G. A. Pierson, president of the stockyards company, gives figures showing the number of head received at the North Portland market by years as follows:

	Oregon	Idaho	Middle West
1916	207,320	75,318	.....
1917	154,828	26,238	.....
1918	166,551	22,545	582
1919	143,007	29,469	385
1020	113,986	18,725	21,943
1921	70,215	13,777	49,493

For the first eight months of 1922 and 1921 the receipts at North Portland were:

	1922.	1921.
Oregon	39,828	50,241
Idaho	33,471	8,930
Middle west	62,920	30,805

President Pierson said in a statement issued recently.

"The yearly figures indicate the serious decline in hog production in Oregon, and to some extent in Idaho, and also indicate the increased number of hogs that have been brought in from the farms outside our natural tributary territory. Where the receipts from Oregon for the year 1916 showed 207,000 head, 1921 was only able to show 70,000 head, a drop of approximately 66 per cent.

"Reference to the comparative receipts by months, 1922 and 1921, shows that Oregon is falling still farther behind, the receipts for each of the eight months this year being less than corresponding months in 1921, except the month of July, and the total receipts for eight months from Oregon this year are 40,000 against 50,000 last year.

"Reference to the table also shows that Idaho is recovering ground rapidly. The receipts from Idaho for eight months last year show approximately 9000 head, and for the same period this year this has jumped up to better than 33,000 head.

"That there is increased demand for pork products in the Pacific northwest is shown by the fact that greatly increased receipts are coming from the middle west. Note that where approximately 31,000 hogs came in the first eight months of 1921, double that number, or approximately 63,000 hogs, have been brought to this market in the same period this year.

"Perhaps the serious difficulty in Oregon at this time is to secure breeding stock. The supply of hogs appears to be so depleted that those who want breeding stock and feeder pigs are having difficulty in finding what they want. We received a request yesterday for two carloads of feeder pigs to be used in cleaning up off-grade fruit and shattered grain in the southern part of the state. Immediate shipment was asked, and with the further request to advise how many more feeder pigs we could secure for that section. As a matter of fact we are having difficulty in assembling even two carloads.

"I received a letter in the mail yesterday that surprised me. It was written by a man in one of the Willamette valley counties, who is in position to know what he is talking about, and I quote from his letter as follows: 'Our county assessor's records show that the value of dogs in this county equals two-thirds the value of hogs,' and so far as I know the county is not particularly noted for the quality of its dogs."

Texas Gulf Sulphur

Best for Agricultural Use

Crude Sulphur---Flour Sulphur---Inoculated Sulphur

Direct Shipments From Portland, Oregon

As the world's largest producers of sulphur we can serve you best. Texas Gulf Brand contains 99 1-2 per cent pure sulphur and is supplied in three different forms, as above.

We will give your dealer or county agent full cooperation.

Write us in detail regarding your sulphur requirements or wire us a night letter, charges collect, stating alfalfa acreage, kind and amount of sulphur you will use, name and address of dealer or county agent. We will promptly supply information and quotations.

The Rabbit Game

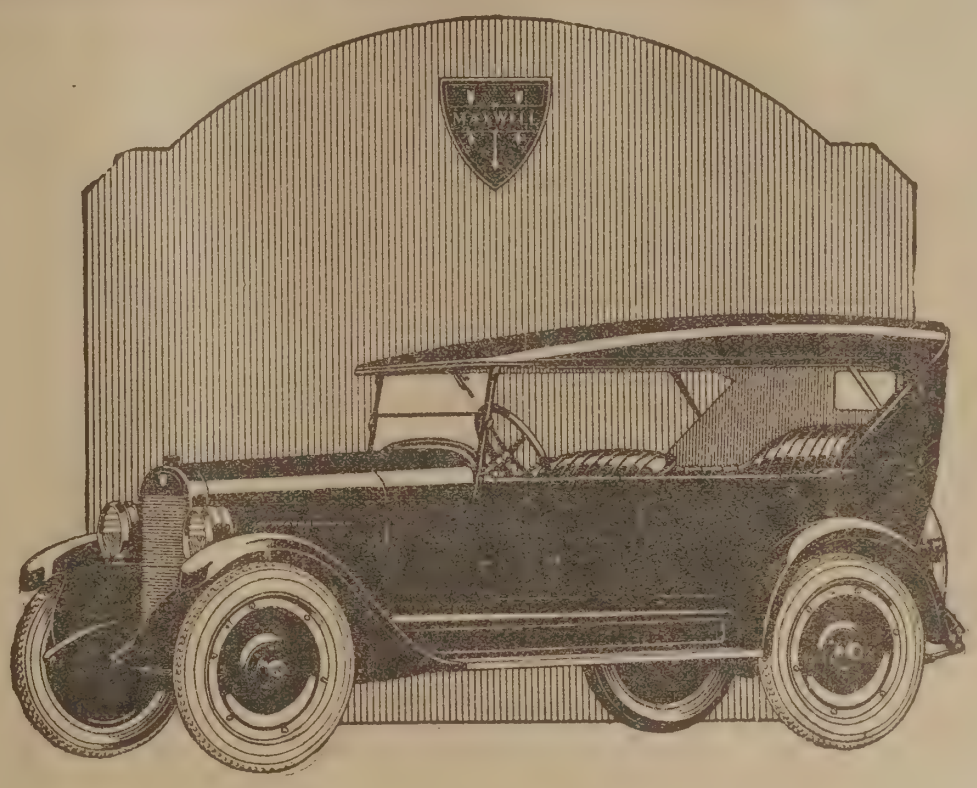
(Continued from page twelve.)

want good health to just keep out of it. Now, Mr. Beginner, leave these buy-back firms alone. Not all of them are crooked, but the crooked are mixed up with the straight and there is a possible thing that you will not be able to tell the difference and patronize the "crookedest of all the crooks." Leave them alone, I say, for there are too many honest breeders the country over who will never give up interest for your success after they have sold you their stock.

Do not buy several different breeds at first. Buy first one breed and stick with that breed until you are sure that you are competent to handle some other breed or breeds of rabbits.

Common sense is the most important quality for the beginner in the rabbit business. Read all available literature on rabbits and give heed to what the veterans in the business have to say. The most popular breeds of today are the Belgian hare, Flemish Giant, New Zealand Red and American Blue. Learn something of each of these individual breeds, so you can tell which is the better for you to purchase.

Do not breed too young. Do not breed your does in the hot summer time or in the winter time, when you haven't the facilities handy to save the little ones from freezing to death. Breed only three and four times a year, three times is better. Give your rabbits a good variety of feed and keep your hutches clean. These rules are a variety of important rules and are often slighted by the beginner.



When you have stock for sale, advertise. Advertising is a good medium by which we can sell our surplus stock and is usually resultful. Let the buying public know who you have to sell.

Do not misrepresent your stock. Sell your stock on the "Golden Rule" plan.

When you get far enough along, join several good associations.

Keep wide awake. Run your business on a strictly business basis and don't get so far along that you are sure there is nothing more for you to learn. Remember, the best of us never pass the stage of learning.

In conclusion I want to say to the beginner, to investigate the rabbit game, and in order to attain success, use one-half part common sense and one-half part energy.

A kind of value not to be duplicated, in the kind of a car the farm needs. Long mileage on gas and oil and tires. Genuine comfort on the road. Ease of handling, even in rough going. Beauty that makes people turn to watch it go by.

Cord tires, non-skid front and rear; disc steel wheels, demountable at rim and at hub; drum type lamps; Alemite lubrication; motor-driven electric horn; unusually long springs; deep, wide, roomy seats; real leather upholstery in open cars, broadcloth in closed cars; open car side-curtains open with doors; clutch and brake action, steering and gear shifting, remarkably easy; new type water-tight windshield. Touring Car, $885; Roadster, $885; Sedan, $1335; Coupe, $1235. Prices F. O. B. Detroit, revenue tax to be added

The Good

MAXWELL

SYNOPSIS.

Esau Haggerty, a strong man of mature years, and Orlando Medford, a young, slightly built and frail companion, have started from their Illinois home town for the great gold diggings of the west. Esau is pushing a provisions-laden wheelbarrow. Orlando is leading a cow. They struggle slowly westward, meeting up with others also headed for the gold diggings. With a party of men traveling by handcart they all but starve for water on a desert, but dig a well and escape. They meet with a family by the name of Cooper, one member of which is a girl of years and manner that at once captivate young Orlando, who delights in keeping near her prairie schooner as they journey on. Once the entire party gives up the westward trip when they meet discouraged gold seekers returning, but Orlando and Hazel Cooper induce them to turn to the west again. They have many interesting experiences on the way, finally coming upon a great Indian camp. Not many days later they sighted Pike's peak, and a little later plodded into a little frontier town that has since grown to be the great city of Denver, Colorado. Here they learned that a rich gold strike had been made not far away. While standing in the street, they saw two four-mule stages drive up, loaded with passengers from Leavenworth.

CHAPTER TWELVE.

A Delay at the River.

The company that had started the stage line, only a few days before, had an office here. It was in front of this office that the two stages now came to a standstill. They traveled in pairs, so as to render each other assistance in case of trouble or of an attack by Indians. They had followed the northern route, up the Republican river.

No postoffice had been established in Denver as yet. But the company running the stage line was bringing letters from Leavenworth at a charge of 25 cents a letter. So a crowd had quickly assembled around the office door, all to gaze at the stagecoaches and the passengers, and many to learn if there was any mail for them. Not only had a large number of letters arrived from the states, but a good supply of newspapers as well.

None of the foot travelers had known of this opportunity to receive mail when they left home. Indeed, the stage line had been established since they had started from Kansas City. So they were not expecting anything. But they waited with the crowd while a man in the office door called out the names of those for whom he had letters. Night was now coming on, and he had to read the last names by lantern light.

When his task was completed he shouted an announcement: "Tomorrow morning at 10 o'clock two stagecoaches will roll out from this office for Leavenworth! Those desiring to engage passage can do so here, and those having letters to forward may hand them in here!"

"That's our chance, Esau!" exclaimed Orlando at once. "We must get some letters ready in time to start 'em off."

"Mighty big price to pay for a letter, two bits is. One's about all I can afford to write."

"Same here. But I can tell a lot in one letter."

The two now left their party and made their way back to camp. A little later Sanders came. But the other three men remained to see what was to be seen. Not till a late hour did they return.

Next morning most of the party were up by the time they could see, and they went to writing as fast as they could write. Orlando had much so set down—much to tell of their long journey across the plains and up along the foot of the mountains. And he did not stop, either to milk Brindle or to eat his breakfast, until his letter was finished and ready for mailing.

After breakfast all took their letters over to the stage office, handed them in and paid the carrying charges on them. That done, they waited, along with many others, to watch the two stagecoaches roll away.

When the excitement was over there the sightseers wandered about the town, chatting with various persons and learning all the latest news from the gold diggings. Most of what they heard was favorable. Indeed, they were told that in Gregory's gulch certain miners were washing out as much as $100 a day for each man.

The party had intended to spend at least the rest of this day here. But those reports so excited them that they returned at once to camp. There, after eating their dinner, they packed up their things, loaded them upon the cart, the wheelbarrow and the cow, and marched off toward the mountains.

But not far did they travel before finding their way blocked. The South Platte, which ran by the north edge of the town, could now be crossed only by ferrying. And but one ferryboat was running—a flatboat.

A big rope had been stretched high across the river, and to this each end of the boat was fastened by means of a short rope and a siding pulley. By lengthening these two ropes, so that the forward end of the boat pointed somewhat upstream, the ferryman made the current move them back and forth across.

So far was the ferryboat behind with its work that white-topped wagons were strung for more than a quarter of a mile along the river bank. Every one of them was waiting its turn to be ferried over.

As there was nothing better to do, the foot travelers took their place at the tail end of this string, to wait till their turn came.

As soon as the party had stopped, Sanders, disengaging himself from the cart, went to the boat landing to find out how soon they could expect to be set across; also how much they would have to pay.

After a good while he came back to report that their turn to cross would not come before noon of the following day. The boat would hold but one wagon and team at a time, and the work could not well be hastened. As for the charge, he had been told that each wagon was paying $2.50. The foot party could all cross at once, they and their belongings, and that was the sum they would have to pay. This was a relief, for not one of the seven had more than a few dollars.

After getting themselves in position to wait, the party sat down on the river bank to rest. Orlando relieved the cow of her pack and permitted her to graze. One or two of the men got out hooks and lines and went fishing, using grasshoppers for bait. Others wandered along that string of wagons, chatting with everybody they saw and learning all they could of the country they were headed for.

From time to time other travelers arrived and took their places at the end of the waiting string. When the shutting down of darkness had stopped the ferryboat the foot travelers found themselves about the middle of the line.

Now they kindled a little fire, using driftwood gathered along the river bank. Numerous similar fires were blazing near the waiting wagons. The handcart's crew slept by their fire, but Orlando and his partner, leaving the wheelbarrow where it was, took the cow and their bedclothes and went farther upstream. There, where the grass was better, they tied Brindle to a stake and slept near her. It was very important that Brindle should have good grazing if she was to travel and give milk at the same time. And it was not considered safe to leave her alone. Too many thieves and other lawless characters had come here with the crowd.

When morning broke the two men returned to their camp, carrying their bedding and their guns and leading the cow. After milking her and cooking and eating their breakfast they sat down to wait again. The ferryboat had started with daylight, and the rattling of the sliding pulleys could be plainly heard as wagon after wagon was carried across to the north bank.

Wearying of the delay, the handcart party finally strolled back to see what was going on in town. Esau remained to guard their things and to move them closer to the boat landing as the string of wagons between him and that point grew shorter. But Orlando, leading his cow, wandered away in quest of good grazing again.

As is usual in such cases, the ferryboat did its work more slowly than had been expected. So the foot travelers cooked and ate their dinner while waiting. And it was more than an hour later when, their turn having come at last, they went aboard the little ferryboat, paying the fare. Now the boat ran swiftly across the stream, the current rippling noisily against it, and the sliding pulleys trundling merrily along the high-stretched cable.

When the flatboat had run her forward end against the north bank all her passengers went ashore with their belongings. At once the boat started back for another load, and the travelers pulled their cart and pushed their wheelbarrow up the river bank.

On top of the bank they paused for a minute or two, for a brief look at the straggling little town of cabins and wigwams they were leaving behind. Then, turning, they took a new but much-traveled road and tramped away toward the mountains.

"Looks like the distance is only a mile or two," remarked Orlando.

"But they say it's every step of 15 miles,' Esau answered.

And Sanders said: "We're well rested, the whole caboodle of us, and Brindle's well rested. Let's try to cover that 15 miles by night."

"So say I!" cried Orlando, eagerly. "Hooray We're close to the gold diggings at last!"

Though recently made—it was scarcely a month old—the trail from Denver to Gregory's Diggings was broad and so well trampled that it lay shoe-mouth deep in dust. And it seemed alive with travelers. As fast as the little flatboat could float them across the Platte, the white-topped wagons, in long strings, rolled toward the mountains. Other wagons were returning to Denver, but those were comparatively few.

After their rest, the seven men on foot tramped faster than usual. While Esau was passing a string of wagons he heard a man's voice saying: "Well, if here ain't a dadblamed grump, pushin' a wheelbarr' all the way to the moon!"

Esau had been tramping along doggedly, with his eyes on the road ahead. But now he looked around in haste, to meet a cheerful, grinning face. The man who had spoken was on foot behind one of the wagons, driving three cows. The cows all had calves, and the calves were tied to the wagon's rear axle. A girl of 9 or 10 years was helping the man with the cows.

"That's right," answered Esau, cheerfully. And he grinned in return. "And what's more, I've purty nigh pushed her there, too."

"Well, you've got a bushel of sand in your craw! That's certain and shore! How many miles have you come with that contraption?"

"About 1400, all counted, I reckon."

"Yes, you shorely have got grit. I've tramped about a thousand and druv these cows behind the wagon. But that's an easy job alongside of yo'r'n. And I've had some help, too." He glanced toward the little girl. "Becky helps me a right smart, when she wouldn't ruther ride in the wagon."

"But who drives your—?" Esau had begun to inquire, when a glance ahead showed him the answer to his question.

A woman, with a long-handled whip in her hands and a man's broad-rimmed hat on her head, was striding along in boots by that two-yoke team of work cattle.

"The old woman has done most of the ox drivin'," the man explained. "She's as good a teamster as I am, and maybe better. She wanted to fetch our milch cows with us, and offered to manage the wagon if I'd drive the cows. I've stuck to my job, and she's stuck tight to her'n. We'll soon be at—Becky, fetch old Sukey back here!"

The little girl ran out of the road after the cow, and the man went on relating his experiences. He soon mentioned his name, which was Hinkson.

When Esau started to pass on the other man said: "Well we'll soon see you ag'in, I'm 'lowin'. We've both had a mighty long, hard tramp, and reckon maybe we're both close to the end of our road at last. I'm shorely glad uv it. I want a little diggin' before I do any more hoofin'. I'd like to give my arms some work and my feet a rest, at least for a spell."

"Don't know but what that would be a welcome change," admitted the man behind the wheelbarrow, with a grin. "Well, see you ag'in at the diggin's!"

Esau passed on after his party, who were already a mile or so ahead. He overtook them a good while later. And the whole seven traveled so well that as night was coming on they went into camp on the bank of Clear creek, at the foot of the mountains.

The last mountain snows were now melting, and the creek, which here emerged from a gorge, was very much swollen. Many wagons were camped along its near bank and several on the far bank.

Finally the weather turned cooler, and perhaps most of the snow had melted. At any rate, the stream began to run down.

As soon as the creek was shallow enough the waiting wagons proceeded to cross, even while the swift water would run into their wagon beds.

Not a great distance beyond the creek the road entered the mountains. And the way it entered was by climbing over them. Hundreds of covered wagons were strung along the foot of the range. Many of the gold seekers, seeing the hard way ahead, had preferred to leave their wagons and teams here, in charge of people who were making money by caring for such things. Knowing that the distance to the diggings was not far, they had chosen to take what they could carry on their backs and travel the remainder of the way on foot.

But others—numerous others—preferred to take their wagons, though the road up the mountainside was frightfully steep; so steep that it seemed incredible that any team could do more than climb it, much less climb it and pull a wagon up after them. Yet the well-beaten trail was good evidence that many wagons had gone up and down there. Indeed, they were going up and down even now.

But they were not moving in their usual manner. For going up, two or three men, or four men, would combine their teams till they had perhaps 10 yoke—20 oxen—to one wagon. And that wagon would have no very heavy load; commonly less than 1000 pounds. Such a wagon was preparing to start up when the foot travelers arrived at the foot of the mountain.

With the cracking of whips and the clanking of many big chains, the team started. Three drivers tramped beside them, each driver managing his own oxen. While the wagon was crawling up the steep mountainside the spectators noticed that the oxen seemed to be trying to stick the points of their hoofs into the roadway. And from time to time the wheels had to be locekd and scotched till the team could rest.

But the wagon kept creeping upward, till it disappeared over the mountain top. And

(Continued on page eighteen.)

Bits of Fun FOR Everyone

Had Been in Worse Places.

Woman—I should think you would be ashamed to beg in this neighborhood.

Tramp—Don't apologize for it, mum I've seen worse.—Williams Purple Cow.

Was Not Hasty.

"Reggie isn't going to marry Dolly after all."

"But I thought he fell in love at first sight."

"Yes but he took a second look."—New York Sun.

Perfect Equality.

Father—Why is it that you are always at the bottom of the class?

Johnny—It doesn't make any difference, daddy; they teach the same things at both ends.—Western Christian Advocate (Cincinnati).

Gets Down to Facts.

A Russian Jew wanted to become an American citizen and this is how he filled out three of the questions on his naturalization blank:

Name—Joseph Levinski.
Born—Yes.
Business—Rotten.—Hospitality.

Amateur Detective Work.

Two sailors, at a dog show, were gazing at a valuable Ikye terrier which had so much hair that it looked more like a woolen mat than a dog.

"Which end is 'is 'ead, Tom?" asked one.

"Blowed if I know," was the reply. "But 'ere, I'll stick a pin in him, and you look which end barks."—Successful Farming.

A Matter of Courtesy.

Bill Jones marched his wife and 12 children into a shoe store and told the clerk to fit them up.

The clerk worked hard for almost two hours and at last had each of the 13 whims satisfied as to foot comfort, so started to make out a sales slip.

"Oh, I don't want to buy the shoes," said Bill, "just mark down the sizes of each one, I am going to order the shoes from that new mail order house at Kalamazoo.

Sounds Phoney!

"Is there anything you would like to do before I press the button?" said the warden of Sing Sing to the murderer in the electric chair.

"Yes, your honor," said the latter, "I would like to get up and give a lady my seat."

A Speech, Anyway.

The individual entered the crowded room while the meeting was in progress, took out a bundle of notes and began to address the meeting.

The chairman made repeated efforts to interrupt the speaker, but he refused to be called to order. The oration lasted close upon half an hour.

"Have you entirely finished, sir?" the chairman asked.

"Yes—quite; but I defy you to deny the truth of my statements," he retorted.

"I have no wish to, sir," said the chairman. "The gas company, of the management of which you complain, is holding its meeting in the next room. This is the vegetarian society."—Kansas City Star.

Prepared for the Worst.

There was turmoil on deck, feet clattered to and fro, there came a grinding sound, and the engines seemed to stop.

The timid passenger rushed from his cabin and almost collided with the captain.

"What has happened?" he panted.

"Be prepared for the worst!" said the captain sternly.

"Wh-where are the lifebelts?"

"It's too late to use those," said the captain. "We've done everything we can. Now it's every man for himself!"

He led the timid one to the side of the deck.

"I can't! I daren't look!" he cried. "Tell me what has happened!"

"We're in harbor," said the captain gently.—Answers, London.

FARMERS' WANT ADS

This is the farmers' "want," "sale" and "exchange" department for small advertisements of farmers, including live stock and poultry.

Advertising rates for ads running 1 to 3 times, 10c per word per insertion, with a special rate to Farmer subscribers, as follows: Ads running 4 to 12 times, 9c per word per insertion; ads running 13 times or more, 8c per word per insertion.

All commercial and land advertising 10 cents per word each insertion. Open also to nonsubscribers.

In using these columns advertisers must observe: (1) No advertisements will be inserted for less than $1.00. (2) Every word, number and initial, including name and address, must be paid for. (3) New advertisements, changes of copy or cancellations must reach general office, Spokane, Wash., 10 days in advance of publication date. (4) Cash must accompany order.

Above rates include insertion in The Washington Farmer, The Idaho Farmer and The Oregon Farmer, which constitute the Pacific Northwest Farm Trio, 46 Review Building, Spokane, Wash.

HELP WANTED—MALE 3

MEN WANTED AT ONCE TO FILL GOOD POsitions. You can qualify in few weeks. Experience unnecessary. Free employment department. Write for free catalogue 100-B, and rates. Modern Automobile and Tractor Schools, W1803 Third ave., Spokane, Wash., or 700 Mercer st., Seattle.

WANTED — SALESMAN WHO CAN SELL high-grade, dependable nursery stock; several counties in Oregon, Wash., Idaho and Montana now open for assignment. Our selling contract will interest you. Address Albany Nurseries, Inc., Albany, Ore.

WANTED — MEN WITH HORTICULTURAL experience to sell our dependable nursery stock; have select territory for immediate acceptance. Write for particulars. Capital City Nursery Company, 426 Oregon bldg., Salem, Ore.

WANTED—EXPERIENCED RANCH HAND, one year or longer; prefer married man. Box 297, Chester, Mont.

SITUATIONS WANTED—Male 21

HONEST, RELIABLE SINGLE MAN, 45, wishes steady position on farm. H 15, Washington Farmer, Spokane.

FRESH FOOD PRODUCTS 51-1

$35,000 WORTH CLEAR INCOME PROPERTY in Tacoma for good ranch, clear. Write owner, 3206 North 27th st., Tacoma, Wash.

Pike's Peak or Bust

(Continued from page sixteen.)

scarceiy was that wagon out of sight when another was seen coming down.

To this there were only three yoke of oxen, and two men were in charge of it. One was managing the team, while the other was watching the wagon itself to see that nothing gave way. For not only were both hind wheels locked fast, so that they had to slide over the rocky grouid, but a good-sized pine tree had been felled and chained to the hind axle. The tree was dragging trunk first, but it had a bushy top, which was sweeping the roadway behind the wagon, and thus helping to hold it back.

Standing at one side of the road, the foot travelers watched the coming down with much interest. When the wagon had reached the bottom of the steep slope, it was stopped till the man walking by it could jerk the lock chains loose and release those sliding wheels. Now he shouted to the driver to turn out of the road. As soon as the pine tree had been dragged to one side it was unchained and left lying there. Many similar trees were scattered around, showing that other teamsters had resorted to the same expedient.

"Pretty steep traveling, don't you find it?" called out Sanders.

"You bet it's steep—everlastin'ly steep! Next door to straight up and down!" answered the man behind.

And the man with the oxen added: "If I'm ever ravin'-distracted enough to try to take a wagon and team into sech a ding-blasted country as that'n' ag'in I hope the Lord'll break my fool neck and put me out of my misery!"

"Reckon I'm horse enough to push this wheelbarr' up there?" inquired Esau.

The teamster glanced at the one-wheeled vehicle, and then at its owner.

"No, you ain't—not unless you're a steam engyne in breeches! My guess is you'd tarr out before you clumb 20 steps up the steepest part."

"Maybe so, maybe so not," answered the wheelbarrow's owner. "I've pushed this clumsy old contraption all the way from southern Illinois to the Rocky mounds, with a little side trip of about 300 miles. Of course, my pardner here has lent me a hand now and then. But between us we've wheelbarrered every step of 1400 miles, I reckon."

"And ain't tarred out yit?" demanded the teamster incredulously.

"Not by a long shot!"

"Then all I can say is: You've got lots more grit in your gizzard than I've got in mine! But you'd better hustle up a dozen men or so before you start up this big slant. You've clumb some devilish high hills, I'm guessin', in all that 1400 mile. But all of 'em stacked one on top of t'other wouldn't be as high or as steep as this golly-buster of a hill right here."

"But we're bound to get up somehow," Orlando told him. "We've started to the Gregory Diggings, and this is the only road."

Here the men who had just taken a wagon up were seen coming down, with their long team, for another wagon. Another string of wagons had also just arrived, stopping not far back. The drivers now came forward to examine the trail, and the foot party were soon in conversation with them.

Ere long a man who had been camped not far away was seen coming. Having despaired of getting his whole wagon up, he had taken out the tongue and fore wheels, and roped such supplies as he would need most to the fore axle and hounds. With three yoke of cattle to pull that improvised cart, he was going to try the mountain.

He went up. But even with such a light load the six work cattle seemed to have every pound they could pull.

When that outfit had disappeared, somewhere up among the clouds, apparently, Sanders addressed his partners: "Well, boys, what do you think by this time? Reckon we're wheelhorses enough to drag this cart and this wheelbarrow up that tilted road?"

"I'm doubtin' mightily if it lays in our breeches to do that," answered a handcarter.

And Esau said: "My notion is we'll have to splice teams to git up, and maybe load light besides."

"Guess you're right about that," Sanders agreed. "Still, just to see how the thing will work, we might try to go up as we are. Buckle your bellybands, boys!"

Two carters were quickly harnessed in front of the cart, another was in the shafts and the other two were pushing behind. All went well enough at first. But by the time they had climbed a hundred yards or so and reached the steepest part of the road they were seen to move more and more slowly. Finally they stopped altogether. After standing for a minute or two they turned round, those in harness seizing their straps with their hands and permitted the cart to run backwards.

"Too tough a job—too tough a job for little shavers like us!" declared Sanders, when they were at the foot of the slope.

He began to unfasten his harness. The others were wiping their sweaty faces with their sleeves, or fanning themselves with their hats.

"No wonder the pore oxens have to stick their toenails in!" exclaimed one of the party.

After a little while Sanders remarked: "Only way I can see is for us to unload all but about 150 pounds. Then, if Esau and Orlando will double teams with us, we may be able to snake her up."

"Yes, we'll give you a boost. To be sure we will," answered Orlando. "We're going to need one ourselves. Won't be room for both of us to get behind and push. Hadn't we better put a rope to the fore end of your cart?"

"A rope will be all right," Sanders told him. "Have it long enough for two men to lay hold of it."

So the cart was moved back from the road and the greater part of its load taken off. A man camped near by promised to keep an eye an what was left as well as on the wheelbarrow and on the pack which Orlando had removed from Brindle. The cow herself, with her packsaddle still on, had been turned loose to graze.

Now the handcart's crew fell into their accustomed places. Nobody was riding, of course, and two were behind to push. After tying a rope to the crosspiece at the end of the cart's shafts, and letting it extend forward, Esau and Orlaido had something to pull by.

When everything was ready, Esau threw the rope over his shoulder, Orlando seized hold of it, their leader shouted "Go!" and away they went.

"Now stick your toenails in, boys! Stick 'em in deep!" bawled Sanders, when they came to the steepest part of the road.

The cart went on this time, though not without much tugging and straining and sweating on the part of the seven men pulling it. When a few hundred feet up they had to stop and rest. And so they did again and again. But at last they found themselves on the mountain top, 10,000 feet above where they had started. Or at least that was what a weary handcarter declared the distance to be, after they had reached the summit. And nobody disputed his guess.

As soon as they had rested enough and felt strong enough to return they unloaded the flour and other things from the cart. Those they left in the care of a man who had stopped his wagon there. He was chopping a pine tree to drag down.

"Now who's yearning for a ride?" called out Sanders.

"Not this boy!" answered Esau. "If the cart broke loose a feller might ride whizzin' to kingdom come!"

So they started back down the mountain with the cart. And when they had reached the bottom all agreed that the coming down was well nigh as hard as the going up. And if the cart had been loaded, the coming down would have been fully as hard.

At the foot of the mountain they seated themselves to rest for a few minutes, while they watched 22 oxen drag a big but nearly empty wagon up the mountainside. One of the drivers was a woman—a woman wearing boots and a man's hat. It was Mrs. Hinkson, the wife of the traveler Esau had talked with soon after crossing the South Platte. Hinkson himself was not far back, looking after the wagon and the children and the loose stock.

When the way was clear the foot travelers put another load on their cart and started up again. But before reaching the steepest part of the road they heard somebody calling to them. Looking behind, they saw three people they knew: Cooper and Holloway and Givens, Holloway's present partner. Those men had just arrived; their wagons could be seen standing a few hundred yards in the rear. The cart had come to a standstill.

"You fellows seem to be having no end of fun getting your plunder up into the clouds!" Cooper called after them.

"Yes, we're having a man-killing job of it!" Sanders admitted. "But we're dragging it up, a jag at a jump. "You'll have a thundering time getting that big, loaded wagon of yours up here!"

"Wouldn't I, though—if I was gump enough to try! But I'm not gump enough to try!"

"What! You're not going any further, Mr. Cooper?" demanded Orlando.

"Oh, yes, I'm expecting to go further myself. But I'll leave my wagon and stock down here and my family to look after 'em."

"How are you goin' in, then?" Esau inquired.

"With a pack on my back, I'd guess; or

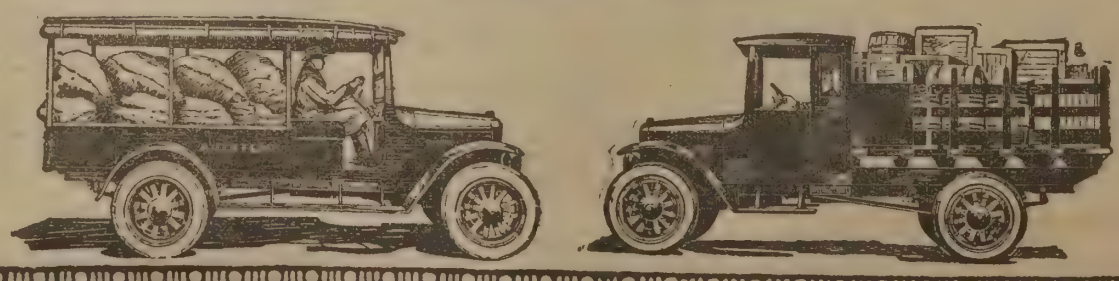
Want a Farm?

Very likely the place you wish is offered at a reasonable price on our "Want Ad" page. Why not look and see?

Information will be sent at your request.

Haul the Modern Way—with International Motor Trucks



THOUSANDS of farmers in America have invested in motor trucks because they have found that the use of horses for hauling is an extravagant waste. Time is too valuable to spend behind slow-plodding horses, and the owners of farm trucks have taken the surest way to increase their productive time. They have advanced a long way toward farming efficiency.

On the basis of the established reputation of International Motor Trucks for dependable, low-cost service in city and country hauling, we urge you to consider the present line of Internationals. Sizes range from 2000-lb. Speed Truck to the 10,000-lb. truck for heavy duty work. Bodies can be furnished for hauling fruit, milk, stock, grain, feeds, vegetables, etc. Figure out the cost of your present hauling system. It is likely you can save many dollars with International equipment.

Establishing Habits

The eating, breathing, sleeping and postural habits established by children are about the most valuable asset or the most serious menace that can affect their lives. They are also one of the most controllable influences that will enter into personal success or failure, if controlled early.

Speaking before a body of women, a nationally recognized Chicago authority on child health, Dr. Carolyn Hedger, recently declared that the persistent aversion to milk sometimes encountered in children is purely a problem for psychological control or is a matter of the method of imbibing milk. "Only in one case in 10,000, perhaps," she said, "do we encounter a human organism sensitized to the milk proteins, or incapable of taking milk. In 25 years of practice I have never had one case. With many children indisposed to take it I have overcome the prejudice by beginning with milk given by the teaspoonful, then the tablespoonful, as a medicine. Taken slowly, thus, it is soon relished."

In other cases the adult's prejudice against milk as a beverage was the difficulty that stood in the way, or some other psychological influence. A pretty glass, a dainty paper napkin, a festive, social aspect lent to the milk drinking by sharing with mother or father the delicious beverage, has often overcome the obstacle. Dr. Hedger alluded to one instance in her knowledge of a small and wilful miss able to induce vomiting at will, so purely was the physical revulsion really a psychological one. "What was done in her case might not be safely recommendable for general application," she said. The child's father, after all persuasive methods had failed to cause her to eat the prescribed oatmeal, repeatedly and forcibly fed her, one morning, between intervals of protest and intervasl of eruption, the required amount. When it became clearly evident to the child that the stipulated amount of oatmeal would keep on going down her gullet, would she, wouldn't she, the oatmeal stuck to her ribs, and thereafter she ate it in peace and enjoyment. Some degree of psychological control over the stomach's reaction is more common in children than is generally supposed, in Dr. Hedger's conviction.

Hence the importance of good psychological methods, not only to induce consumption of the proper food, but good assimilation of it. Another entire family of children averse to milk had been speedily converted to its habitual use when they learned that "children too sick to drink milk must stay in bed."

Just Folks

Rules of life are easily made.

It is better not to see all things as they are.

A big piece of education is to name trifles rightly.

It is even better to be one-sided than to be no-sided.

Men and women will always be waiting for the last word.

There is nothing necessary that is carried over from the evening to the morning. This thought of itself gives poise.

The day is done. The books are balanced.

The morning is a new resurrection of life and should come with the joy of springtime, and the evening should follow with the joy of the harvest. There is no magic about the miracle of work in the morning and rest in the evening. It is simply the beginning and the ending of the chapter with the blessed uncertainty of when the final chapter shall close.

Plan for the new chapter always but let it always be a new chapter. Let the freshness and vigor of youth enter into every morning's duty. Let the ruggedness of action characterize the midday and let the graciousness of age close the chapter at night. So shall growing content come with the years. So shall misfortune be interpreted. So shall there be light at eventide. E A S

Home Recipes

Brown Sugar Frosting—One and one-half cups brown sugar, one-half cup sweet cream, two tablespoons butter, cook till it bubbles, then flavor with vanilla and beat till thick.—Mrs. L. Balser, Idaho.

Fruit Cake—Two cups brown sugar, two cups boiling water, one pound of seeded raisins, two tablespoons of lard, one teaspoon each of cloves and cinnamon; stir together and boil five minutes; let cool and add one rounding teaspoon soda and three cups flour. Bake in a slow oven 45 minutes. It improves with age if not kept more than a month.—Mrs. F. M. S., Idaho.

Cold Relish: One peck of ripe tomatoes, chopped fine and drained, six large onions (chopped), two cups chopped celery, one large pepper, two pounds brown sugar, one-half cup salt, two ounces white mustard seed, two tablespoons of cinnamon, one quart vinegar; mix thoroughly and put away unsealed.

MRS. JENNIE HAIN.

Easily Made Boudoir Cap

By JEANETTE BELL.

This charming cap is of the most simple work. The foundation of the cap is a band of sash ribbon. This may be of any kind or color desired. The model was made of flowered ribbon on a white background. This sash ribbon was five inches wide, of which 42 inches were used. The daisies were made of the widest size of white rick rack braid, with centers of yellow crochet. Cut 20 points of rick rack braid, sew the ends together, then fold each point and sew together, forming the petals, as shown in the illustration. Seven of these flowers are used, six daisies for the band and one for the center of the crown. One ball of mercerized crochet cotton of any shade desired is used. With a sharp-pointed crochet hook make :

First row: * 1 s c into point of braid, 5 ch sts, repeat *, for this row, 5 ch sts.

Second row: * 1 s c into center st of loop of previous row, 5 ch sts, repeat *, for this row, 3 sl sts, to center of loop.

Third row: 3 ch sts, 1 d c, 2 ch sts, 2 d c, all into center st of loop, * 1 ch st, 2 d c, 2 ch sts, 2 d c, all into center st of next loop, repeat *, for each loop of previous row, break thread.

Repeat for the next daisy. Join the first and second medallions as follows: Join to ch in center of group, make 1 s c, 3 ch sts, 1 s c between groups of next medallion, 3 ch sts, 1 s c into next group, 3 ch sts, 1 s c over opposite ch, continue back and forth until you have joined 3 groups on each medallion, break thread.

The six medallions joined, form the band.

For the crown, make a medallion, same as before.

Fourth row: * 5 ch sts, skip 2 d c, 1 s c, repeat *, for this row.

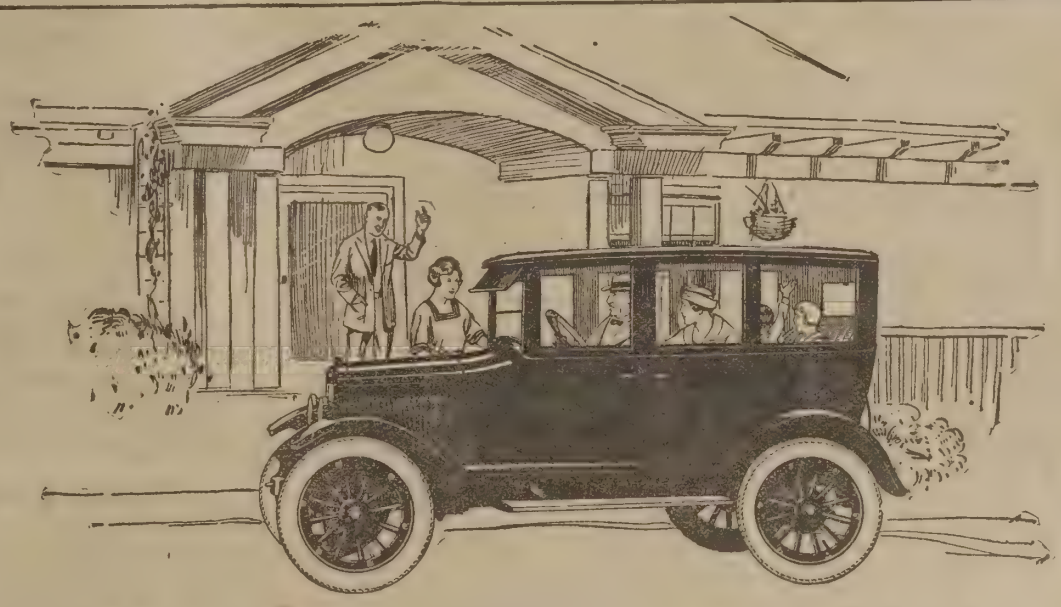
Fifth row: * 5 ch sts, 1 s c into center st of loop of previous row, repeat *, for the next 3 rows.

Ninth row: 2 sl sts, to center of loop, 3 ch sts, 1 d c, 2 ch sts, 2 d c, all into center st of loop, * 2 d c, 2 ch sts, 2 d c, all into center st of loop, repeat *, for each loop, 3 ch sts.

Tenth row: * 2 d c, 2 ch sts, 2 d c, all between groups of previous row, 1 ch st, repeat *, between each group, break thread.

For the daisy center, make of deep yellow, 5 ch sts, join, forming a circle.

First row: 5 s c into circle.



Second row: 2 s c into each st.

Third row: 1 s c into each st.

Fourth row: * 1 s c into first st, 2 s c into next st, repeat *.

Fifth row: 1 s c into each st, repeat for the next 2 rows, fill with cotton and decrease rapidly to close, sew to the center of daisy. Sew the ribbon ends together, and shir at top and bottom. Sew the crown to one edge and the band of medallions to the other. As the latter is in scallops, the ribbon will follow the scallops.

High Points in News of the Week

As important as were the developments in the railroad strike situation last week, the European and Near East situation took precedence in news interest. The general public is wondering if another great war is about to begin. The Turks are on a rampage; they have completely demolished the Greek army in Asia Minor; they have renewed their atrocities against Christians and are now believed to have plans under way to re-enter Europe and take possession again of the Dardanelles and the Bosphorus, from which they were driven during the recent war.

England, Italy, France and dependencies of these allied countries are rallying in warlike fashion to prevent any such aggression on the part of the Turkish army. The allied watchword of the great war is again to be heard: "They shall not pass." Except in so far as the welfare of American citizens in the territory affected is involved, the United States is not directly concerned in the situation, though there is no way to predict dependably what the ultimate outcome may be. All Europe is seething in controversy and discontent. Not a nation of that continent is beyond the possibility of being drawn into another conflagration, though the present situation may be cleared up with comparatively little conflict.

Reappearance of the victorious Turks on the European shore would, it is held by the British government, provoke a situation of the gravest character throughout the Balkans, and very likely lead to bloodshed on a large scale in regions already cruelly devastated.

The British government maintains that it is the duty of the allies of the late war to prevent this great danger and secure order and peaceful conditions in and around the straits.

Great Britain is prepared to bear her part in this matter, it is stated. It is pointed out as clear that the other allied powers of the Balkan peninsula are also vitally affected. Rumania, it is noted, was brought to her ruin in the great war by the strangulation of the straits. The union of Turkey and Bulgaria would be productive of deadly consequences to Serbia in particular, and Jugo-Slovakia as a whole, it is argued, while the whole trade of the Danube flowing into the Black sea is likewise subject to strangulation if the straits are closed.

It is further maintained that an adequate force must be available to guard the freedom of the straits and to defend the deep water line between Europe and Asia against violent and hostile Turkish aggression.

It is announced that Great Britain intends to reenforce immediately and, if necessary, to considerable extent, troops at the disposal of General Harrington, the British commander at Constantinople. Orders have been given to the British fleet in the Mediterranean to oppose by every means any infraction of the neutral zones by the Turks or any attempt by them to cross to the European shores.

The British government holds that if the allies were driven from Constantinople by the forces of Musta pha Kemal Pasha it would be an event of the most disastrous character, producing far-reaching reactions not only throughout all the Moslem countries, but throughout all the states defeated in the late war, who would be profoundly encouraged by the spectacle of the undreamed of success which have attended the efforts of the comparatively weak Turkish forces.

The cabinet has been sitting informally over the week-end at Chequers Court, the country residence of the prime minister. Austen Chamberlain, Lord Birkenhead, Sir Robert Stevenson Horne and Winston Spencer Churchill have been Mr. Lloyd George's guests there, and all through Sunday the telephones between Chequers Court and the foreign office in London have been humming with consultations with the various government departments.

* * *

All 47 of the miners entombed in the Argonaut mine August 27 are dead, it was announced officially shortly before 9 o'clock Monday night.

A note found on one of the bodies indicated that all the men had died within five hours of the beginning of the fire, August 27, officials said.

Mine officials declared that the condition of the crosscut behind the bulkhead was such that life could not have been sustained there by the entombed men for more than a few hours. They said that death had come to the entombed men painlessly. The gases, they said, would produce first a lethargy, then a coma and finally death.

Jackson, Amador county, the scene of the greatest mining disaster in California's history, lies about 40 miles southeast of Sacramento, the state's capital. It has a population of 2500, which includes a considerable number of foreign-born. These are the workers in the Argonaut and Kennedy mines which are among the deepest in the world, each possessing shafts nearly a mile deep. Of the foreign-born miners, the Italian element predominates.

* * *

The destruction of the Greek port of Smyrna by fire, accompanied by reports of horrible massacres perpetrated by the Turkish nationalist forces, the victims, numbering between 1000 and 2000 persons, has still further complicated the already grave situation in Asia Minor.

Death and indescribable misery rule among 200,000 of the crazed population. Six lone American relief workers are attempting the superhuman task of ministering to the dead and dying.

The catastrophe is so vast that only the collective efforts of the allied nations can cope with it. When the fire was at its worst, the American destroyers Lawrence and Litchfield were almost swamped by thousands of maddened survivors who plunged into the water in the darkness of night and swam out to the ships, imploring piteously to be saved. The American bluejackets rescued hundreds of drowning.

* * *

The chief development in the railroad strike situation last week was the decision by the leaders of the shopmen's organization that strikers were at liberty to make settlement with individual railroad companies. This decision was followed by the beginning of negotiations that brought a virtual end of the strike on about 50 roads, with mileage, totaling about one-third of the entire mileage of the country. Many believe that this marks the beginning of the end of the strike. The Chicago, Milwaukee & St. Paul is the only transcontinental road serving the north west that has made settlement, though many of the smaller companies in this territory have done so. The Great Northern and Northern Pacific have announced that they will not settle on any other basis than the wages and conditions laid down in the ruling of the railway labor board, against which the strike was called. Both these roads declare that they are operating successfully with men employed since the strike began, and that they can reemploy only such of their former employees as are actually needed to fill positions that are now vacant.

A significant event occurred last week in connection with railroad operation when the New York Central entered into agreement with two of the operating railroad brotherhoods. The agreement provides that the present wages and working rules shall hold one year and the company will withdraw its application already made to the labor board for reduction in wages. Other lines, including the Pennsylvania system, are reported to be making similar negotiations.

* * *

The American Federation of Labor, under the leadership of Samuel Gompers, is preparing a constitutional amendment for submission to congress, intended to limit the power of the United States supreme court. Under the proposed amendment, if an act of congress is declared by the courts unconstitutional, but later is repassed by congress it can not again be declared unconstitutional.

* * *

Both houses of congress have now completed their action on the soldier's bonus bill and have passed it on to President Harding for his signature or veto. Probably before this reaches the reader the president will have signed it or returned it to congress without his approval. There is wide speculation as to whether he will sign or veto it.

* * *

The United States department of labor reports that a nation-wide labor shortage is at hand. With a view to improving conditions the department is organizing the entire United States, with a sort of clearing house through which a state that needs additional help may be assisted in securing it from other territory where a greater supply exists.

Mrs. Harding, wife of President Harding, is reported to be recovering from

(Continued on page twenty-two.)

Farm Business and Markets Outlook

(Continued from page five.)

Prices for No. 1 American cheese on September 13 were:

Chicago — Twins, 20 1-4@21 1-2c; S. Daisies, 20 1-4@20 3-4c; D. Daisies, 20@20 1-2c; Y. Americas, 20@20 1-2c; Longhorns, 20 1-2@21c; Square Prints, 21@21 1-2c.

Apple Crop Generous.

The September forecast of the commercial apple crop was 32,583,000 barrels, compared with 21,200,000 barrels last year and an average of 26,800,000 barrels in the five years, 1916 to 1920. Washington has 7,846,000 barrels, Oregon 1,549,000 barrels, Idaho 1,072,000 barrels and Colorado 974,000 barrels. Receipts continued to reflect the big crop the carlot movement in the week ending September 9 being 1768 cars compared with 1215 cars last year, 1068 cars two years ago and 913 cars three years ago. Prices remain low with barreled Jonathans quoted at $3 to $3.25 at Chicago.

Potato Crop a Record.

The white potato crop was estimated at 438,398,000 bushels on September 1, or slightly less than a month ago compared with 347,000,000 bushels last year and an average of 373,000,000 bushels in the five preceding years. Combined with the sweet potato crop of 108,000,000 bushels, the total is the largest on record.

Prices remain weak, although carlot shipments have declined until they were only up to normal for the season last week. Early Ohios are quoted at $1 to $1.25 per 100 pounds sacked, with rurals at $1.25 on the Chicago carlot market.

LATEST QUOTATIONS.

The Livestock Market.

Your Health

By Royal S. Copeland, M. D., F. A. C. S.

HOW TO RELIEVE "IRITIS."

There are all kinds of suffering—earache, brainache, heart pain—but there is no more agonizing than that caused by iritis.

Dr. Copeland.

The colored part of the eye is the iris. It is brown, or blue, or black, or variegated in color. This iris is really a muscle or several delicate layers of muscles. The black patch in the middle of the iris is a hole in the iris. This is the pupil, which varies in size as the muscles of the iris dilate and contract it.

As I have said, the main substance of the iris is muscle, and it is subject to all the diseases muscles have. Rheumatism is one of these, of couse. So we have "rheumatic iritis."

Normally, the iris has lustre and brilliancy. In iritis it becomes muddy and dull.

The pupil, which reacts to light and shade, changing its size almost constantly, becomes fixed in iritis.

There is a peculiar zone of redness in the white of the eye. This zone surrounds the iris and gradually widens and deepens in color. If the case grows worse the entire white becomes red and inflamed.

There is pain in the eye as if some foreign substance had entered it. The pain grows worse and shoots up into the forehead and even to the top of the head.

Sometimes operative measures are necessary.

Hot water compresses and all forms of heat are helpful. Capsicum-vaseline applied to the temple, and a hot towel applied over it may help to control the pain.

The eye should be protected from the light, but fresh air and sunlight are essential to improve the general condition of the patient.

In some cases the pain is terrific and it is worse at night and in wet weather. There are cases of so-called "quiet iritis," where there is little pain, but thery are not common.

Bad teeth, rheumatism, tonsillitis, exposure and blood-disease are factors in producing the disease. Of course, there are many other causes.

In the treatment, the pupil must be kept dilated with atropine. Soothing drops should be used, and the primary cause treated.

It is common to have relapses, and the the disease lasts a long time in spite of good treatment.

Take Time to Learn

That housewife who "has not time to" put up fruit and vegetables and to cure meats faces the alternatives of taking time to become well acquainted with standards of commercial brands or frequently accepting an imposture. She will learn, in the course of time, to look for the resoldering mark beneath the can which tells her that the product has been punctured once to allow the escape of gases that had formed; to ask herself if the canned goods have the right color or that of aged goods; if the catsups and jams betray the color of partially disintegrated components; if the dried prunes have been rebrightened with molasses and are sticky, instead of being fresh or sugar-whited with age; if the pickling fluid used on the "store" meats is efficient even unto pickling the internal human membranes, or is a mere deodorizer concealing the condition of and the nature of the minced meats. She will need to know why some brands are cheap and some expensive, when it pays to take a cheaper brand and when it is unwise. She will need to know that certain varieties of fish, such as grayfish and codfish, can not be tinned without risk of ammonia's formation within the tin. On these, and many other points, she will need to take time to become informed.

Boys and Girls Have Trip

Two auto loads of club boys and girls from Kitsap county enjoyed a trip to Tacoma and through the Puyallup valley with G. N. Worden, their county agent and club leader, on August 23 and 24. The party took in all of the points of interest and camped over night of the first day out. All had the time of their lives and learned much to be remembered in their club work.

SAVE BY REMODELING.

Old garments were remodeled by farm women last year, as a result of demonstrations by county extension agents, into 55,600 up-to-date articles of apparel, according to reports to the United States department of agriculture. Under similar instruction 105,000 new garments were made.

GRINDING BREAKS TISSUE.

Ground meats, such as hamburger, do not keep quite so well as whole meat, the grinding tending to break down and expose tissue surface.

GENUINE CONSERVATION.

It is as important to protect and conserve what you have as to produce something new.

KEEP THE INFORMATION.

Keep a well-indexed scrapbook.

Latest High Class Patterns for the Home

Please order the patterns you desire at least two or three weeks before you wish to use them. Desiring to obtain the latest high-class patterns for its readers, THE FARMER has made arrangements to have them sent direct from the east, and under present mailing conditions it takes about that time for them to reach you.

4086. Girl's Dress. Cut in 4 sizes: 4, 6, 8 and 10 years. A 6-year size requires 2 7-8 yards of 32-inch material. To make vest and cuffs of contrasting material will require 5-8 yard of 32-inch material. Price 10c.

3266. Child's Play Dress. Cut in 4 sizes: 2, 4, 6 and 8 years. A 4-year size will require 3 3-8 yards of 27-inch material. Price 10c.

3812. Misses' Dress. Cut in 3 sizes: 16, 18 and 20 years. An 18-year size requires 4 3-4 yards of 27-inch material. Price 10c.

Are your crops looking yellow and growing poorly? They may have indigestion for lack of

Nitrate of Soda

The difference between fertilizing with Nitrate Nitrogen and other forms is that of expecting a baby to thrive on raw flour when it should have milk. NITRATE OF SODA furnishes Nitrogen immediately available for plant food: other forms do not. Write for my FREE BULLETIN, "Common Sense About Nitrogen."

THE AUTO-OILED AERMOTOR

A Real Self-Oiling Windmill

Oil an Aermotor once a year and it is always oiled. Every moving part is completely and fully oiled. A constant stream of oil flows on every bearing. The shafts run in oil. The double gears run in oil in a tightly enclosed gear case. Friction and wear are practically eliminated.

A year's supply of oil is sent with every Aermotor

Any windmill which does not have the gears running in oil is only half oiled. A modern windmill, like a modern automobile, must have its gears enclosed and run in oil. Dry gears, exposed to dust, wear rapidly. Dry bearings and dry gears cause friction and loss of power. The Aermotor pumps in the lightest breeze because it is correctly designed and well oiled. To get everlasting windmill satisfaction, buy the Aermotor.

Aermotor Towers are Towers of Strength

Write today for Circular. AERMOTOR CO. Chicago Kansas City Des Moines Minneapolis Oakland

HUGHES & COMPANY, Spokane Distributors.

Ora Schafer, Adams county, Wash., will be 12 years old January 28, 1923. When school commenced early in September she went in the sixth grade. She says she still likes to read The Junior Farmer.

Aunt Nellie has the following nice letter from Millie Le Bret: "This is the first time I ever wrote a letter on a typewriter. I like The Junior Farmer and I read it to my little sister every time I get it. I have little twin brothers who are now 4 years old. Their names are Jimmie and Johnny." Millie lives in southern Stevens county, Wash., north of the Spokane river.

"I should like to join the Children's Corner," writes Phyllis March, Skagit county, Wash. "I am 11 years old. My birthday is October 4, I live on an island called Sinclair island in Puget sound. My pets are a big sheep, two cats, a dog, three cows and a calf."

A new cousin in Snohomish county, Washington, writes that she should like to join the Corner. She is Nina Toivonen. Nina is in the sixth grade and the name of her school is the Swans Trail. She has a sister and three brothers. Two calves, three cats and some chickens are family pets at the Toivonen home. January 15, 1923, Nina will be 12 years old.

Laura Thomas writes to us about her little black and white puppy and her 10 little chickens. Laura was 11 September 20, 1922. She says she is getting along nicely in the sixth grade at school. Her home is near Coal creek, Lincoln county, Washington.

"Yesterday, Monday, August 28, I came home from Bellingham, after a week's vacation," writes our little friend Velzia Stevens of Whatcom county, Wash. "Every one is fine there and the baby is cutting teeth at the age of six and a half months. When I was in town I got lost, but I found my way home after I wandered around about an hours. My teacher's name is Miss Elsie Hughdahl. We shall only go to school about a month because we are going to move to town for the winter. Love to you and the cousins."

"How are all the cousins?" asks Anna Mae Tarter. Anna Mae writes that she spent three days out in the country. Her school started the day she wrote to Aunt Nellie, which was September 6. Anna Mae lives in Grant county, Washington. She is always glad when The Junior Farmer comes. Her pets are three little calves.

We have a nice letter from a cousin in Franklin county, Washington, who signs her name "Frances." Frances enjoys the stories in The Junior Farmer very much. She writes: "Our school will start a week from tomorrow (September 11). I like to go to school. My sister, Helen, is playing on the piano. We have one hired man. His name is Pete." (What is your last name, Frances?)

"I would like to join The Corner," writes Arthur Toivonen, a western Washington cousin. "I will be 9 years old October 1. I am in the third grade at school. I go to the Swans Trail school and my teacher's name is Miss Murphy. I live on a 10-acre farm about five miles from town in Snohomish county. We have two cows, two calves and a lot of chickens. I have two brothers, William and Neil. My sisters are Nina and Laila."

"I get The Junior Farmer from one of my school chums and enjoy reading it. Will you please send me the little paper?" The above letter comes to us from Violet Lutz of eastern Washington. (We are glad to have you with us, Violet.)

Matilda French writes a little note to tell Aunt Nellie that Monday morning, September 11, she started to school. She is a central Washington cousin. We are glad to hear from Matilda.

Birthday Greetings

THURSDAY, September 21—Frank Pietila, 6 years old; Esther Wahl, 11.

SATURDAY, September 23—Alice Hill, 11 years old; Danny Roe, 10; Carl Schmick, 11.

SUNDAY, September 24—Paul Anderson, 11 years old; Lemerl Bridsell, 11; Elizabeth Felchlin, 10; Margaret Fender, 11; Alice Paulson, 10; Nadine L. Hutchens, 10.

MONDAY, September 25—Evelyn Arneson, 11 years old; Louise Vorla, 11.

TUESDAY, September 26—Louis Chabre, 10 years old; Florence Frye, 10; Shirley Brooks, 11.

WEDNESDAY, September 27—MaCament Dickenson, 10 years old; Martha H. Haskins, 10; Paul Keller, 10.

LETTERS WELCOMED BY AUNT NELLIE.

Among recent letters received by Aunt Nellie are those from cousins whose names follow. A few of these will be published each week in the regular edition of THE FARMER and others will appear from time to time in The Junior Farmer:

Jay Atkinson, Laura Thomas, Gertrude Pinister, Violet Lutz, Anna Kuzminich, Phyllis Van Dyke, Mabel Hanson, Martha May Jenkins, Edna Amend, Marion Lewis, Ellen Nelson, Verna Stevens, Hazel Schafer, Ora Schafer, Elizabeth Millim, Alice Goodfellow, Nina Toivonen, Anna Mae Taeter, Arthur Toivonen, Dorothy Loch, Marie Trupp, Elizabeth May Thomas, Mathilda French.

BEDTIME STORIES

By THORNTON W. BURGESS.

REDDY THINKS HE SEES GHOSTS.

Reddy Fox came down the lone path through the Green Forest on his way to the Green Meadows. He had brushed his red coat until it shone. His white waistcoat was spotless and he carried his big tail high in the air that it might not become soiled. Reddy was feeling as fine as he looked. He would have liked to sing, but every time he tried his voice cracked and he was afraid that some one would hear him and laugh at him. If there is one thing that Reddy Fox dislikes more than another it is being laughed at.

Reddy chuckled at his thoughts, and what do you think he was thinking about?

"It must be his ghost," muttered Reddy.

Why about how he had seen Farmer Brown's boy carrying off Unc' Billy Possum by the tail the afternoon before. He knew how Farmer Brown's boy had caught Unc' Billy in the henhouse, and with his own eyes he had seen Unc' Billy was dead! There could be no doubt about it. And Reddy was glad of it. Unc' Billy Possum had made altogether too many friends in the Green Forest and on the Green Meadows, and he had made Reddy the laughing stock of them all by the way he had dared Reddy to meet Bowser the hound and actually had waited for Bowser while Reddy ran away.

Reddy remembered that Unc' Billy's hollow tree was not far away. He would go over that way just to have another look at it. So over he went. There stood the old hollow tree and half way up was the door out of which Unc' Billy used to look down on him and grin. It was Reddy's turn to grin now. Presently he sat down with his back against the foot of the tree, crossed his legs, looked this way and that way to make sure that no one was about, and then in a dreadfully cracked voice he began to sing:

Ol' Bill Possum, he's gone before!
Ol' Bill Possum, he is no more!
Bill was a scamp, sir,
Bill was a thief!
Bill stole an egg, sir;
Bill came to grief.
Ol' Bill Possum, it served him right;
And he is no more for he died last night.

"Very good, sah, very good. Ah sutt'nly am obliged to yo' all for yo' serenade," said a voice that seemed to come right out of the tree at Reddy's back.

Reddy Fox sprang up as if some one had stuck a pin into him. Every hair stood on end as he looked up at Unc' Billy's doorway. Then his teeth began to chatter with fright. Looking out of Unc' Billy's doorway and grinning down at him was something that looked for all the world like Unc' Billy himself.

"It must be his ghost!" muttered Reddy, and tucking his tail between his legs he started up the lone little path as fast as his legs could take him.

Reddy never once looked back. If he had he might have seen Unc' Billy Possum climb down from the hollow tree and shake hands with Jimmy Skunk, who had just come along.

"How did Ah do it? Why Ah Just pretended Ah was daid when Farmer Brown's boy caught me," explained Unc' Billy. "Of course he wouldn't kill a daid possum. So when he tossed me down on the chopping block and turned his back Ah just naturally came to life again, and here Ah am."

Unc' Billy Possum grinned broader than ever, and Jimmy Skunk grinned too.

News of the Week

(Continued from page twenty.)

the serious illness that has threatened her life during the last two weeks.

* * *

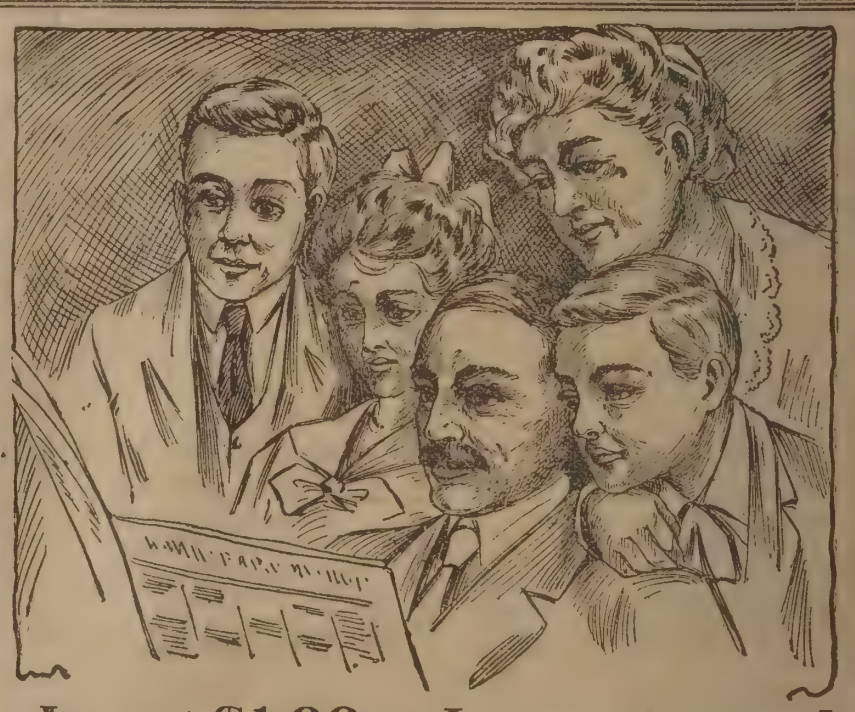
Another critical situation has arisen between the allies and Germany over the payment of reparations by Germany. The latter has flatly refused to deposit 100,000,000 gold marks, as demanded by Belgium, to guarantee payment of a reparations installment now overdue. Again France and Belgium are standing firmly for compelling Germany to make good, while Great Britain is apparently more sympathetic toward Germany. A meeting of the allied premiers probably will be held at once to take up the question.

* * *

A report from Chicago says that the five great packing concerns, including Armour, Wilson, Morris and Cudahy, are contemplating a merger into one corporation with capitalization at over $500,000,000.

* * *

Attorney General Daugherty finished last week his arguments before the United States district court at Chicago in favor of a continuation of the temporary injunction secured against the striking railroad workers. Attorneys for the strikers will present their case to the court beginning early this week.



* * *

Impeachment proceedings were started last week in congress against United States Attorney General Daugherty on grounds that he exceeded his constitutional rights in obtaining the injunction against the striking railroad workers in Chicago two weeks ago. The case is being heard by the judiciary committee of the house of representatives.

What the War Did for the Palouse

(Continued from page three.)

experiment station was ready to help him and had a system of cropping worked out so that these wheat farmers are now growing legumes such as clover, alfalfa, sweet clover and peas in a rotation, are cropping their soil every year and are returning the straw and manure to the land. They are growing just as much wheat as they ever did and produce all these other crops besides. The live stock necessary to consume on the farm those crops that are not readily marketable is being gradually introduced and in the course of a few years the farmer will wonder how he ever got along without the cow and the pig and the hen. Here is one case at least where the after effects of the war were not demoralizing. They have made the population, as well as the agriculture of the Palouse region, more permanent, and the dream of the visionaries has been realized. The future Palouse farm will be smaller and more intensively managed because of the war.

Invest $1.00 in Instruction and Entertainment for Your Family

When you send $1.00 for a five-year subscription to The Washington Farmer, you spend the money, not for yourself alone, but for the good of the entire family.

This home and farm weekly keeps the entire family informed about the farm life of the state, and brings new light to bear on every phase of agricultural progress. The interests of boys and girls are given plenty of space. There is a constant interchange of experiences, ideas, opinions and methods of strong appeal to the housewife. The stories, illustrations and special features appeal to all.

A dollar seems a small sum to pay when you consider how many receive pleasure from its expenditure.

This low price is made possible by the cooperation of our readers in sending in their subscription orders direct. Agents are expensive. Save their cost by sending in your subscription renewal at least sixty days in advance of the expiration date stamped on the wrapper of your paper and by including the orders of your friends and neighbors with your own.

$1.00 for 5 Years

50 cents for 3 years, 25c for one year.

If your subscription is already paid in advance it will be extended from the date to which it is paid. Sept. 21, 1922.

News for Breeders

HAS 18 HEAD REGISTERED.

There are 18 head of registered Jerseys on the William Cooke farm in the Shelton valley, in Mason county. The farm is more commonly known as the Shelton dairy and is being operated by William Cooke and his son, W. Cooke, each of whom have a dwelling house on the farm.

A 2-year-old bull, Utellum, that comes from a Puyallup valley herd, is being used on the herd with good results. He has some strong St Mawes breeding behind him and is a typy individual. A Shorthorn bull is also kept for use on some of the grade cows in the herd with the intention of breeding some good veal calves.

In addition to the Jerseys there are 37 head of Lincoln sheep kept on the farm, which are allowed to feed on the native and meadow pastures. Although there has been no trouble with coyotes in this neighborhood, a few sheep have been killed by dogs and it is thought best to keep all of the flock in the barn at night. Sheep are found to be a paying undertaking for local conditions and it takes but little time to care for them.

For feed, both clover and vetch crops have been found to yield best and the vetch is usually planted with winter wheat. Native grass is used for hay from some of the bottom land and it makes a fair grade of hay if properly matured.

Mr. Cooke had one of the heaviest crops of oats in a 12-acre field, which was mostly clay loam soil. The field had been in sod for 10 years and received no manure. The oats will be cut for grain and it is expected to produce an exceptional yield. Some of the tallest patches measure five feet from the ground. The crop was seeded the middle of June.

EFFECT OF PUREBRED SIRE.

There are 11 daughters of two foundation cows on the Tualco Valley farm near Monroe, Snohomish county, that are doing much better than their dams in milk production, according to Dr. Stockwell, the owner.

The instance was given to show the value of a purebred sire and his effect on a good herd. The bull, Prince Aralia Burke 4th, is now a 5-year-old and is a half brother to Cascade Blossom and his dam was a world-record cow when the record was made.

Dr. Stockwell is breeding for type and believes that if this is once attained, the production will take care of itself. There are many of the cows in the herd that are making good showings in their milk production and as the heifers freshen they are making better showings.

BUYS AYRSHIRE SIRE.

Harry D. Mytinger of Pendleton, Ore., recently purchased from E. W. Van Tassell of Wenatchee, Wash., the young Ayrshire bull, Wenatchee Prince. This youngster is by Willowmoor Peter Pan 25th and out of Queeche's Robinhood of Wenatchee. The dam has a record of 11,649 pounds of milk and 498.26 of fat, made as a junior 2-year-old. She is now on test as a junior 3-year-old and is milking 65 pounds a day, with a test of 4.96. She will have over 90 pounds of fat to her credit for August, when the official report is made. Mr. Mytinger recently bought a foundation herd of 13 Ayrshires from J. U. Smith of Newburg, Ore.

WINS STATE RECORD.

Star of Yewloa, a junior 2-year-old Jersey owned by N. C. Sears of Winlock, Wash., now holds the Washington state record for Jerseys on official test at that age. Star in her year, which ended in February, produced 456.23 pounds of fat. This record is 56 per cent above the requirement for the register of merit at that age. The heifer was second in class at the recent Southwest Washington fair. Mr. Sears has been successful with his herd in the show ring and is now making a number of good records.

BUYS UNBORN BOAR PIG.

During the Southwest Washington fair, the last week in August, J. H. West, O. I. C. breeder, of Centralia, Wash., purchased an unborn pig from Ed Schoel of Albany, Ore. The pig is to be out of Mr. Schoel's grand champion sow and by Chief Justice Jr., a noted big type boar of Nebraska. Mr. West bought a boar pig from Mr. Schoel six years ago and he gives that pig much of the credit for making his herd the good one it is.

MAKING GOOD RECORD.

Lily L. 3d, a milking Shorthorn cow, owned by Northwood farms of Redmond, Wash., started on official test in February and was shown at the fairs at Burlington, Wash.; Vancouver, B. C., and Chehalis, Wash. In 167 days after her start she had averaged 50.8 pounds of milk per day. She was grand champion at the first two shows.

INFORMATION AT HAND.

File this paper away every week.

Hurt?

WHAT if it does? Just reach up on the shelf and get that bottle of good old Gombault's Balsam. Rub just a little on the sore spot gently. It immediately relieves! One more application and every bit of the ache disappears. IT IS equally effective for bruises, cuts, burns, sprains, sores, rheumatism, stiffness of all kind, sore throat, and chest colds. In addition to its remarkable healing qualities it is absolutely safe and a perfect antiseptic. IN thousands of homes it is the *one* remedy that cannot be spared. You'll feel the same way yourself after you've tried it. GET a bottle of Gombault's Balsam today! Keep it always on hand for any emergency. It's so effective one bottle lasts a long while.

Sold by druggists, or sent by parcel post on receipt of price $1.50 per bottle.

AS A VETERINARY REMEDY Gombault's Caustic Balsam has no equal. It supercedes all cautery and firing; and never leaves a scar or discolors the hair.

Pike's Peak or Bust

(Continued from page eighteen.)

maybe on a pony. You don't catch me trying to drag my wagon up into that mountainous country. Men I've talked with say this is about the worst place, right here at the start. But there's more—plenty more a good deal like it."

"Not much doubt of that, I reckon," Sanders answered. "Boys, I rather wish we could cache some of our stuff here."

"So do I," spoke out Esau. "At least till we can make a spyin' trip in there to see what's comin' to pass, and what the prospects air."

Now Cooper said: "If any of you men want to leave anything down here, my folks will look after it for you. Guess there'll be room in my wagon or in our tent for whatever you don't care to take."

"Lando, I'm thinkin' me and you'd better lighten our loads by about half. More on my wheelbarr' than I can push around up there. And you've got more than old Brindle can pack after she leaves the level country," said Esau.

"You're right, Esau. Not far in to the diggings from here. One or both of us can easily come back for supplies any time we run short."

"Guess there'll be some storage room in our wagon, won't there, Jeff?" remarked Holloway to his partner.

"Why, yes. Room and to spare. We've got only a small load, the two of us together. And ours is a bully good wagon cover, too. Your stuff will keep dry, no matter how hard the rain pours down."

"And you're goin' to leave your wagon and team out here?" asked Esau.

"That's what. Jess and I have arranged with Mr. Cooper's folks to look after everything for us while we're away. We're all going in with what we can pack on our backs, till we look things over, and maybe get us some claims. We expect to leave our wagon right by Mr. Cooper's. And Mrs. Cooper says her and the children will see after it. And the boys say they'll take care of our team—our work cattle."

Now the men holding the cart, after a few words together, let it run back down to level ground. There the situation was talked over, with the result that a new working agreement had soon been entered into. They would all go in together to the mines, starting the following morning.

As they were not to set out at once, the foot travelers toiled up to the mountain top with the empty cart and brought down what they had carted up there. From the wheelbarrow and Brindle's pack Esau and his partner selected such things as they expected to carry with them. The cow, with a much-lighted pack, would be taken in to the gold diggings, but the wheelbarrow would be left here. A good part of the cart's load would also find storage in Given's wagon.

Before making camp, Cooper's wagon, and also Given's, were driven back more than a mile from the road, to where were water and good grass for the stock. It was there, at the foot of the mountain, that the Cooper family would remain in camp. Other similar camps, with women and children in them, could be found not far away. Mrs. Cooper and Hazel would manage things, and Hazel's not very large brothers would keep all the oxen and Cooper's cows under herd.

The foot travelers followed the wagons and camped with them. Taking advantage of the brief stay here, Orlando missed no opportunity to talk to Hazel. And he made such good use of the few hours that the two quickly became better friends than ever. Even before the time drew near to set out, he had some visible evidence of their friendship.

Early the following morning the party of gold seekers, 10 in number, were ready to start. Now there was a moderate-sized pack on Bindle's back. All the party's others things were on the cart. Cooper had a pony he had intended to use as a pack animal, but the boys would need a horse while herding the cattle, and the pony would be left behind.

Away they all went, back to the trail first, and then up the mountainside. Three of the handcarters were working in harness, as usual, and one was pushing behind. In addition to leading Brindle, Orlando was helping push. The other five men were in front, all tugging manfully at a long rope.

The cart was rather heavily loaded and, even with 10 to push and pull, getting it up the steep mountain was no easy task. At last, however, it was on level ground. After that the party moved on easily enough for a time. Then came more tugging and straining and sweating.

It was a much-traveled but rough, wild road which the foot farers followed that day. Up and down mountainsides it led, across clear and cold but shallow streams and through narrow, gloomy canyons, with upright rock walls which seemed almost to overhang. Though they had not had covered many miles, every man of them was weary when the time came to camp for the night.

What Are the Best Winter Wheat Varieties for Washington?--Page 15

Club Contests Keen

Nearly 40 eager youngsters from Lewis, Thurston, Pacific, Cowlitz, Clarke and Grays Harbor counties, usually accompanied by a county agricultural or club agent as well as by the regulation chaperons, marched upon the Southwest Washington fairgrounds at stated intervals throughout the week of the recent fair, fired their respective broadsides in cooking, sewing, gardening or pig raising, and retired, leaving the genial state club leader and charge d'affaires, F. L. Audrain, to figure up the casualties. Usually retirement was in good order, but one or two club groups which have not had the advantage of leader guidance encountered problems which they had never met before and opponents who were highly skilled. The engagements resulted in a distinct triumph for the Grays Harbor club members, for, while Cowlitz county won three district championships to Grays Harbor's four, two of these were won without opposition, and Cowlitz county has a club leader, while Grays Harbor has not. Lewis county, which has heretofore been a heavy winner, won only one contest this year, as did Thurston and Pacific.

The best contests were in canning, where there were five entries, and in sewing, gardening, pig raising and dairying, in each of which four teams were entered; but it was in the beekeeping contest that George Robinson of Grays Harbor made the high score, a perfect one, and consequently will represent the district at the state fair. The next highest score was 96, also made by a Grays Harbor representative, Elvira Lightner, in sewing. She defeated Lydia Guild of Cowlitz by one point. Luella Ellingsen of Lewis scored 91, and the Thurston representative, Edna Yearout, was fourth.

The Cowlitz county canning team, Irvina Guild and Ida Martin, defeated the one from Lewis, Mabel Carlson and Ruth Smith, 93 to 92. The Thurston team, Glenna Watters and Valeta Keating, scored 90, but the Clarke and Pacific county teams were distanced. In gardening Frank Knizek, a Dryad boy, won Lewis county's only triumph, scoring 92 to 90 by his nearest competitor, George Carroll of Kalama. Here, too, a Grays Harbor entrant, Floyd Gouchner, ranked high (87), and Clarke county was fourth. It was quite fitting that Robert Polsen of Grays Harbor, president of the state club association, should win his contest in pig raising, else how would he get to the state fair? He did so handily, defeating Cowlitz, Lewis and Thurston county boys. Grays Harbor in the person of Crosby Valentine won again in dairying, scoring 91 to Francis O'Connor's 87. The latter came all the way from the Naselle valley, in Pacific county, to attend the fair. He lives on a farm where it's so wet in the winter that they have to walk on sidewalks set up on stilts, and he walked and rowed a boat several miles in order to catch the stage which brought him to South Bend.

The poultry contest proved a triumph for Edwin Halverson of Pacific county, who has 300 Rhode Island Reds of his own and who almost wept for joy when he was allowed to judge birds of that breed instead of White Leghorns. He had only one opponent. Valiant with the hoe where his namesake was valiant with the bow, Robert Adair of Thurston county scored 93 in the potato club contest, nosing out Ralph Lindley of Grays Harbor by one point. Louis Christen, Pacific county entrant, made 89. The home management and "own-your-own-room" contests were won, respectively, without opposition by Anna Waggonhoffer and Mildred Bailey, Cowlitz county girls, who are members of the first clubs of this kind to be formed in the state.

Other contestants than those mentioned include Anna Pebl and Mildred Chester (canning), Pacific county; James Hamilton (dairy), Vera Sweeney (cooking) and Ralph Detering (pig), Lewis; Roy Taylor (pig) and May Richards (beef), Thurston; Harlan Shepherdson (pig) and Wayne Bozarth (dairy), Cowlitz; Mary Kilpinski (garden), Cecil Roberts and Katherine James (canning), Clarke; Edna Johnson (beef) and Clarence Glenn (poultry), Grays Harbor.

Uses Disk to Kill Out Grass

There need be no fear of grasses choking out an alfalfa crop in western Washington if the disk is used at the proper time, according to Frank Binns, who has a grain and hay farm near Shelton in Mason county.

"I had some alfalfa in rows to try it out last year," said Mr. Binns, "and when it seemed to be getting crowded out with grass this spring I went after it with a cultivator, intending to kill it all and plant some more in another field. The result was that I got the grass out in fine shape and the alfalfa came up with the best stand I have ever seen.

"I am positive that if the disk is used in the early spring or after the first cutting it will kill out all of the undesirable grasses that come up during the winter and the cultivation will do the alfalfa good. The results of this crop are very encouraging, since I find it is not difficult to get it started in new land if the seed has been properly inoculated.

JERSEYS AT SKAGIT FAIR.

Through an unavoidable error, the Jersey awards were omitted from the story of the Skagit County fair at Burlington last month. The grand champion cow was Juda Regina, a 7-year-old animal with much capacity, excellent type and an exceptionally well developed udder. She was from the H. S. Ruley herd at Mt. Vernon. This is the second time this cow has been placed at the head of the Jerseys.

The junior champion, a senior yearling, was in the same herd, Lad's Rinda Pansy of Valley View, a granddaughter to Rinda Lad. She showed excellent quality and was a good example of the type of animals in this herd. Peter Meenderink of Lynden had the grand champion bull, Sunlight Chief, a 5-year-old animal that has been used as the herd sire by Mr. Meenderink. He is a well built animal and made a fine appearance in the show ring. The other herds shown were those of N. Jordal of Ferndale; H. Tarry, Avon; C. Callahan, Fredonia, and the Teabrink herd of Burlington. There were more individual exhibitors in the Jersey show this year than there have been in past years, although the number of animals was less.

Exide
BATTERIES

Those lights in the train

Long before the locomotive is coupled to the train, you push the button in your berth and the light flashes on. Have you ever wondered what supplies the current for those Pullman lights? Storage batteries, charged by a generator under the car when the train is in motion, furnish the current. Exide Batteries are used on many of the country's leading railroads.

In the automobile field the first starting and lighting battery was an Exide, and today more new cars have Exides than any other battery.

The pioneer battery for light and power plants on farms was an Exide, and a great majority of the thousands now in use are rugged, long-lasting Exides.

Experience in making batteries for all purposes since the start of the storage battery industry is built into the Exide for your car. The result is a battery that keeps its power through a long life of steady service. For real comfort and true economy in motoring, get an Exide when your present battery must be replaced.

The nearest Exide Service Station has a battery the right size for your car. If your present battery needs repairs, no matter what make it is, it will be repaired skillfully and reasonably. If not in your telephone book, please write us for the address.

For Good Farming, Attractive Country Homes and Happy Country People

Twenty-Sixth Chapter Added to Fair Book

Live Stock, Including Alligator and Coyote, Feature Annual Exposition at Yakima September 18-23

In at least one respect the 26th annual Washington state fair was one of extremes—the extreme southeastern corner and the extreme northwestern corner of the United States being represented. To be more specific, the tropical swamps of Florida sent a baby alligator to compete with the good things Washington producers had to show, and the sawdust was well trampled about his little natatorium in the state game department's building. Had there been prizes offered for this class of live stock he would have been declared first in class, junior champion and grand champion alligator of the show, for he alone represented his amphibious race.

To be sure, this southern animal was but a side show of Washington's great 26th annual state fair—a side show of a side show, to be exact, for, interesting and instructive as were the displays of live fish, beaver, wild geese and ducks, pheasants, deer, elk, bear and so on in and around the state game building, they were but a grain of sand on the shore of an ocean billowing with the products Washington.

Billowing? Yes, but at that the agricultural and horticultural resources of Washington were inadequately represented in the building devoted to their displays. They were of excellent quality; some of the county and community displays were of highest class, but for a state the annual farm crops of which have a value that may appropriately be quoted as a sizable fraction of a billion dollars, the display was regretably small. There are 39 productive counties in Washington; only five county exhibits were made at the state fair. There are rich communities too numerous to be named; eight (and all in the Yakima valley) had booths at the state fair showing their productiveness. Unquestionably the opportunity for the counties and communities of the state to advertise themselves and the state of which they are parts is being undervalued. Next year's fair should see four times as many county displays, several times as many community booths and a much more representative showing of individual exhibits of fruits, cereals, vegetables and other products—for the tray, sheaf, peck and half dozen classes of apples, wheat, corn and so on was also light, though of quality of which to be proud.

West Side Is Winner.

Two West Side counties led in the county exhibits, Benton, the only East Side county to compete, taking third place. Pierce county, with a display built up around the idea of "the valley of the mountain" and showing a wide variety of products neatly displayed, won first prize, while Skagit county, with her oats, seed crops, dairying industry, fruits, vegetables and many other products, was awarded second. One feature of the Skagit county booth was the presence of condensed milk and Darigold cheese and Darigold butter, produced and manufactured by the organized dairymen of the county under affiliation with the United Dairy Associations of Washington. While the crops were varied as represented in the Benton county display, grapes were outstanding. The other two counties showing were Jefferson and Kitsap, placing in the order named.

In the district contest the eight booths were placed by the judges in the following order of winnings: Tieton View, Naches Heights, Wapato, Toppenish, Terrace Heights, Pomona, Grandview and Zillah.

Other displays in the building included an individual showing of vegetables by Louis Deccio of Yakima and a booth prepared by the Western Washington State hospital at Steilacoom.

Practical Education.

Of notable educational significance were exhibits by the state department of agriculture, the state college extension service and the government. In the horticultural building the state had an exhibit showing diseases and pests of Washington crops, with information as to means of combating them. The extension service had liberal space devoted to horticulture, live stock feeding, labor-saving equipment, grain treatment, farmstead planning, farm housing and the like. Incidentally, farmstead plans and farm buildings appealed to many exhibitors as something that should be advertised at a fair. Lumber vied with concrete. From baby chicks and their housing to a huge barn and hay to put into it, the Tum-a-lum Lumber company's miniature farmyard extolled the virtures of wooden construction, while just across the "street" of the Mechanics building was a model farmstead exhibited by the cement association, with everything from posts to silo made of concrete.

Predaceous animals, from rats to timber wolves, would have received a hair-raising scare had they been able to see themselves as others saw them in the government bioligical survey's department. "Just a common, chicken-stealing coyote caught by a federal hunter" kept vigil at the door. Uneaten dog biscuit in his cage was mute testimony to his dislike for modern food products as compared to the kind caught behind the chicken house early in the morning.

Numerous exhibits of modern devices for making the farm and home better places in which to live drew their share of attention from the crowds. Household equipment and furnishings of all kinds were shown and demonstrated, from furnaces to candleshades. Automobiles and up-to-the-minute accessories and attachments occupied a large section. Outside, tractors cavorted around as though they were made for wild west performance rather than plowing and seeding. Huge irrigation pumps, operated by gasoline engines, wore out large quantities of water pumping it back and forth from the tank that was both source and receiver, and home lighting plants competed with the sun to prove their ability. Both won.

Milking time in the Guernsey show ring. Judge Grout required cows in milk to appear in the ring with udders full, after which they were milked out before final decision as to awards. A cow without a good udder is like gold with nothing to spend it for. Mr. Grout is shown coatless as he worked.

Club Work Is Strong.

The boys and girls' club work was divided into two sections: The district and state contests. Both divisions were carried on in true club routine and the winners chosen by the persons having the best record for the year and his ability to judge and demonstrate his own particular kind of work.

The district contest winners were as follows:

Cooking—Preston Anglin of Hanford, who scored 87 points. He prepared a meal for a 2-year-old child and told how it was done. There were no other contestants in this class.

Sewing—Ardice Sheppard of Kennewick, first, 91 points, and Mary Rupert, second, with 82 points.

Breadmaking—Flora Brooks, 87 points, with no competition.

Canning—Benton City, 93 points. Team members, Elizabeth Drenkhahn and Ethel Kelso. Tieton, second, 87 points. Team members, Hazel Mingus and Gladys Gilbert.

Garden—Edward Lum of Kennewick, first, with 90.5, and Irvin Rozencranz of Yakima, second, with 90 points.

Dairy—Chris Verstate of Yakima, first, with 94, and Chester Cox of Kennewick, second, with 88 points.

The state contests were as follows:

Beef—Nora Waite of Ellensburg, first, with 93.6 points; Chester Schelin of Mabton, 87.3 points, and May Richards of Tenino, third, with 86.6 points.

Garden—Edward Lum of Kennewick, 86; Frank Knizek of Dryad, 83, and Albert Pease of Usk, 81 points.

Dairy—Chris Verstate, 94; Crissie Keuster of Spokane, 89, and Chester Cox of Kennewick, 88 points.

Bees—George Robinson of Elma, first, 97, and Lorane Engals, second, with 92 points.

Canning—Southwest Washington team from Kelso, first, with 93 points; members, Irvin Giles and Ada Martin. Yakima district was second, with the Benton City team winning 92 points. The team was composed of Elizabeth Drenkhahn and Ethel Kelso as team members. The Spokane district team was third, with 90 points. Members were Goldie Hammond and Florence Hogan of Rockford. Adriana Vander Griend and her sister, Maurie, of Puyallup were placed fourth.

Rabbits—Caroll Birdwell of Puyallup, first, with 95, and George Sheppard of Kennewick, with 90 points.

Sewing—Selena Deno of Spokane, first, with 94 points; Alice Sheppard of Kennewick, second, 92, and Elvira Lehtinen of Montesano, with 82 points.

Sheep—Kenneth Hinshaw, Goldendale, first, with 89 1-4; Gordon Brown, Spokane, second, 77, and Rowland Newman of Ellensburg, third, with 65.6 points.

Poultry—Alma Ockfer of McKenna, 97.5 points; Harvey Norris of Goldendale, 95, and Paul Cordel of Cheney, third, with 90 points.

Potato—Mark Wells, 94, and Robert Adair, 93.5 points.

Swine—Lester Hartley, Cheney, first; Harold Bagley of Sunnyside, second; Henry Kane of Pierce county, third, and Robert Paulson of Montesano, fourth.

Win Washington Farmer Cups.

The special trophy cups given by The Washington Farmer to the highest scoring club boy in pig, sheep, dairy, beef, poultry, garden, corn or potato contests, and to the highest scoring girl in the canning, cooking, breadmaking or sewing contests were won by Harvey Norris of Goldendale and Selena Deno of Spokane. Harvey scored 95 points in poultry and Selena scored 94 in sewing.

The special dairy contest, which was open to all counties and awarding the win-

(Continued on page six.)

McAdoo Sees the Light

Land Reclamation Important to Entire Nation

While THE FARMER is not a partisan journal, it does reserve the right to commend sound and constructive utterances when they come from prominent public men, republican or democrat. We were especially impressed with the wisdom of a recent public statement by William G. McAdoo, former secretary of the treasury and railway director in President Wilson's administration.

Mr. McAdoo, who is ardently in love with the wild, free life of the west, recently enjoyed a week's rafting trip down the south fork of the Snake river. When he arrived at Rigby, Idaho, he gave out a statement in which he said, in part:

I noted the lack of storage of the waters of the Snake, not saved by the construction of a dam at a suitable point. Water is allowed to go to waste, which could be used for hydro-electric power and irrigation. It is not possible for the human eye to say by casual observation definitely the cost or feasibility of such a reclamation project; except after a proper survey.

It seems to me that all conditions are favorable to the proper conservation of Snake river at a very reasonable cost.

It is a pity that the federal government does not take hold of these feasible projects. They would cut off many wasteful expenditures now being made at Washington and secure for them reclamation and power development properly, which would increase the national wealth and contribute to national prosperity—to the farmers, miners and business men of the state where such projects were, a real service would then be rendered.

It is an extremely short-sighted view to say that the projects are local. They are important to the entire nation in contribution of wealth and to the upbuilding of the country as a whole.

Mr. McAdoo truly added that "the west needs an intelligent policy of land reclamation, hydro-electric power development, cheaper railroad transportation and plenty of it, and reduced taxation." But these are more than western needs; they are national advantages and requirements.

For 100 years and more the west has been the expansion chamber of the nation, and it is to the national interest to continue that relation between the east and the west. For more than half a century the homestead law contributed incalculably to the development of the nation. But good homesteads are gone, and the nation now must look more and more to irrigation of arid lands, to the clearing of logged-off lands and to drainage. As it would have been short-sighted and costly if opposition to the homestead law had been successful, so now it would be short-sighted and ruinous to stop the progress of western reclamation.

As Mr. McAdoo says, "These are problems of statesmanship; mere partisan politicians are unequal to them." It took statesmanship for President Jefferson to make the Louisiana purchase and send Lewis and Clark across the continent to the Pacific; it took statesmanship to pass the Oregon donation land claim act; it took statesmanship for Secretary Seward to buy Alaska; it took statesmanship for President Roosevelt to establish a national reclamation policy, and there is need now, and will always be need, for continuing statesmanship.

It is reassuring to find that there are republicans like President Harding and Secretary of the Interior Fall, and democrats like former Secretary McAdoo, who are alert to the continuing need of western development.

President Harding's Veto of the Bonus Bill

When President Harding vetoed the bonus bill he prevented an increase of the national indebtedness variously estimated at from $4,000,000,000 to $7,000,000,000. It is hard for the mind to take hold of the magnitude of sums expressed in billions. It is easier to grasp the meaning of the savings effected by the president's veto by calculating, for example, the sums that will be saved to the various counties of the state of Washington.

If the cost of the bonus bill had been $6,000,000,000, as many authorities said it would be, Washington's share of the taxes to meet that obligation would have been nearly $60,000,000. That calculation is based on the quotas of the fourth Liberty bond campaign. In that campaign the government asked the nation for $6,000,000,000 and the people of Washington state were asked to subscribe $58,218,000. Going to the records, we find that the following quotas were assessed against the counties of Washington in that Liberty bond campaign. So it is easy for our subscribers in each county to get a pretty close line on what the veto meant in the way of savings to them in taxes.

Adams	$ 237,600	Klickitat	$ 224,900
Asotin	116,500	Lewis	771,000
Benton	235,300	Lincoln	818,400
Chelan	529,800	Mason	88,000
Clallam	260,200	Okanogan	290,600
Clarke	662,000	Pacific	428,000
Columbia	304,300	Pend Oreille	75,200
Cowlitz	239,000	Pierce	6,047,000
Douglas	336,000	San Juan	70,500
Ferry	35,800	Skagit	838,000
Franklin	155,100	Skamamia	49,000
Garfield	339,100	Snohomish	1,716,200
Grant	135,600	Spokane	5,988,500
Grays Harbor	1,800,000	Stevens	322,100
Island	41,600	Thurston	725,000
Jefferson	204,200	Wahkiakum	49,000
King	26,872,400	Walla Walla	1,616,600
Kitsap	361,800	Whatcom	1,652,200
Kittitas	561,600	Whitman	1,435,800
		Yakima	1,691,200

If the bonus bill had meant a cost of only $4,000,000,000, the lowest estimate, the share of the state and the various counties in the state would be two-thirds of the foregoing figures.

It would be a mistake for the people of any county to imagine that by some process they could have escaped their share of the taxes to meet the bonus. The burden of taxes that would have been necessary to make the bonus payments would have to be distributed over all the states and all the counties substantially on the basis of the quotas of the Liberty bond campaign.

Much as the people of Washington would like to have more improvements, such as paved highways, better schools, needed bridges, hospitals, etc., it is safe to say that if a bond issue of $60,000,000 were proposed to acquire these benefits it would be overwhelmingly voted down at the election. Yet the burden of taxation would have been none the less if $60,000,000 had gone into bonus payments than if it had been borrowed and expended in local improvements in the state. The government itself had not a dollar to make bonus payments; it would have had to take the entire $4,000,000,000, $5,000,000,000 or $7,000,000,000—whatever the cost might have been—out of the pockets of the people.

These facts are fairly to be weighed when we consider the effect, and, to some extent, the unpopularity, of the president's veto. It was not a pleasant duty for him to veto the bonus bill. The easier procedure would have been to drift along and allow the bill to become a law. But the duty of the president under the Constitution is to exercise the veto power in just such cases, and we believe that most of our readers will agree that he has acted courageously and patriotically, and that in the long run the ex-service boys themselves will see the wisdom and courage of his action. In the long run the boys themselves would have been injured more than they would have been benefited by the bonus, because the imposition of another $5,000,000,000 or $6,000,000,000 upon the national debt at this time would be depressing to industry and business and would put off just that much longer the return of prosperity.

In saying these things we are not unmindful of the splendid and patriotic service rendered their country by the ex-service men. It is not a question of flinching from our duty in recognizing their service, but it is a matter of weighing well the national welfare and the ultimate benefits to the ex-service men themselves. Not only that, but the laying now of an additional burden of $4,000,000,000 or $6,000,000,000 upon the nation would have meant that the country could not take as good care of the disabled men as it is now taking. In that work it is giving, with a lavish hand, $500,000,000 a year for the rehabilitation of the disabled men, and that service of gratitude and sympathy must be carried on regardless of the cost to the nation.

We believe that when the able-bodied ex-service men think it over they will approve the action of the president and will agree that nothing should be done that could possibly diminish the ability of the nation to take proper care of their disabled and deserving comrades.

Foolish to Take This Chance

When a charge of dynamite fails to explode, it is dangerous to return to a stump to relight a fuse.

A Whatcom county farmer tried it, and was soon taken to a hospital with the fingers of both his hands blown off, the bones in the hands shattered, the collar bone broken, and his eyes peppered with powder and blinded.

LOOKING INTO OTHER FARM FIELDS

Texas reports that a watermelon weighing 102 pounds was grown by J. P. Carter near Garza.

* * *

The potato crop in western Nebraska has been seriously affected by the continued hot and dry weather and the final yield will be considerably under earlier estimates.

* * *

Twenty-six reclamation projects have been built under federal government supervision since the establishment of the United States reclamation service 20 years ago. The total area of these 26 projects is not equal to the proposed area of the Columbia basin project.

* * *

Distributors of lettuce in California are making an attempt to secure a reduction in estimated weights on head lettuce and have asked the railroads for an estimated weight of 60 pounds per crate instead of the 70-pound minimum which was in effect during the last season.

* * *

South African fruits maturing at the time when American and Mediterranean fruits are not available, are now being shipped around the world—over 800,000 boxes having been exported in 1921, Consul Charles J. Pisar states. The fertile fields used by the Boers as grazing lands are now sustaining hundreds of thousands of fruit trees. South Africa's orchards contain 116,320 lemon trees, 1,382,410 orange trees, 323,300 tangerine trees, 1,211,550 apple trees, 907,800 apricot, 105,300 mango, 57,560 nectarine, 2,411,270 peach, 542,420 pear, and 995,570 plum trees, according to the government census.

State Farm News

Messrs. Burns and Fowler of Shaw island, in San Juan county, have succeeded in acclimating and producing in commercial qualities the Chinese medicinal plant called ginseng. Starting with $5 worth of seed and $30 worth of roots the experiment has developed into several plantations, and beginning last year commercial quantities were placed on the market. From a single bed some 40 feet long by 5 wide, $298.50 worth of the roots were sold by one party. The dried roots seldom sell below $6 per pound. The roots are not sold until 5 or more years of age and a single root often weighs a pound or more.

* * *

The Yakima Valley Dairymen's association, one of several activities of the farm bureau, with 125 members present in a recent all-day meeting, pledged $20,000 to carry on for the coming six months. This action was almost unanimous.

* * *

A campaign against the orchard mouse is to be waged this fall by the federal bureau of biological survey, according to Leo K. Couch, inspector in charge of rodent control at Olympia. The pest has done serious damage in five counties and the first results of a questionnaire to determine the damage done last winter has been announced. Of 273 orchards in the Yakima valley, having a total of 7032 acres, there was a loss of 4664 trees by mouse girdling. Signs of an invasion again this year are reported. Questionnaires have been sent to fruit growers of Chelan, Okanogan, Kittitas and Benton counties.

* * *

W. M. Clark, C. C. Goodrich, Matt Harkema and Fred Shadbolt, representing Zillah apple growers, met with Yakima county farm bureau officials a few days ago with a view to forming a pool for apples, tending to stabilize the market.

* * *

The Frank Waterhouse ranch of 160 acres, near Yakima, has been bought by Henry Kleinberg, Ellensburg pioneer, for $50,000. The property is considered the show place of the Yakima reservation and Kleinberg estimates that at least $150,000 was spent for the place and improvements. There are 80 acres in orchard, 80 in hay, a modern packing house, a Northern Pacific station and two ranch houses on the place.

* * *

Fruit shipments from the Wenatchee district up to September 14 were 136 cars of cherries, 95 cars of apricots, 513 cars of mixed fruits, 159 cars of apples, 351 cars of pears, 9 cars of plums, 125 cars of peaches—making a total of 1188 cars this season.

* * *

R. S. Fowler, county agriculturist of Lewis county, Washington, who judged Guernsey cattle at the Tillamook, Ore., fair, was superintendent of live stock for the Southwest Washington fair at his home town of Chehalis. Much of the success of the live stock show is due to his untiring and efficient efforts. Fair management and exhibitors were well pleased with his work. Whether judging or "managing" Mr. Fowler is right at home with the live stock.

* * *

The resignation of F. L. Audrain, state leaders of boys' and girls' club work in Washington for two years past, has been accepted effective December 1.

* * *

The beekeepers of Mason county have carried on a thorough campaign to weed out the foul brood that was found in a few places. Owing to the fact that the services of the state bee inspector were cut off last spring the beemen in the county went together and paid the expenses and salary of an expert and had every hive in the district examined. They are now ready to start the next year's work on a stronger footing.

* * *

About $30,000 was spent fighting the fires threatening Pend Oreille county forests this year, according to the report of A. L. Baker, secretary of the Eastern Washington Timber Protective association. Of this, $12,000 was spent in fighting fires across the line in Stevens county.

* * *

The potato crop in Grays Harbor county will be little over half normal, A. B. Holloway, prominent grower of the Brady district, estimates. Mr. Holloway blames the drought of last summer, but says that the quality this year will be good. The growers are hoping for a dry fall, which will increase the crop materially.

* * *

A storage in transit rate of 6 cents a pound on prunes, which will permit storage at Missouri river points on the Union Pacific to avoid glutting of any one market, is announced at Yakima by the Union Pacific. The rate and privilege went into effect September 1.

* * *

Fire on the Yakima reservation recently destroyed the hop house of P. N. Campbell, half a mile west of Wapato, causing a loss of $10,000. The fire started in a dryer and the blaze could not be gotten under control. Some hops were destroyed. Those being picked are being dried in the kilns of Dan McDonald and F. A. Shadbolt, near by.

* * *

Fred L. Wolf of Newport, a newspaper man and former state legislator, was elected president of the Washington State Good Roads association at its recent convention. Vice presidents elected for the coming year include E. L. French, Vancouver; F. J. Wilmer, Rosalia; C. F. Stinson, Pasco; M. J. Carrigan, Seattle, and Leon Titus, Olympia. Percy L. Sinclair of Pacific county was elected treasurer. Douglas A. Shelor, Seattle, secretary of the Automobile Club of Western Washington, was appointed historian to record the accomplishments of the association.

Members of the executive committee include the following: Al Rogers, Waterville, chairman; C. C. Van Arsdol, Clarkston; Alex. McNeil, Kennewick, E. M. Gillette, Wenatchee; C. E. Fulmer, Clallam; E. L. French, Vancouver; E. W. Truett, Columbia county; R. B. McFarland, Pasco; Bert Thomas, Grant; Alex. Polson, Aberdeen; A. S. Eldridge, Seattle; J. C. Hubbell, Ellensburg; G. F. Rust, Kitsap; R. H. Sommerville, Centralia; Charles Meyers, Lincoln; Mark Reed, Shelton; N. E. Whitworth, Okanogan; P. C. St. Clair, Pacific; Fred Turnbell, Pend Oreille; W. C. Baldwin, Tacoma; J. C. Wilson, Big Lake; W. G. Hufford, Skamania; Frank Weber, Snohomish; Arthur D. Jones, Spokane; J. G. Kulzer, Stevens; Thad C. Pierce, Thurston; W. N. Meserve, Wahkiakum; E. C. Burlingame, Walla Walla; J. J. Donovan, Whatcom; J. T. Tifft, Colfax, and W. L. Dimmick, Yakima.

FARM BUSINESS AND MARKETS OUTLOOK

Aside from an overabundance of common cattle which invariably occurs at this season of the year, the cattle market is a healthy affair.

Cooler weather and the recent settlement of the coal and rail strikes have brought an expansion of the dressed beef trade and the largest run of the season at the leading markets last week was absorbed at higher prices for practically all kinds.

Prime steers reached a new top of $11.75 and scarcity of such steers is expected to continue until December. Intermediate grades of steers failed to advance as much as the best kinds as the western range delegation increased materially. Cows and heifers also made moderate gains for the week. Bulls recovered smartly from the recent depression and calf prices were the highest of the season.

A further increase in market supply can be expected before the high point of the autumn beef harvest is reached, but no pronounced decline in the price level is likely unless brought about through the abundance of pork and poultry during the fall months. The broad movement of feeders to the country in the last few weeks forecasts a generous supply of shortfeds within the next three months so that a pronounced advance upon the rank and file likewise appears improbable.

Cattle Feeders Continue Active.

Combined shipments of stockers and feeders from the leading markets continue to run far above the corresponding period in either of the two preceding years and are increasing rather consistently each week. Widespread rains and revival of fall pastures was an additional stimulus recently. Prices show but little change, since the supply from the western range, the southwestern pastoral area and from Canada is adequate for the demand. Light weights at prevailing prices seem to offer the safest opportunity for the feeder.

Increase in Pork Production.

The department of agriculture estimates the number of stock hogs on farms on September 1 to be fattened this winter at 60,500,000 head compared with 55,917,000 head last year and 56,584,000 head two years ago. The increase of slightly over 8 per cent is not great enough to indicate extremely low prices for hogs compared with feed costs although the handsome profits of the last year can not be expected to continue.

Receipts of hogs at the leading markets again set a new record for the corresponding week, but prices advanced to the highest point in a month, the $10 quotation being restored at Chicago. Packing sows are becoming less numerous right along while new crop hogs are showing up, this change in the character of the supply being a factor in the higher average price level. Lower prices for pork appear to have stimulated demand and the settlement of labor troubles together with cooler weather were additional aids so that trade, both in fresh pork and cured hams, was unusually brisk. Export trade also has improved. Stocks of lard in storage are decreasing steadily and hog meats are disappearing more rapidly than during August.

From this time on receipts can be expected to increase rather steadily from week to week so that the recent advance may not be maintained.

Lamb Receipts Light.

Receipts of lambs and sheep at the seven leading markets in the last few weeks have been the lightest on record for the corresponding season. The total last week ran more than 40 per cent below the average. Consumptive demand is fairly broad and in addition lamb feeders are competing with packers in order to obtain even a small supply for feed lots. As a result of these influences prices advanced sharply last week to a top of $14 at Chicago, the highest since May.

Feeder demand is keen, but is limited by the small available supply. Prices are extraordinarily high, but unless the western range supply expands the number put into feed lots will be small enough to make the feeding operation fairly safe.

Improvement in Horse Trade.

Demand for horses has broadened materially in the last few weeks and prices upon the better grades are higher. City buyers are after drafters weighing 1700 pounds and up at prices ranging from $200 to $300 at Chicago, an advance of about $10 over recent levels. Most of the arrivals consist of 1400 to 1600 pound chunks which bring $130 to $175. Southern trade has improved in both horses and mules. Coal dealers are in the market in a limited way and logging outfits are showing interest.

Wool Market Displays Strength.

The wool market is showing a healthy tone and activity is more marked than a few weeks ago as manufacturers have resumed buying on a broader scale. Higher prices on woolen goods are rather freely predicted. The London auction reports prices steady to 10 per cent higher than the preceding series. The duty recommended in a conference report on the wool tariff is 31 cents per pound and makes but little change in the situation, although it may effect sales upon some of the wool held in bond of which there were 108,549,776 pounds on July 31. Part of these wools have been on hand for a long time and a few forced sales have been made recently. Some buyers are holding back until more of these wools are put on the market in the hope of picking up bargains.

War Scare Lifts Wheat Market.

War in the Near East finally caused wheat buyers to take alarm last week and lifted prices about 8 cents a bushel. Export sales have increased slightly and a shortage of nearby wheat has developed abroad as a result of small world shipments in the last week or two. Flour trade also is more active with some disposition on the part of bakers and others to buy ahead at the prevailing price level.

The improvement in the demand has hardly been sufficient to explain the full advance as the latter was partly due to a change in speculative activities and its maintenance will depend upon continuance of the war scare.

Receipts of wheat have increased, but there has been a tendency in the spring wheat districts to hold back and the movement is not extremely heavy, although above the average for the corresponding period in past years. In Canada farmers are selling freely with daily receipts at country elevators estimated at 3,500,000 bushels. Manitoba wheat is 6 to 8 cents cheaper than United States wheat so that most of the export business is going in that direction.

Wheat Surpluses Look Ample.

Besides the exportable surplus of over 500,000,000 bushels in North America the new crop in Argentina promises to furnish about 150,000,000 bushels and Australia about 100,000,000 bushels, according to private estimates, with approximately 40,000,000 bushels from other countries. The surplus of old wheat in Argentina is estimated officially at 23,000,000 bushels. Based on these figures there is an ample supply of wheat in sight to meet the needs of importing countries whose total takings last year were approximately 680,000,000 bushels. The southern hemisphere crops may yet be injured, of course, as they are approaching the critical period of growth, but thus far reports have been rather favorable.

Wheat statistics are less bullish than they have been for three years as there is now a prospect that the world will wind up the present crop year with more wheat than at the end of the preceding year.

Coarse grain markets have advanced recently, because of the strength in wheat. It is generally believed that the corn crop will fall below the government's estimate and demand remains broad. Producers are selling freely and primary receipts have increased again. Corn prices are now the highest in seven weeks.

Receipts of oats increased last week, but there is as yet nothing like the usual post-harvest movement. Demand from the east has improved materially and prices up about as much as corn from the low point of the season.

Cash Grain Markets.

The range of cash grain prices for the week ending September 20 is as follows:

Chicago—Wheat—No. 3 red, $1.05@1.11; No. 4, $1.02@1.10; No. 2 hard, $1.02@1.09 1-4; No. 3, $1.01 1-4@1.08 1-4; No. 1 northern, $1.16 1-4@1.29. Corn—No. 2 mixed, 62 3-4@66 1-4c; No. 3, 61 1-2@64 1-2c; No. 2 yellow, 63@66 1-2c; No. 2 white, 63@66c; No. 3, 61 1-4@65 1-2c. Oats—No. 2 white, 36 1-2@41 1-2c; No. 3, 35 1-2@39 1-2c. Rye—71 1-2@76 1-2c. Barley—55@63c.

Feed markets have advanced sharply in the last few days, due primarily to light offerings. Bran has advanced nearly $3 and cottonseed meal about $2. Drouth in the southwest has brought a brisk demand from that section, but sales elsewhere generally are small and the market is not expected to retain the advance.

Prices per ton (100-pound bags) in carlots—Chicago—Bran, $19.50@20; standard middlings, $20.50@21; flour middlings, $23@24; cottonseed meal, 36 per cent, $36.50; 43 per cent, $40.50; hominy feed, $25; gluten feed, $30.35; old process oil meal, $41.50; tankage, $60.

Arrivals of hay at distributing markets and country loadings in the surplus sections both are comparatively light. Prices are firm in a few cities, but most points report weakness.

Prices per ton in carlots—Chicago—No. 1 timothy, $20@22; No. 2, $17@20; No. 3, $12@13; No. 1 light clover, $17@20; No. 1 clover, $14@17; No. 1 clover mixed, $14@17; upland prairie, $15@18; midland prairie, $12@14; rye straw, $10@11; oats and wheat straw, $8@9.

Clover Seed Crop Above Average.

The yield of red clover seed is approximately 1,880,000 bushels compared with an average of 1,538,000 bushels during the six preceding years. The crops of alsike and white clover also are larger than in 1921. Prices have been firm during the last 10 days.

Toledo—Per bushel: Prime red clover, $13@17; prime timothy, $4.25@5.25.

Chicago—Per 100 pounds: Clover, $13@17; timothy, $4.25@5.25.

Egg Market Retains Advance.

Egg prices have retained nearly all the recent advance. Receipts of fresh eggs at the leading cities are running lighter than last year and slightly below the average for the corresponding season in the three preceding years. Demand is brisk and in addition to current receipts, rather heavy withdrawals from cold storage are necessary.

Poultry prices are holding up as receipts are not running as much above the average for the corresponding season as they were two months ago. Indications are, however, that the crop to be marketed this fall and winter will be larger than during any recent years.

Although a weaker tone was noticeable in the butter market last week prices at eastern points advanced slightly and the decline at Chicago was negligible. Rains and cooler weather have improved the prospects for autumn production, but it is improbable that the make will be sufficient to supply the consumptive demand so that steady inroads must be made into cold storage holdings from this time on. Fancy butter has been scarce as most of the recent receipts were made during the hot weather period. The butter situation is comparatively strong, although advances from this level may be rather slow.

Prices for fresh 92-score creamery butter on September 20 were:

Chicago, 39 1-2c; New York, 42c; Boston, 41 1-2c; Philadelphia, 42c.

Cheese markets were dull early last week with but little buying on a broad scale at distributing points, but toward the close demand from the south and east expanded materially and values were well sustained. Country markets have been clearing up satisfactorily and in the east the supply of New York state cheese has been inadequate, turning part of the demand toward Wisconsin product. Reopening of coal mines is believed to be one important factor in the improved trade. Based on storage stocks and the rate of production, the cheese market is in a fairly strong position.

Prices for No. 1 American cheese on September 20 were:

Chicago—Flats, 21 1-2@22c; Twins, 21@21 1-2c; S. Daisies, 21@21 1-2c; D. Daisies, 21@21 1-4c; Y. Americas, 21@21 1-2c; Longhorns, 21 1-2@22c.

Fruits and Vegetables.

Potato shipments have increased again and are above normal for this season of the year. The carlot movement for the season to September 18 totaled 74,551 cars compared with 66,511 cars last year. Northern round whites are quoted at $1.20 to $1.45 per 100 pounds in midwestern cities.

The apple market is holding at about the same level as in the two preceding weeks with summer apples quoted at a range of $1 to $1.25 a bushel on midwestern markets and Grimes Golden and Jonathans bringing $3.75 to $5.50 a barrel. Receipts continue to reflect the big crop, the carlot movement for the season to September 18 being 12,356 cars compared with 8866 cars last year.

Twenty-Sixth Chapter Added to Fair Book

(Continued from page three.)

ning team a trip to the National Dairy show, was won by the Spokane team, on which were Cecil Resor, Bernice Spear and Aubrey Schenefelt. Their score was 783 points, while the Yakima team, composed of Chris Verstate, John Lunders and Leland Duffield, scored 774.

The woman's department was housed in two buildings this year and had exhibits from all parts of the state. Most of the exhibits were needle and fancy work and there were some high-class articles shown. The demonstration building included a day nursery and departments to show the construction of dress forms, hats, labor-saving devices and many other articles dear to the heart of the modern housewife. Miss Mary Remy of Yakima was in charge of the department.

The Poultry Department.

The exhibit of poultry was very good. The Rhode Island Reds had the largest entry list, which represented some of the best quality ever shown at Yakima. There was also a good quality of White Leghorns and the White Wyandottes were better than usual. The entire turnout totaled over 800 birds and included seasonably good showings of practically all of the main breeds. At least half of the entries were from breeders in the Yakima valley. C. H. Barnett of Seattle judged.

OUT WITH THE HERDSMEN.

It is impossible to compare this year's live stock show with those of former years, either as to exact number of animals or as to the fine points of quality. But if there has ever been a better show at Yakima it was a good one. Every department was strong. No class can be called weak, though some were stronger than others. Dr. Robert Prior took justifiable pride in the department of which he was superintendent.

Guernseys were generally admitted to be the feature of the show, with outstanding herds and a few individual entries competing. Guernsey enthusiasm was somewhat dampened by the report that reached the barns Tuesday that Sammamish Topsy, Dr. Park Weed Willis' high-record cow, one of the noted animals of the breed in the west, had died at Spokane following an illness contracted during the earlier part of the fair circuit. A hard competitor of the fawn-and-whites for feature honors was the Shorthorn show, in which five large herds and representatives of several others took part.

All beef breeds were judged by John L. Smith of Spokane.

The Shorthorns.

The Shorthorns came from outside of the Yakima valley with the exception of 10 club steers of the Hercules steer clubs, which came from the Mabton district, the other 10 coming from Kittitas county. Two of the breeding herds came from Oregon, those of G. W. Delay of Hot Lake and W. A. Heater of Sublimity. The others were from Washington farms, but there was not the turnout from the smaller breeders that is always desirable. The grand champion bull was Hercules Conqueror of the Day & Rothrock herd at Sprague, a junior yearling, a grandson of both Gainford Perfection and Doune Radiance, the two aged herd sires on the Hercules farm. The grand champion female was Perfection Lady of the same herd, a senior yearling. Both senior championships went to DeLay.

Exhibitors—W. G. Cordiner, Walla Walla, Wash.; Day & Rothrock, Spokane, Wash.; G. W. DeLay, Hot Lake, Ore.; W. A. Heater, Sublimity, Ore.; J. D. McGuire, Tenino, Wash.; William Mulhall, Buena, Wash.; State College of Washington.

Bulls: Group of three—1, Day & Rothrock, Spokane, Wash.; 2, J. D. McGuire, Tenino, Wash.; 3, State College of Washington; 4, W. A. Heater, Sublimity, Ore.; 5, W. G. Cordiner, Walla Walla, Wash.. Group of two bred by exhibitor—1, Day & Rothrock; 2, Cordiner; 3, McGuire; 4, Heater; 5, G. N. DeLay, Hot Lake, Ore.

Aged bull—1, Heater, on Gainford Modus; 2, DeLay, on Village Reserve; 3, McGuire, on Mayflower King. Two-year-olds—1, DeLay, on Hercules Cornerstone (senior champion); 2, Cordiner, on Hedgewood Hopeful. Senior yearling—1, State College of Washington, on Hercules Rex. Junior yearling—1, Day & Rothrock, on Hercules Conqueror (junior and grand champion); 2, McGuire, on Hercules Model; 3, Cordiner, on Cumberland Again; 4, DeLay, on Linden Laddie. Senior calves—1 and 2, Day & Rothrock, on Hercules Marshall and Hercules Radiance; 3, State College of Washington, on Village Top; 4, Heater, on Gainford Silvertip; 5, Cordiner, on Hawthorne Prince; 6, Delay, on Missie's Villager. Junior calves—1, State College of Washington, on Doune Sultan; 2 and 4, Cordiner, on Captain Radium and Prince Cumberland; 3 and 6, McGuire, on King's Perfection and Oakgrove King; 5, Heater, on Little Gainford.

Females: Aged cow—1, State College of Washington, on Orange Blossom Lady; 2, and 5, Cordiner, on Dorothy Hedgewood and Cumberland Lass 3d; 3, DeLay, on Dunbro Maid; 4, McGuire, on Roan Lady. Three-year-olds—1 and 2, DeLay, on Scottish June 4th (junior champion), and Ruberta's Missie; 3, Cordiner, on Olantha Commodore; 4, McGuire, on Hercules Missie 3d; 5, Heater, on Signet's Memory 7th. Two-year-olds—1, Cordiner, on Priscilla B 2d; 2, Heater, on Memory's Roan Lady; 3, McGuire, on Chief's Hope; 4, DeLay, on Englisk Lady 21st. Senior yearlings—1 and 2, Day & Rothrock, on Perfection Lady (junior and grand champion), and Hercules Matchless 3d; 3, Heater, on Memory's Snowdrift; 4, DeLay, on Village Missie; 5, McGuire, on Hercules Missie 3d. Junior yearlings—1 and 2, Day & Rothrock, on Hercules Topsy 5th, and Hercules Jasmine 2d; 3, Cordiner, on Lavender Sue; 4, Heater, on Thistlebloom 2d; 5 and 6, McGuire, on Mayflower Rose and Mayflower Hope. Senior calf—1 and 3, Day & Rothrock, on Hercules Sylvia 3d and Hercules Violet 6th; 2, McGuire, on King's Hope; 4, Cordiner, on Bessie Hedgewood; 5, DeLay, on Village Duchess D 2d; 6, Cordiner, on Acanthus 2d.

Groups: Graded herd—1, DeLay; 2, Cordiner; 3, Heater; 4, McGuire. Yearling herd—1, Day & Rothrock; 2, McGuire; 3, DeLay. Calf herd—1 and 2, Day & Rothrock; 3, DeLay. Get of sire—1 and 2, Day & Rothrock; 3, McGuire; 4, Cordiner.

The Herefords.

There were two large herds of Herefords out, while Charles Bull of Mabton and the state college added to the classes with three head. The numbers were not as large as has been in the past, but the quality was very good. The senior and grand champion bull was from the O. A. Boggs herd at Daysland, Alberta. This animal, Alberta Panama, a 3-year-old, was well covered and had an abundance of quality. The senior and grand champion female, Miss Panama, a 4-year-old, is a cow of good size and real Hereford type.

Exhibitors—O. A. Boggs & Sons, Daysland, Alta.; Charles Bull, Mabton, Wash.; Methow Valley Live Stock Co., Winthrop, Wash.; State College of Washington.

Bulls: Group of three, any age—1, Boggs & Son; 2 and 3, Methow Valley Live Stock Co.; 4, George Bull. Group of two, any age—1, Boggs & Son; 2 and 3, Methow Valley Live Stock Co.; 4, Bull.

Aged bull—1, Boggs, on Alberta Panama (senior and grand champion). Two-year-olds—1 and 2, Boggs, on Alberta Panama 2d and Melrose Perfection; 3, Methow Valley Live Stock Co., on Chewuch Panama 14th. Senior yearling—1, Methow Valley Live Stock Co., on Beau Stewart. Junior yearling—1 and 2, Boggs, on Alberta Panama 3d (junior champion) and Dudley's Panama; 3, Methow Valley Live Stock Co., on Commander Jr.; 4, State College of Washington, on Bonnie Rex. Senior calf—1 and 2, Methow Valley Live Stock Co., on Prince Perfect and Pince Chewuch 2d; 3 and 4, Bull, on Beau Carlos 1st and Donald Carlos. Junior calf—1 and 2, Methow Valley Live Stock Co., on Beau Sunshine and Sir Radio; 3, Bull, on Donald Carlos.

Females: Aged cow—1, 2 and 3, Boggs, on Miss Panama (senior champion), Bonny Lady Panama and Panama Lady 3d. Two-year-olds—1, Methow Valley Live Stock Co., on Florence Debonair; 2, Boggs, on Miss Fairfax Panama. Junior yearling—1 and 2, Boggs, on Panama Lady 3d (junior and grand champion(and Miss Columbus Panama 2d; 3 and 4, Methow Valley Live Stock Co., on Blossom's Joy and Princess Lilly. Senior calf—1, 3 and 4, Methow Valley Live Stock Co., on Lady Annabell, Miss Frances and Wild Rose; 2, Boggs, on Miss Panama Perfection.

Groups: Aged herd—1, Boggs; 2, Methow Valley Live Stock Co. Young herd—1, Boggs; 2, Methow Valley Live Stock Co. Calf herd—1 and 2, Methow Valley Live Stock Co. Get of sire—1 and 2, Boggs; 3 and 4, Methow Valley Live Stock Co.; 5, Bull.

The Aberdeen Angus.

The Aberdeen Angus competition was between the Condon & Battles herd of Yakima and that from Chehalis owned by J. A. Scollard. The two herds filled a majority of the classes, totaling 33 animals. The grand champion bull was Erickman C. B. 5th of the Scollard herd, which won on his extreme smoothness and general Angus quality. The Yakima herd had the senior and grand champion female in Ridgelawn Barbara 2d, an 8-year-old cow, smooth, low-set and well fleshed.

Exhibitors—Congdon & Battles, Yakima, Wash.; J. A. Scollard, Chehalis, Wash.

Bulls: Groups of three—1 and 3, Congdon & Battles; 2, Scollard. Group of two bred by exhibitor—1 and 2, Congdon & Battles; 3, Scollard.

Aged bull—1 and 2, Congdon & Battles, on Blackbirdman CB 5th, and Prizemere 10th. Two-year-olds—1, Scollard, on Erisman CB 5th (senior and grand champion). Senior yearlings—1, Congdon & Battles, on Prideman CB 14th. Junior yearlings—1, Scollard, on Blackmead 2d; 2 and 3, Congdon & Battles, on Prideman CB 18th and Queenmere 15th. Senior calf—1 and 2, Congdon & Battles, on Blackmere 16th (junior champion), and Ericman CB 8; 3, Scollard, on Heathermead 4th. Junior calf—1 and 2, Congdon & Battles, on Eillermere 7th and Queenmere 18; 3, Scollard on Gloriamead.

Females: Aged cow—1, Congdon & Battles, on Ridgelawn Barbara 2d (senior and grand champion); 2, Scollard, on Kannia K 4th. Two-year-olds—1 and 3, Congdon & Battles, on Pride of Rosemere 37th and Queen of Rosemere 13th; 2, Scollard, on Rose of Rosemere 8th. Senior yearling—1, Congdon & Battles, on Erica CB 4th (junior champion); 2, Scollard, on Blackcap of Broadmead. Junior yearlings—1 and 2, Congdon & Battles, on Barbara of Rosemere 33d and Queen of Rosemere 15th; 3, Scollard, on Erica of Broadmead. Senior calf—1 and 2, Congdon & Battles, on Barbara CB 2d and Erica CB 6th; 3, 4 and 5, Scollard, on Erica 4th of Broadmead, Blackcap of Broadmead 2d and Bonnie Rose of Broadmead.

Groups: Aged herd—1, Congdon & Battles; 2, Scollard. Yearling herd—1, Congdon & Battles; 2, Scollard. Calf herd—1, Congdon & Battles; 2, Scollard. Get of sire—1 and 2, Congdon & Battles; 2, Scollard.

The Guernseys.

There was a marked increase in the number of Guernseys shown this year and there were some of the finest individual herd showings that have ever been seen at the state fair. The grand champion bull was Chicona Lover Bold of the Wallace & Fordyce herd. He was a smooth, typy animal of excellent quality. A. L. Gile of Chinook, Wash., had the senior and grand champion female, Jewel of Rose City, that showed an excellent udder development in addition to her general conformity to Guernsey standards. George P. Grout of Duluth, Minn., judged.

Exhibitors—H. E. Angel & Son, Mabton, Wash.; Roy R. Bush, Outlook, Wash.; William S. Cross, Wapato, Wash.; A. L. Gile, Chinook, Wash.; E. W. Pazel, Yakima, Wash.; Orchard Hill Farm, Redmond, Wash.; R. T. Peterson, Yakima, Wash.; W. O. Reith, Astoria, Ore.; Ben H. Ridgeway, Sequim, Wash.; A. Macrae Smith, Bellingham, Wash.; Wallace & Fordyce, Sunnyside, Wash; Jesse Beasley, Sunnyside, Wash.; T. O. Burlingame, Sunnyside, Wash.; Ray N. West, Yakima, Wash.; C. J. Thursh, Granger, Wash.; F. L. Shannon, Walla Walla, Wash.

Bulls: Three years or over—1, Wallace & Fordyce, on Chicona Lover Bold (senior and grand champion); 2, A. L. Gile, on Chicona Buster; 2, H. E. Angell & Son, on France's May King; 4, Orchard Hill Farm on Chicona Hero. Two-year-olds—1, Reith, on Glenwood Sequel Lad of Willow-wood. Yearling—1, Wallace & Fordyce, on Fawndale Marose; 2, Ridgeway, on Khedin Kitchener of Sequim Prairie; 3, Gile, on Chicona Peter; 4, Angel & Son, on Bobbie Boy of Pleasant Acres. Senior calf—1, Smith, on Fircrest LaFrance Rival; 2, Reith, on Willow-wood Buttermaker; 3, Gile, on Chicona Luke; 4, Angel & Son on Ruby Dell Frenchman. Junior calf—1 and 4, Wallace & Fordyce, on Fawndale Bold Laddie (junior champion) and Fawndale Boulder; 2, Jesse Beasley, on Alga's Bold Lad; 3, Angel & Son, on Dame's Lad of Ruby Dell.

Females: Cows, four years or over—1, Gile, on Jewel of Rose City (senior and grand champion); 2, Smith, on La France of Bralee; 3 and 4, Angel & Son on Angel's Lila May and Georgia Dunn. Three-year-olds—1, Angel, on Sweet Dame of Muskeego; 2, Orchard Hill Farm, on Katie Did of Orchard Hill; 3, Wallace & Fordyce, on Filipina of Groton Farms; 4, Reith, on Lilly's Blossom of Willow-wood. Two-year-olds—1, Smith, on Fircrest Pretty Maid; 2, Reith on Rose Girl of Oregon; 3, Angel & Son, on Lila May's Daisy; 4, Bush, on Old Homestead Lilly Belle. Senior yearling—1 and 4, Smith, on Fircrest LaFrance Pride (junior champion) and Fircrest May Blossom; 2, Angel & Son on Old Homestead Belle's Queen; 3, Gile, on Doris of Chicona. Junior yearling—1, Orchard Hill Farm, on Wanda Topsy of Orchard Hill; 2 and 4, Wallace & Fordyce, on Anchor Rose of Fawndale and Twinkle's Daughter; 3, Gile, on Sunlight of Chicona. Senior calf—1, Angel & Son, on Ruby Dell Butter Queen; 2 and 3, Bush, on Old Homestead Sunshine and Old Homestead Katharine; 4, Reith, on Jewel Chene of Willow-wood. Junior Calf—1 and 4, Reith, on Ada May Chene of Willow-wood and Ruby Girl; 2, Ridgeway, on Ben's Sequim Daisy; 3 and 5, Gile, on unnamed.

Groups: Graded herd—1, Gile; 2, Wallace & Fordyce; 3, Smith; 4, Reith. Young herd—1, Smith; 2, Gile; 3, Angel & Son; 4, Orchard Hill Farm. Calf herd—1, Gile; 2, Smith; 3, Reith; 4, Angel & Son. Get of sire—1, Wallace & Fordyce; 2, Gile; 3, Smith; 4, Reith. Produce of cow—1 and 2, Smith; 3, Ridgeway; 4, Reith.

The Holsteins.

The Holstein barn was full to overflowing, but there were 70 of the animals that were in the breeders' consignment sale, which was held on Wednesday, few of which were entered in the show. Some of the state's most prominent herds were represented and they filled some strong classes. One herd was at the state fair for the first time. This was the new Holstein herd from the Western State hospital at Fort Steilacoom. The grand champion bull was the Carnation bull, Matador Segis Walker 6th of Carnation farm, that has won at the Pacific Int...

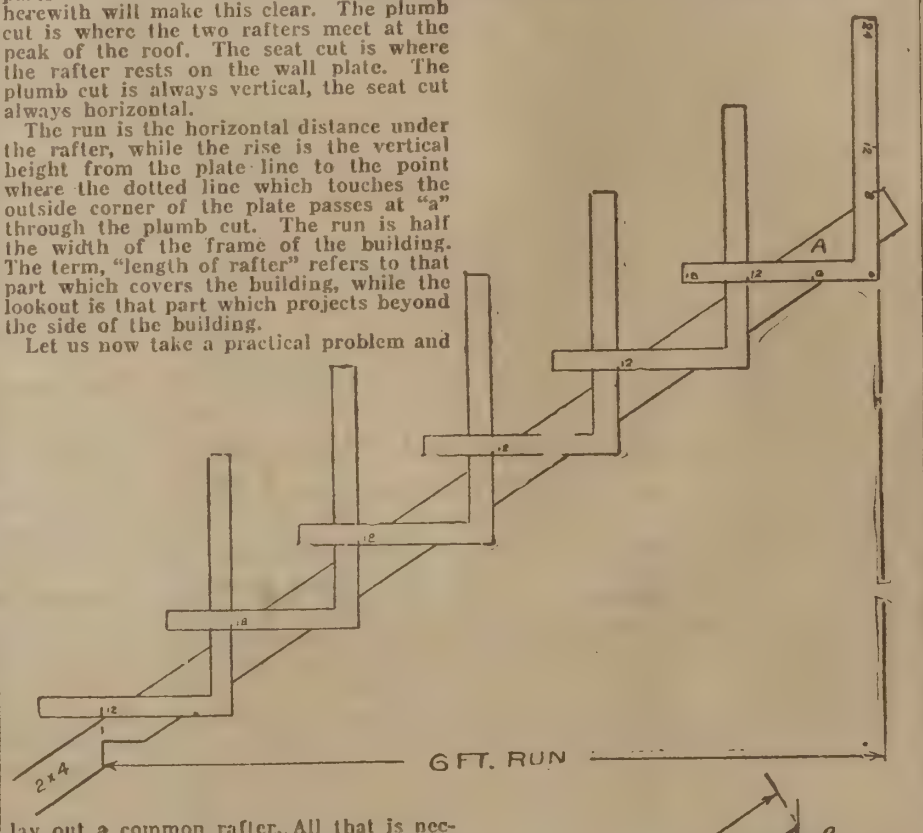
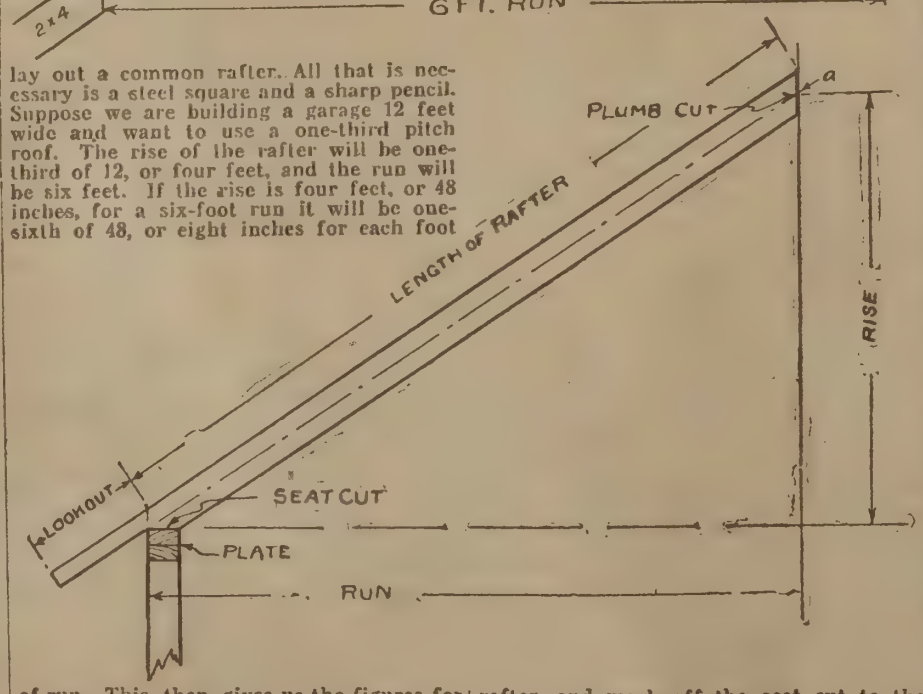
Do You Know How to Cut a Rafter?



By PROFESSOR L. J. SMITH.

Many a farmer, in building any of the various small farm buildings, has no difficulty until he comes to laying out the rafters. Yet this is not a very hard matter, once one takes a little time to think the problem through.



First, we should get clearly in mind the parts of a rafter. The first illustration herewith will make this clear. The plumb cut is where the two rafters meet at the peak of the roof. The seat cut is where the rafter rests on the wall plate. The plumb cut is always vertical, the seat cut always horizontal.

The run is the horizontal distance under the rafter, while the rise is the vertical height from the plate line to the point where the dotted line which touches the outside corner of the plate passes at "a" through the plumb cut. The run is half the width of the frame of the building. The term, "length of rafter" refers to that part which covers the building, while the lookout is that part which projects beyond the side of the building.

Let us now take a practical problem and

lay out a common rafter. All that is necessary is a steel square and a sharp pencil. Suppose we are building a garage 12 feet wide and want to use a one-third pitch roof. The rise of the rafter will be one-third of 12, or four feet, and the run will be six feet. If the rise is four feet, or 48 inches, for a six-foot run it will be one-sixth of 48, or eight inches for each foot

of run. This, then, gives us the figures for applying our steel square to the 2x4 rafter. First lay off the plumb cut by placing the square on the 2x4 so the eight-inch and 12-inch division are in line with the upper edge of the rafter, as shown in "A" in the second sketch. Then make a fine mark at the 12-inch division and transfer the square so the eight-inch division coincides with the first 12-inch mark made on the rafter. Make as many transfers as there are feet in the run, and the last 12-inch pencil mark will be directly above the outer edge of the studding. Now slide the square farther down, keeping the eight and 12-inch divisions on the upper edge of the rafter, and mark off the seat cut to the desired depth.

The transfers and marks must be very carefully made to get accurate results. Also choose 2x4 that is absolutely straight. After carefully sawing out one rafter, it can be used as a pattern for the rest.

Walla Walla Fair Best Ever

By W. C. FLETCHER.

The Walla Walla county fair was voted by old-time fair men the best ever held here in 37 years. Breeders from all over the northwest, as well as some from Canada, pronounced their treatment all that could be desired. The exhibits, purely agricultural, represented the wonderful variety and scope of the farming interests of Washington's oldest community. The success of her own live stock, especially, was gratifying to her red-blooded farming enthusiasts.

Sheep, hogs, dairy and beef cattle were caught up out of pastures, in many cases but a day or two before being exhibited, and won many places in this $500,000 exhibit, including not a few grand championships, from the Spokane Interstate fair winners, who had come here for pickings. Much of this stuff was bred in this wonderland of mountain, valley and dry farms, showing that the contention that diversified farming, including live stock, is entirely feasible.

Furthermore, there was no busting or bucking or bull-dogging to mar and torture the dumb friends of humanity. C. M. Rader, a prominent Shorthorn breeder, summarizes this tersely:

"Our community has progressed beyond bucking. We haven't any bucking, and, what is more, we never shall have any more bucking. We don't care to cater to the type of young man whose title to manhood depends on his ability to smoke a cigarette and an ability to hunt up moonshine. We propose to change the type of our young manhood by having a different type of fair—the kind we have this year, with its live stock value at more than $500,000."

"That kind" had a wide variety appeal including woman's work, better babies' clinic, food demonstrations and exhibits from the extension service of the Washington State college that alone would have filled a pavilion had it been assembled all in one place;

An exhibit of four generations of improvement through the use of purebred sires on the dairy herd of the state penitentiary;

A contrast showing that one dairy sire was worth $1000 more than another through the improvement of daughters over dames;

A contrast of two pens of trapnest pullets, one laying almost exactly twice as many eggs per year as its rival under exactly the same conditions but sired by an inferior sire from an inferior mother;

A special hog barn filled with the porcine pets of boys' and girls' industrial clubs, and another filled by the kiddies' 120 pens of poultry;

A special department of the women's farm bureau showing labor-saving devices for the farm home, including an iceless refrigerator, similar to many made by the farm women themselves;

A kitchen jitney and a woodbox on wheels;

A children's nutrition clinic;

A radio concert;

Speed races galore, and the same big carnival company that supplied fun at the Spokane Interstate fair the preceding week.

All these and many more features of the modern fair.

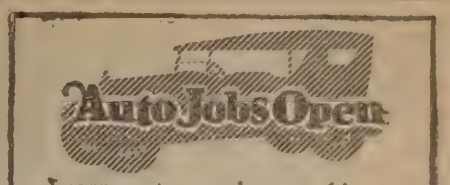
But there was a fly in the ointment. The crowd wasn't there. The last day, the best, had but few more than 3000 paid admissions. A number of reasons were ascribed: The day charge of $1 and the free admission nights was one considered; the fact that the business men did not cooperate by closing their stores; that the times are hard; that people were ignorant of the value of the fair, and the beautiful autumn weather required a rush of fall work—all these reasons and many more.

But Walla Walla had a real fair, thanks to the splendid cooperation of the county farm bureau, the fair association, the Walla Walla Purebred Breeders' association, its county bee association, whose excellent exhibit was pronounced by George York, superintendent of the Interstate fair bee division, as one of the best that he has ever seen in the United States, and all of her forward-looking citizens.

As an evidence of its spirit, consider the 11th hour rush that resulted in the building of two pig sheds, each housing four rows of live stock, the erection of many pens, the adaptation of the recently partially burned sheds, and the big, fat premiums and all of this was done without a professional secretary or a county subsidy. May Walla Walla's progressives have the spirit to perpetuate it.

The live stock exhibits were from all parts of the northwest. In the sheep and goat classes William Riddel & Sons of Monmouth have had a fine showing of Angora goats as well as Lincoln sheep with curly wool. C. H. Craig of Lowden showed Cotswold and Rambouillets. Shropshires were shown by Feltzer Brothers of Tangent, Ore., and A. T. Fox of Oregon showed Oxford Down. Archie Stewart showed 15 pens of various classes of sheep. Harold W. Hastings of Thornton, Wash., had French Merinos on exhibit.

In beef cattle W. W. Cordiner, Walla Walla; Ralph Rader, Walla Walla; W. A. Heater of Sublimity, Ore.; W. W. Craig, Walla Walla, had Shorthorns; Methow Valley Live Stock company, Reginald H. Parsons, Winthrop, Wash.; Shadeland Stock farm, O. A. Boggs & Sons, Daysland, Alberta, Canada; Weatherford Stock ranch, Dayton, Wash., exhibiting Herefords; Broadmead farm of Chehalis had Aberdeen Angus exhibits.



In the swine exhibits Berkshires were shown by Stubblefield Home, Walla Walla, and James C. Bonner. Poland Chinas by E. O. Lee of Silverton, Ore.; B. F. Kammerzell, Colfax; Duroc Jerseys by S. D. Cornell, Grandview; Frank Busch, Johnson, E. K. Huber, Touchet, J. W. Yenney, Walla Walla; Chester Whites by Ed. School, Albany, Ore.; Hampshires by J. M. Fruits, Cambridge, Idaho; Washington state penitentiary.

W. O. Reith, Astoria, Ore.; Chicona farms; A. L. Gile, Chinook; Orchard Hill farm, Fircrest farm, Lynden; Shannondale farm, and F. L. Shannon, Walla Walla, had exhibits of Guernsey cattle; Shannondale farm of Walla Walla; Walla Walla college, College Place; Vernon Baker of Walla Walla, Washington state penitentiary, Walla Walla; state college, Pullman, had exhibits of Holsteins; the Jersey exhibits, including Allendale Jersey farm, Yakima; N. C. Nelson, Walla Walla; Mrs. F. Levy, College Place; Bixby farms, Freewater, and Sears & Litte of Chehalis, Washington; Wenatchee Ayrshire farm also had an exhibit of Ayrshires.

Shire horses were exhibited by W. A Clark, Latah, Wash.; H. W. Merritt, Rosalia; Clydesdale by R. C. McCroskey, Garfield, and Percherons by W. A. Clark, Latah; J. A. Martin, Touchet; W. R. White, Dry Creek; J. M. Reavis, Walla Walla; an unusual record for his first two shows was made by a 2-year-old Shire stallion owned by H. W. Merritt of Rosalia and exhibited at the fair, being named grand champion at the Spokane Interstate fair, and being placed in the same position in the Walla Walla fair.

W. A. Clark of Latah took five firsts, and grand champion. R. C. McCroskey of Garfield had everything his own way with his Clydesdales, as there were no other entries. L. A. Martin secured the grand champion of the Percherons. J. A. Scollard of Chehalis had no competition for

Made to order for the

Farmer's Car

Practical experience with country roads produced this Goodrich 55.

Rugged, long lasting, built in both 30 x 3½ and 30 x 3 sizes, it is *made-to-order* for Fords, Chevrolets, Willys-Overland, and other cars using these sizes.

Tractorlike tread to grip any ground, and hold steadfast to the road against slipping and skidding.

Fortified tread and sidewalls to withstand the "bite" of deep ruts.

Made in one high quality only—the Goodrich Standard!

And its price is down—the lowest of low-tide prices.

Look this tire over at your nearest Goodrich Dealer, and you'll see sure return of service for every cent in its price.

THE TIRE FOR SMALL CARS

LIVESTOCK AND DAIRY

Butter

New York Consumes 230 Tons Every Day

By W. B. LIVERANCE.

It would take 305 trains of 30 refrigerator cars each to transport the butter that is required each year by the city of New York, as the average annual receipts of butter in that city alone are fully 2,750,000 60-pound parkages, or about one-sixth of the total production in the country.

In other words, the consumption of butter in Greater New York, which consists of the boroughs of Manhattan, Brooklyn, the Bronx, Queens and Richmond, is nearly 1600 tons each week or 230 tons every day of the year.

On the basis of a population of 6,000,000 inhabitants, many of whom use but little, if any, the weekly per capita consumption of butter in the greater city is one-half pound. The butter business of New York city, from the standpoint of the wholesaler, basing computations on the average price for the last year, amounts to approximately $75,000,000 annually, or $250,000 each business dav of the year.

It can be seen very readily that the tiny pat of butter used by the individual at mealtime when multiplied many times aggregates a value of considerable magnitude.

It is quite apparent that the consumer is compelled to pay several handling charges when he purchases butter. The wholesaler must be paid, the jobber can not work for nothing and the retailer is not in business for pleasure alone. In addition, in case the speculator has had "his finger in the pie" he expects some return for the risks he has run in storing his butter.

The question is, and one which is discussed freely these days, whether or not one or more of the classes of operators in the market can be eliminated without injuring the efficiency of distribution. Under conditions that have obtained in the past it is quite probable that none could have been eliminated to advantage.

At present, however, as previously mentioned, the chain store organization is making inroads into the fields of both the wholesaler and the jobber. In addition, in some states where the creamery industry is well developed state-wide organizations of creameries have been perfected with an ultimate aim of marketing their own butter.

It is quite possible that we shall witness striking changes in the distribution of butter and that many of the agencies that now exist will be frozen out in the not distant future.

LIFE PRESERVERS FOR LIVE STOCK

By DR. E. E. WEGNER, W. S. C.

DIGESTIVE TROUBLES, ARTICLE VIII.

Great Colon.

The troubles of this portion of the digestive tube are not rare and in many respects are similar to those of the cecum; this portion of the tube, however, is so arranged that all the food materials must pass directly through it in order to traverse the digestive tube, precluding any possibility of a drug going around an obstructing mass.

The large colon receives food materials directly from the base of the cecum and as this portion of the digestive tract is very large it has to be arranged in a regular manner in order to be contained within the abdominal cavity. The large bowel is about 15 feet long and varies in diameter from three inches to 12 inches; this enormous organ then is folded twice, so that it may be contained within the abdominal cavity; that is, it starts in the region of the right flank and extends forward to about the diaphragm where it turns to the right and backward along the first portion to near the entrance to the pelvis, where it turns somewhat downward and forward, extending to a point near the stomach, this third portion closely following the second one. At the stomach the tube turns again backward toward the right flank, the fourth portion following the first one, so in reality this portion is doubled upon itself twice, so that it may be shortened enough to enter the abdominal cavity.

Food materials remain here for a considerable time and since there isn't a great deal of fluid present here, it is a very favorable place for the development of impactions; it also is a favorable place for fermentive changes and the development of gases that many times prove so troublesome. The impactions that develop here are not confined to any one class of foods, but a great variety are responsible; in fact, these many times seem to be independent of the kind of foods and more certainly follow certain devitalizing processes, though, of course, certain dry and bulky foods are more often responsible than softer, more succulent ones. Straw in the winter is commonly a causative agent, but the same may result when the animal is regularly fed on stall rations of a substantial character.

The symptoms that characterize this condition are similar to those of impaction of the cecum and the difference must be determined by exploration through the rectum in most instances. There is casual pain at first, evidenced by pawing slightly and lying down a great part of the time, followed by increased discomfort. Refusal of the foods is more evidence of distress. It is fortunate indeed if the gas formation does not complicate the condition as frequently happens. Where the case is uncomplicated purgatives are in order, such as raw linseed oil or mineral oil, time being given for them to soften the mass; this requires a number of hours, depending upon the intensity of the individual case. Drastic acting drugs should not be given, as they usually aggravate these cases without doing material good.

Feeds of all kinds should be withheld during attacks of impaction, as they aggravate all cases and the animals should not be coaxed to eat, but rather should be kept without foods until the appetite returns; they may then be given small quantities of food several times a day, but overloading should be carefully avoided.

VETERINARY

By DR. S. B. NELSON.

Lumpy Jaw.—I have a cow that has been in poor flesh all summer. The other day I noticed a lump just at the back of the left lower jaw about eight inches long and possibly four thick. It is hard, but is not fast to the jaw bone. Would her calf be fit for veal? If I call the state veterinarian and he says the cow has lumpy jaw, would I get any pay for the cow if I had to kill her? W. H. D.

If the cow is affected with lumpy jaw the veal would be fit for meat provided the veal was not at all affected, which is not likely. I am not informed as to whether or not you can receive indemnity from the state if the state veterinarian condemned the cow. Write to Dr. Pelton, department of agriculture, Olympia, and he can give you advice regarding the indemnity.

Fly Repellent.—My cow is tormented with dozens of small flies resembling house flies. What could I do to keep them off? She is in the brush a great deal, so it would be hard to keep a blanket on her. Would it be better to feed her bran or corn to keep up the milk flow and flesh this winter? E. N. J.

Orovada, Nev.

You will have a pretty fair fly repellent by the use of fish oil to which a little tar has been added; enough to give it a good strong odor of tar. If the mixture is too thick to work through the spray pump, dilute it with a little soap and water solution made fairly strong. Whether you feed your cow corn or bran will depend on what other feeds you are using. In a general way I would say that corn would be better.

Heaves.—Will you kindly give me a treatment for heaves in horses? H. E. C.

Decrease the amount of roughage one-half at least. You may increase the grain slightly if necessary. Give the animal one

McQUAY-NORRIS

PISTON RINGS
PISTONS
PINS

They will cut down your Gas, Power and Transportation expense

Your tractor, truck, engine or pump, and your automobile all depend upon the motor's piston rings, pistons and pins for economy and the machine's length of life. There is great waste in all of them when wear has taken place in these three vital units. And these parts wear faster in farm motors than they do in city-used motors, because of dusty roads and fields.

Dust works into the cylinders through the carburetor and mixes with the lubricating oil where it acts as an abrasive and produces more wear than happens in city automobiles that operate on paved streets. There is special need for farmers to overhaul their gasoline motors.

Thousands of added miles of car life and many added hours of power usefulness can be given most motors by renewing their piston rings, pistons and pins. The gas and oil saving will generally pay the expense of renewing them. They really need renewing just as much as tires do. There is this difference: you can see tire wear easily, but you cannot see piston ring, piston and pin wear. Power loss in the motor and an increase in gas and oil consumption tells you of it, however.

Sometimes only piston rings are required to restore these losses due to wear. There is a McQuay-Norris ring for every purpose and price—all made of Electric Iron.

If, however, the cylinders are worn enough to necessitate regrinding or reboring, then McQuay-Norris *Wainwright* Pistons and Pins are needed as well as McQuay-Norris Piston Rings. The McQuay-Norris line offers a complete renewal service for motor wear. Send for our Free Booklet, "To Have and to Hold Power," which explains the whole subject of motor wear and its correction. Address Dept. BD.

McQUAY-NORRIS MANUFACTURING COMPANY, ST. LOUIS, U. S. A.

Pistons and Pins
McQuay-Norris *Wainwright* Pistons and Pins—gray iron pistons as light in weight as safety permits—specially designed for replacements—available in standard sizes and over-sizes—also in semi-finished form 75-thousandths over-size—pins of special hardened steel, ground to exceptional accuracy.

$1.25 Per ring — LEAK-PROOF — an exclusive two-piece design preventing loss of gas and compression. Gives equal pressure at all points on cylinder walls. For all piston grooves except top, which should have Supercyl. Each ring packed in a parchment container.

$1.00 Per ring — Supercyl—Keeps lubricating oil out of combustion chamber. Collects excess oil on each down stroke of piston and empties on each up stroke, which ordinary grooved rings cannot do. Each ring packed in a parchment container.

50c Per ring — *JIFFY-GRIP*—a one-piece ring. Non-butting joint, which can be fitted closer than ordinary step cut—velvet finish—quick seating. "Seats in a jiffy." To keep them clean and free from rust, each ring is packed in an individual glassine envelope.

Snap Rings—of the highest grade. Raised above the average by McQuay-Norris manufacturing methods. Their use insures all the satisfaction possible for you to get from a plain snap ring. They are packed twelve rings to the carton and rolled in waxed paper.

2307-F

Live Stock Men Meet

Live stock breeders took occasion to get together in a number of breed meetings during the state fair at Yakima September 18-23. Members of the Washington Guernsey Cattle club and their friends met at the Commercial hotel at Yakima for a banquet and business meeting on Wednesday evening. A number of interesting talks were given by Dr. S. B. Nelson of the state college. Dr. L. C. Pelton of the state department of agriculture and others. Dr. Park Weed Willis of Seattle told of the life and death of his record cow, Sammamish Topsy, and of the good fortune he felt in having in his herd some 20 of her offspring. A. L. Gile of Chinook, Wash., gave a short outline of the benefits of purebred cattle. George P. Grout of Duluth, Minn., gave an interesting history of the Guernsey herd at Jean Duluth farms, of which he is part owner.

The business meeting which followed resulted in the election of officers for the coming year. A. L. Gile of Chinook is the new president; J. V. Vance, Yakima, vice president; L. J. Clark of Bellevue, secretary-treasurer; H. E. Angel of Mabton and R. N. West of Yakima, members of the executive committee.

E. L. Westover, western representative of the American Guernsey Cattle club, was appointed to confer with the dairy department of the state college once a year in order that better cooperation may be maintained between the college and the association. A motion was passed to have all Guernsey sales sanctioned by the state association in order that the buyers may know that the animals consigned are up to standard.

The Jersey Breeders.

There were 25 at the Jersey banquet held at Yakima on Wednesday. A number of the out-of-town dairymen attended the affair and stayed for the business meeting which followed. Short talks were made by such men as Dr. S. B. Nelson and Don G. Magruder of the state college, Dr. L. C. Pelton of the state department of agriculture and Frank P. Astroth, representative of the American Jersey Cattle club. The election of officers which followed resulted in the election of E. W. Trezise to succeed himself; N. C. Sears of Chehalis, vice president; R. I. Tanner of Sumas, secretary-treasurer; S. O. Pool of Wenatchee and J. W. Taylor of Montesano on the board of directors.

The Black-and-Whites.

Members of the state Holstein-Friesian association and their friends held a banquet at the Commercial hotel on Tuesday night prior to their sale of cattle at the fairgrounds on September 20. George A. Gue acted as toastmaster and called on a number of prominent men for short talks, among which were Frank Rothrock, Dr. L. C. Pelton, Charles Sprong of Grandview, Calvin Phillips of Seattle and William Bishop of Chimacum.

The Swine Breeders.

The hogmen who attended the state fair at Yakima held an interesting get-together meeting on Friday night of fair week. All "breeds" were invited and a number of talks were given by those who attended.

Charles M. Talmadge of Salem explained his idea of type for all breeds. "The right type is what the people want," he said. "It is not only what the butcher wants, but it is also something that is demanded by the housewife. It is something we must all keep in mind if we are going to breed a hog that will sell on any market."

NATIONAL DAIRY EXPOSITION.

With 32 tons of special properties being arranged for the $32,000 "Healthland" exhibit, the installation of stanchions in the $600,000 cattle barn for 1000 purebred and from 350 to 500 grade cattle, many of which will be sold at auction, advance installments of the $1,000,000 machinery exhibit and changes being made in the agricultural building for the poultry exposition, final preparations are being made for the National Dairy exposition, Minnesota state fairgrounds, October 7 to 14.

"Majesty's Best"

"Majesty's Best" took first prize, senior champion and grand champion in Clydesdales at the Spokane Interstate fair. The horse is owned by H. T. Whitman of Rosalia, Wash., and was in charge of James Norton at the fair grounds. Mr. Norton has been at every Interstate fair for 18 years. He came from Scotland after the Boer war, in which he served for three and a half years.

By an unfortunate oversight, the report in The Washington Farmer stated that Robert C. McCroskey of Garfield, Wash., was the only exhibitor of Clydesdales and won all awards in this class.

FIRST APPLE CARGO.

The first refrigerated ship to carry Wenatchee apples to Europe this season is the "Gothic Star" of the Admiral line that will sail from Seattle October 2. Several thousand boxes will go across on this vessel and will probably go into cold storage on the other side.

New Lamp Burns 94% Air

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal-oil).

The inventor, W. W. Johnson, 31 N. Fifth St., Portland, Ore., is offering to send a lamp on 10 days' FREE trial, or even to give one FREE to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.—Adv.

Note these New Prices on U.S. Tires

ON July 29, 1922, the lowest prices ever quoted on U. S. Passenger Car Tires went into effect—Royal Cords included.

These new prices should give confidence to dealers and car-owners that no lower basis of quality tire prices will prevail.

Bear in mind that these prices apply to the most complete line of quality tires in the world. Remember, too—as you read the following table—that U. S. Quality has been positively maintained.

SIZES	Royal Cord	FABRIC Nobby	Chain	Usco	Plain
30 x 3 Cl.	——	$12.55	$11.40	$9.75	$9.25
30 x 3½ "	$14.65	15.60	13.00	10.65	—
31 x 4 "	——	23.00	21.35	18.65	—
30 x 3½ SS.	14.65	——	——	——	—
32 x 3½ "	22.95	20.45	16.90	15.70	—
31 x 4 "	26.45	——	——	——	—
32 x 4 "	29.15	24.35	22.45	20.85	
33 x 4 "	30.05	25.55	23.65	21.95	
34 x 4 "	30.85	26.05	24.15	22.40	
32 x 4½ "	37.70	31.95	30.05	——	
33 x 4½ "	38.55	33.00	31.05	——	
34 x 4½ "	39.50	34.00	32.05	——	
35 x 4½ "	40.70	35.65	33.55	——	
36 x 4½ "	41.55	36.15	34.00	——	
33 x 5 "	46.95	——	——		
35 x 5 "	49.30	43.20	39.30		
37 x 5 "	51.85	45.75	41.70		

Federal Excise Tax on the above has been absorbed by the manufacturer

The dealer with a full line of U. S. Tires at these new prices can serve you better than you have ever been served before in the history of the automobile.

If there ever was any fancied advantage in shopping around for tires it disappeared on July 29, 1922.

Extension Work and Cooperation

Secretary Wallace Defines Duties of the County Agents

The relationship between the county agent and other extension workers and farmers' organizations, especially the cooperative marketing associations, has been a widely discussed subject. THE FARMER is glad to publish the following official statement on the matter by Secretary Henry C. Wallace of the department of agriculture:

The act of congress approved May 8, 1914, and supplemental acts thereto, established cooperative agricultural extension work between the federal department of agriculture and state agricultural colleges. Section 2 of that act defines the work as follows:

Sec. 2. That cooperative agricultural extension work shall consist of the giving of instruction and practical demonstrations in agriculture and home economics to persons not attending or resident in said colleges in the several communities, and imparting to such persons information on said subjects through field demonstrations, publications, and otherwise; and this work shall be carried on in such manner as may be mutually agreed upon by the secretary of agriculture and the state agricultural college or colleges receiving the benefits of this act.

It is thus made clear that the work of the cooperative extension employees, whether county agents, home demonstration agents, boys' and girls' club agents, or other cooperative extension workers, is educational. These extension workers are public teachers paid with money largely raised from all of the people by taxation and are charged with giving instruction and practical demonstrations in agriculture and home economics. Their work covers the entire rural field, which includes economic production, economic marketing, and the development of better home, community and social conditions.

What They May and May Not Do.

As they are public teachers it is not a part of the official duties of extension agents to perform for individual farmers or for organizations the actual operations of production, marketing, or the various activities necessary to the proper conduct of business or social organizations. They may not properly act as organizers for farmers' associations; conduct membership campaigns; solicit membership; edit organization publication; manage cooperative business enterprises; engage in commercial activities; act as financial or or business agents, nor take part in any of the work of farmers' organizations, or of an individual farmer, which is outside of their duties as defined by the law and by the approved projects governing their work. They are expected, however, to make available to organizations such information as will be helpful to them and contribute to the success of their work.

The various federal laws provide that cooperative extension work shall be conducted in such manner as shall be mutually agreed upon by the secretary of agriculture and the state agricultural colleges. By an agreement between these agencies an extension director located in each state is the representative of both the college and the department. He submits projects for extension work to the secretary for approval.

Where Cooperation Comes In.

In carrying out these projects the law provides that no federal Smith-Lever money, except $10,000 per state, shall be paid to the states for cooperative extension work until

* * *an equal sum has been appropriated for that year by the legislature of such state, or provided by state, county, college, local authority, or individual contributions from within the state, for the maintenance of the cooperative agricultural extension work provided for in this act.

* * *moneys contributed from such outside sources * * * shall be paid only through the secretary of agriculture or through state, county or municipal agencies, or local farm bureaus or like organizations, cooperating for the purpose with the secretary of agriculture.

This makes it very clear that the law contemplates cooperation with farmers' organizations willing to cooperate in the work with which the cooperative extension agent is charged. It is the duty of the extension agents to render such assistance whenever possible in his teaching capacity to any agricultural organizations desiring it. Furthermore, the work of these extension agents can be the most effective where it is carried on with organized groups of rural people. It is entirely proper for any agricultural organization desiring to cooperate financially in the work of the extension agents to contribute funds for the support of such work, and these funds may be accepted legally by the extension service of the agricultural colleges and by the federal government for work on approved projects.

Cooperate With Everybody.

In short, it is the business of the extension agent to cooperate with all agricultural organizations which desire to cooperate on approved projects. If more than one organization exists in a county he must cooperate with all fairly and impartially in the educational work in which they are mutually interested.

The department of agriculture must necessarily consider in its administration of federal cooperative extension funds the laws which have been passed by the various state legislatures in accepting these funds and under which agreements have been made with those states for conducting this work. If special provisions relating to the methods of cooperation with agricultural organizations or other agencies are contained in the state laws, which do not conflict with the federal laws, it is clearly the duty of the secretary of agriculture to accept such provisions in a cooperative project.

APPLE CROP OF CANADA.

According to the August report of the department of agriculture for Canada the present prospects are for a crop of summer and fall apples about 70 per cent of that of 1921, while winter varieties will yield probably 80 per cent of the 1921 crop. The total crop to be shipped from Ontario is estimated at 3446 cars.

Walla Walla Fair

(Continued from page seven.)

his Aberdeen Angus, taking everything.

The special prize for the four best beef animals under 1 year of any breed was won by the Methow Valley Live Stock company. W. G. Cordiner took eight firsts and six seconds on Shorthorns.

In Hampshire hogs, J. M. Fruits lost but one prize, the grand champion sow, which went to the state penitentiary.

The 14 community exhibits, the booths of which filled nearly half of the first floor, were especially complete and attracted a great deal of attention. They were so complete and presented such an artistic combination of varieties as to be the equal of many county exhibits in large fairs scored on a basis of 10,000 points. 6000 being allowed for the booths and 800 for each animal class of hogs, horses, beef, dairy and sheep. They rated Lowden, 1; Prospect Point, 2; College Place, 3; Burbank, 4. The booth of the latter scored all of her 5700 points, no live stock being shown. Lowden won first on all-around performance, getting first on horses, sheep, beef and second on booth and third on dairy.

In commenting on the community spirit that made the fine exhibits possible, W. H. Talley, county agriculturist, stated:

"I am especially fortunate in having such fine people to work with. When you consider that this is the first year that anything of the sort has been attempted and that 400 people participated, many of them for four days in arranging alone these exhibits, perhaps you can realize what this has meant in cementing not only the friendship in the local communities, but in fusing them into the strong county farm bureau organizations of more than 1100 members."

Expressions of assurance of finer exhibits for another year and praise of each other's exhibits could be heard from all sides.

Another expression of this same fine spirit was evidenced in the fine boys and girls' club poultry show of 120 pens. The kiddies from the pepful youngster of 10 up to the mature young men and women of 18 and 19 were there with the choicest poultry show that the writer has seen this year. Competition was keen and laurels hard won.

The special club swine exhibit was another evidence of this day-after-tomorrow-mindedness of the Walla Walla junior farm bureau.

WISCONSIN ONION CROP.

A thousand acres of commercial onions are being grown in Wisconsin this year.

SCIENCE PERFECTS *a new economy oil for Fords*

Four years ago Tide Water engineers began exhaustive experiments to produce a lubricating oil exclusively for Ford automobiles. This undertaking was based on a single fact definitely established by them through long practical experience.

The fact—the Ford motor presented unique and complex problems of lubrication, never fully mastered by any oil.

In November 1921, Tide Water engineers announced that laboratory and refinery experiments were over. Veedol Fordol was ready for the test of the road.

Thousands of miles were covered in tests carefully checked by Tide Water engineers in country lanes and city streets. One large company put Fordol to test in its fleet of 750 Ford cars of all types. A nationally known taxi company gave Fordol gruelling traffic tests.

The combined results confirmed to the last detail the 8 economies in Ford operation established by Tide Water engineers. Fordol was ready for the public! At last a Ford lubricant that actually mastered *all* of the lubricating problems of the Ford power plant!

You are not asked to buy Veedol Fordol on faith. Do as the owners of the fleet of 750 Fords did. Do as the taxi company did. Test it! Watch the results. Note the new economies you experience. You will realize quickly what a factor Fordol is in your motoring satisfaction.

Veedol Fordol is on sale at all dealers who display the orange and black Veedol sign

TIDE WATER OIL SALES CORPORATION
11 Broadway, New York.
Seattle, 1934 Railroad Ave.
Spokane, 310 Pacific St.
Tacoma, 110 So. 15th St.

The 8 economies of Fordol

1—10 to 25% saving in gasoline—Hundreds of tests have demonstrated that Fordol conservatively saves 10% on gasoline consumption. 25% to 33% savings have been developed repeatedly.

2—Eliminates costly "chatter"—Fordol lengthens the life of Ford brake and transmission bands by properly lubricating them. "Chatter," a result of faulty lubricants, is *entirely eliminated.*

3—10 to 25% saving in oil—The savings in oil consumption run from 10% to 25%. The exact savings depend upon the mechanical condition of the engine and the lubricant formerly used.

4—10 to 25% less carbon—Fordol forms on an average from 10% to 25% less carbon in the Ford engine cylinders. The exact savings depend on the mechanical condition of the engine and the lubricant formerly used. Less carbon means more power with fewer repairs.

5—Resists heat and friction—Fordol possesses to a super-degree the famous characteristic of all Veedol oils to resist heat and friction.

6—Increased ability to coast—With average lubrication a Ford will only coast down steep hills. With Fordol, coasting is possible down the slightest grades.

7—Resists fuel dilution—Even with poor fuel, Fordol maintains its power-seal and lubricating value longer than other oils. Result—more miles per gallon of gas and per quart of Fordol.

8—Fewer repairs—Because Fordol masters the lubricating problems of the Ford power plant the result is a hitherto unknown freedom from engine vibration and repair bills.

(Continued from page six.)

national two years in succession. May Walker Skylark of the same herd won grand champion female. She is a daughter of the original Matador Segis Walker and was showing dry. George E. Morton, head of the animal husbandry department of Colorado State college, judged the Holsteins.

Exhibitors—William Bishop, Chimacum, Wash.; Stephen E. Chaffee, Sunnyside, Wash.; Carnation Stock Farms, Seattle, Wash.; Charles Eldridge, Chimacum, Wash.; F. E. Fairbanks, Selah, Wash.; Francis Hansen, Yakima, Wash.; Lauraris Hansen, Yakima, Wash.; R. Hoffman and O. Skagan, Kent, Wash.; State College of Washington; L. G. Stickney, Toppenish, Wash.; E. V. Taylor, Selah, Wash.; Arthur Wiley, Wiley City, Wash.; Yarr Bros., Chimacum, Wash.; Ralph Tuttle, Walla Walla, Wash.; Western State Hospital, Stellacoom, Wash.

Bulls: Aged bull—1, Carnation, on Matador Segis Walker 6th (senior and grand champion); 2, Bishop, on Skagit Korndyke Vale Pietertje. Two-year-olds—1, State Hospital, on Sir Pietertje Ormsby Blossom; 2, Chaffee, on Chief of the Ormsbys. Yearlings—1, State hospital, on Carnation King Matador Mutual; 2, Bishop, on Sir Chimacum Perfection; 3, Hoffman & Skagan, on Riveland Prince. Senior calf—1, Carnation, on Ensign Model Matador Abbekirk (junior champion); 2, state hospital, on Stellacoom Sir Ormsby Veeman; 3 and 4, State college, on Chinook Piebe Adam and Chinook Piebe Count. Junior calf—1 and 3, Bishop, on Sir Chimacum Ormsby Gettie and Sir Chimacum Molly's Korndyke; 2 and 5, Carnation, on unnamed calves; 4, State college, on Chinook Piebe Excellent.

Females: Aged cow—1, Carnation, on May Walker Skylark (senior and grand champion); 2, Yarr Bros., on Bos Johnson; 3 and 4, Bishop, on Hazelwood Pietertje Jewel and Chimacum Lutske Avacanora. Three-year-old—1, 2 and 3, Carnation, on Carnation Matador Queenie, Tillamook Princess Wayne and Queen Bonheur Pontiac DeKol; 4, Bishop, on Chimacum Wayne Molly. Two-year-old—1, Carnation, on Carnation Matador Aaggie Segis; 2, Bishop, on Jewel Hazelwood DeKol; 3, Stickney, on Edna Hartog Aaggie; 4, State college, on Josephine Ormsby Hazelwood Heilo. Senior yearling—1 and 3, Carnation, on Carnation Matador Nena Kaan and Carnation Matador Coquette; 2, State college, on Hazelwood Heilo Aaggie DeKol; 4, Chaffee, on Otsego Butterfly. Junior yearlings—1 and 3, Carnation, on Carnation Matador Christmas (junior champion) and Carnation Sylvia Segis; 2, State hospital, on Steilacoom Bonnie Ormsby Lass; 4, Chaffee, on Aaggie Midnight Vale. Senior calf—1 and 2, State hospital, on Steilacoom Molly Ormsby Hengerveld and Steilacoom Blossom Zanke Mercerdes; 3, Chaffee, on Glencliff Segis Walker Posch; 4, Bishop, on Chimacum Wayne Segis. Junior calf—1, State hospital, on Steilacoom Jewel Pontiac Korndyke; 2, Bishop, on Chimacum Selah Fayne Ormsby; 3, Carnation, on unnamed; 4, State college, on Chinook Piebe Dora.

Groups: Graded herd—1, Carnation; 2, Bishop; 3, State hospital. Young herd—1, Carnation; 2, State hospital; 3, Chaffee; 4, Bishop. Calf herd—1, State hospital; 2, Chaffee; 3, Carnation; 4, Bishop. Get of sire—1 and 2, Carnation; 3, Bishop; 4, State college. Produce of cow—1, Carnation; 2, Rishop; 3, State hospital.

The Jerseys.

The Jersey classes brought out some excellent type and quality, but the turnout was not adequately representative of the breed in the state. Sultan's Olga Lad of the Erickson herd of Yakima was senior and grand champion bull. He beat Glen Tana's younger animal by a close margin. The state college took the grand champion female award on Waikiki's Pilot Mary, a junior yearling, with an exceptionally well developed barrel and a good makeup all around, though showing a little beefy.

Exhibitors—Erickson Bros., Yakima, Wash.; Glen Tana Farms, Spokane, Wash.; Midfields Farm, Winlock, Wash.; State College of Washington; Clarence Worrell, Yakima, Wash.; Marie Tornay, Ellensburg, Wash.; T. S. Lester, Sunnyside, Wash.

Bulls: Aged bulls—1, Erickson Bros., on Sultan's Olga's Boy (senior and grand champion); 2, Glen Tana Farm, on Glen Tana Perfection. Two-year-olds—1, Midfields, on Champion of Midfields; 2, Erickson, on Raleigh's Fancy Lad. Yearlings—1, Glen Tana, on Glen Tana Morocco Wonder; 2, Erickson, on Sultan's Bonnie Lad; 3, Midfields, on Fussy's Fern Nobel 35th; 4, Erickson, on Fern's Golden Duke. Senior calf—1, Midfields, on Midfields Manila; 2, Glen Tana, on Glen Tana Guenon; 3, Erickson, on Sultan's Marigold of J. H.; 4, Midfields, on Midfields Combination. Junior calf—1, Glen Tana, on Glen Tana Morocco Majesty (junior champion); 2, Midfields, on unnamed; 3, Erickson, on Sultan's Lad of J. H.; 4, Glen Tana, on Glen Tana Morocco Sultan.

Females: Aged cows—1 and 2, Erickson, on Sultan's Figgis of J. N. (senior champion) and Sultan's Violet Rose; 3, Glen Tana, on Glen Tana Sibyl 2d. Three-year-olds—1, Midfields, on Star of Yewlea. Two-year-olds—1 and 4, Midfields, on Cicely's Golden Dawn and Panacea of Midfields; 2, Erickson, on Olga's Pet; 3, Glen Tana, on Glen Tana Dorothy. Senior yearlings—1, Erickson, on Sultan's Vesta Lass; 2, Worrell, on Olga's Goldie Pet; 3, State College of Washington, on Chinook Landseer Faith; 4, Midfields, on St. Mawes Merry Olga. Junior yearlings—1, State College of Washington, on Waikiki's Pilot Mary (junior and grand champion); 2, Glen Tana, on Glen Tana Morocco Inez; 3, Erickson, on Flower Lassie; 4, Midfields, on Sweetheart's Image. Senior calf—1, Glen Tana, on Glen Tana Morocco Lady; 2, Erickson, on Zellah's Fancy Queen; 3, Marie Tornay, on Precious Little Pearl; 4, Midfields, on unnamed. Junior calf—1 and 4, Midfields, on unnamed and St. Mawes Golden Clythia; 2 and 3, Erickson, on Raleigh's Maid of J. N. and Olga's Bonnie Babe of J. H.

Groups: Graded herd—1, Erickson; 2, Glen Tana; 3, Midfields. Young herd—1, Glen Tana 2, Erickson; 3, Midfields. Calf herd—1, Glen Tana; 2, Midfields; 3, Erickson. Get of sire—1, Erickson; 2 and 4, Glen Tana; 3, Midfields. Produce of cow—1, Glen Tana; 2 and 4, Erickson; 3, Midfields.

The Milking Shorthorns.

The milking Shorthorns were from two Washington herds and the Dwight A. Smith herd from Salmon, Idaho, in which herd was the junior champion bull, a senior calf of good quality. The animals from the E. C. Truesdale farm at Centralia made a creditable showing, but both of the grand champions were in the herd from the Northwood farms at Redmond, Wash., near Seattle. Gretna Challenger, the grand champion bull, was a 4-year-old with a well-developed barrel and good loin and splendid covering. The senior and grand champion female was a white animal of quality, Billing White Ruth. She was well balanced between the beef and dairy qualities, a genuine "double-decker."

Twenty boys and girls and 20 Shorthorn steers, a distinct feature at the state fair. They are all the boys and girls and half the steers of the Hercules Shorthorn steer clubs. Their story will be told in a later issue of THE FARMER.

Exhibitors—Dwight A. Smith, Salmon, Idaho; Northwood Farms, Redmond, Wash.; E. C. Truesdale, Centralia, Wash.

Bull: Two years or over—1 and 2, Northwood Farm, on Gretna Challenger (senior and grand champion) and Northwood Defender; 3, Smith, on Roan Fairhelm. Yearling—1, Northwood Farm, on Northwood Pride; 2, Truesdale, on Walgrove Perfector; 3, Smith, on Rockrose Commander. Senior calf—1, Smith, on Rockrose Lake (junior champion); 2, Northwood Farm, on Northwood Surprise; 3, Truesdale, on Wynooche Jeweler. Junior calf—1, Northwood Farm, on Northwood Cyrus; 2, Truesdale, on Roan Jeweler 2d.

Females: Aged cow—1 and 3, Northwood Farm, on Billing White Ruth (senior and grand champion) and Lilly L 3d; 2, Smith on Buttercup's Belle 3d. Two-year-old—1, Smith, on Beth Rockrose; 2 and 3, Northwood Farm, on White Princess and Roan Jewel. Senior yearling—1, Smith, on Rockrose Clarisse; 2, Northwood Farm, on Miss Rose of Oaklawn; 3, Darces, on Maud Jewel. Junior yearling—1, Northwood Farm, on Northwood Winnie 2d (junior champion); 2, Smith, on Rockrose Lulu; 3, Truesdale, on Ora Jewel. Senior calf—1, Truesdale, on Anna Jewel; 2, Northwood, on White Princess; 3, Smith, on Rockrose Snowdrop.

Groups: Aged herd—1, Northwood; 2, Smith; 3, Truesdale. Young herd—1, Smith; 2, Truesdale. Calf herd—1, Smith; 2, Truesdale. Get of sire—1, Smith; 2, Truesdale. Produce of cow—1, Smith; 2 and 3, Northwood.

Ayrshires.

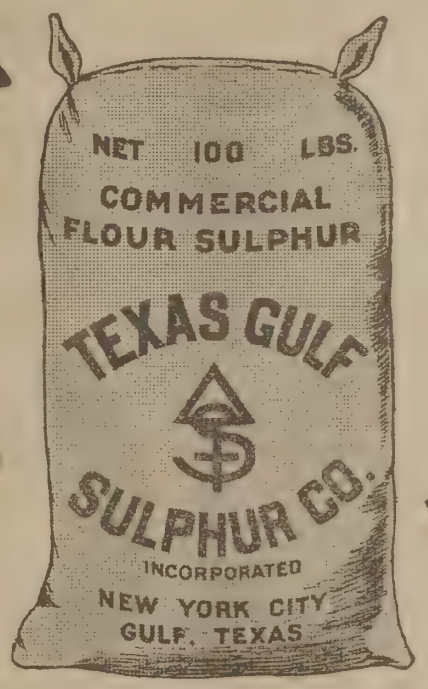
Exhibitors—E. W. Van Tassell, Wenatchee, Wash.; State College of Washington.

The State College of Washington showed two head in competition with the full herd of E. W. Van Tassell of Wenatchee, Wash., the latter winning all awards except first in senior bull calf (junior champion) on Chinook Cavalier Karton and second in senior heifer calf on Chinook Cavalier Elsie.

THE HORSE SHOW.

The horse show this year was considered

(Continued on page fourteen.)



"Best for Alfalfa"

TEXAS GULF SULPHUR

(Identify the genuine by this trademark)

A better sulphur at a better price direct from the mines of the Texas Gulf Sulphur Co., the world's largest producers of sulphur. In order to fully serve the alfalfa growers in this territory we have established a warehouse in Portland, Oregon, from which we will make quick shipments of the genuine Texas Gulf Sulphur in any quantity. You will find the product, the price and the service right in every respect. No matter where you have been securing sulphur in the past you will find it greatly to your advantage to place your order with us this season.

Contains 99½% Pure Sulphur

Packed in 100 lb. Burlap Bags

Your Choice of Three Forms:—

Crude Sulphur—

Lump sulphur, 99½% pure, for those who prefer to do the grinding.
In bulk or 150 lb. bags

Flour Sulphur—

Ground to extreme fineness, ready for immediate application to the soil. This product is so finely ground that it is in every respect equal to special brands for which high prices are commonly charged.
In 100 lb. burlap bags

Inoculated Sulphur—

An exclusive Texas Gulf product. Specially ground flour sulphur inoculated with sure-acting oxidizing bacteria which make the sulphur quickly available for plant food. As commercial sulphur is apt to be inert in the soil and its full effects are usually not noted until the second season, we advise the use of Texas Gulf Inoculated Sulphur where quick action is needed, and especially for late applications. In any event, test it on an acre or two this season and compare results.
In 100 lb. burlap bags

Consult your County Agent

We will gladly cooperate with him and with you in handling club orders. Naturally, you can save money by joining with your neighbors and making up a carload order.

Wire us at our expense—now!

Send us a night letter, *charges collect*, tonight. Tell us your alfalfa acreage, the kind and amount of sulphur you will require, the name and address of your county agent or dealer. Address as below. We will promptly quote prices which will delight you.

Our Sulphur Booklet and other helpful literature mailed free on request

TEXAS GULF SULPHUR CO.

POULTRY AND RABBITS

It Means Culling

Low Prices Make Po r Hens Poorer

"There is no use to disguise the fact that there are no fortunes in sight for northwest poultrymen," said Auditor D. S. McDole of the Washington Cooperative Egg and Poultry association when asked recently at Yakima about the prospects for the future. "There are in storage right now 2,278,000 more cases than were in storage August 1, 1921, and the stored total is 10,000,000 cases, or 25,000 carloads. That's more carloads of eggs than Yakima will ship carloads of apples this whole season.

"There has been an enormous increase in the number of poultry kept in the middle and southern states—particularly the latter, where conditions approximate those in the northwest except that the summer is long and extremely hot. Texas, Louisiana and even Oklahoma, for example, have the same open winters. In New Jersey they are specializing on a "48-hour egg" with which, of course, we can not possibly compete, and for which they are getting 46 cents at present—6 or 7 cents per dozen more than Pacific coast whites. There promises to be no money at all in storage operations this year; in fact, Chicago warehousemen have announced that they are ready to let go their stored eggs for 75 cents less than they put them in for. New York banks have reduced their advances to $5 per case, and Los Angeles banks have ceased making them entirely.

"The answer to all this which we have been making our members is that they must cull their flocks to the very marrow of producing usefulness. There is little enough excuse at any time for keeping unprofitable birds in the flock, but there will be less excuse than ever this fall. Cull and cull again; make certain that there are no idle birds, is the best advice that we can offer. What winter market conditions will develop we do not know."

Trying Out Early Chicks

"We are trying an experiment with early hatched chicks to find how they would produce during the winter and early months," said John Annonem of Winlock, Wash. "We have 250 White Leghorn pullets that were hatched the 5th of January. They started laying at the age of 4 months and 10 days and they are now producing a 60 per cent lay. The experiment looks all right so far. The flock was thoroughly culled at the age of 4 months and all birds weighing over three pounds were taken out. All of these chicks were hatched from pullet eggs."

There are 1000 breeders in an adjoining pen, all of which are required to trapnest 180 eggs a year. Any hens laying above 168, however, are taken to the commercial laying houses. Anything under this number is disposed of. The commercial flock is not trapnested. There are 2800 birds in all on the Annonem farm.

Feeds Mustard to Chickens

R. V. Totten of Falls City, King county, tells of an interesting way to eradicate mustard from growing crops. Early this summer he had a crop of corn in which some mustard was growing, and he pulled a small armload of the weeds for the chickens. He found that they ate it very readily, so he made a practice of pulling a small amount each day and feeding it to the chickens in the place of other green feeds.

"I kept up the plan until I had cleaned out the entire patch," said Mr. Totten, "and you can not find a bit of mustard in the whole field. The birds seem to thrive on the weed, and ate it even when it had begun to bloom. I not only avoided feeding my young kale plants, but weeded out the entire patch of corn as well."

New Standard for Judging

A new standard for the judging of poultry was recently established at the American poultry convention held at Knoxville, Tenn. H. H. Collier of South Tacoma attended the convention, representing the northern states.

The plan agreed upon will allow more recognition for the utility qualifications of the fancy and show stock. Judges will be asked to ascertain something of a hen's egg production qualities as well as her general appearance. Mr. Collier is enthusiastic over the new standard, saying that it should mean much to the poultrymen of western Washington, who have heretofore emphasized egg production and not paid enough attention to show stock. Details of the new plan can soon be had in pamphlet form, and will also include the judging for eggs.

"It will mean a new step in the poultry game," said Mr. Collier. "The man who raises commercial poultry will be able to show these birds in competition with other birds at the poultry show. It is a point we have been after for many years, that the best producers are the best showbirds. Every egg record we have had has been made by fine bred birds, which indicates that high production goes hand in hand with the type of the bird itself."

Turkeys Have Roup

By RALPH E. WALDO,

I have some turkeys and their heads swell up, eyes water and nostrils seem to get clogged and it is difficult for them to breathe. Can you tell me what it is they have and what I can do for them? Will the chickens catch it from them?

A. L. C.

The turkeys in question have roup. This disease is the result of a cold, which is caused by damp, poorly ventilated or drafty quarters. The first step to take in curing the disease is to remove the cause.

Remodel the roosting quarters so that it is dry and well ventilated, with no drafts striking the roosting birds. The pus formation in and around the eye and nostril may be partially removed by gently massaging the affected parts with the thumb. Then paint the affected area with tincture of iodine. If you take a small syringe and force kerosene into each nostril it will help to clean out the head passages.

It would be well to give the entire flock a dose of epsom salts at the rate of one-fourth pound of salts dissolved in one gallon of water. Roup is contagious, but is not hard to control, providing the proper housing conditions are present.

Profit of $1.50 Per Hen

"I find that I can do the heavy work about the poultry plant and get it out of the way by 8 a. m., so that I can get at the work about the farm," explained L. H. Jacobs of Shelton, who keeps about 1000 White Leghorn hens. "Mrs. Jacobs looks after such details as feeding the mash, watering and gathering the eggs. She takes an interest in the work and it gives me a chance to spend a full day on the farm."

Mr. Jacobs finds that he can average about $1.50 per hen, which is above cost of feed and other expenses. A registered Shorthorn bull is kept on the farm and there also is one purebred heifer, from which he expects to build up a herd of milking Shorthorns for general farm use.

COLOR IN THE BEAK.

About five weeks are required for the yellow color to fade entirely from a Leghorn's beak, and it returns first to the base, giving the poultryman a sure index of what the bird is doing. Yollow there indicates that either she has rested or is resting now.

Big Fruit Storage Plant

The biggest social event of the season at Kennewick occurred when more than 1500 citizens of Kennewick, Richland and Benton City were guests of the Yakima Fruit Growers' association at the grand opening of the big "Y" cold storage plant just completed here.

Manager C. H. Swigart of Yakima briefly reviewed the origin and progress of Yakima's foremost pioneer cooperative marketing organization through which the construction of the plant was possible at a cost of more than $75,000, and with a storage capacity of 100 carloads (75,000 bores) of apples in this first unit, which, he said, was only one-half the size of the plant ultimately contemplated.

West Side Irrigation

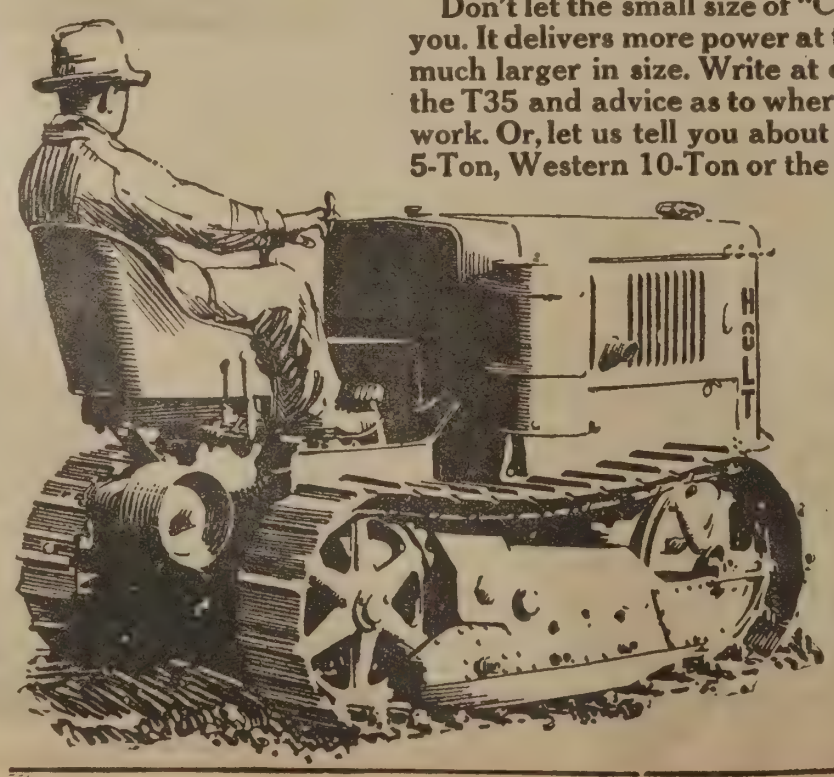
Further evidence of the beneficent effect of irrigation in western Washington in territory with normal precipitation is cited by Dan A. Scott, director of the state department of conservation and development, and Marvin Chase, state hydraulic engineer, following an inspection of the Yelm irrigation district.

With 3000 acres under cultivation, 350 of which were brought under this year, the Yelm district shipped 200 tons of fruit this season, the strawberries averaging 275 quarts an acre and red raspberries 300 quarts.

PUT IMPLEMENTS UNDER COVER.

Last winter some of your implements weathered the storms out in the open. Shed them this fall.

Endurance



"Caterpillar" T35 Tractor conclusively proves that neither power nor endurance need be sacrificed to produce a tractor of small size and light weight. The T35 weighs but 4000 pounds and measures only 48 inches wide, yet it has 15 drawbar horsepower and maintains the same high standard of economy, dependability and endurance that have always marked Holt products. Better qualities of steel, improved methods of heat-treatment, advanced design, enabled Holt to make this achievement—the supreme small tractor.

Other factors contributing to T35 endurance are the exacting standards of accuracy in workmanship; the perfect system of lubrication—full force-feed for the motor, oil baths for gears, Alemite fittings in place of grease cups; complete enclosure of all working parts from dust and dirt; simplicity; easy accessibility; numerous other features.

Don't let the small size of "Caterpillar" T35 Tractor mislead you. It delivers more power at the drawbar than many tractors much larger in size. Write at once for full information about the T35 and advice as to where you can see it on display or at work. Or, let us tell you about larger "Caterpillar" Tractors—5-Ton, Western 10-Ton or the big-power 75.

$375 SAVING.

Manufacturing economies resulting from increased production which was necessary to meet the great and growing demand for "Caterpillar" T-35 tractors have made possible a recent reduction of $375 in the price of this "supreme" small tractor.

ORCHARD AND GARDEN

Good Points in Apple Thinning

By PROF. O. M. MORRIS,

Head of Department of Horticulture, W. S. C.

Orchardists are just now experiencing the results of proper or improper thinning during the 1922 season. In some orchards good fruit is being harvested because of proper practices, including proper thinning. In others inferior fruit is the result of inferior methods. Therefore it seems appropriate to discuss thinning at this time, though it is several months before actual thinning will be again in order. We recommend that the reader study carefully this article and two others that will follow it, then clip them out and put them away for study again from time to time throughout the season as various of the problems affecting thinning arise. As Professor Morris shows, thinning involves much more than the mere removal of some of the apples. It even involves soil tillage this fall.—Editor.

ARTICLE ONE.

The primary object of thinning apples in the orchards of Washington is to increase the net profits from the crop.

This is accomplished in four different lines of results: First, by increasing the size of the fruits permitted to mature; second, by increasing the per cent of the best grades, as extra fancy and fancy; third, by reducing the harvest cost of the crop; and fourth, by reducing the effects of an overload of fruit on the trees. The first three lines have been discussed fully from time to time.

A tree carrying an overload of fruit will produce its maximum tonnage, but this is almost sure to reduce the possibility of a crop the following year. Trees may bear a good crop year after year. This activity varies with the variety, but the load must be reduced to much less than a normally full crop, or in most cases even a fair crop, before the fruits will grow to extra large size. A Jonathan tree capable of producing 10 boxes of fruit when loaded so that the size of the fruit will be 188 to the box, will not produce 10 boxes of fruit if thinned down so that there are 960 apples instead of 1880. This thinning would require that the apples would double in size or jump from 188s to 96s. The larger sizes are produced by the tree only under conditions where the trees have a surplus of leaf and growth power above that of the actual requirements for the carrying of the crop of fruit.

Varieties Respond Differently.

The response of the different varieties to the thinning is a factor that requires careful attention. The habit of growth and the distribution of fruiting wood makes the very mechanics of the tree capable of responding in different degrees to the different types of thinning practiced. I want to mention only a few of the varieties in order to give the idea that I have in mind.

The Winesap tends to produce heavy crops regularly and is one of the best annual bearers in our northwest fruit list. The variety has a strong tendency to produce a few main branches in the trees and have each of these to continue the development of the one terminal bud or branch and of others to be distinctly lateral in development. Most of the fruiting wood is started as spurs on the lateral branches and there are relatively few fruits produced on spurs attached directly to the main branches. The fruit spurs have a good capacity for branching and producing fruiting spurs of short to medium length and only under a distinctly disturbed condition will the fruiting spurs revert to twig growth. We see this manifest very often in certain parts of the tree top where all of the spurs are small, short, semi-drooping and producing smaller fruits each succeeding year.

When some changed condition causes the fruiting spurs to turn from annual blossom production to twig growth they quickly reach their wood production limit and turn again to blossom production. The branching spurs do not have the desirable characteristic of maintaining one as a leading branch and keeping the others secondary. This develops a large amount of slender spurs of short or intermediate length and a large number of these accumulating in one area of the tree causes the noticeably strong tendency of this variety to produce small fruit as the tree attains age.

Remove the Terminal Fruits.

The twigs and terminal buds are small and wirelike in character, and carry all of the fruit to maturity. The leaves are small and not overabundant. In thinning it is advisable to remove the terminal fruits in weak branches and reduce the cluster to a single fruit. Thin them to seven or eight inches apart.

This variety carries a relatively high market value for small sized fruit, but of course there is a good difference in price of fruits of 163 and larger and those of smaller size. Color requirements in this variety are much easier attained than with the Jonathan and Stayman, hence the distribution of fruit is relatively more important and the exposure to direct sunlight is relatively less important. This variety should be thinned early and the thinning can be done very early as few fruits fall after the crop is said to have set.

What has been said of the Winesap can with slight modification be said of the Jonathan. Both varieties have an admirable capacity to produce a blossom bud one year and continue twig growth the next year and in this way alternate between fruit and wood production. Both varieties have a weakness in their tendency to overload with fruit and reduce the vigor of the tree.

Rome Beauty Clusters.

The Rome Beauty has an unusual capacity to alternate between blossom production and twig growth in the same spur or twig. The short twig growth is the normal tendency of the variety. It is an annual producer and usually at maturity is persistent in its fruiting habit. It has a strong tendency to produce fruits in clusters on the end of the branches, which, with a load of maturing fruit, becomes pendulous. The extremely large size of this variety do not require high color attainment, and if well supported on strong wood do not require thinning for the best distribution of sunlight. Small Rome Beauty apples are not desirable. It is advisable ordinarily to thin to one fruit per cluster. In heavy crops thin to one fruit per cluster and do not permit the fruit to be closer than eight inches of each other.

The constant interchange of action between fruit producing and twig growth of all the branches on the tree is an extremely marked characteristic of this variety. A careful system of heading back the side wood in smaller branches is necessary to keep the tree producing its load where it can be well supported. The leaves are large, vigorous and apparently very effective as digestive organs so that the spurs often produce a fruit and twig four to six inches long the same year and if the soil is fertile and the trees have received moderate pruning, the same spur that is this year producing a fruit may produce a twig of four to six inches and terminate it with a fruit bud for next year's growth.

Every Other Year Habit.

In the Wagener, Spitzenberg and Fameuse, we have another peculiar type of plant. These varieties produce their fruit on very short spurs on the side of long polelike branches. They ordinarily produce one fruit on a spur and the fruits have a strong tendency to be quite uniform in size unless the tree is extremely overloaded. These varieties are extreme in their development or biennial producing habit and will often go to the extent of one large branch producing a heavy crop this year while the remaining part of the tree is barren and the following year reverse the condition. In these varieties the fruit spurs have almost lost their individuality and act in mass. The foliage may be removed from the individual spurs, but the fruit produced by those spurs will be quite normal in size. It is ordinarily not possible to have even annual production unless it is done by alternating large branches in the tree or holding the production far below the maximum crop that the tree is able to produce in good form. The thinning of fruits on these varieties should be gaged on the full capacity of the tree to make good-sized apples. The growers usually permit them to bear a full load when they fruit, knowing that it will be necessary to thin them far below a reasonable crop before it will have much influence in encouraging the development of a crop the following year.

Heavy foliage—heavy crop, lighter thinning.

Light foliage—light crop, heavy thinning.

In the next article Professor Morris will discuss the influence of certain cultural practices on thinning. The amount of plant food available is one factor in determining what thinning to do and the manner in which to do it.

BLACKBERRIES BRING GOOD RETURNS.

Mrs. E. F. Benson of Gig Harbor reports good returns from a few Himilaya blackberry vines, and is putting out more sets. Last spring they put out 44 tips and by September 1 they had grown to a length of 14 feet.

"We like them better than the Everbearing blackberry," said Mrs. Benson, "since they sell equally as well and they are not so hard to pick. There is some difference of opinion in this regard, but there is not much preference for either kind of fruit on the local market."

Destroying Cabbage Pests

To the Editor: I wish to tell my friends how I beat the cutworms on my cabbage plants. After I set out the plants I sprinkled a good, liberal supply of pulverized sulphur on and around each plant. Then I kept watch, and as soon as the cabbage louse began to show I sprinkled again with fine sulphur dust. Up to date I have the louse whipped and all cabbages are looking fine. Also there are no cabbage worms, either. Sprinkling the fine sulphur dust on and around the plants after setting out, and then about twice during the summer is enough to keep the plants clear of the pests. This also works on tomato plants or any other kind of garden truck. CHARLES H. DAVIDSON.

Thorp, Wash.

Millionaire Pears

Anjou pears, which are the choicest fruit grown in the Yakima (Wash.) valley and which brings the highest price a box of any pears or apples, have mostly gone into local storage to await the time when the market is right, says the Yakima Herald. Anjous are the pear which the wealthy New Yorkers fancy and the millionaires of that great metropolis at Christmas time pay a good price for this luscious fruit. It has been termed "the millionaire's pear" and Yakima valley Anjous have brought as high as $6 a box.

Very few cars of Anjous have been forwarded, but are being held in storage until the proper time for shipment. They are usually handled so as to be ripe by Christmas. Unusual pains are taken in handling this fruit.

Sorters use canvas gloves and especial care is exercised in the handling. The packers also wear gloves and they are paid by the day instead of by the box to insure very careful handling, as the pears must be as near perfect as possible to qualify for the highest class trade in New York. The packers are paid $5 a day.

SILO-FILLING—AND GOODYEAR BELTS

The most satisfactory belt he has ever used, says Harold H. Holtzman, of Wheaton, Illinois, is the Goodyear Klingtite Belt. First he threshed with it, then used it in silo-filling, corn-shelling, hay-pressing, feed-grinding and wood-cutting.

"It is a powerful belt," Mr. Holtzman reports, "delivering steadily and sturdily the full power required for the cutting and for forcing the ensilage up the stackpipe. It holds the pulleys in a slipless grip, yet runs freely, so that there is never any worry about overheating the engine bearings. It performs the same in any weather." Goodyear Klingtite Belts need no breaking in. Their special construction so distributes the load that ply separation is unknown to them. They outwear ordinary belts, and earn their reputation as the best help on the farm.

Efficient, economical Goodyear Klingtite Belts come in endless type for all heavy duty and in suitable lengths for water-pumping, cream-separating, churning, electric lighting plant, washing machine and other light drives. For further information, write to Goodyear, Akron, Ohio, or Los Angeles, California.

GOODYEAR

Twenty-Sixth Chapter of Fair Book

(Continued from page eleven.)

one of the best ever seen on the grounds and George M. Wilson, who judged all breeds, was well pleased with the turnout. The Shires had the largest number and some of the best quality, especially in the female classes. The Clydesdales were not far outclassed. In fact, the quality and type was far above the average. The Percherons also had a creditable showing. No Belgians were shown. The majority of all breeds came from the Inland Empire.

The Shires were exhibited by H. W. Merritt and Mr. and Mrs. W. A. Clark, the former breeder, taking the junior and grand champion honor with Forrester Prince, a 2-year-old stallion, with splendid quality and substance. The senior and grand champion mare, Martha Washington, was owned by the same breeder. She is an aged mare of great draft quality, with much bone, well muscled and spirited.

The Clydesdales of the R. C. McCroskey farm were outstanding. His champions were Lady Ramsey, a 7-year-old, and Prince, an outstanding colt.

E. L. Mulhall of Buena showed the senior and grand champion Percheron mare in Lenore. The grand champion stallion, Mignon, a horse 19 years old, but sound and clean, was a wonderful animal for his age. He is owned by J. A. Adams & Sons of Yakima.

Exhibitors—J. A. Adams & Son, Yakima, Wash.; Emmett Mulhall, Buena, Wash.; H. C. Doepke, Fairfield, Wash.; Earl Mulhall, Grangeville, Idaho; W. A. Clark, Latah, Wash.; Mrs. W. A. Clark, Latah, Wash.; H. W. Merritt, Rosalia, Wash.; O. B. Skidmore, Plummer, Idaho; Robert C. McCroskey, Garfield, Wash.; Will Hill, Buckley, Wash.; Robert McKendricks, Yakima, Wash.; Howard Fisher, Mabton, Wash.; E. N. Eagle, Toppenish, Wash.

Shires.

Stallions: Four years or over—1, Clark, on Eureka Nig 2d (senior champion); 2, Skidmore, on General Leonard Wood. Three-year-olds—1, Skidmore, on Teddy R.; 2, H. W. Merritt, on Blue Ribbon Winner 2d. Two-year-olds—1 and 3, Merritt, on Forest Prince (junior and grand champion) and Billo Billie; 2, Clark, on Mack. Yearlings—1, Mrs. W. A. Clark, on Bardon Menestrel 2d; 2, Merritt, on Sir Gould. Colt—1, Clark, on Rothwell Forester 2d; 2, Merritt, on Irvin Washington.

Mares: Four years or over—1 and 2, Merritt, on Martha Washington (senior and grand champion) and Lady Victoria Rose; 3, Clark, on Colony Heroine. Three-year-olds—1, Merritt, on Kcota Molly. Two-year-olds—1, Clark, on Mary Pickford. Yearlings—1, Mrs. Clark, on Colony Missie (junior champion); 2, Merritt, on Nancy Lee; 3, Skidmore, on Maud Shotkin. Filly—1, Merritt; 2, Clark.

Mare and foal—1 and 3, Clark; 2, Merritt. Produce of mare—1, Skidmore; 2 and 3, Clark. Stallion and three mares—1, Merritt; 2, Clark.

Percherons.

Stallions: Four years or over—1 and 2, Adams, on Mignon (senior and grand champion) and Carmont. Yearlings—1, Adams, on Kasba (junior champion). Colt—Adams, on unnamed.

Mares: Four years or over—1 and 2, Emmett Mulhall, on Lenore (senior and grand champion) and Mabel; 3, Adams, on Iona. Three-year-olds—1, Adams, on Nona. Two-year-olds—1, Emmett Mulhall, on Marise (junior champion); 2, Doepke, on June Waltz. Filly—1, Mulhall; 2, Adams.

Mare and foal—1 and 3, Mulhall; 2, Adams. Produce of mare—1 and 2, Adams; 3, Mulhall. Stallion and three mares—1, Adams.

Percheron Society Specials.

Colt—1 and 2, Adams, on Buster (champion) and Kasba.

Mares: Four years or over—1 (champion) and 2, Mulhall; 3, Adams. Two-year-olds—1, Mulhall; 2, Doepke. Fillies—1, Mulhall; 2, Adams.

Clydesdales.

All awards in the Clydesdales went to Robert C. McCroskey of Garfield, Wash., the only exhibitor.

THE HOG SHOW.

The swine division was larger this year than last and it was necessary to build two more rows of pens to accommodate all comers. The Poland Chinas had the largest number, some of which were from new herds. There were many local breeders and several club members who showed. The Duroc Jerseys were exceptionally high

Busch's Royal Pathfinder, grand champion Duroc Jersey boar at the state fair, owned by Frank P. Busch, Johnson, Wash.

in quality and type. The Berkshires made a strong show, as did also the Chester Whites. Both the Hampshire and the Tamworth breeds had less competition than the other breeds, but each made a creditable showing. Three futurities drew out much quality young stuff. A. J. Firkin of Nampa, Idaho, judged the Polands, while Charles M. Talmadge of Salem judged all other breeds.

Poland Chinas.

Exhibitors—Baker & Paddison, Yakima, Wash.; E. M. Dorsey, Pasco, Wash.; B. B. & Ivan B. Fenton, Sunnyside, Wash.; J. F. Torgazon, Silverton, Ore.; John Funke, Cottonwood, Idaho; H. W. Hastings, Thornton, Wash.; B. F. Kammerzell, Colfax, Wash.; Arthur King & Sons, Yakima, Wash.; T. S. Lester, Sunnyside, Wash.; John F. Lynn & Son, Peach, Wash.; E. O. Loe, Silverton, Ore.; George M. Longknecht, Yakima, Wash.; Howard McKinley, Cottonwood, Idaho; E. S. McCulloch, Sunnyside, Wash.; James Mulkey, Silverton, Ore.; W. A. May, Toppenish, Wash.; Harvey Norris, Goldendale, Wash.; L. J. Oder, Yakima, Wash.; A. Prior, Yakima, Wash.; Washington State College; E. V. Taylor, Selah, Wash.; J. P. Thurston, Yakima, Wash.; Harold Van Wechel, Yakima, Wash.; H. Wyckoff, Toppenish, Wash.; Elmer A. Smith, Thorp, Wash.

Eureka Nig 2d, senior champion Shire stallion at the state fair, owned by W. A. Clark, Latah, Wash.

Boars: Aged boar—1, Wyckoff, on Iowa (senior and grand champion); 2, Lester, on Cedar Giant; 3, McCulloh, on Brunk's Great Timm. Senior yearling—1, Loe, on Wonder Jones; 2, Fentons, on Hillcrest Lad. Junior yearling—1, Kammerzell, on Designer's Model; 2, Baker & Paddison, on Big Giant; 3, Torgazon, on Maplehill Master. Senior pig—1 and 3, Oder, on Naches Big Bone and Naches Ranger; 2, Thurston, on unnamed. Junior pig—1, Baker & Paddison, on Columbia Chief 2d (junior champion); 2, Kammerzell, on Fashion Archdale; 3, May, on Black Orphan.

Sows: Aged sow—1, Lengknecht, on Diamond (senior champion); 2, Loe, on Wonderful; 3, Oder, on Lady Master. Senior yearling—1, Loe, on Lady Jones; 2, Kammerzell on Fashion's Pet 2d. Junior yearling—1, Longknecht, on Bessie; 2 and 3, Loe, on Miss Liberator and Wonderful Giant. Senior pig—1, Longknecht, on Maxine (junior and grand champion); 2, Washington State college, on Giant Lady 2d; 3, Loe, on Miss Buster. Junior pig—1, Longknecht, on Helen A. Wonder; 2, Kammerzell, on Archdale's Best; 3, Loe, on Miss Sally Peter.

Groups: Aged herd—1, Loe; 2, Kammerzell; 3, Baker & Paddison. Young herd—1, Kammerzell; 2, Loe; 3, Oder. Young herd bred by exhibitor—1, Kammerzell; 2, Loe; 3, Oder. Get of sire—1, Kammerzell; 2, Loe; 3, Oder. Produce of sow—1, Kammerzell; 2, Loe; 3, Oder.

Poland China Futurity.

Boars: Junior yearling—1, Baker & Paddison, on Big Giant. Senior pig—1 and 2, Oder, on Naches Big Bone and Naches Ranger; 3 and 4, Lester, on Superba Model and Superba Model 2d. Junior pig—1 and 4, Baker & Paddison, on Columbia Chief 2d and Montana Chief; 2 and 6, Kammerzell, on Fashion Archdale and Royal Checkers; 3, 5 and 7, May, on Black Orphan, May's Orphan and Smooth Orphan; 8, Taylor, on Buster Mastadon.

Sows: Junior yearling—1, Longknecht, on Bessie; 2 and 3, Prior, on My Pet and Big Queen 2d. Senior pig—1, Longknecht, on Maxine; 2 and 3, Prior, on A. Prior's 11th and A. Prior's 12th; 4 and 7, Oder, on Naches Queen and Naches Lass; 5 and 6, Lester, on Fancy Clarinda 2d and Fancy Clarinda. Junior pig—1, Longknecht, on Helen A. Wonder; 2, 3 and 7, Kammerzell, on Archdale's Best. Archdale's Queen and Archdale's Pet; 4, Longknecht, on Ella J.; 5, Fentons, on Hillcrest Lil; 6, Oder, on Queen of Mastadons; 8, Van Wechel, on Sis Clansman 1st.

Senior litters—1, Oder, on litter out of Miss Price; 2, Lester, on litter out of Fancy Maid. Junior litters—1 and 4, Kammerzell, on litters out of Fashion Pet 2d and Clansman Kind; 2, Baker & Paddison, on litter out of Daisy May 2d; 3, Longknecht, on litter out of Bessie; 5, Fentons, on litter out of Hillcrest Fancy A; 6, Oder, on litter out of Miss Price; 7, King & Son, on litter out of Lady Mastadon A; 8, May, on litter out of Smooth Big Lady.

Duroc Jerseys.

Exhibitors—Frank P. Bush, Johnson, Wash.; S. E. Chaffee, Sunnyside, Wash.; S. D. Cornell, Grandview, Wash.; J. K. Conzigns, Yakima, Wash.; F. D. Gano, Sunnyside, Wash.; Phillips Hitchcock, Sunnyside, Wash.; Chester Murphy, Sunnyside; H. W. Turner, Sunnyside; F. M. Yockey, Outlook, Wash.; State College of Washington; Wallace & Fordyce, Sunnyside, Wash.

Boars: Aged boar—1, Busch, on Busch's Royal Pathfinder (senior and grand champion); 2, Cornell, on Great Wonder Chief; 3, Turner, on Colonel Pathfinder. Senior yearling—1, Cornell, on Grandridge Wonder Pride. Junior yearling—1, Murphy, on Pathfinder 1st; 2, Cornell, on Grandview Wonder Chief 7th; 3, Conzins, on Orion Joe Jr.; 4, Busch, on Woodland Golden Model. Senior pig—1 and 2, Turner, on Royal Pathfinder Jr. 1st (junior champion) and Lady Orion's Pathfinder; 3, Murphy, on Crimson Chief. Junior pig—1 and 2, Busch, on Skookum Pathfinder and Imikash Pathfinder; 3, Chaffee, on Glencliff Chief.

Sows: Aged sow—1 and 3, Cornell, on Belltrama Defender Maid and Sensation Lady 1st. Senior yearling—1, Cornell, on Miss Hazel 2d (senior and grand champion). Junior yearling—1 and 2, Busch, on Woodland Model 1st and Woodland Model 2d; 3, Turner, on I Am Lady Orion. Senior pig—1, Cornell, on Grandridge Wonder Girl 4th (junior champion); 2, Turner, on Lady Orion 3d; 3, State College of Washington, on Illustrator I Am 2d. Junior pig—1 and 2, Cornell, on Grandview Wonder Chief Girl 7th and Grandview Wonder Chief Girl 18th; 3, Turner, on Yakima Charlotte.

Groups: Aged herd—1, Busch; 2, Cornell; 3, Turner. Young herd—1, Turner; 2, Murphy; 3, Cornell. Herd bred by exhibitor—1, Turner; 2, Cornell; 3, Murphy. Produce of sow—1, Turner; 2, Busch; 3, Murphy. Get of sire—1, Turner; 2, Busch; 3, Cornell.

Duroc Jersey Futurity.

Fall pigs: Boars—1 and 2, Turner, on Royal Pathfinder Jr. 1st and Lady Orion's Pathfinder; 3, Murphy, on Crimson Chief; 4 and 7, Busch, on Golden Western and Golden Model; 5 and 6, Cornell, on Grandview Wonder Chief 2d and Grandview Wonder Chief 1st. Sows—1, 3 and 4, Cornell, on Grandridge Wonder Girl 4th, Grandview Wonder Girl 1st and Grandview Wonder Girl 14th; 2, 6 and 7, Turner, on Lady Orion 3d, Lady Orion 4th and Lady Orion Mary; 5, Murphy, on Murphy's Pathfinder Queen; 8, Busch, on Sunset 1st. Litter—1, Turner; 2, Murphy; 3 and 4, Cornell; 5, Busch.

Spring pigs: Boars—1, 2 and 4, Busch, on Skookum Pathfinder, Imikash Pathfinder and KupKup Pathfinder; 3, Chaffee, on Glencliff Chief; 5 and 6, Hitchcock, on unnamed; 7, Cornell, on unnamed. Sows—1, 2, 3 and 4, Cornell, on Grandview Wonder Chief Girl, Grandview Wonder Chief Girl 18th, Grandview Wonder Chief Girl 8th and Grandview Wonder Chief Girl 19th; 5, Turner, on unnamed; 6 and 7, Busch, on unnamed; 8, Hitchcock, on unnamed. Litter—1 and 4, Busch; 2, 7 and 8, Cornell; 3, Turner; 5, Hitchcock; 6, Wallace & Fordyce.

Berkshires.

Exhibitors—Ray Banks, Moxee City, Wash.; Albert Booker, Donald, Wash.; J. A. Bull, Ellensburg, Wash.; James Bonner, Silverton, Ore.; Kenneth E. Cain, Yakima, Wash.; C. O. Goodwin, Donald, Wash.; Stubblefield Home, Walla Walla, Wash.; Orval R. Loe, Silverton, Ore.; Edwin Mills, Ellensburg, Wash.; Fred H. Sinnes, Prosser, Wash.; Pearl Wood, Silverton, Ore.; Kenneth B. Wilcox, Wapato, Wash.; Helen Wilson, Ellensburg, Wash.; Simonson Hog company, Buena, Wash.

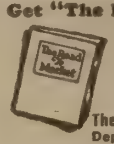
Boars: Aged boar—1 and 2, Simonson, on Crestland Bob (senior and grand champion) and Crestland King; 3, Banks, on Fruitland's Rival 4th. Senior yearling—1, Cain, on Crestland Cain. Junior yearling—1, Sinnes, on Rival's Monarch 4th; 2, Banks, on Rival's Rivalry; 3, Simonson, on Buena Prince. Senior pig—1 and 2, Sinnes on Dominator's Royal Superb and Dominator's Royal Superb 2d; 3, Wood, on Producer. Junior pig—1 and 2, Sinnes, on Monarch's Royal Superb (junior champion) and Monarch's Royal Superb 2d; 3, Stubblefield, on Monarch Sentinel.

Females: Aged sow—1, Banks, on Silverbrook Violet 3d. Senior yearling—1, Goodwin, on Laurel Ione 2d; 2, Simonson, on Riverby Rose. Junior yearling—1 and 2, Wilcox, on Ames Typess 3d (senior champion) and Riverby Robin 15th; 3, Banks, on Silver Brook

(Continued on page sixteen.)

The Washington state fair is a child of the state department of agriculture, and as such was carefully watched over by department officials. Director E. L. French of the department was present throughout the entire week, as were also F. H. Gloyd, his assistant; Dr. Pelton of the live stock department, Dr. Donohue of the dairy branch and others participating in the common effort to make the fair a worthy offspring, which it proved to be. Governor Hart, a silent partner in all state departments, was present two days of the fair. General satisfaction was expressed upon announcenfent by Director French early in the week that H. P. Vermilye, now closing his second season as secretary of the fair, would be at the helm again for the 1923 exposition.

The weather man was kind ;the fair in general was of high merit; the entertainment programs were worthy, and the crowds goodly in numbers and appreciative. Wednesday was Yakima day and if one wanted to buy anything he had to go to the fair to do it, for the town was closed all afternoon while everybody went to the fair. Attendance for that day approximated 20,000, bringing the week's total well toward the 75,000 mark.



You Know Farming Now Learn MARKETING

Knowing the production end of farming is only half the game. The *selling* of farm products is where you make or lose money. Know, how when, and where to sell at a real profit. You can learn successful methods from 93 national authorities who have pooled their knowledge and experience with The American Institute of Agriculture under the direction of George Livingston, former Chief, U. S. Bureau of Markets.

Let Experts Train You at Home

These experts give you individual training every detail of marketing. Use spare time at home learning marketing methods that increase your profit or fit you for one of the many responsible positions offered to men trained in marketing. Your choice of one or all of 6 complete courses in Livestock, Grain, Dairy, Fruits & Vegetables, Poultry & Eggs, Cotton.

Get "The Road To Market" FREE

This booklet shows how training in marketing benefits everyone from farmer to consumer. It points the *open* road to profitable farming and personal success. Fill out and mail coupon now.

WADE'S ANNOUNCE NEW SERVICE FOR FAMOUS NEW PEORIA DRILLS

We now offer you a personal service in obtaining the best drill in the world for your fall seeding. If you live in Oregon, Washington or Idaho our traveling representative whose route is nearest you will call and personally give you drill facts, which have increased grain yields. Just fill out the coupon and ask us to have the Peoria drill man call on you. You will be under no obligation.

We'll also be glad to send you, FREE, new catalogues on the New Peorias, 12 sizes, single and double disc, plain or fertilizer, horse-drawn or tractor hitch.

Don't Take Chances With a Worn-Out Drill

New Peoria disc shoedrills bring full, even stands. The patented disc shoe cuts trash, stalks, hard ground; shoe opens furrow; seed dropped evenly on packed seed bed; every seed covered, safe from wind and birds; all seeds germinate, sprout, grow, head out and ripen uniformly.

Now Is the Time to Get the Facts

A new Peoria will not only bring you increased yields but it will also save you money on seed. Send for catalog of users' testimony. Your neighbors will tell what it has done for them, too.

Fifty-seven years of experience back of Wade lines. Since 1865 we have been supplying farmers of the northwest with implements and machinery particularly adapted to the needs of this territory. The New Peoria is one of these "hand-picked" implements.

Act Now. Mail Coupon Today.

R. M. WADE & CO. SINCE 1865 PORTLAND, ORE.-SPOKANE, WASH.

R. M. Wade & Co., Dept. W, Portland, Ore., or Spokane, Wash.

Please have your New Peoria drill man call on me. Also send by return mail free catalog and 1922 prices. This is not an order and does not obligate me to buy.

Four Best Winter Wheats

By E. F. GAINES Cerealist, Division of Farm Crops
Agricultural Experiment Station, Pullman, Wash.

There are certain varieties of fall wheat that have a right to a larger share of the wheat land of Washington. Each of the four varieties, Hybrid 128, Triplet, Turkey and Red Russian, is best in the particular section to which it is adapted. There are other varieties, such as Fortyfold, Jones Fife and Jenkins Club, that are being grown almost exclusively in certain sections, but careful comparative tests over long periods of time show them to be inferior to the four named above.

The tests at Pullman in field plots side by side for the last nine years show the following average yields per acre:

Triplet	45.9 bushels
Hybrid 128	45.5 bushels
Turkey Red	39.7 bushels
Red Russian	39.0 bushels
Jones Fife	37.9 bushels
Fortyfold	31.5 bushels

Jenkins Club has been tested for the last four years only, during which time the average yield has been 5.6 bushels below Hybrid 128.

Pullman is located in the heart of the Palouse country and is representative of the principal wheat belt of the state. The tests shown above indicate that Triplet and Hybrid 128 are distinctly superior to the other varieties mentioned for the Palouse country.

Turkey is the best variety for the drier areas of the Big Bend. The records from the Dry Land branch experiment station at Lind show that it is the safest wheat on the average when the season is favorable for fall seeding. It stands drought well, yields well, is heavy, and resists smut. The four-year average yield of the principal varieties at Lind in bushels per acre is shown below:

Turkey Red	10.3 bushels
Hybrid 128	8.9 bushels
Jones Fife	8.8 bushels
Triplet	8.1 bushels
Fortyfold	6.8 bushels

In addition to the larger yield of Turkey, it brings the highest price on the market, due to its superior quality.

Red Russian has a place in Washington, west of the Cascade mountains. It matures late and its broad leaves shade the ground well, thus smothering weeds somewhat better than other varieties, it is claimed. The yield, however, is not superior to Hybrid 128 and Triplet, as the following five-year average in bushels per acre from the experiment station at Puyallup shows:

Hybrid 128	36.5 bushels
Triplet	36.4 bushels
Red Russian	36.4 bushels

Fortyfold and Jones Fife are evidently inferior, for they are no longer listed in the variety test publications from the Puyallup experiment station.

The main advantage Red Russian has over Hybrid 128 and Triplet is that it is universally grown west of the Cascades and seed is readily available. The fact that it matures later and has grain of poorer quality are factors that may not affect its value, depending upon local uses for the crop. Red Russian was once the dominant winter wheat in Whitman and Spokane counties, but it is now being replaced by Triplet, Hybrid 128 and Turkey.

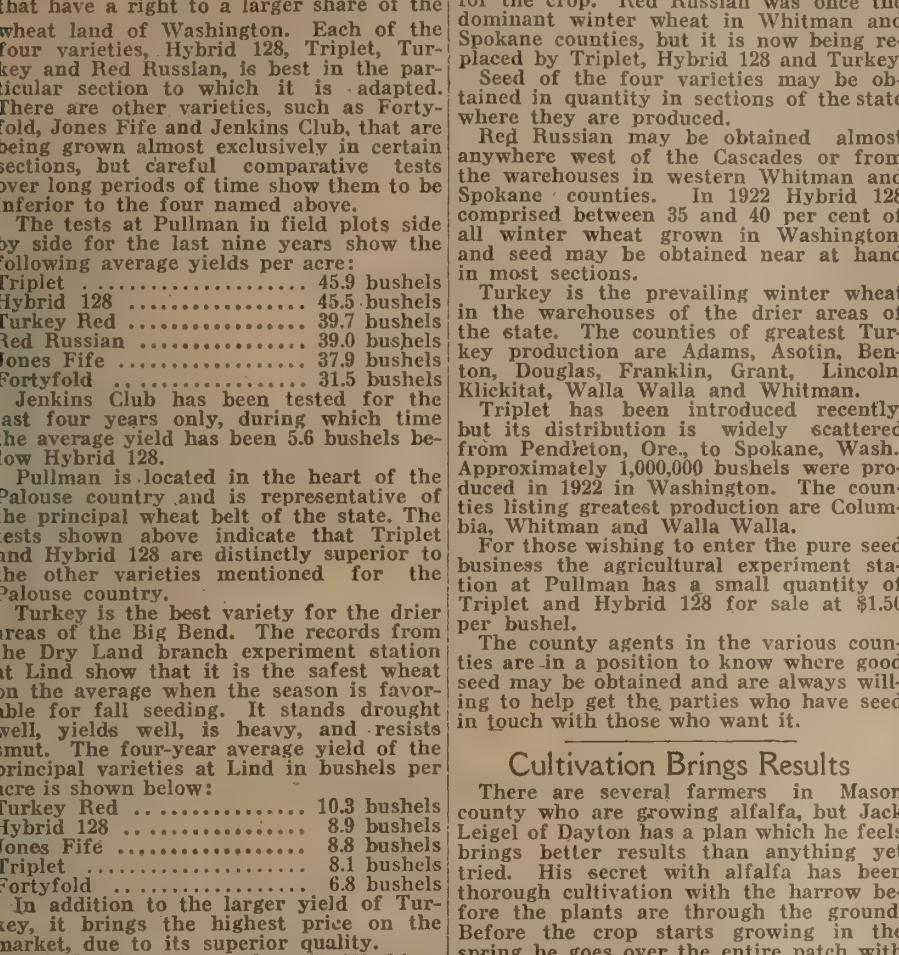
Seed of the four varieties may be obtained in quantity in sections of the state where they are produced.

Red Russian may be obtained almost anywhere west of the Cascades or from the warehouses in western Whitman and Spokane counties. In 1922 Hybrid 128 comprised between 35 and 40 per cent of all winter wheat grown in Washington, and seed may be obtained near at hand in most sections.

Turkey is the prevailing winter wheat in the warehouses of the drier areas of the state. The counties of greatest Turkey production are Adams, Asotin, Benton, Douglas, Franklin, Grant, Lincoln, Klickitat, Walla Walla and Whitman.

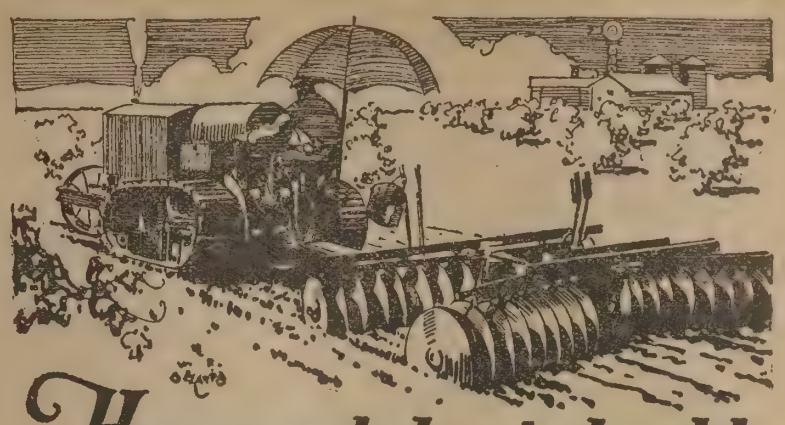
Triplet has been introduced recently, but its distribution is widely scattered from Pendleton, Ore., to Spokane, Wash.. Approximately 1,000,000 bushels were produced in 1922 in Washington. The counties listing greatest production are Columbia, Whitman and Walla Walla.

For those wishing to enter the pure seed business the agricultural experiment station at Pullman has a small quantity of Triplet and Hybrid 128 for sale at $1.50 per bushel.



The county agents in the various counties are in a position to know where good seed may be obtained and are always willing to help get the parties who have seed in touch with those who want it.

Cultivation Brings Results



There are several farmers in Mason county who are growing alfalfa, but Jack Leigel of Dayton has a plan which he feels brings better results than anything yet tried. His secret with alfalfa has been thorough cultivation with the harrow before the plants are through the ground. Before the crop starts growing in the spring he goes over the entire patch with a spike-tooth harrow, which takes out all weeds and blue grass which has started growing during the winter months. The harrow is again used immediately after the removal of the first crop, which takes out all weeds and puts the soil in excellent condition for growing a second crop.

STAHL GOES TO CALIFORNIA.

J. L. Stahl has tendered his resignation as horticulturist and assistant superintendent of the western Washington experiment station at Puyallup and left for Davis, Cal., where he will become a member of the experiment station staff at University of California. Mr. Stahl has been with the experiment station for the last 11 years and his place will be filled temporarily by C. L. Vincent from the state college pending the appointment of Mr. Stahl's successor by the board of regents.

The four best winter wheats—from left to right they are: Red Russian, Turkey, Triplet, Hybrid 128.

How much heat should a tractor oil stand?

And how long should it "stand up" in that heat? Tractor oil *must* resist high operating temperatures if it is to keep your working equipment on the job.

Zerolene resists heat. Fill your tractor crankcase with this lubricant of stability, refined from crudes carefully selected for heat-resisting quality.

Oiliness — Purity

Zerolene penetrates to small-clearance bearings and clings evenly. At the same time it splashes freely, and you get all the power your tractor engine is rated to deliver.

Because it has purity, Zerolene burns clean, and deposits but a small amount of carbon, so soft and flaky that most of it blows out harmlessly with the exhaust. An exclusive high-vacuum refining process has removed all impurities, yet retained the highest lubricating value.

Consult the Zerolene Correct Lubrication Chart for the correct grade for your tractor, truck or automobile.

STANDARD OIL COMPANY
(California)

"An analysis of Zerolene shows that it maintains always the right 'body' at all operating temperatures, following in close relation the decrease in bearing clearances caused by heat expansion."
—*Board of Lubrication Engineers.*

The Standard Oil ZEROLENE For Motor Cars

more power & speed ~ less friction and wear ~ thru *Correct Lubrication*

BN TRUE TO NAME NURSERY STOCK 1890

"As Ye Sow" - - -

Truly, "as ye sow, so shall ye reap." The only question is: Are you certain of what you sow? Are your nursery products guaranteed "True-to-Name"?

All doubt of the harvest of your seed is removed when you buy from this nursery—that is, if 32 years' successful "True-to-Name" business means anything to you. Price List and Catalog Upon Request

Twenty-Sixth Chapter of Fair Book

(Continued from page fourteen.)

Beauty. Senior pig—1 and 2, Sinnes, on Dominator's Royal Fashion (junior and grand champion) and Dominator's Royal Fashion 2d; 3, Wilcox, on Bunty's Typess. Junior pig—1 and 2, Sinnes, on Monarch's Royal Fashion and Monarch's Royal Fashion 2d; 3, Bonner, on Hillbrook Julia.

Groups: Aged herd—1, Banks. Young herd—1 and 2, Sinnes; 3, Wood. Herd bred by exhibitor—1 and 2, Sinnes; 3, Wood. Get of sire—1 and 3, Sinnes; 2, Wood. Produce of sow—1 and 3, Sinnes; 2, Wood.

Berkshire Futurity.

Spring boars—1 and 2, Sinnes, on Monarch Royal Superb and Monarch Royal Superb 2d; 3, Stubblefield, on Monarch's Sentinel; 4, Banks, on Rival B; 5, Bull, on Sunset Duke 13th; 6, Stubblefield, on Monarch's Sentinel 2d; 7, Simonson, on Buena; 8, Wilcox, on Bunty's Best.

Spring sows—1 and 2, Sinnes, on Monarch Royal Fashion and Monarch Royal Fashion 2d; 3, Simonson, on Silver Buena Beauty; 4, Banks, on Silver Brook Beauty 8th; 5, Stubblefield, on Monarch's Mayflower; 6, Bull, on Sunset Duchess 7th; 7, Bull, on Sunset Duchess 8th; 8, Wilcox, on Bunty's Typess 4th.

Litters of four—1 and 3, Sinnes; 2, Simonson; 4, Wilcox; 5, Stubblefield; 6, Bull; 7, Banks.

Chester Whites.

Exhibitors—Fred Niesz, Wapato, Wash.; Leonard Newman, Thorp, Wash.; Purdin & Parker, Wapato, Wash.; Ed Schoel, Albany, Ore.; Frank Von der Heyden, Wapato, Wash.

Boars: Aged boars—1, Ed. Schoel, Albany, Ore., on Iowa Lad (senior and grand champion). Senior yearling—1, Frank Von der Heyden, Wapato, Wash., on Oak Prince; 2, Schoel, on Benton Chief. Junior yearling—1, Schoel, on Young Prince. Senior pig—1 and 3, Schoel, on Chief Justice Jr. (junior champion) and Buster; 2, Von der Heyden, on Oak Prince 2d. Junior pig—1, Leonard Newman, Thorp, Wash., on Kittitas King; 2, Schoel, on Prince; 3, Von der Heyden, on Western Fir.

Sows: Aged sow—1, Schoel, on Oregon Queen (senior and grand champion); 2, Von der Heyden, on Rollo's Choice; 3, Purdin & Parker, Wapato, Wash., on Perfection. Senior yearling—1 and 2, Purdin & Parker, on Perfection 4th and Perfection 5th. Junior yearling—1 and 2, Schoel, on Benton Pride and Benton Queen. Senior pig—1, Schoel, on Queen's Vesta (junior champion); 2 and 3, Von der Heyden, on Fir 2d and Fir 3d. Junior pig—1 and 2, Newman, on Kittitas Queen and Kittitas Queen 2d; 3, Schoel, on Bonnie.

Groups: Aged herd—1, Schoel; 2, Von der Heyden. Young herd—1, Newman; 2, Schoel; 3, Von der Heyden. Breeder's herd—1 and 3, Schoel; 2, Von der Heyden. Get of sire—1, Newman; 2, Schoel; 3, Von der Heyden. Produce of sow—1, Newman; 2, Schoel; 3, Von der Heyden.

Hampshires.

Exhibitors—S. E. Chaffee, Yakima, Wash.; J. M. Fruitts, Cambridge, Idaho; H. W. Hastings, Thornton, Wash.

All awards went to J. M. Fruitts, Cambridge, Idaho, except 1st in junior pig and junior champion, which went to S. E. Chaffee, Sunnyside, Wash., on Cherokee Monarch.

Tamworths.

Exhibitors—Allen Brown, Yakima, Wash.; G. E. McDaniel, Yakima, Wash.; I. J. Oder, Yakima, Wash.

I. J. Oder won all awards except the following: First on junior boar pig, third on aged sow and second in all group classes, which went to G. E. McDaniel, Yakima, and third in senior sow pig, which went to Allen Brown, Yakima, on Brown's only entry, Lookout Queen. Oder won all championships as follows: Senior champion boar, Colonel X; junior and grand champion boar, Bell Boy; senior and grand champion sow, Columbus Pet 1st; junior champion sow, Riverside Queen.

Sow and Litter, Any Breed.

First, T. S. Lester, Sunnyside, Wash., on Poland China; 2, Frank Von der Heyde, Wapato, Wash., on Chester White; 3, I. J. Oder, Yakima, on Poland China.

Fat Barrows.

Under six months—1, Orval R. Loe, on Berkshire; 2 and 3, Ward Rugh, Ellensburg, Wash., on Chester Whites.

Over six months—1, S. L. Woodhouse, Ellensburg, Wash., on Chester Whites; 2 and 3, Fruitts, on Hampshires.

Pens of three under six months—1, Rugh, on Chester Whites; 2, Loe, on Berkshires.

Pens of three, over six months—1, Fruitts, on Hampshires.

Champion barrow—Woodhouse, on Chester White.

Champion pen—Rugh, on Chester Whites.

THE SHEEP SHOW.

The sheep display brought out some strong classes, especially in the Hampshires show, in which the club boys from Kittitas county played a prominent part. There were also some fine Rambouillets and Shropshires, while the Lincolns from Oregon and Yakima herds made strong competition. Other breeds were satisfactorily represented. There was a good milch goat show, which was made up of three of the main breeds. A few Angoras were shown.

O. V. McWhorter of DuBois, Idaho, judged the sheep in all classes.

Exhibitors—E. W. Bailey, Naches, Wash.; Carol Robinson, Ellensburg, Wash.; C. H. Craig, Lowden, Wash.; H. S. Curris, Steveston, B. C.; E. N. Eagle, Toppenish, Wash.; Felzer Bros., Tangent, Ore.; Floyd T. Fox, Silverton, Ore.; Ed Farquer, Granger, Wash.; J. G. S. Hubbard & Sons, Monroe, Ore.; H. W. Hastings, Thornton, Wash.; Hastings & Comegys, Thornton, Wash.; E. F. Hubbard, Corvallis, Ore.; C. M. Hubbard, Pullman, Wash.; Alex. E. McCredy, Wapato, Wash.; Rowland Newman, Thorp, Wash.; Archie Prior, Yakima, Wash.; William Riddle & Sons, Monmouth, Ore.; William Riddle Jr., Monmouth, Ore.; State College of Washington; Ed. Schoel, Albany, Ore.; Archie C. Stewart, Aldergrove, B. C.; Ernest Wilson, Ellensburg, Wash.; Peter Wippel & Sons, Ellensburg, Wash.; S. P. Wippel & Sons, Ellensburg, Wash.; Harold Wippel, Ellensburg, Wash.

Rambouillets.

Rams: Aged ram—1 and 2, Craig. Yearling—1 and 2, Craig; 3, Schoel. Lamb—1, McCurdy; 2, Craig; 3, Schoel.

Ewes: Aged ewe—1 and 2, Craig; 3, Schoel. Yearling—1 and 2, Craig; 3, Schoel. Lamb—1 and 2, Craig; 3, Schoel.

Get of sire—1 and 3, Craig; 2, Schoel. Produce of ewe—1, Craig; 2, Schoel; 3, Stewart. Pen—1 and 3, Craig; 2, Schoel. Flock—1 and 2, Craig; 3, Schoel.

Champion ram and champion ewe—Craig.

Shropshires.

Rams: Aged ram—1, Felzer Bros.; 2, Stewart; 3, Fox. Yearling—1, Stewart; 2, Fox; 3, Felzer. Lamb—1, Felzer; 2, Stewart; 3, Fox.

Ewes: Aged ewe—1, Stewart; 2, Fox; 3, Felzer. Yearling—1 and 3, Stewart; 2, Fox. Lamb—1, Stewart; 2, Fox; 3, Felzer.

Get of sire—1, Felzer; 2 and 3, Fox. Produce of ewe—1, Fox. Pen—1, Fox; 2, Felzer. Flock—1, Stewart; 2, Felzer; 3, Fox.

Champion ram—Felzer. Champion ewe—Stewart.

Hampshires.

Rams: Aged ram—1, Hubbard & Sons; 2, Prior. Yearling—1, C. M. Hubbard; 2, Hubbard & Sons; 3, Prior. Lamb—1, Harold Wippel; 2, Wilson; 3, Newman.

Ewes: Aged ewe—1, Hubbard & Sons; 2, Hastings; 3, S. P. Wippel & Sons. Yearlings—1, S. P. Wippel & Sons; 2, Hubbard & Sons; 3, Wilson. Lamb—1, Harold Wippel; 2, Wilson; 3, S. P. Wippel & Sons.

Get of sire—1, Wilson; 2, S. P. Wippel & Sons; 3, Prior. Produce of ewe—1, Newman; 2, Wilson; 3, Prior. Pen—1, Wilson; 2, S. P. Wippel & Sons; Prior.

Champion ram and champion ewe—Hubbard & Sons.

Southdowns.

All awards in Southdowns went to Archie C. Stewart, Aldergrove, Alta.

Oxfords.

Rams: Aged ram—1 and 2, Fox. Yearling—1 and 2, Hastings; 3, Fox. Lamb—1 and 2, Hastings; 3, Fox.

Ewes: Aged ewe—1, Hastings; 2 and 3, Fox. Yearling—1, Fox; 2 and 3, Hastings. Lamb—1, 2 and 3, Hastings.

Get of sire—1 and 2, Hastings; 3, Fox. Produce of ewe—1 and 2, Hastings; 3, Fox. Pen—1 and 2, Hastings; 3, Fox. Flock—1 and 3, Hastings; 2, Fox.
